showed that the society in England and Scotland included 16,400 members, showing an increase of about 40—less than recent averages—and in Ireland 2,600. The names of 337 "recorded ministers" were returned as entered on the rolls. The Yearly Meeting in Dublin is independent, but sends representatives to the London meeting. The meeting was visited by representatives of American Friends' traveling ministers who had been laboring in different parts of the world, and by a deputation returned from Russia, where the members had had private interviews with the Czar and Czarina on the subject of religious liberty. The reading of the report of marriage statistics was followed by expressions of regret that the marriage ceremony of the society was not universally made use of by the members, and was but little sought by others, to whom it is freely open. A question arose concerning the appointment of the committee of selection, or of a committee to whom is intrusted the duty of naming the persons to be assigned to important services. The present method of naming the committee in open meeting was held liable to lead to one-sided committees by enabling those who are readiest in suggestion and speech to forestall their more deliberate brethren. It was proposed to have the representatives from the various districts appoint the committee. In the discussion concerning the society's schools, the subject of the higher education of women was most prominent. The opinion was generally expressed that the best way of meeting the want of a special woman's college would be to establish a hall of residence and tuition attached to some college, as Dalton Hall, for young men, is attached to Owen's College, Manchester. In the discussion of the state of the society desires were expressed that Friends should not purchase effectiveness in mission work at the cost of lowering the standard of the ministry, lest in the desire for readiness and for quality, and to meet a demand for words, it should lose spontaneity and inspiration. The relations of the London Yearly Meeting to American Friends have in recent years become somewhat delicate, in consequence of the assumed departures from the old usages which have been tolerated in some of the larger yearly meetings with which this body has been accustomed to correspond. The question which of the American separated bodies should be recognized in the annual letter was the subject of debate, and the meeting decided "to write to the smaller conservative bodies, sometimes named after the Rev. John Wilbur, as well as to the more numerous evangelical bodies, sometimes called after Joseph John Gurney." This action, according to Rufus M. Jones, editor of the "American Friend," is regarded as a step toward the obliteration of differences in the fuller light of the unity of truth and the oneness of the head of the Church. Among other subjects discussed were the report of the Opium Commission; slavery, with especial reference to Zanzibar; the education of new members—such as the workmen who are joining the society from the adult schools—in Quaker principles and methods of thought and feeling; and birthright membership.

A conference of British Friends was held in

London, in November, to consider the attitude and relations of members of the body toward modern conditions. One day's session was given to the discussion of the bearing of social questions. The training given by Friends in their business meetings was held up as the best for qualifying men for the conduct of public affairs, inasmuch as it inculcates and exemplifies prudence, courtesy in difference, deference to the opinions and feelings of others, and reliance on rational conviction rather than on forcing conclusions. Quaker methods were mentioned as a good antidote for the prevailing disposition to haste; and "another thing that entitled Friends to deal with social questions was the stress they were accustomed to lay upon the spirituality of true religion." A discussion of the topic "Modern Thought and its Results upon Quakerism" called out a variety of expressions of opinion.

The discussion chiefly related to the authority of the Scriptures and the tendency and results of the "higher" biblical criticism; while the modern developments of aestheticism, historical criticism, and the evolution of thought, including religious thought, were touched upon. In the consideration of the topic of "The More Effective Presentation of Spiritual Truth," the unprofessional character of the Friends' ministry was pointed out as involving a weak point in the Quaker system, inasmuch as it does not demand education, and the ministers may fail to meet the demands of thoughtful minds among the younger men and women; and the desirability was suggested of finding means for giving better-grounded training to those who intend to serve as preachers, without incurring the danger of raising up a separate, semiprofessional ministerial class.

G

GEORGIA, a Southern State, one of the original thirteen, ratified the Federal Constitution Jan. 2, 1788; area, 59,475 square miles. The population, according to each decennial census, was 92,548 in 1790; 162,686 in 1800; 252,433 in 1810; 340,955 in 1820; 516,823 in 1830; 691,392 in 1840; 906,185 in 1850; 1,037,286 in 1860; 1,184,169 in 1870; 1,542,180 in 1880; 1,837,353 in 1890. Capital, Atlanta.

Government.—The following were the State officers during the year: Governor, William Y. Atkinson, Democrat; Secretary of State, Allen D. Candler; Treasurer, Robert U. Hardeman; Comptroller General, William A. Wright; Attorney-General, Joseph M. Terrell; Adjutant General, J. McIntosh Kell; Commissioner of Agriculture, Robert T. Nesbitt; School Commissioner, S. D. Bradwell—all Democrats; Chief Justice of the Supreme Court, Thomas J. Simmons; Associate Justices, Samuel Lumpkin and Spencer R. Atkinson.

Valuations.—The assessed valuations of taxable property in the State in 1894 were: Real estate and railroad property, \$285,613,778; personal property, \$143,399,145; total, \$429,012,923. This does not include the property of railroads that is exempt by their charters from *ad valorem* taxation, estimated at about \$20,000,000. The tax rate was \$4.37 per \$1,000. In 1892 taxable property reached its highest valuation in the history of the State—\$463,733,534, when the tax rate was \$4.85 per \$1,000.

Finances.—The balance in the treasury Oct. 1, 1893, was \$1,139,837.45. The receipts during the following year were \$2,789,595.05, and the paid payments by the treasurer \$3,100,798.94, leaving a balance in the treasury Oct. 1, 1894, of \$995,633.56. The recognized bonded debt was \$8,134,500, comprising \$8,149,500 in interest-bearing bonds and \$5,000 in past-due noninterest-bearing bonds, the sinking fund held \$200,000, making the net debt \$7,954,500. The State owns the Western and Atlantic Railroad, extending from Atlanta to Chattanooga, Tenn., and has leased it to the Nashville, Chattanooga and St. Louis Railroad at an annual rental of \$420,012.

Outstanding bonds fall due as follows: July 1, 1896, \$542,000 (funding, 1876); Jan. 1, 1922, \$207,000 (redemption, 1892); July 1, 1915, \$2,302,000 (refunding, 1884); Jan. 1, 1896-1916, \$1,900,000 (refunding, 1887, \$100,000 payable annually); Jan. 1, 1917-35, \$1,835,000 (refunding, 1880); and various times in 1923-'42, \$275,000 (State University bonds).

Banking.—According to the last published report of the United States Comptroller of the Currency, Georgia had on Oct. 31, 1894, 29 national banks in operation. The combined capital was \$3,816,000; amount of United States bonds held to secure circulation, \$1,107,000; excess beyond requirement, \$328,000; amount of coin and coin certificates held, \$519,314.90; notes issued for circulation, \$9,935,630; redeemed, \$8,735,926; outstanding, \$1,199,704; and loans and discounts, \$8,108,018. The State banks numbered 77, and had total capital of \$8,240,408; resources, \$24,435,397; deposits, \$11,764,466; and surplus and undivided profits, \$2,434,190. There were 12 savings banks with capital of \$717,327; resources, \$2,322,779; savings deposits, \$836,823; deposits subject to check, \$468,100; and surplus and profits, \$211,110. There were also 3 private banks with capital of \$185,000; resources, \$632,412; deposits, \$213,712; and surplus and profits, \$154,781.

Railroads.—On Dec. 31, 1893, Georgia had a single-track railroad mileage of 5,089.02; during 1894 three lines constructed 30 miles of new track; making the total mileage on Dec. 31, 1894, 5,119.02. The roads were operated on a capital of over \$68,500,000; had a funded debt exceeding \$87,000,000, and a total investment of over \$172,500,000; and had expended for road-bed and equipment nearly \$137,500,000.

The Northeastern Railroad of Georgia was put up at auction April 16, and bid off by the State for \$100,000. The Georgia Central Railroad was sold, Oct. 7, for \$2,000,000 to representatives of the Southern Railway Company, which in June had secured control of the Georgia Southern and Florida, running from Macon to Palatka, Fla., 285 miles. The Marietta and North Georgia

was sold, Nov. 25, for \$956,000 to the Philadelphia Car Trust Company.

Manufactures.—In the fiscal year ending June 30, 1894, the collection of internal revenue aggregated \$413,287.44 from the following sources: Distilled spirits, \$315,661.39; tobacco, \$15,196.59; fermented liquors, \$75,639.23; oleo-margarine, \$4,770; and penalties, \$2,020.23. The same sources yielded a total of \$393,417.72 in the fiscal year ending June 30, 1895.

The number of tobacco factories in 1894 was 66, which had a total output of 5,073,252 cigars; and of grain, molasses, and fruit distilleries, 268, of which 251 were in operation, producing 287,517 gallons of distilled spirits and 78,407 barrels of fermented liquors.

A census of the cotton and woolen manufacturing interests of the Southern States, in April, 1895, showed that Georgia had 73 mills, operating 668,578 spindles, 15,237 looms, and 1,809 cards. The largest plant in the State, and till recently the largest one in the South, was at Columbus, and had a capital of \$1,250,000 and 46,600 spindles. There were 2 mills, both in Augusta, capitalized at \$1,000,000 each. Another mill had a capital of \$600,000; 2 had \$500,000 each; 1 had \$400,000; 1 each had \$300,000, \$262,000, \$250,000, and \$225,000; 2 had \$200,000 each; and 16 had from \$157,500 to \$100,000 each. The smallest capital reported was \$15,000.

Manufacturers' Association.—An association of the manufacturers of the State was formed May 7, the purposes of which are set forth in the resolutions adopted, namely:

Collection, compilation, and distribution of reliable statistics and special information regarding the progress and possibilities of manufacturing in Georgia.

Education of the producer to an intelligent knowledge of the fact that the manufacturer is not, as the politician teaches, his enemy, but a friend who develops a home market for his product.

Equitable adjustment of freight and insurance rates.

Enactment of just and liberal laws for the protection of both private and corporate capital, and for the promotion of manufacturing in the State.

Promotion of a patriotic spirit among our people that shall encourage them to patronize home industries.

Live Stock.—In January, 1895, the United States Department of Agriculture estimated the number and value of farm animals in the State as follows: Horses, 107,044, value \$5,458,470; mules, 161,204, value \$10,470,828; milch cows, 309,615, value \$4,811,417; oxen and other cattle, 357,645, value \$4,505,380; sheep, 402,946, value \$537,530; and swine, 1,934,892, value \$6,885,119; total value, \$32,668,744.

Gold Mining.—A few years ago several wealthy men from the North made extensive investments in the old mines of Dahlonega, and by taking advantage of new processes they have reaped a good profit from the low-grade ores which are practically inexhaustible in this part of Georgia. About 300 men are at work within six miles from Dahlonega. Those who have the capital for an improved equipment can mine the ore and deliver it into the mills at a cost of 25 cents a ton.

Education.—The total enrollment in 1893 in the public schools, including those coming under

local systems, was 436,682, an increase over the preceding year of 21,035. The total average attendance was 262,140, an increase of 16,762. The number of teachers was 9,033, an increase of 214. The school fund in 1893 was \$1,058,532.52.

The State Normal School, near Athens, enrolled 175 students during the session of 1894, among whom 51 counties were represented. The average daily attendance was 125. The session lasted only eight weeks, beginning July 5. In April, 1895, it was formally opened as a permanent normal school, the Legislature having appropriated \$20,000 for two years for running expenses. (See "Annual Cyclopaedia" for 1893, page 339.) Rock College, as the building now used by the Normal School is called, is on an eminence 750 feet above the sea level between the Oconee river and the Blue Ridge. It was built in 1859 as a place for instruction of the undergraduates in the sophomore and freshman classes of the University of Georgia. But it was long since discontinued in that use and turned over to the Agricultural College. The degree of Licentiate of Instruction is to be conferred upon graduates.

The total attendance at the State University, at Athens, in 1894-'95 was 246; and the total number, including those at other institutions established by the State and made branches of the university, was 1,542. These institutions are: The North Georgia Agricultural College, the South Georgia and the Middle Georgia Military and Agricultural Colleges, the West Georgia Agricultural and Mechanical College, the Georgia School of Technology, the Georgia Normal and Industrial College, the State Industrial College for Colored Youth, and the State Normal School.

The failure of the Legislature to provide suitably for the Technological School led to the resignation of its president.

Mercer University, at Macon, had enrolled in 1894 students to the number of 252, including the preparatory, theological, and law departments. By a decision rendered in December the university receives \$13,000 from the Cheney estate in addition to the \$30,000 not disputed by the relatives. Emory College, at Oxford, had 256 enrolled, including a subfreshman class of 46. The income from endowments during the year 1892-'93 was \$9,637, and that from tuition fees \$8,871. There would have been a deficit of \$6,516 if salaries had been paid in full, but the professors made up the shortage by accepting reduced salaries.

State Institutions.—In the State Lunatic Asylum, at Milledgeville, the average number of patients during the year ending Sept. 1, 1894, was 1,709. Of those present during that time 127 were discharged restored and 7 were discharged improved, while 162 died. The expenditures for eleven months amounted to \$185,598.85. The total cost *per capita per diem* was 32.42 cents.

The School for the Deaf at Cave Spring had in 1893-'94 130 pupils, with 7 teachers. The cost of support was \$18,854.71. In addition to the usual school instruction the girls are taught to sew, and the boys learn shoemaking. The shoe shop had a balance in its favor for the year of \$285.38. The State maintains and instructs

the pupil for seven years without charge, and in case of need supplies clothing. All are furnished with shoes from the shop free of cost.

Silver Convention.—A convention held at Griffin, July 18, for the purpose of taking action favorable to the restoration of silver, was attended by nearly 5,000 people, and included delegates from every senatorial district in the State. Great enthusiasm was shown, and the resolutions passed at the Bimetallic Convention at Memphis in June were adopted, together with others having in view the organization of clubs in every county and district of the State.

A Negro Exodus.—The Danish steamer "Horsa" was chartered by the International Immigration Society to take to Liberia a company of about 300 negroes who gathered at Savannah in March, to form an African colony. In making the selections only men of good physical condition were permitted to join. The married men were accompanied by their wives and families, and the society made arrangements to give the unmarried colonists 10 acres of land and the married ones 25 acres upon their arrival in Liberia. The Liberian Government will shelter the colonists for three months, until they have built their own houses.

Lawlessness.—A race war, so called, broke out in Brooks County in December, 1894. The trouble began with the killing of Constable Moulton while he was on business connected with his office, by two brothers, negroes. Prominent among those who assisted in arresting the murderers was Joseph Isham; and a plot was formed among their friends, who formed themselves into a band to take revenge upon Mr. Isham. He was shot by a gang of 5 negroes in the highway near his house in the vicinity of Quitman. Three of the 5 were captured; but the one who fired the first shot, which was fatal, escaped. The search for him excited the negroes of the neighborhood, who banded together threatening not only to prevent his capture, but also to release the 3 prisoners from jail. A company of white men gathered to oppose them and to hunt for the murderer. The murdered man's father-in-law urged them to turn the negro over to the officers if he should be caught, and allow the law to take its course; and they sent a message to the blacks promising to do so if they would give him up. The proposition was rejected, and the whites began a search for the man, in the course of which they killed his step-father, his brother, and another negro, and beat most cruelly a woman who was suspected of knowing where the murderer was hidden. The excitement grew until whites and blacks were gathered into two armed mobs of several hundred men each. The situation was so serious that the Governor was appealed to and ordered the Pablota Violette to the scene, and in a short time the trouble was over.

This account, gathered from reports of newspaper correspondents who were on the field, is contradicted by a statement given out Dec. 27, by the Board of Commissioners of Brooks County, in which they say: "There has never been any race riot in our county; the negroes have never been under arms; and the whole trouble has been caused by about 25 white men, not over 4 of whom lived in Brooks County."

About the same time great excitement was caused in Augusta by a mob, said to be 1,000 strong, which gathered about the jail where a negro was confined who had murdered another negro, and in resisting arrest had shot a detective and a policeman, both, it was supposed, fatally. During the riot that followed over 150 shots were fired. One other man, a spectator, was shot and killed. The crowd were finally induced to give up their purpose to lynch the murderer.

It was necessary to call out militia to quell a riot that arose in Savannah, in February, in consequence of a lecture announced to be given at Masonic Hall by an ex-priest. In the course of the riot, stones and bricks were thrown into the hall, and attempts were made the next day to burn the building. Four buildings in the city were blown up during the night, but there seemed to be no evidence to sustain the charge that this was done by the rioters.

Legislative Session.—The Legislature adjourned, Dec. 11, after a session of fifty days. In accordance with an act passed in 1892, a commission has been at work for nearly two years codifying the laws of the State. The recent Legislature passed an act providing that, as the work of the commission would have finished its work before the next session of the General Assembly, and as under the original act its work must be accepted by the Legislature, a committee be appointed to examine the work and report to the next General Assembly.

The Governor sent a special message to the Legislature in reference to the crime of lynching, from which the following are extracts:

Information reached me that there were in Sevier County two parties charged with murder who had not been arrested, although the sheriff had in his hands a warrant charging them with the above-named offense. These men were reported to be armed and ready to resist any effort that might be made to bring them to trial for the offense charged. I offered a reward of \$500 for their arrest, and wrote the sheriff of the county, calling his attention to the fact that it was his duty to arrest them, and requested that he summon a *posse comitatus* and execute the warrant in his hands. On Nov. 14 the sheriff wrote to me: "I summoned a *posse* of 25 men to meet me this morning. Out of 25, 3 responded to the summons. I went with the 3 men and searched the premises, but they could not be found. Where they are I am not able to say, as I could learn nothing from the family." I am informed that on this day the defendants were seen bird hunting in the county of Sevier. There is no penalty attached for failure to respond to the summons of a sheriff to act as a *posse comitatus*. This statement of facts, without argument, justifies me in recommending:

1. That a law be enacted that will provide a penalty for failure to obey the summons of a sheriff to act as a *posse comitatus*.
2. That it be made the duty of the Solicitor-General, in every case where he has reason to believe that an arresting officer has failed to make an arrest whom it was in his power to do so, to draw a *habeas corpus* against him, so that if the facts on trial warrant it he may be punished.

During the present session of the General Assembly there have been reported 3 lynchings—one in Clinch County, one in Montgomery, and one in Dawley. That you may fully appreciate the enormity of the wrong done by so-called lynch law to the reputation of the State, to civilization, and to the rights of man, I invite you to inquire into each case of the recent cases which

have moved me to pen this communication. The conduct of the mob in each case is unjustifiable, disgraceful, and shocking, but in one of them the wrong done was especially horrifying. While I was engaged in writing this message, there came into my office, asking that he be accorded a trial in our courts, a man who had fled from an angry mob which endeavored to capture and lynch him.

If the measures herein and heretofore suggested by me do not meet with your approval, I most earnestly ask that you devise others, and enact them into law.

Political.—County elections were held in January, resulting in gains for the Democrats, who elected their candidates in some counties considered heretofore as Populist strongholds. The Populists gained in Washington County. The Republicans elected their candidates in Picken and Fannin Counties. There will be no more county elections in January, the Legislature having passed an act uniting them with the October elections.

The new election in the Tenth Congressional District (see "Annual Cyclopædia" for 1894, page 313) resulted in the election of the Democratic candidate, Mr. Black, by a majority of 1,602. Only 19,022 votes were cast, against 34,440 in Nov., 1894.

The People's party held a convention at the capital, Dec. 18, and chose delegates to the National Convention of the party. It was decided to recommend to that convention the platform that includes these principles:

Direct issue of all money by the Government; abolition of banks of issue; no more bonds to be issued except in refunding those of the Government now outstanding; silver and gold to be coined upon equal terms at a ratio of 16 to 1; the volume of currency to be increased to not less than \$50 *per capita*; Government revenues to be raised by a graduated tax upon incomes and by a tariff tax upon luxuries of life, the necessities of life to be placed upon the free list, and the internal-revenue system to be abolished; Government ownership of railroads, canals, the telegraph, and the telephone; alien ownership of land to be prohibited; and United States Senators to be elected by direct vote of the people.

GERMAN EVANGELICAL SYNOD. This body returns for 1895 839 ministers, 1,075 congregations, 185,203 persons having received the communion, and 81,091 pupils in Sunday schools. The year's profits of the publishing house are reported as having been \$25,000. More than 80 congregations received aid from the Home Mission fund. A foreign mission is sustained in India, which is represented as making steady progress. Orphan asylums, two of which are connected with a home for old people, are sustained at Detroit, Mich., Bensenville, Ill., and Hoyleston, Ill. The triennial General Conference of the Church met in August. Its principal acts related to the appointment of a Professor of the English Language at Eden College; the erection of a building at St. Louis, Mo., for the Eden Publishing House; the erection of an additional building for Elmhurst College, Illinois; and the publication of the weekly journal "Friedensbote," the organ of the Synod.

GERMANY, an empire in central Europe under a federal Government. The King of Prussia as German Emperor has supreme charge

of political and military affairs, with power to enter into international treaties and to make war if the empire is attacked, but he must have the consent of the federal legislative authorities if the war is not purely defensive. The legislative bodies are the Bundesrath and the Reichstag. The acts upon which they agree become law on receiving the assent of the Emperor and being countersigned by the Chancellor of the Empire. The Bundesrath consists of 58 members, appointed by the governments of the federal states, the Kingdom of Prussia having 17 seats, Bavaria 6, Saxony 4, and Württemberg 4; the Grand Duchy of Baden 3, Hesse 3, Mecklenburg-Schwerin 2, and Saxe-Weimar, Mecklenburg-Strelitz, and Oldenburg 1 each; the Duchy of Brunswick 2, and Saxe-Meiningen, Saxe-Altenburg, Saxe-Coburg-Gotha, and Anhalt 1 each; and the principalities of Schwarzburg-Sondershausen, Schwarzburg-Rudolstadt, Waldeck, Reuss-Greiz, Reuss-Schleiz, Schaumburg-Lippe, and Lippe, and the free cities of Hamburg, Bremen, and Lübeck each 1. The Reichsland of Alsace-Lorraine is not represented in the Bundesrath, but sends 15 members to the Reichstag, which has 397 members altogether, of whom 236 represent Prussia, 48 Bavaria, 23 Saxony, 17 Württemberg, 14 Baden, 9 Hesse, 6 Mecklenburg-Schwerin, 3 Saxe-Weimar, Oldenburg, Brunswick, and Hamburg, 2 Saxe-Meiningen, Anhalt, and Saxe-Coburg-Gotha, and a single member each of the other states. The Reichstag members are elected by universal male suffrage and by secret ballot for five years, the proportion being about 1 to 124,500 of population. The Reichkanzler or Chancellor of the Empire presides over the Bundesrath.

The German Emperor is Wilhelm II, born Jan. 27, 1859, eldest son of Friedrich III, whom he succeeded on June 15, 1888.

The Reichskanzler in 1895 was Prince Hohenlohe-Schillingsfürst, appointed Oct. 29, 1894. The imperial ministers were: Foreign Affairs, Freiherr A. Marschall von Bieberstein; Interior, Dr. Karl Heinrich von Bötticher; Marine, Vice-Admiral Hollmann; Justice, A. Nieberding; Treasury, Graf A. von Posadowsky-Wehner; Railroads, Dr. Schulz; Post Office, Dr. von Stephan; Court of Accounts, Privy-Councilor von Wolff; Invalid Fund, Dr. Rösing; Railroad Administration, Herr Thielen; Imperial Bank, Dr. Koch; Debt Commission, Privy-Councilor Meinecke. Prince Hohenlohe was President of the Prussian Council of Ministers, Dr. von Bötticher was Vice-President and Minister of State, and Herr Thielen was Minister of Public Works. The other Prussian ministers were: Interior, Herr von Köller; War, Gen. Bronsart von Schellendorf; Agriculture and Domains, Freiherr von Hammerstein-Loxten; Justice, Dr. Schönstedt; Ecclesiastical Affairs, Education, and Public Health, Dr. Julius Robert Bosse; Finance, Dr. Johannes Miquel; Commerce, Freiherr von Berlepsch.

Area and Population.—The area of the empire is now computed to be 208,670 square miles. The population at the taking of the last census on Dec. 2, 1895, was 51,758,364, showing an annual gain of .91 per cent. since 1890, when the population was 49,428,470, consisting of 24,230,832 males and 25,197,638 females. The

annual rate of increase for the preceding five years was 1.07 per cent., as compared with 1.3 per cent. for the whole period since 1816. The number of foreigners was 518,510, of whom 207,135 were Austrians, 56,437 Netherlands, 53,257 Russians, 41,613 Swiss, 32,130 French, 23,429 Danes, 15,748 English, 14,615 Scandinavians, 13,080 Italians, 12,704 Luxemburgers, 10,212 Belgians, 3,242 others Europeans, 17,646 citizens of the United States, 6,068 other Americans, 3,371 Asiatics, Africans, etc., and 5,842 of unknown origin. The number of marriages in 1892 was 698,775; of births, 1,856,999; of deaths, 1,375,430; excess of births, 584,569. There were 654,763 boys born and 900,253 girls. The number of emigrants in 1893 was 87,677, compared with 116,339 in 1892; the destination of 78,245 was the United States, while 1,173 went to Brazil, 7,366 to other countries in America, 586 to Africa, 146 to Asia, and 261 to Australasia. The total emigration since 1820 had been 5,700,000, of whom 2,392,496 crossed the sea since 1870. Of the total number about 4,000,000 went to the United States. The number of Austrians, Russians, and other emigrants who took ship at Hamburg and Bremen in 1893 was 98,288. Berlin on Dec. 2, 1895, had 1,674,112 inhabitants, an increase of 95,318 since 1890. The suburbs increased more rapidly than the city. The population within the corporate limits of the other principal cities was in 1890 as follows: Munich, 350,594; Leipzig, 357,122; Breslau, 349,624; Hamburg, 323,923; Dresden, 289,844; Cologne, 281,681; Magdeburg, 302,234; Frankfurt, 170,985; Hanover, 174,455; Königsberg, 161,666.

Finances.—The ordinary revenue for 1895 was estimated in the budget at 1,154,899,000 marks, and the extraordinary revenue at 130,275,000 marks; total, 1,285,174 marks (1 mark = 2882 cents). The receipts from customs and excise were estimated at 621,936,000 marks; stamp duties at 34,045,000 marks; postal and telegraph revenue, 28,404,000 marks; printing-office profits, 1,437,000 marks; net revenue from railroads, 23,081,000 marks; from the Imperial bank, 2,245,000 marks; from the departments, 12,559,000 marks; interest of invalid fund, 27,258,000 marks; interest of Imperial funds, 46,000 marks; various receipts, 1,400,000 marks; contributions of the federal states, 397,508,000 marks. The ordinary recurring expenditure for the year ending March 31, 1895, was estimated at 1,079,948,000 marks, and the nonrecurring and extraordinary expenditure for military and other purposes at 206,598,000 marks; total, 1,286,546,000 marks. The gross receipts from posts and telegraphs were 270,768,400, and expenses 342,364,883 marks; the gross receipts of the printing office were 6,242,000, and expenses 4,862,200 marks; the gross receipts of the railroads 62,460,000, and expenses 39,378,900 marks. Of the recurring expenditure, 360,528,000 marks were for the Imperial treasury, 480,022,000 marks for the army, 71,740,000 marks for interest and sinking fund of the debt of the empire, 50,000,000 marks for the navy, 48,245,000 marks for the Pension fund, 27,358,000 marks for the invalid fund, 27,223,000 marks for the Interior Department, 10,304,000 marks for foreign affairs, 632,500 marks for the court of accounts, 2,066,000 marks for justice, 423,000 marks for the

Reichstag, 322,000 marks for reform of the civil-service salaries, 335,000 marks for railroads, and 153,000 marks for the Imperial Chancellery. The total ordinary expenditure for military and naval purposes in 1895 was 588,047,000 marks, compared with 563,908,000 marks in 1894, 548,666,000 marks in 1893, 531,986,000 marks in 1892, and 487,845,000 marks in 1891; the extraordinary expenditure for defense was 96,960,000 marks, compared with 161,820,000 marks in 1894, 118,395,000 marks in 1893, 119,925,000 marks in 1892, and 363,397,000 marks in 1891. The debt charge has increased from 48,374,000 marks in 1891 to 55,807,000 marks in 1892, 58,711,000 marks in 1893, 66,966,000 marks in 1894, and 71,740,000 marks in 1895.

The funded debt of the empire on March 31, 1893, amounted to 1,740,842,500 marks. The first loans, amounting to the nominal sum of 450,000,000 marks, were contracted at 4 per cent., after which 760,842,500 marks were raised at 3½ per cent., and old debts were funded and new obligations issued under acts passed in 1890, 1891, and 1892 to the amount of 530,000,000 marks bearing interest at 3 per cent.

The amount of the several reserve funds in April, 1893, was as follows: Invalid fund, 457,775,275 marks, besides 3,297,635 florins and 6,818,160 marks in cash; Reichstag building fund, 9,956,800 marks; war treasure, 120,000,000 marks.

The following table gives, in marks, the budgets of the different German states for 1895, or in the case of some of them for 1894, and the state of their debts:

STATES.	Revenue.	Expenditure.	Debt.
Alsace-Lorraine . . .	50,139,640	51,399,739	25,001,000
Anhalt	91,754,000	91,754,000	1,300,000
Baden	75,762,360	81,251,344	877,500,750
Bavaria	328,841,360	328,841,360	1,022,874,721
Bremen	16,341,938	17,772,300	50,000,000
Brunswick	13,601,300	14,391,300	34,911,300
Hamburg	60,642,737	60,900,100	827,297,662
Hesse	27,302,964	27,360,000	30,100,000
Lippe	1,148,020	1,148,000	800,000
Lübeck	4,254,374	4,254,374	9,321,000
Mecklenburg-Schwerin	4,151,000	4,151,000	190,700,000
Mecklenburg-Strelitz	—	—	6,900,000
Oldenburg	9,154,951	10,800,107	42,506,796
Prussia	1,940,649,781	1,939,408,391	8,671,204,024
Rhine-Groß	1,228,708	1,228,708	100,000
Rhine-Schleiz	2,001,400	2,000,000	1,000,000
Saxe-Altenburg	3,047,110	3,047,110	967,000
Saxe-Coburg-Gotha	2,012,100	2,042,100	3,100,000
Saxe-Meiningen	2,007,000	2,007,000	11,351,310
Saxe-Weimar	2,700,000	2,700,000	3,000,000
Saxony	70,891,000	70,891,000	800,000,000
Schleswig-Lippe	1,200,000	1,200,000	—
Schwarzburg-Rudolstadt	2,342,000	2,342,000	3,970,000
Schwarzburg-Sonderhausen	2,764,000	2,764,000	1,720,444
Waldeck	1,200,000	1,200,000	1,000,000
Württemberg	67,100,000	68,100,000	444,000,000

Many of the states have property offsetting, and in some cases exceeding the debt. Anhalt has property of the value of 6,746,328 marks. The debt of Baden was incurred solely for railroad construction, and the railroads pay more than the interest. Of the Bavarian debt 900,460,400 marks were put into railroads. The debt of Bremen is represented by railroads and harbor improvements yielding revenue enough

to extinguish the obligations at a rapid rate. Of the debt of Brunswick 80 per cent. was contracted in order to build railroads. The debt of Hamburg was incurred mainly for public works, from which, next to direct taxes, the largest revenue is obtained. Of the debt of Hesse 35,345,020 marks are railway debt, and against the rest are held 4,166,503 marks of active funds. In Lippe, where the revenue comes from the land, which is the property of the prince, the debt is less than the active funds. The debt of Mecklenburg-Schwerin is more than covered by productive funds. The budget given includes only that part of the grand-ducal revenue that is applied to public purposes, not the separate revenue of the grand duke, amounting to 17,390,000 marks a year. In Mecklenburg-Strelitz the administrative expenses are paid out of the privy purse of the grand duke, and no public accounting is made. Most of the debt of Saxe-Meiningen is covered by productive capital; two thirds of the revenue of Saxe-Altenburg and one third of that of Saxe-Meiningen is the usufruct of ducal estates now applied to public purposes. Saxe-Weimar gets a large part of the revenue from the state forests. The budget of Saxony includes 21,690,700 marks of extraordinary revenue used for extending the public works; the kingdom obtains more than half its revenue from state forests, domains, and railroads, the latter yielding a net income of 30,636,535 marks in 1894. Of the debt of Württemberg 405,242,000 marks were contracted for railroads, from which the state derived a net profit of 11,377,442 marks in 1892. The Prussian revenue is derived from the following sources: Domains and forests, 86,191,474 marks; direct taxes, 194,422,000 marks; indirect taxes, 71,221,000 marks; lottery, 79,266,500 marks; marine bank, 1,876,000 marks; mint, 353,650 marks; mines, iron furnaces, and salt works, 128,188,972 marks; state railroads, 963,751,676 marks; finance administration, 335,553,367 marks; Ministry of Justice, 60,913,300 marks; Ministry of the Interior, 11,075,890 marks; Ministry of Agriculture, 3,855,512 marks; Ministry of Public Instruction, 3,080,890 marks; other departments, 9,899,160 marks. The expenditure is distributed as follows: Working expenses of the domains and forests, 41,198,090 marks; of the finance administration, 119,319,590 marks; of the administration of mines, etc., 111,916,732 marks; of the administration of railroads, 595,996,943 marks; supplement to the King's revenue from the royal trust funds, 8,000,000 marks; public debt, 282,309,810 marks, being 241,876,534 marks for interest, 37,934,067 marks for amortization, 1,432,756 for annuities, and 1,057,453 for administration; matricular contribution to imperial expenditure, 247,986,090 marks; appanages, subventions, and indemnities, 105,316,343 marks; Herrenhaus, 179,680 marks; Chamber of Deputies, 1,201,540 marks; Ministry of State, 6,204,639 marks; Ministry of Foreign Affairs, 538,000 marks; Ministry of Finance, 72,762,679 marks, of which 43,007,904 are for civil pensions and rewards, 5,466,100 marks for the widows' fund, 13,529,000 marks for presidencies and governments, 8,810,900 marks for the general funds, and 1,948,775 for administration and other expenditure; Ministry of Public Works, 22,376,-

640 marks; Ministry of Commerce and Industry, 6,618,077 marks; Ministry of Justice, 91,913,200 marks; Ministry of the Interior, 53,055,094 marks, of which 22,516,456 marks are for police, 10,716,970 marks for gendarmerie, 9,122,016 marks for houses of correction, and 10,699,652 marks for administrative and other expenses; Ministry of Agriculture, Domains, and Forests, 17,229,607 marks, of which 4,722,100 marks are for the stud; Ministry of Worship and Public Instruction, 105,843,809 marks, of which 80,439,883 marks are for public instruction, 10,819,451 marks for expenses common to worship and instruction, 2,987,425 marks for evangelical worship, 2,604,789 marks for Catholic worship, 4,061,591 marks for science and the fine arts, 1,983,398 marks for medical affairs, 1,675,024 marks for technical instruction, and 1,322,248 for other expenses; administration of the arsenal, 128,122 marks. The total ordinary expenditure is 1,891,612,410 marks, and the extraordinary expenditure is 58,036,981 marks, of which the chief items are 20,865,000 marks for railroads, 16,235,490 marks for other public works, 4,707,200 marks for justice, 4,373,575 marks for worship, 4,270,359 marks for agriculture, and 4,474,047 marks for finance. The Prussian debt consists of 3,592,667,850 marks of consols paying 4 per cent. interest, 1,916,883,950 marks paying $\frac{3}{4}$ per cent., 635,000,000 marks paying 3 per cent., 170,075,535 marks of shares and loans of railroads bought by the state, 35,089,800 marks of treasury bills, and some old debts.

The Army.—Every able-bodied German, unless exempted by lot, is called into the active army at the age of twenty. The military law of 1893, adopted for the period ending March 31, 1899, reduced the time of active service to two years in the infantry, leaving it still three years in the cavalry and field artillery. This added about 60,000 men to the annual contingent. Young men who have reached the highest grade in a gymnasium or a *realschule*, if they equip and board themselves, can fulfill their military duty by serving a single year. From these one-year volunteers, of whom there are about 8,000 every year, are taken many officers of the Landwehr. These volunteers are not counted in the peace effectives. Roman Catholic priests are inscribed in the depot reserve, and are not obliged to train. Natives of Heligoland are exempt from military duty by treaty; but those born after the cession of the island to Germany, Aug. 11, 1890, will have to serve. Schoolmasters are required to serve in the active army only ten weeks. After the two or three years of service with the colors the recruits return to civil life, except those who adopt the military profession and are re-engaged as noncommissioned officers. When these men become too old for the service, they frequently obtain civil employment on the railroads, or as forest rangers, or the like. The time-expired soldiers are enrolled for three years in the regular army reserve, and then pass into the Landwehr, where the term of service is five years in the first and seven years in the second bans for the men who have served two years as infantrymen, engineers, foot artillerymen, etc.; but those who have served three years in the

permanent army remain only three years in the first ban. The military law of 1893 fixed the mean annual peace effective at 479,229 men. This limitation, however, has not been observed. The actual strength in 1895 was 22,534 officers and 562,014 men, with 96,844 horses. The army is organized in 20 corps, consisting of 173 regiments of infantry, 19 battalions of Jägers, 93 regiments of cavalry, 43 regiments, with 494 batteries, of field artillery, 17 regiments of foot artillery, and 23 battalions of pioneers, besides 5 regiments and 2 battalions of railroad troops. There are 288 district commands of Landwehr. The strength of the different arms, including the armies of Bavaria and Württemberg—which, though separately organized, form a part of the German army under the supreme command of the Emperor-King as war lord—is shown in the following table:

TRUUPS.	Officers.	Men.
Infantry	11,774	869,750
North-German	410	12,084
Prussian contingents	700	5,852
Engineers, instructors, etc.	...	2,716
Field artillery	2,671	59,223
Cavalry	2,852	66,008
Foot artillery	869	23,073
Pioneers	724	19,139
Railroad	305	7,246
Special detachments	481	2,759
Staff and special details	2,264	287
Total	22,534	562,014

The war strength of Germany, with her present organization, is estimated to be 3,000,000 instructed soldiers.

The Navy.—In accordance with the programme of construction adopted in 1889, 4 first-class battle ships, of 9,840 tons ("Kurfürst Friedrich Wilhelm," "Weissenburg," "Brandenburg," and "Wörth"), were launched in 1891 and 1892. They have steel hulls with double bottoms and 120 water-tight compartments, are protected by a complete belt of 15½-inch compound armor, 9,000 indicated horse power, a speed of 16 knots with natural draught, and are armed with 6 11-inch guns mounted in a strong barbette, besides 16 4-inch quick-firing guns, 8 of 3-inch caliber, and 7 torpedo ejectors. A fifth vessel of this class ("Ersatz Preussen") is under construction. Of the projected 10 armor clads, of 3,600 tons, for coast defense, 6 were completed before 1895 ("Siegfried," "Beowulf," "Frithjof," "Hildebrand," "Heimdal," and "Hagen"), and 2 are under construction. Each of these vessels has a normal speed of 16 knots and carries 3 9·4-inch breech-loading guns and 6 3-inch quick-firers. Of the 8 corvette cruisers that were in the programme, only the "Kaiserin Augusta" has been built as originally planned. She is a triple-screw steamer of 12,000 indicated horse power, capable of steaming 22 knots, having a displacement of 6,052 tons, and armed with 12 6-inch Krupp guns, 8 quick-firing guns, and 4 torpedo tubes. The "Irene" and "Prinzess Wilhelm" are smaller and slower. There are 10 battle ships of the old fleet that are still effective, all built between 1874 and 1884, except the "König Wilhelm," of 9,600 tons, a broadside ship, with 12 inches of armor and 18 9·4-inch, 5 8·2-inch, and 6 5·9-inch guns. Two of them ("Kaiser" and "Deutschland") have a displace-

ment of 7,550 tons, 10 inches of side armor, and 8 10·2-inch guns in a central battery, besides 1 8·2-inch gun and 7 5·9-inch guns; 4 ("Sachsen," "Baden," "Bayern," and "Württemberg") have a displacement of 7,280 tons, 16-inch armor, and 6 10·2-inch guns mounted in barbette, 4 4·1-inch quick-firing guns; 2 ("Preussen" and "Friedrich der Grosse") have a displacement of 6,660 tons, 10½ inches of side armor, and 4 10·2-inch, 2 6·6-inch, and 4 4½-inch quick-firing guns; and 1 ("Oldenburg"), of 5,120 tons, has 12 inches of armor, and carries 8 9·4-inch guns. Every one of these vessels is fitted with 4 or 5 torpedo ejectors. Their speed varies from 13½ to 15 knots. There are 11 gunboats ("Basilek," "Bismarck," "Camilleon," "Crocodil," "Hummel," "Mücke," "Natter," "Salamander," "Skorpion," "Viper," and "Wasp"), of 1,000 tons, having 8-inch armor, and carrying a single 55-ton or 11·8-inch gun. The Government has engaged 7 of the fleetest vessels of the Hamburg-American and North-German Lloyd packet lines to serve as auxiliary cruisers in case of war, and has provided for each of them 8 5·9-inch, 4 4·9-inch, and 4 quick-firing Krupp guns. There are 7 third-class cruisers ("Gefion," "Arcos," "Alexandrine," "Olga," "Marie," "Sophie," and "Freya"), of about 2,500 tons, and 7 fourth-class cruisers ("Sennar," "Condor," "Comoran," "Falke," "Bussard," "Schwalbe," and "Sperber"), of about 1,500 tons, the latter having powerful rams and 4 guns disposed fore and aft and on each broadside. A first-class cruiser of 8,500 tons has been authorized, and 3 second-class cruisers are to be laid down also. The chief naval stations are at Kiel and Wilhelmshaven, which are connected by the new North Sea Canal. The torpedo stations are Friedrichsort, Wilhelmshaven, Kiel, Cuxhaven, and Geestmünde. There are 114 first-class torpedo boats and torpedo division boats, and 21 second-class torpedo boats.

Commerce and Industry.—The total value of the special imports in 1893 was 4,134,070,000 marks, and the value of the exports of German products 3,244,592,000 marks. The following table gives the values, in marks, of the special imports and exports in 1893 of the various classes of merchandise:

MERCHANDISE.	Imports.	Exports.
Live animals	221,354,000	225,898,000
Animal products	187,600,000	79,692,000
Articles of consumption	1,094,753,000	606,115,000
Seeds and plants	64,352,000	382,169,000
Fuel	94,821,000	160,620,000
Fats and oils	214,800,000	382,242,000
Chemicals and drugs	225,020,000	109,161,000
Stone, clay, and glass wares	56,354,000	111,499,000
Metals and metal goods	882,800,000	477,899,000
Wood and wood manufactures	226,254,000	590,941,000
Paper manufactures	21,690,000	91,697,000
Leather and skins	162,400,000	302,502,000
Textiles	1,074,100,000	916,216,000
India rubber, etc.	81,700,000	94,299,000
Machinery and instruments	24,000,000	164,133,000
Hardware	13,000,000	79,703,000
Literary and art products	22,000,000	194,200,000
Miscellaneous	...	521,000
Total	4,134,070,000	3,244,592,000

The imports of cereals were 220,300,000 marks in value; of wool, 278,400,000 marks; of cotton, 221,200,000 marks; of coffee, 214,000,000 marks;

of cattle, 206,700,000 marks; of timber, 162,200,000 marks; of raw silk, 139,300,000 marks; of woolen yarn, 117,900,000 marks; of coal, 94,600,000 marks; of leaf tobacco, 75,100,000 marks; of flax and hemp, 68,700,000 marks; of petroleum, 66,800,000 marks; of seeds, 66,200,000 marks; of Chili salt-peter, 65,400,000 marks; of eggs, 57,000,000 marks; of copper, 48,300,000 marks; of cotton yarn, 47,300,000 marks; of fish, 45,600,000 marks; of wine, 42,100,000 marks.

The exports of sugar were valued at 227,100,000 marks; of woollens, 217,900,000 marks; of iron manufactures, 167,400,000 marks; of silk goods, 156,300,000 marks; of cotton goods, 154,300,000 marks; of coal, 136,700,000 marks; of silk and woolen goods, 124,580,000 marks; of colors, 97,800,000 marks; of iron, 93,100,000 marks; of leather goods, 85,100,000 marks; of clothing, 80,000,000 marks; of wool, 67,700,000 marks; of hides, raw and tanned, 62,400,000 marks; of leather, 53,200,000 marks; of manufactures of wood, 50,400,000 marks; of glassware, 41,500,000 marks; of woolen yarn, 37,900,000 marks; of seeds, 36,400,000 marks; of pottery, 34,700,000 marks; of raw silk, 34,600,000 marks; of hops, 33,100,000 marks; of flax and hemp, 31,500,000 marks.

The imports of precious metals in 1893 were 172,332,000 marks, and the exports 152,604,000 marks.

The participation of the different countries in the commerce of the German Zollverein in 1893 is seen in the following table, giving the imports from and the exports to each one, in marks:

COUNTRIES.	Imports.	Exports.
Free port of Hamburg	15,806,000	31,788,000
Great Britain	656,695,000	674,018,000
Austria-Hungary	580,244,000	420,543,000
Russia	233,441,000	184,595,000
Netherlands	214,176,000	240,688,000
France	241,417,000	208,119,000
Belgium	188,869,000	147,757,000
Switzerland	143,691,000	187,367,000
Italy	149,680,000	85,418,000
Norway and Sweden	80,674,000	109,622,000
Denmark	50,254,000	80,829,000
Spain	35,985,000	83,051,000
Portugal	18,741,000	12,083,000
Turkey, Greece, and Balkan countries	122,573,000	97,074,000
North America	497,112,000	889,863,000
South America and West Indies	384,158,000	175,600,000
Australia	96,998,000	18,510,000
British India	178,809,000	46,936,000
Other Asian countries	56,528,000	69,913,000
Africa	71,867,000	34,567,000
Other countries	972,000	974,000
Total	4,184,070,000	3,244,562,000

The total area of Germany is 54,025,085 hectares, of which 26,311,968 are cultivated, 13,908,398 are forest, 10,944,570 are meadow, pasture, and waste, and 2,860,149 are roads, towns, etc. There are 5,276,344 farms, employing 8,120,518 and supporting 18,840,818 persons. The areas covered with various crops in 1893 were: Rye, 5,678,733 hectares; oats, 3,987,719; wheat, 1,975,632; barley, 1,600,096; potatoes, 2,929,808; hay, 5,892,717; vines, 118,292; hops, 43,434. The number of horses in 1892 was 3,817,939; cattle, 17,496,696; sheep, 13,775,063; hogs, 12,056,804; goats, 3,077,722. The quantity of sugar beets consumed in 1893 was 9,811,940 metric tons, producing 1,175,137 tons of sugar. The quan-

lity of beer brewed was 54,651,000 hectolitres, the product of 8,460 breweries. The coal output in 1893 was 73,909,000 tons. The product of pig iron in 1892 was 4,937,461 tons, valued at 229,296,000 marks; of manufactured iron, 5,130,891 metric tons were turned out, valued at 671,077,000 marks. The silver product was valued at 57,229,000 marks; zinc, 55,062,000 marks; copper, 24,758,000 marks; lead, 20,547,000 marks.

Navigation.—The merchant shipping of various nationalities that visited German ports during 1892 is shown in the following table, each vessel, though calling at different ports, being counted only once:

ENTERED.	WITH CARGOES.		IN BALLAST.	
	Vessels.	Tonnage.	Vessels.	Tonnage.
German	40,954	6,512,325	7,726	689,300
British	4,868	3,945,963	251	262,106
Danish	4,675	772,315	1,256	96,872
Swedish	2,809	596,031	138	24,748
Dutch	1,105	194,148	192	19,400
Norwegian	1,047	433,030	61	26,987
Russian	567	167,783	70	2,775
Other foreign	238	189,968	5	8,400
Total	56,263	13,101,560	9,664	1,085,977

The number of vessels cleared and their tonnage are given according to their flags in the table below:

CLEARED.	WITH CARGOES.		IN BALLAST.	
	Vessels.	Tonnage.	Vessels.	Tonnage.
German	37,617	5,565,757	10,802	1,543,979
British	2,900	2,044,805	2,192	2,146,120
Danish	3,831	639,769	2,149	224,856
Swedish	1,379	261,780	1,560	270,632
Dutch	941	182,565	808	95,444
Norwegian	677	262,654	412	185,046
Russian	237	74,067	327	87,700
Other foreign	274	115,670	80	81,222
Total	47,756	9,549,567	17,825	4,550,980

The total number entered was 65,927, of 14,187,407 tons; cleared, 65,581, of 14,108,950 tons. The number entered at Hamburg was 8,829, of 5,683,353 tons; at Bremen, 3,095, of 1,358,191 tons; at Stettin, 3,762, of 1,233,541 tons; at Kiel, 3,611, of 591,680 tons; at Dantsic, 1,582, of 584,478 tons; at Lübeck, 2,425, of 516,963 tons; at Königsberg, 1,330, of 397,556 tons.

The merchant navy in 1894 consisted of 2,713 sailing vessels, of 698,356 tons, and 1,016 steamers, of 823,702 tons; total, 3,729 vessels, of 1,522,058 tons. Of the sailing vessels 2,017, of 558,139 tons, belonged to North Sea ports, and 696, of 140,217 tons, to Baltic ports; of the steamers, 628, of 665,702 tons, belonged to ports of the North Sea, and 388, of 158,000 tons, to Baltic ports. Not included in these figures are the vessels engaged in the coasting trade and inland navigation, numbering 22,848 in 1893, of about 2,817,000 tons.

Railroads.—There were 27,439 miles of railroads in operation in 1894, all of which belonged to the Government, state or imperial, save 3,206 miles, and of these 296 miles were worked by the Government. The gross receipts for 1893 were 1,353,083,000 marks, and expenses 862,267,000 marks, leaving the net receipts 490,816,000 marks,

equal to 44 per cent. on the capital, which was 10,917,237,000 marks. The freight traffic for the fiscal year was 290,864,000 metric tons, paying 808,377,000 marks, while 354,793,000 marks were taken in from 498,171,000 passengers.

Posts and Telegraphs.—The imperial post office in 1893 carried 1,094,333,514 letters, 385,334,970 postal cards, 471,295,176 circulars, etc., 90,677,658 samples, and 808,257,036 newspapers. The total number of pieces was 2,878,996,588. The separate Bavarian post office handled 302,872,489 pieces, and the Württemberg post office 128,633,212 pieces. The amount of money forwarded was 18,016,532,164 marks in the imperial postal district or 20,638,573,319 marks, including Bavaria and Württemberg. The receipts of the imperial post office for 1894, both from mail and the telegraph service, were 256,466,749 marks, and expenses 239,776,366 marks, leaving a surplus of 16,690,383 marks. Including Bavaria and Württemberg, receipts were 290,615,418 marks, and expenses 270,887,743 marks.

The telegraph lines of the imperial postal district had in 1894 a total length of 66,045 miles, with 245,017 miles of wires. The Bavarian telegraphs were 7,559 miles in length, with 23,404 miles of wire, and those of Württemberg 2,955 miles, with 7,551 miles of wire, making the total length of lines for the empire 76,559 miles, and the length of wires 275,972 miles. The number of domestic telegrams dispatched by the imperial service was 19,592,554; in Bavaria, 1,719,669; in Württemberg, 610,518; total, 21,922,741. The number of foreign telegrams was 8,775,932 for the imperial postal district, 498,471 for Bavaria, and 167,072 for Württemberg; total, 9,441,475.

The North Sea and Baltic Canal.—The only means of communication by water between the North Sea and the Baltic has hitherto been by the navigation of the Skager Rack and the Cattegat, round the peninsula of Jutland, with the exception of the old Eider Canal, which gave passage to small vessels only. The route round Jutland is dangerous, for the reason that the passage is not very wide and that the water is crowded with shipping, which in the heavy fogs and the frequent violent storms cause much shipwreck. The annual number of wrecks averages 200. The new canal was ceremoniously opened by Kaiser Wilhelm, June 20, 1895. For an account of the canal, see **ENGINEERING**.

Prince Bismarck's Birthday.—On April 1, 1895, Prince Bismarck, ex-Chancellor and founder of the German Empire, celebrated his eightieth birthday, and with him celebrated the German nation, from the Emperor down to the lowest citizen.

In the German Reichstag a resolution was proposed to authorize the president of that body, Herr von Loezow, to convey to Prince Bismarck the congratulations of the Chamber. The majority of the Reichstag members, however, could not forget the bitter quarrels they had had with the former Chancellor, in which they usually were worsted, and by a vote of 163 to 146 the proposed resolution was rejected. Herr von Loezow and the second vice-president of the Reichstag immediately resigned, amid great confusion. Emperor William, upon hearing the decision of the Reichstag, sent

the following telegram to Prince Bismarck: "Allow me to express to your Serene Highness my deepest indignation at the decision just taken by the Imperial Diet, which is diametrically opposed to the sentiments of all German princes and their peoples."

The celebrations in Friedrichsruh began on March 25, with the reception by the Prince of the members of the Prussian Diet and many members of the Reichstag. On March 26 Emperor William went to Friedrichsruh to congratulate Prince Bismarck personally, accompanied by the Crown Prince, the Minister of War, the heads of the civil, military, and naval cabinets, and the members of his staff.

On April 1 large delegations from all parts of the empire arrived in Friedrichsruh and presented the congratulations of the German people. In the cities the houses and public buildings were decorated, and in the evening illuminations and fireworks took place. Emperor William gave a grand banquet in honor of the Prince's birthday, and celebrations and festivities were had everywhere—in the United States, in Italy, Japan, China, Africa, Australia, in every place where Germans congregate.

Session of the Reichstag.—At the opening of the Reichstag, Dec. 5, 1894, Emperor William, in his speech from the throne, announced the introduction of bills dealing with the extension of the criminal laws; a bill for the regulation of house transactions; a measure for the reform of abuses caused by dishonest trade competition; and a bill providing for the further taxation of tobacco. The first of these 4 bills, the *Umsatzsteuerlage* (see "Annual Cyclopaedia" for 1894), created an enormous amount of opposition throughout the whole of Germany. Petitions against its adoption were presented to the Reichstag by thousands, signed by the best learned men of the empire—professors in the universities, poets, writers; all liberal-minded people joined in expressing their disapproval of this proposed measure. The bill, although mainly directed against socialism, was elastic enough to be applied with equal force against any one of the parties that might happen to offend the Government, and it had arrayed against it in the Reichstag all the liberal parties in addition to the Social Democrats. The Government relied chiefly on the support of the Conservatives and the Ultramontane party. After its first reading in the Reichstag it was referred to a committee, and here it underwent considerable changes and modifications. Attempts were made to win the Clericals for the Government, but that party was mindful of the fact that it owed its existence to the *Culturkampf* and the repressive laws originating therefrom. It was therefore not disposed to grant to the Government powers which could be turned against it at any moment unless by giving this weapon to the Government it could derive material benefits. While the bill was in the hands of the committee the Clericals succeeded in gaining many modifications to suit their purposes, and when the bill emerged from the committee room there appeared to be a prospect that with the aid of the Clericals the bill would be adopted. When it came before the Reichstag for a second reading it was found that the Government insisted

on the bill in its original form. The Clerical party, which had agreed to support the Government under the impression that the latter had tacitly consented to the modifications, refused to vote for the original bill. When section 112 was reached only the Clericals voted for the section as modified, and when the section in its original form was read, only the Conservatives voted for it. Eugene Richter then proposed to dispose of the entire bill at once, and not to waste any more precious time upon it. Accordingly, the different paragraphs of the bill were taken up successively, and were rejected by the Reichstag by large majorities, so that not even the formality of a division was required. Thus ended with the inglorious defeat of the Government a campaign undertaken, as the Government expressed it, for the defense of religion, morality, and social order.

The Government had to sustain another defeat in the rejection by the Reichstag of the tobacco-tax bill. This bill provided for a reduction of the import duty on foreign-grown tobacco by 45 marks per 100 kilogrammes, the abolition of the system of specific duties on home-grown tobacco, and substitution for the latter of an *ad valorem* duty of 25 per cent. for cigars and cigarettes and 40 per cent. for snuff and smoking and chewing tobaccos. At the time of its introduction into the Reichstag, the Government declared that these new duties were necessary to prevent a threatened deficit in the budget, and it was expected that the Clericals would rally to its support. When it came before the committee it appeared that there would be no deficit in the budget, and even the committee rejected it. When it came before the House on a second reading, it was rejected by a large majority, only the Conservatives and National Liberals voting for it.

The other two bills mentioned in the speech from the throne were never even laid before the Reichstag. A bill dealing with the regulation of the imperial finances was defeated. The whole accomplished by the Reichstag in its five months' sittings, amounted to the adoption of the budget, 2 bills dealing with the taxation of sugar and spirits, a customs-laws amendment bill, a measure providing for the punishment of slave trading, 2 bills granting pensions to veterans or their widows and orphans, and a few minor proposals. Such lack of positive results has never been equaled by any Reichstag. The sessions closed on May 24.

Socialism.—The unsuccessful attempt of the German Government to combat socialism within the German Empire by means of repressive laws in the shape of the *Umsatzvorlage* only served to unite the socialists for stronger activity and helped to increase their numbers. Hitherto the strongholds of the socialists have been large cities and the industrial centers, but the distressing condition of the agrarian population contributed to swell the socialists' ranks in districts where formerly socialism was unknown. In order to meet the demands of this wing of the party for recognition in the party platform, an agrarian committee was appointed to draft amendments to the party principles, which were to be submitted to the Socialist Congress at its meeting at Breslau. The committee prepared a

programme of which the principal points were: The abolition of all administrative functions and of all privileges connected with real property, as well as of any remains of the feudal system; the preservation and increase of public landed property, the transfer of property in mortmain, of the forests, and of water power to the community, under the control of the representatives of the people; the introduction of a right of pre-emption for the communes in case of the sale of property by public auction, and the management of their property by the state and the communes on their own account, or by associations of rural laborers or small proprietors, or, if that was not attainable, by self-dependent tenants, under the supervision of the state or the commune; state credit for associations or for communes for the purpose of improving property; the payment by the empire or state of the expenses involved in the construction and repair of the public means of communication and of dams and dikes; the nationalization of mortgages and a reduction of the rate of interest thereon; state help for distress caused by the elements of Nature; and an extension of forest and shooting rights. This programme, although rejected by the congress, was declared by a resolution accompanying the rejection to form a basis upon which a new committee was to prepare amendments to be laid before the congress in 1896.

Great celebrations were prepared and held throughout the German Empire to commemorate the twenty-fifth anniversary of the victory of the German army over that of France. The socialistic press urged its adherents to refrain from taking part in these celebrations, and especially from celebrating the fall of Sedan, on the ground that it would be an unbrotherly act toward the French socialists. In a good many places the socialists announced their intention of holding meetings to denounce these celebrations, of which Emperor William was the prime mover. Their press assailed the memory of Wilhelm I in recalling his repressive laws. On Sept. 2, 1895, the anniversary of the battle of Sedan, Emperor William II, in proposing a toast to the Guards at a banquet in the White Hall of the royal castle, concluded his speech as follows: "Yet in the sublime and noble joy of these celebrations a note has been struck which truly has no place there. A rabble unworthy to bear the name of Germans have dared to revile the German people, have dared to drag in the dust the sacred person of their late honored Emperor. May the whole people find strength to repel these monstrous attacks! If not, I now call upon you to resist this treasonable band, to wage a war which will free us from such elements." The Social-Democratic papers took up this speech and attacked the Government and the Emperor in violent articles. This and the aspersions upon Wilhelm I led to the arrest of several of the most prominent socialistic editors, and the institution of charges against them for *lèse-majesté*. A number of socialistic newspapers were confiscated and, with the aid of some old Prussian laws, repressive measures against the socialists were adopted throughout the Kingdom of Prussia. The plant of the "Vorwärts," the leading paper of the socialists in

Berlin, was seized. Prominent socialists were arrested, their houses searched, and all papers and documents confiscated, with the result that the headquarters of the Social-Democratic party was removed to Hamburg, where the Prussian laws are not applicable.

The Agrarian Movement.—When, in 1893, the Agrarian League was formed, there was little indication that within two years the Agrarians would succeed in arousing the whole country on the question of agrarian reforms. Nevertheless, the question of relieving the distressing condition of agriculture has assumed tremendous proportions. In 1894 Count Kanitz proposed a measure of relief which, although coming from a staunch Conservative, was socialistic in its scope. He proposed that the Government should go into the grain business, that it should have an absolute monopoly of the importation and sale of foreign cereals, and should fix a price for domestic cereals which would be large enough to yield a comfortable profit to the producer. This proposal was placed before the Prussian Herrenhaus and adopted there by a large majority. It was discussed in the press, in the Reichstag, by citizens and ministers of state, but the Government did not declare itself either way. It recognized that something had to be done to save agriculture in the empire from ruin, but it did not care to commit itself to a scheme like the Kanitz proposal. On the other hand, it had no definite measure of relief which it might substitute, and thus satisfy the clamor of the Agrarians for relief, which had been promised by the Government again and again. In order to escape from this embarrassing position and show the good intentions of the Government, Emperor Wilhelm called a meeting of a select committee of the State Council at Berlin on March 12, 1895, to inquire into the unfavorable condition of agriculture, its causes, and its remedies. Two proposals were laid before the 1894 Council, viz., Count Kanitz's motion and the currency problem. The deliberations of that body lasted ten days, with the result that the Kanitz motion was declared impracticable, while on the currency question the decision was neither for nor against a gold currency; it simply declares that an investigation of the currency question might be serviceable. The reasons for rejecting the Kanitz motion are: That such an extensive enterprise is not compatible with a proper conception of the position of the state in the industrial and economic life of the country; that the organization of the state is not suited to such a task; that such an undertaking would arouse discontent and suspicion, and would damage commerce in general and the export trade in particular; and finally, that it was not reconcilable with the commercial treaties, as it would restrict the guaranteed freedom of trade. For the relief of agriculture the Council recommends the reduction of the costs of production and transport, protection of the sugar and spirit industries, and a reform of the loan system.

This decision gave very little satisfaction to the Agrarians, who renewed their attacks against the Government and increased their demands. Count Kanitz's motion, though thought to be

dead, was reproduced and submitted to the Reichstag, and, contrary to all expectations, it was referred to a committee. One of the principal and most violent leaders of the Agrarians was the editor of the Berlin "Kreuz-Zeitung," Baron von Hammerstein, who for years had been the leader of the Conservative party. In August, 1895, rumors were heard that he was about to resign his position as managing editor, and at the same time appeared charges against him in several newspapers for mismanaging the funds of the "Kreuz-Zeitung." These charges were denied by Baron von Hammerstein, and actions for libel were instituted against the responsible editors of the respective papers. Shortly before the trial of these actions Baron von Hammerstein absconded, leaving his personal effects in charge of a governor, whose wages he forgot to pay in his hurry to get away. The poor woman was left destitute, and, in order to obtain what was due her, she sold Hammerstein's correspondence to the editors of the Social-Democratic paper "Vorwärts." This correspondence contains compromising letters of members of the Conservative and Agrarian parties, addressed to von Hammerstein, and the "Vorwärts" published one letter after another. Von Hammerstein was apprehended in Athens on Dec. 30, 1895, and brought back to Germany.

GIFTS AND BEQUESTS. The following list comprises the most notable gifts and bequests for public purposes, of \$5,000 each and upward in amount or value, that were made, became operative, or were completed in the United States during 1895. It excludes the ordinary denominational contributions for educational and benevolent purposes; State and municipal appropriations to public and sectarian institutions; and the Fayerweather bequests to colleges (see "Annual Cyclopaedia" for 1894, concerning which the New York Supreme Court, in December, 1895, set aside the deed of trust, allowing the original bequest to stand. The known value of the gifts and bequests enumerated exceeds \$32,800,000.

Abbott, George A., Dexter, Me., gift to the new, a public-library building, July 2, 1895; cost, \$10,000.

Abbott, Vesta, Concord, N. H., bequests to local charitable and religious organizations, \$27,300.

Adams, Frederick C., Kingston, N. Y., bequests to the city for a town hall and public library, now available, over \$80,000.

Adriance, Mrs. John P., Poughkeepsie, N. Y., bequests to local churches and charities, \$4,000.

Aldridge, Sarah M., Newark, N. J., bequests to the Church of the Redeemer \$1,000, and to three local charities the reversion of \$5,000.

American Education Society, gift from a New England friend for an endowment, \$40,000.

American University, Washington, D. C., gift from a woman of New York city for a chair of history, \$100,755; also gifts from friends for a hall of history, \$150,000.

Anderson, Mrs. A. A., Greenwich, Conn., gift to the city, a public library.

Anderson, J. Henry, Brooklyn, N. Y., bequests to Plymouth Church, Secoy Hospital, Children's Aid Society, and Consumptives' Home, in equal parts, \$44,000.

Atrill, Mrs. Coraella A., New York city, gift to Columbia College for 2 art scholarships, \$4,000.

Avery, Samuel P. and **Mary O.**, New York city, gift to Architectural Library of Columbia College, \$10,-

000, making total money gift \$25,000, besides the costly collection of books.

Ayer, Edward E., Chicago, Ill., gift to the Newberry Library of that city, his collection of Americana, comprising about 2,000 books, drawings, maps, manuscripts, photographs, etc., representing thirty years' research.

Ballantine, John H., Newark, N. J., bequests to American Bible Society, Boards of Foreign and Domestic Missions of the Reformed Church, and to 5 charitable institutions, each \$5,000; total, \$40,000.

Ballantine, Mrs. John H., Newark, N. J., gift to the Female Charitable Society, \$10,000.

Balton, Matarin M. See OBITUARIES, AMERICAN.

Balton, Newton H., M. D., Lansingburg, N. Y., bequest to St. Luke's Church, of Mechanicville, \$40,000.

Bailegan, Joseph J., of Providence, R. I., gift for a chair of political economy in the Catholic University of America, \$50,000; also, with his wife, gift of the St. Maria Home for Working Girls, Providence, R. I., dedicated Jan. 15, 1895.

Barnard College, New York city, gifts from 2 friends, each \$100,000, one toward a new building.

Barnard, Henry, New York city, gift to the Montefiore Home, an apartment house; equity, \$75,000.

Barr, Miss Ellen M., New Ipswich, N. H., bequest to Radcliffe College (Harvard) for scholarships, residuary estate estimated at \$40,000.

Bates College, Lewiston, Me. (friends of), gift of Roger Williams Hall for Cobb Divinity School.

Beckwith, Abby H., Providence, R. I., several charities; \$7,000 in all.

Bellerive (N. J.) Reformed Church, gift from friends, a chapel; cost, \$9,000.

Berkeley Divinity School, Middletown, Conn., friends of, gift for construction of Williams Memorial Library, \$30,000.

Bishop, Charles B., San Francisco, Cal., gifts for schools and benevolent societies in the Hawaiian Islands, which had been sustained by the late Mrs. Bishop, aggregating \$800,000.

Board of Education, Brooklyn, N. Y., gift from friends, the Erasmus Hall Academy (chartered 1786) in Flatbush, for a high school; value, \$150,000.

Brittin, Pemberton, Newton, N. J., bequests to Dennis Library and Christ Church, of Newton, each \$5,000.

Brown, Anna, Quincy, Ill., bequests to Illinois Humane Association, \$70,000; Quincy Humane Society, \$14,000; Connecticut Humane Society, \$42,000; Louisiana Humane Society, \$42,000; Massachusetts Humane Society, \$14,000; Old Folks' Home, Quincy, \$55,000; Illinois Industrial School for Girls, \$5,000; and Quincy Woodland Orphan Home, \$5,000—in all, \$247,000; for other charitable purposes, \$103,000.

Brown, Martha Wheeler, Manchester, N. H., bequests to New Hampshire Home Missionary Society, \$3,000; Franklin Street Church, \$5,000; Woman's Aid and Relief Society, \$1,000; city of Manchester, \$500; and residue of her estate, estimated at over \$50,000, to Dartmouth College and the Manchester Children's Home.

Browne, Abby B. K., Gloucester, Mass., bequests to Congregational societies, \$12,900.

Bull, Mrs. Mary Putnam, Tarrytown, N. Y., bequests to Davenport (Iowa) Academy of Natural Sciences, \$10,000; and to various churches and institutions, an aggregate of \$24,400.

Burham, Thomas Oliver Hazard Perry, Boston, Mass. (see obituary in "Annual Cyclopaedia" for 1891), bequests distributed by executor to the Massachusetts General Hospital, residuary legatee, \$263,000; town of Essex, \$40,000; Massachusetts Institute of Technology, \$30,000; Tufts College, \$10,000; Home for Aged Men, in Boston, \$10,000; 9 charitable institutions, each \$5,000; and 4 others, each \$2,000; total, \$384,000.

Burroughs, S. M., Medina, N. Y., bequests to John Parsons Presbyterian Church and Boxwood Cemetery, Medina, each \$25,000.

Cady, David, Amsterdam, N. Y., bequests to Amsterdam Library Association, a block of buildings, value,

\$10,000; and to benevolent organizations, an aggregate of \$5,500.

Cady, Mrs. Henrietta, Sing Sing, N. Y., bequests to the Board of Home Missions of the Presbyterian Church, for Indian Schools in Alaska, \$11,000; Board of Foreign Missions, \$5,000; and the American Female Guardian Society, \$5,000.

Callender, Elizabeth, Newport, R. I., bequests to Presbyterian Board of Relief for Disabled Ministers, \$4,000; and for a free bed in Newport Hospital, \$3,000.

Campbell, Miss Clara, Ironton, Ohio, bequests, available on the death of certain relatives, to the Methodist Woman's Home Missionary Society and the International Missionary Alliance, an estate, estimated at \$100,000.

Cannon, Henry Le Grand, New York city, bequests to National Academy of Design, for prizes, \$3,000; to the University of Vermont, his East Indian curios and bric-a-brac and \$2,500; and to St. Paul's Church, Burlington, Vt., for chime of bells, \$2,500.

Carleton, James H., Haverhill, Mass., bequests, made available by the death of his sister, to the Haverhill City Hospital, \$25,000; Haverhill Public Library, \$15,000; North Church, Haverhill, \$30,000; Young Men's Christian Association, \$15,000; Carleton College, Northfield, \$8,000; city of Haverhill, for a high school scholarship, \$5,000; American Commissioners for Foreign Missions, \$5,000; American Home Missionary Society, \$5,000; Andover Theological Seminary, \$5,000; Riverside Congregational Society, Haverhill, \$5,000; Union Congregational Church, \$6,000; American Bible Society, \$2,000; Old Ladies' Home, Haverhill, \$3,000; Female Benevolent Society, \$2,000; Whittier Birthplace Association, \$1,000; in all, \$132,000.

Sloane, Mr. and Mrs. William D., New York, joint gift to the Sloane Maternity Hospital, for an addition, \$300,000. Mrs. Sloane endowed the original building with \$250,000, and has promised to meet all the expenses of the institution during her lifetime.

Sloane, Mrs. William D., Mrs. H. T. Auchmuty, Mrs. Isaac Bell, William C. Schermerhorn, Morris K. Jessup, and others, New York, gift, a home for consumptives in Denver, Col., cost \$100,000.

Smith, Agnes H., Boston, Mass., bequests to Home for Aged Couples, \$10,000; trustees of Donations for Rectory, \$10,000; and two relief societies, each \$1,500.

Smith estate, of Massachusetts, gift to Wilbraham Academy for a gymnasium, \$20,000.

Smith, Mrs. Heloise C., West Chester, Pa., bequests to the Protestant Episcopal City Mission, her country seat valued at \$100,000, with a cash endowment.

Smith, Mrs. James W., Brooklyn, N. Y., gift to South Third Street Industrial School, \$25,000.

Smith, Richard, Philadelphia, bequest, now available, for the erection and maintenance in Fairmount Park of a monumental memorial of distinguished citizens of Philadelphia who took part in the civil war, and also a playhouse and grounds for children, his entire estate, estimated at over \$1,000,000.

Smith, Sebastian B., D. D. See OBITUARIES, AMERICAN.

Souderbeille, Mme., daughter of the late Horace F. Clark, bequest to Williams College, \$20,000.

Spalding, Edward, M. D., Nashua, N. H., bequests to Dartmouth College, \$5,000; American Board, \$5,000; American Missionary Association of New York, \$5,000; New Hampshire Orphans' Home, \$5,000; Tuskegee (Ala.) Normal Institute, \$5,000; New Hampshire Bible Society, \$4,000; and First Congregational Church, Nashua, \$1,000; total, \$30,000.

Stachelberg, Michael, New York, bequests in reversion to 5 Hebrew benevolent institutions, an aggregate of \$10,000.

Stearns, George M., Watertown, Mass., gift to First Parish Church, an organ, value \$5,000.

Stevens family, Hoboken, N. J., gift toward a building for a free public library and a manual training school, \$25,000.

Stevens, Paron, New York, bequest to the town of Claremont, N. H., now available, \$40,000.

Stickney, Mrs. Elizabeth H., Chicago, gift to the parish of St. James's Protestant Episcopal Church, a rectory, cost \$20,000.

Stone, David M. See OBITUARIES, AMERICAN.

Stranahan, Mrs. James S. T., Brooklyn, N. Y., gift to the University of Michigan, to found scholarships, \$25,000.

Straus, M., Elyria, Ohio, gift to Oberlin College, property valued at \$40,000.

Sugden, Richard, Spencer, Mass., bequests to the Public Library, buildings valued at \$35,000; and to an old ladies' home, his residence property.

Sutro, Adolph, San Francisco, gifts to the regents of the University of California, 13 acres within the city limits on which to erect buildings for the affiliated colleges of the university; and to the city, an adjoining tract of similar size as a site for a library of over 200,000 rare volumes, for which he will erect a building. The present value of the gifts is about \$1,500,000, and when the improvements and library building are finished it will be about \$2,000,000.

Syracuse University, gift from a friend, \$10,000.

Taylor, Henry Augustus, Milford, Conn., gift to the town, a library building.

Thorn, John, Utica, N. Y., bequests to Tabernacle Baptist Church, Utica, \$20,000; Home for Aged Men, Utica, \$15,000; and Baptist Home Missionary Society, Baptist Missionary Union, New York State Baptist Convention, Baptist Publication Society, and New York State Baptist Educational Society, each \$5,000; total, \$60,000. In life he is believed to have given over \$500,000 to charitable and educational institutions in Utica.

Thorne, Jonathan, Millbrook, N. Y., children and grandchildren of, school building with public hall and library, cost \$100,000.

Townsend, Amos, Cleveland, Ohio, bequests to local charities, \$13,000; and to Lakeside Hospital, his residuary estate estimated at \$40,000.

Turner, Mrs. Mary B., Boston, Mass., bequests to 11 benevolent institutions in Boston and Randolph, an aggregate of \$36,000; and to Massachusetts General Hospital, Home for Aged Couples, Home for Aged Men, Home for Aged Women, and Kindergarten for the Blind, her residuary estate, in equal shares.

Tuskegee (Ala.) Normal Institute, gift from friends for a chapel, \$12,000.

Tuttle, Mrs. Sarah, Hartford, Conn., bequests to the Old People's Home, \$10,000; Larrabee fund, \$5,000; Hartford Hospital, \$5,000; Hartford Orphan Asylum, \$5,000; other institutions, \$3,000.

Underhill, Mrs. Elizabeth B., New York, bequest for a free church and congregation in New York city, to be under the jurisdiction of the Protestant Episcopal Church, \$75,000.

Union College, Schenectady, N. Y., Western alumni of, gift, funds for a new dormitory.

University of Michigan, gifts for a woman's gymnasium, from 2 of the regents, \$35,000; and from friends, \$15,000.

University of Pennsylvania, gifts for the naming of an apartment in the new dormitory system, from Charles C. Harrison, Alfred C. Harrison, Thomas F. Dolan, Robert E. Foerderer, William M. Singler, Hugh Craig, Jr., Alice D. Craig, Thomas McKear, E. H. Fidler, J. E. Bayard, Richard F. Soper, the Misses Blanchard (2), and Hatfield, Burnham, Williams & Co., each \$10,000; total, \$140,000.

University of the City of New York, gift from a friend, funds to defray cost of a central building on the new site. The building will comprise a museum, library, commencement hall, and administration offices, and will cost \$250,000.

Vanderbilt, Cornelius, Frederick K., George W. and William K., New York, joint gift to Vanderbilt Clinic and the College of Physicians and Surgeons, New York city, for additions to buildings, \$350,000.

Vanderbilt, Mrs. Frederick W., New York, gift for a operating room in Newport (R. I.) Hospital, \$5,000, supplementing a former gift of \$3,000.

Voorhes, Peter L., Camden, N. J., bequests to Cooper Hospital, \$7,000; to 2 churches, each \$1,500; and to Cooper Hospital, conditionally, \$20,000.

Wals. Mr. and Mrs. George W. Boston, gift to the Boston Museum of Fine Arts, 700 specimens of ancient and modern pottery and porcelain.

Walker. Mrs. Hope Potter, Boston, Mass., bequest to the Bristol (R. I.) Old Ladies' Home, her estate of \$40,000, excepting \$1,000 for Indian and home missions.

Wallace. Rodney, Fitchburg, Mass., gift to the town of Hingham, N. H., a library; dedicated June 12.

Warren. William M., Boston, bequest to Boston Museum of Fine Arts, available on the death of his widow, \$50,000. Mrs. Warren has waived her rights, and the money has been paid.

Waterhouse. Rufus, New York, bequests to St. Luke's Hospital, for a ward for consumptive sewing women, \$5,000, and the principal of 4 trusts, of \$10,000 each.

Webster College. Massachusetts, gift from friends of the late Prof. Lewis B. Monroe, for readings and lectures, \$2,000.

Wells. Mr. and Mrs. Henry and Mr. and Mrs. Frederick H. Burlington, Vt., joint gift for a residence for the Protestant Episcopal Bishop of Vermont, \$21,000.

Whitall. Matthew J., South Worcester, Mass., gift to St. Matthew's Protestant Episcopal Church, \$30,000.

Wicks. W. W., Brooklyn, N. Y., gift to Lafayette Avenue Presbyterian Church, for its missionary and benevolent societies, \$20,000.

William Academy. Massachusetts, gift from a friend, for a scholarship, \$5,000.

Willis. Moses (second), Cambridge, Mass., bequests, available by the death of his widow, to 11 State, Marine, and other benevolent institutions, over \$150,000; also special bequests of \$22,000.

Wilkens. Mrs. Martha W., Cambridge, Mass., bequests, conditional, to Bates College, Lewiston, Me., and Carleton College, Northfield, Minn., each \$20,000; and outright to the Congregational National Council, \$1,000, resolvable in reversion to the American Board.

Williams. Dr. E. H., Philadelphia, gift to University of Vermont, a science hall, cost, with equipment, \$12,000.

Werner. Simon, New York (died July 30, 1895), sum of gifts to Hebrew institutions, an aggregate of \$15,000.

Wright. John, Philadelphia, bequests to the Maternity Hospital, the Society to Protect Children from Cruelty, Germantown Hospital, and Howard Hospital, each \$5,000.

Wright. J. Hood, New York, bequest to Manhattan Dispensary, a large residuary estate, of which \$100,000 may be applied as a building fund.

Young Men's Christian Association. New York city, gifts from 25 friends, toward a building on the West Side, near Central Park, \$200,000. On the completion of this subscription, to be added to the bequest of the late William H. Vanderbilt, for this purpose, now amounting to \$140,000, Mr. and Mrs. Samuel Insull donated the association, in fulfillment of a pledge, real estate, valued at \$200,000.

Zacharia. Mrs., New York, gift for a new chancel for the Church of the Transfiguration, \$60,000; first completed Feb. 3.

GREAT BRITAIN AND IRELAND, a monarchy in western Europe, formed by a union of the British Kingdom, into which the Kingdoms of England and Scotland and the Principality of Wales are merged, and the Kingdom of Ireland, holding supreme dominion over the Empire of India and dependencies of various kinds, from self-governing colonies to barbarian protectorates, the whole constituting the British Empire. The reigning sovereign is the Queen-Empress Victoria, born May 24, 1819, daughter of Edward, Duke of Kent, fourth son of George III, of the house of Guelph, descended from a Margrave of Hesse of the eleventh century, who married the daughter of Guelph, Count of Altdorf, near Re-

gensburg. The Guelphs became by marriage and inheritance Dukes of Bavaria, and afterward Dukes of Saxony and Lords of Brunswick and Lüneburg, and have been Dukes of Brunswick since 1235. Ernst August, who was made Elector of Hanover in 1692, married a princess of the house of Stuart, and his son was proclaimed successor to the throne of Great Britain and Ireland in 1701, and was crowned under the name of George I in 1714. Victoria is the fifth monarch of the Brunswick-Lüneburg line. The heir apparent is Albert Edward, Prince of Wales, born Nov. 9, 1841, and married to Alexandra, Princess of Denmark. George, Duke of York, the only living son of this union, born June 3, 1865, married Victoria, daughter of the Duke of Teck, who on June 23, 1894, bore him a son, christened Albert Edward.

The power to legislate for the United Kingdom and, except so far as is delegated to the local legislative authorities, for the whole British Empire is vested in the Parliament, which consists of the House of Lords and the House of Commons. Lords are the princes of full age of the blood royal, of whom there are 5; the 2 Anglican archbishops, the bishops of London, Durham, and Winchester, and 21 other English bishops of ancient sees; the heads by right of primogeniture of the noble houses of England, of Great Britain, and of the United Kingdom, and peers created by the sovereign, of whom there are altogether 494 over twenty-one years of age; 16 Scotch peers elected for each Parliament from among 36; and 28 representatives whom the 94 Irish peers elect for life. The House of Commons has 670 members, elected by the registered electors of counties, boroughs, and universities. In counties, as well as in boroughs, every householder or lodger is now a qualified voter. There are 253 English, 39 Scotch, and 85 Irish county members; 237 English, 31 Scotch, and 16 Irish borough members; and 5 English, 2 Scotch, and 2 Irish university members. There were 6,229,120 registered electors in 1893, of whom 4,862,758 were in England and Wales, represented by 495 members; 619,091 were Scotch, represented by 72 members; and 747,271 were Irish, represented by 103 members. The duration of Parliament, unless it is previously dissolved, is seven years. The executive power is exercised in the name of the sovereign by a committee of ministers, whose tenure of office depends upon their retaining the support and confidence of a majority of the House of Commons, and thus being able to initiate and control legislation. The legislative programme for each annual session is set forth in brief and general terms in the royal address. When through the defection of former supporters and the successes of the opposite party in by-elections a ministry finds itself in a minority on a political question and its policy condemned by a vote of the House, Parliament is prorogued, and the Government appeals to the country by issuing a proclamation of dissolution and writs for new elections, or the Prime Minister advises the sovereign to send for the leading statesman of the opposite party, who is requested to form a new Cabinet to take over the seals of office and the executive business of the kingdom and empire. If he accepts, unless he is sure of the sup-

port of Parliament in the policy that he is prepared to inaugurate, he also dissolves Parliament and orders new elections to be held throughout the United Kingdom.

The Cabinet that assumed office on Aug. 18, 1892, as the result of the general elections, represented a coalition of Gladstonian Liberals and Irish Home Rulers, and was pledged to introduce Irish self-government. This ministry, as reconstructed after the retirement of Mr. Gladstone in the beginning of March, 1894, was composed as follows: Prime Minister, First Lord of the Treasury, and President of the Council, the Earl of Rosebery; Lord High Chancellor, Lord Herschell; Chancellor of the Exchequer, Sir William Vernon Harcourt; Secretary of State for Foreign Affairs, the Earl of Kimberley; Lord Privy Seal and Chancellor of the Duchy of Lancaster, Lord Tweedmouth; Secretary of State for India, Harry H. Fowler; Secretary of State for the Home Department, Herbert H. Asquith; Secretary of State for the Colonies, the Marquis of Ripon; Secretary of State for War, H. Campbell-Bannerman; First Lord of the Admiralty, Earl Spencer; Chief Secretary to the Lord Lieutenant of Ireland, John Morley; President of the Board of Trade, James Bryce; President of the Local Government Board, G. J. Shaw-Lefevre; Secretary for Scotland, Sir George Otto Trevelyan; Postmaster-General, Arnold Morley; Vice-President of the Council on Education, A. H. Dyke Acland.

Area and Population.—England has an area of 50,867, Wales 7,442, Scotland 29,785, Ireland 32,583, the Isle of Man 227, and the Channel Islands 75 square miles; total United Kingdom, 120,979 square miles; England, on April 5, 1891, had 27,483,490 inhabitants, 13,291,402 males and 14,192,088 females; Wales had 1,519,035 inhabitants, 761,499 males and 757,536 females; Scotland had 4,025,647 inhabitants, 1,942,717 males and 2,082,930 females; Ireland had 4,704,750 inhabitants, 2,318,953 males and 2,385,797 females; and there were 55,608 inhabitants in the Isle of Man, 92,234 in the Channel Islands, and 224,211 soldiers and sailors abroad; total population of the United Kingdom, 38,104,975. The estimated population of England and Wales in 1894 was 30,060,763; of Scotland, 4,124,691; of Ireland, 4,593,577.

The population of the three kingdoms, counting for England persons above the age of ten years only, was divided in 1891, in respect to occupation and means of living, as follows:

CALLINGS.	England.	Scotland.	Ireland.
Agriculture and fisheries...	1,936,945	240,124	996,759
Commerce.....	1,399,785	189,952	83,173
Industry.....	7,536,344	1,032,404	656,410
Liberal professions.....	926,182	111,819	214,243
Domestic.....	1,900,824	203,138	235,144
Without profession.....	9,154,373	2,248,695	2,559,921
Total.....	22,058,757	4,025,647	4,704,750

The estimated population of the large towns of England and Wales in 1894 was as follows: London (registration district), 4,349,166; Manchester, 520,211; Liverpool, 507,230; Birmingham, 492,201; Leeds, 388,761; Sheffield, 338,316; West Ham, 228,184; Bristol, 226,578; Bradford, 223,995; Nottingham, 223,584; Kingston-upon-

Hull, 212,679; Salford, 205,828; Newcastle-on-Tyne, 201,947; Leicester, 189,136. Scotland has 3 cities with over 150,000 inhabitants: Glasgow, 686,820; Edinburgh, 270,588; Dundee, 158,719. Ireland has 2: Belfast, 255,950; Dublin, 245,001.

The number of marriages in England in 1893 was 218,251; of births, 914,189; of deaths, 569,923; excess of births, 344,266. In Scotland the number of marriages was 27,090; of births, 127,040; of deaths, 79,641; excess of births, 47,399. In Ireland the number of marriages was 21,710; of births, 106,031; of deaths, 82,822; excess of births, 23,209.

The total number of emigrants in 1894 from the United Kingdom was 227,179, including foreigners. Of the total emigration, 159,605 persons went to the United States, 23,731 British America, 11,185 to Australasia, and 32,658 to other destinations. The British and Irish emigrants in 1894 numbered 156,806, which was 52,008 fewer than in 1893. Of these, 100,663 were English, 14,213 were Scotch, and 41,930 were Irish.

The Army.—The peace establishment of the regular army, according to the estimates, was, for the year ending March 31, 1895, as follows: Officers of the general staff, 332, with 130 assistants; accountants, 209; chaplains, 87; surgeon, 620; veterinarians, 76; cavalry, 553 officers, 1,371 noncommissioned officers, and 11,392 rank and file; royal artillery, 850 officers, 2,017 noncommissioned officers, and 20,546 rank and file; royal engineers, 588 officers, 1,222 noncommissioned officers, and 5,413 rank and file; infantry, 2,817 officers, 6,659 noncommissioned officers, and 79,295 rank and file; colonial corps, 161 officers, 372 noncommissioned officers, and 4,695 rank and file; departmental corps, 139 officers, 1,299 noncommissioned officers, and 2,924 rank and file; army service corps, 237 officers, 920 noncommissioned officers, and 2,729 rank and file; staff of yeomanry, militia, and volunteers, 600 officers, 6,199 noncommissioned officers, and 10 rank and file; instruction in gunnery and musketry, 35 officers, 100 noncommissioned officers, and 98 rank and file; Royal Military Academy, at Woolwich, 30 officers, 22 noncommissioned officers, and 18 rank and file; other colleges and schools, 39 officers, 109 noncommissioned officers, and 1 rank and file; regimental schools, 14 officers and 183 noncommissioned officers; other establishments, 99 officers, 63 noncommissioned officers, and 30 rank and file; total army, 7,496 officers, 20,689 noncommissioned officers, and 127,162 rank and file. The infantry consists of 3 regiments of guards, divided into 7 battalions, each regiment having its depot; 69 battalions of the line, with 65 depots; and 20 battalions stationed in South Africa, Canada, Bermuda, the West Indies, Malta, Gibraltar, Hong-Kong, Singapore, Ceylon, and Egypt. The weapon is the Lee-Metford rifle of 7-698 millimetres caliber, with a detachable magazine holding 8 cartridges. The cavalry forces are 3 guard regiments of cuirassiers, each of 8 troops; 17 regiments of the line, with 11 depots; and 1 battalion in Egypt, 1 in Natal, and 9 in the Indies. The weapon is the Martini-Metford carbine. The yeomanry numbers 10,697 men, organized since April, 1893, in 194

squadrons. The artillery comprises 20 batteries of horse artillery, with 2 depot batteries; 80 mounted batteries of field artillery, with 4 depot batteries; 10 mounted batteries; and 3 sections of garrison artillery, containing 97 companies, with 1 depot. The armament consists of breech-loading rifled cannon of 7.62 centimetres caliber for the horse artillery and 8.9 centimetres for the mounted batteries and muzzle-loading mountain guns. Each battery consists of 6 pieces. The engineers comprise 8 companies of field and 11 of fortress pioneers, 2 railroad companies, and 4 companies of surveyors, with 17 depot companies; 11 companies of submarine mines, with 1 depot company; and 1 battalion of telegraphists, 1 battalion of pontonniers, and 1 balloon section, with a depot. The number of horses provided in the estimates was 14,556. In the beginning of 1894 there were 105,550 officers and men in the home stations, of whom 75,435 were in England and Wales, 3,680 in Scotland, and 26,426 in Ireland. The troops stationed in Egypt numbered 5,015, and in the colonies there were 21,577. The regular forces, home and colonial, in returns for 1895 had 143,788 effectives; the army reserve, 80,559; militia, 126,273; yeomanry, 10,424; volunteers, 227,741; total, 588,785. The regular British troops drafted into the Indian army numbered 76,721, making the total effective regular British troops 665,506. There are 2 schools for the training of officers, the Royal Military Academy, at Woolwich, and the Royal Military and Staff College, at Sandhurst. Other military educational institutions are the military asylum and normal school, at Chelsea, the Hibernian Military School, at Dublin, the department for the instruction of artillery officers, the military medical school, and schools and libraries for the garrisons. The yearly requirements of recruits for the British army are from 32,000 to 36,000. About 17,000 men are transferred annually to the army reserve.

The Duke of Cambridge, field marshal commanding the British army, was retired in August in spite of his plaintive protests, and his moderate antagonist, Field-Marshal Viscount Wolseley, the foremost champion of military reform, was appointed his successor. During all the years that he was commander in chief the Queen's cousin was the object of incessant radical attacks as an exponent of the royal prerogative, having been appointed in 1856 at the dissolution of the Queen in spite of his failure as a general in the Crimean War, and being the recipient, though rich, of an annuity of £12,000 and the emoluments of various sinecures. Scientific military men and the chiefs of the War Office have long desired the removal of the pipe-smoking martinet who has fought every reform and was the chief obstacle to administrative reorganization on the modern Prussian model, to effect which Lord Wolseley was chosen in preference to the Duke of Connaught, the Queen's third son. Lord Wolseley assumed the chief command on Nov. 1.

The Navy.—The British navy since the completion in 1894 of the programme of the naval-defence act of 1889 has 10 first-class battle ships launched since 1890, 13 more built between 1880 and 1890 that can steam 15½ knots an hour or

over, 18 others above 6,000 tons of older type that are still classed as effective for port-defense or convoying purposes, if not for the line of battle, and 9 above 3,500 tons with from 9 to 12 inches of side armor, and armed with 18-, 22-, or 25-ton guns. Of the 10 new ships 7 ("Royal Sovereign," "Empress of India," "Repulse," "Royal Oak," "Komillies," "Resolution," and "Revenge") have a displacement of 14,150 tons, 18 inches of armor, engines of 13,000 horse power, giving a speed of 17½ knots, and carry 4 67-ton guns in barbette batteries, with an auxiliary armament of 10 6-inch, 16 6-pounder, and 12 3-pounder quick-firing guns, with 7 torpedo ejectors. There is another vessel ("Hood") in this class that carries her heavy guns in closed turrets. The 2 other new armor clads ("Centurion" and "Barfleur") are lighter and more mobile, having only 12 inches of armor and a displacement of 10,500 tons, and with the same engine power develop a speed of 18½ knots. Of 3 turret ships completed in 1891 and 1892, 2 ("Nile" and "Trafalgar"), of 11,940 tons, having 20 inches of armor over the vital parts, carry 4 67-ton guns and a secondary battery of 6 4.7-inch, 8 6-pounder, and 9 3-pounder quick-firing guns, and the third ("Sans Pareil"), of 10,470 tons and 18-inch plates, with engines indicating 12,000 horse power, carries 2 11-ton guns, 1 29-ton gun, 12 5-ton guns, and 12 6-pounder and 9 3-pounder quick-firers, and has engines of 14,000 horse power. These have a nominal speed of 16½ knots, and the 4 barbette ships launched in 1885 ("Benbow," "Camperdown," "Howe," and "Anson"), of 10,600 tons and 18-inch armor, develop the same speed with engines of 11,500 horse power, while they carry an armament of 4 67-ton and 6 5-ton guns, with 19 quick firers, and are fitted with tubes for discharging 5 torpedoes, 1 less than the vessels last mentioned. This standard of speed was fixed by a vessel of similar type ("Rodney"), whose main armament consists of 1 69-ton and 3 67-ton guns. Two turret ships ("Edinburgh" and "Colossus"), of 9,420 tons, having 18 inches of armor and an armament consisting of 4 45-ton and 5 5-ton guns and 14 quick firers, developed a speed of 15½ knots, the rate set by a lighter armed and protected vessel ("Conqueror") launched in 1881. Into a barbette ship that was next built ("Cedricwood"), of 9,500 tons, having the same side armor as they and the same armament, were put engines of 9,500 horse power, with which the speed of 16½ knots was first reached. These 4 ships come rather within the second class of squadron fighting ships than within the first, to which belongs a more recent turret ship ("Hero"), of 6,200 tons, which carries 2 45-ton guns and a powerful auxiliary armament, and makes 15½ knots an hour. There are 4 older vessels counted in the second class, 1 of which ("Temeraire") was the first British barbette ship, launched in 1876, and armed with 4 25-ton and 4 18-ton guns; 1 is a turret ship ("Dreadnaught") carrying 4 38-ton guns; and 2 ("Superb" and "Alexandra") carry 18- and 22-ton guns in a central battery. A monster vessel built at the same period ("Inflexible") of 11,880 tons, with plates 24 inches thick and 4 80-ton guns, is now accounted too slow and unwieldy for fleet purposes, and is not even

placed in the third class, which comprises 7 vessels, 2 of which ("Hercules" and "Sultan") carry 8 18-ton guns in a central battery and 5 are turret ships ("Monarch," "Devastation," "Thunderer," "Rupert," and "Neptune") armed with 38-, 20-, 22-, or 18-ton guns. There are 17 other armor-clads classed as efficient for coast defense, of which 8 ("Penelope," "Audacious," "Invincible," "Iron Duke," "Swiftsure," "Triumph," "Belleisle," and "Orion") have their guns disposed in a central battery, and 9 ("Hotspur," "Cyclops," "Glatton," "Gorgon," "Hecate," "Hydra," "Inflexible," "Agamemnon," and "Ajax") carry their heavy guns, mostly 25-, 20-, or 18-ton, in closed turrets.

A new programme of construction was begun upon as soon as the old was completed. The first vessel laid down ("Renown"), launched in May, 1895, is an improved "Centurion," with the same armament more effectively arranged and better protected; she has a displacement of 12,350 tons, engines of 10,000 horse power, is calculated to steam 17 knots, and is fitted with 5 torpedo ejectors of new design. The first ("Magnificent") of a class of colossal battle ships, of 14,900 tons displacement, was launched in 1894; a sister ship ("Jupiter") was launched on Nov. 18, 1895, and 7 others ("Majestic," "Prince George," "Caesar," "Hannibal," "Victorious," "Illustrious," and "Mars") are building. They will have engines of 12,000 horse power, capable of making 18 knots, and will be armed with 4 12-inch guns in barbettes and 12 6-inch and 28 smaller quick-firing guns, and have 5 torpedo ejectors.

Under the naval-defense act 9 first-class deck-protected cruisers were built, 5 ("Edgar," "Endymion," "Hawke," "Grafton," and "Theseus"), of 7,350, and 4 ("Royal Arthur," "Crescent," "St. George," and "Gibraltar"), of 7,700 tons, all equipped with engines of 12,000 horse power, capable of steaming 19½ or 20 knots an hour, with coal space for long cruises and an armament of 2 22-ton guns and 12 6-inch, 12 6-pounder, and 5 3-pounder quick-firing guns, except the "Royal Arthur," which carries only 1 heavy gun. Two older cruisers ("Blake" and "Blenheim"), of 9,000 tons, have engines of 20,000 horse power and a nominal speed of 22 knots. Seven belted cruisers launched in 1886 and 1887, of 5,600 tons and a nominal speed of 18½ knots ("Undaunted," "Aurora," "Australia," "Galatea," "Immortalité," "Narcissus," and "Orlando"), have also 2 22-ton guns, and nearly as large a secondary armament. Lighter deck-protected cruisers, of 5,600 tons and engines of 9,600 horse power, giving a trial speed of 19½ knots, of which 3 ("Eclipse," "Minerva," and "Talbot") have been begun, to be followed by 6 others ("Diana," "Dido," "Doris," "Isis," "Juno," and "Venus"), carry only quick-firing guns, 5 of 6 inches caliber, 6 of 4.7 inches, and several smaller ones. The "Talbot" was launched in April, 1895. Two enormous protected cruisers have been begun under the latest programme ("Powerful" and "Terrible"), of 14,000 tons, with engines of 25,000 horse power, designed to give a trial speed of 22 knots; the armament will be 2 9.2-inch, 12 6-inch quick-firing, and 18 12-pounder and 12 3-pounder quick-firing guns. The "Terrible" was launched in the Clyde on May 27, 1895. Every one of these cruisers is equipped

with 4 torpedo ejectors. There are 12 armored cruisers built between 1860 and 1885, which are classed as first class for convoying purposes ("Warrior," "Black Prince," "Minotaur," "Achilles," "Bellerophon," "Agincourt," "Northumberland," "Shannon," "Nelson," "Impérieuse," and "Warspite." There are 29 second-class cruisers built under the naval-defense act, which are of 2 types and sizes, 3,400 tons ("Apollo") and 4,360 tons ("Astræa"), with 9,000 horse power and a speed of 19½ or 20 knots. Three improved "Astræas" and 6 fast cruisers of another type are projected. The older second-class cruisers number 20, and the third-class cruisers and gunboats 172. Of torpedo craft there are 85 of the first class, including torpedo-boat catchers or torpedo gunboats of the "Rattlesnake" class, the more recent ones of the "Sharpshooter" class and the "Speedy" class, the still larger torpedo gunboats of the "Halcyon" class, and 42 of the new torpedo-boat destroyers, of which the "Havock," "Hornet," "Ardent," and "Daring" were the first to be completed; 33 of the second class; and 18 of the third class. The destroyers have a displacement of 220 tons, and are fitted with 5 torpedo tubes, and are armed with a 12-pounder quick-firing gun and, usually, 5 6-pounders. The torpedo-boat destroyers were decided on in 1893 on the theory that England, being the strongest naval power, has no need of torpedo boats, but rather of special craft large enough and fast enough to put torpedo boats out of action. As the French torpedo boats have a speed of 25 knots, the destroyers were tested for 27 knots. Abandoning the heavier types, of which the "Rattlesnakes," of 550 tons, marked the first departures followed by the "Sharpshooters," of 800 tons, and still larger "Speedy" class and "Halcyons," the Admiralty reverted to the first idea of the torpedo-boat catchers of 1885, boats of 200 tons, armed with quick-firing guns, and capable of overtaking the fleetest torpedo boats in all weathers. There were 23 completed before the end of 1895. The speed has been improved, the "Boxer," built by Thornycroft, making 29.17 knots. Since the "Sokol," built by Yarrow, showed 29.76 knots, and the French have turned out a torpedo boat ("Forban") speeding 31 knots, the 19 destroyers called for in 1896 will be required to show over 30 knots. New first-class cruisers to be begun in 1896 will be improved "Blenheims." Second-class cruisers, of about 5,750 tons, will have the armament of the "Talbot" class and similar, but increased protection. Third-class cruisers are to have a displacement of 2,100 tons, locomotive boilers developing 7,000 horse power, and giving a speed of 20 knots, an armament of 8 4-inch quick-firing guns, 8 3-pounders, and smaller guns, and in torpedo armament and general type and arrangements will resemble the "Barham" class, but will have greater free board and much larger coal capacity. There are under construction 10 first-class battle ships, 6 first-class cruisers, 13 second-class cruisers, 2 third-class cruisers, and nearly 50 torpedo-boat destroyers. Harveyized steel has been definitely adopted for armor plates. Besides locomotive boilers, Du Temple water-tube boilers, Thornycroft boilers capable of being forced under air pressure, and the Belleville

boiler have been tried, and the water-tube type has been adopted for most of the new ships. The number of officers, seamen, boys, coast guards, and marines provided for in the estimates for 1896 is 83,400. An attempt to recruit men from the mercantile marine having failed, the experiment was tried of engaging boys, not such as are taken on the ordinary training ships, but older boys that can be trained for the service in a few months. The complement of officers and men to be provided in 1897 is 88,850.

Commerce and Production.—The total value of the imports in 1894 was £408,505,718. The value of the exports of British products was £216,194,239; of re-exports of foreign and colonial products, £57,066,484. The values are not determined for the year, as in most countries; but the declared values are taken, subject to revision and a fine for false declaration. The exports of British produce shrank from \$31.80 per cwt. in 1891 to \$27.60 in 1893, and the imports from \$56 to \$51. Of the total imports in 1893, amounting to £404,688,178, British colonies and dependencies furnished 23½ per cent. and foreign countries 77½ per cent., and of the exports of British produce and manufactures 83 per cent. went to British possessions and 67 per cent. to other countries. The imports from and domestic exports to the different colonies and dependencies in 1893 were valued as follow:

BRITISH COLONIES.	Imports.	Domestic exports.
India.....	£36,233,949	£38,776,001
Australasia.....	39,844,762	15,068,480
British America.....	13,842,506	7,200,233
French Africa.....	5,550,128	8,554,386
Spanish Africa.....	4,518,987	1,736,367
British West Indies.....	885,634	1,822,047
French West Indies.....	1,740,580	2,284,251
Ceylon.....	4,232,734	899,730
British Islands.....	772,661	619,581
Channel Islands.....	1,236,264	780,965
West Africa.....	2,162,217	1,034,019
Malta.....	16,771	721,618
Mauritius.....	250,497	965,127
All others.....	881,509	1,256,706
Total.....	£91,769,454	£72,015,101

The imports of wheat in 1894 were 130,482,520 bushels. Including flour, the imports of wheat and other cereals were 178,477,173 hundredweight. The imports of flour were 19,134,605 hundredweight, of which 15,925,486 hundredweight came from the United States. Of wheat, 24,628,245 hundredweight were imported from the United States, 16,775,881 hundredweight from Russia, 13,272,152 hundredweight from the Argentine Republic, 5,349,056 hundredweight from India, 3,877,418 hundredweight from Australia, 2,828,515 hundredweight from Canada, 1,364,412 hundredweight from Chili, and 715,043 hundredweight from Germany. The imports of bacon and hams were 4,846,387 hundredweight; of fish, 2,556,929 hundredweight; of butter, 2,576,064 hundredweight; of margarine, 1,109,315 hundredweight; of cheese, 2,263,287 hundredweight; of beef, 2,346,405 hundredweight; of preserved meat, 554,346 hundredweight; of fresh mutton, 2,295,065 hundredweight; of refined sugar, 13,916,642 hundredweight; of raw sugar, 14,306,739 hundredweight; of tea, 244,474,625 pounds; of spirits, 11,989,863 proof gallons; of wine, 14,362,171 gallons. The imports

of live stock consisted of 484,764 sheep and lambs and 476,021 cattle.

The imports from foreign countries and the trade with them in British produce are shown in the following table:

FOREIGN COUNTRIES.	Imports.	Domestic exports.
United States.....	£91,769,457	£28,602,502
France.....	45,426,000	19,002,444
Germany.....	36,041,449	11,000,027
Netherlands.....	29,001,400	9,749,679
Russia.....	18,274,565	6,672,256
Belgium.....	16,469,879	7,124,302
Spain.....	14,278,300	5,615,416
Egypt.....	8,042,600	3,500,745
Denmark.....	5,000,000	2,000,799
Brazil.....	4,000,000	1,778,400
Sweden.....	3,000,000	1,000,000
Turkey.....	2,000,000	500,000
Argentine Republic.....	1,000,000	500,000
China.....	1,000,000	500,000
Italy.....	1,000,000	500,000
Chile.....	1,000,000	500,000
Romania.....	1,000,000	500,000
Norway.....	1,000,000	500,000
Japan.....	1,000,000	500,000
Portugal.....	1,000,000	500,000
Java.....	1,000,000	500,000
Philippine Islands.....	1,000,000	500,000
Austria.....	1,000,000	500,000

Foreign East Africa.....	1,000,000	500,000
Madagascar.....	1,000,000	500,000
Siam.....	1,000,000	500,000
All other countries.....	797,444	7,200,000
Total.....	£212,918,734	£74,607,564

The values of the principal imports in 1894 were: Cereals and flour, £48,223,785; raw cotton, £32,944,346; wool, £24,791,160; meat, £22,724,273; sugar, raw and refined, £19,149,576; butter and margarine, £16,515,300; wood and timber, £17,146,806; silk, manufactured, £12,749,035; tea, £9,840,206; woolen manufactures, £9,261,316; flax, hemp, and jute, £9,040,101; seeds, £7,125,534; leather, £7,004,156; fruits and hops, £6,270,824; cheese, £5,467,137; wine, £5,020,007; eggs, £3,786,730; coffee, £3,535,016; tobacco, £3,512,601; iron ore, £2,982,597; iron manufactures, £3,061,635; tin, £2,718,499; copper, £2,864,318; copper ore, £2,360,580; dried currants and raisins, £1,761,948; lead, £1,511,855; zinc, £1,194,771; bar iron, £555,928.

The values of the principal exports of domestic manufactures were: Cotton goods, £57,397,120; cotton yarn, £9,289,078; woolen goods, £14,035,544; woolen yarn, £4,731,874; linen manufactures, £4,604,639; linen yarn, £168,419; jute manufactures, £2,065,635; jute yarn, £382,482; apparel and haberdashery, £5,772,932; pig iron, £1,912,350; bar, angle, bolt, and rod iron, £822,557; iron wire, £221,422; iron hoops, sheets, and plates, £2,969,777; cast and wrought iron, £3,438,065; old iron, £226,873; steel, wrought

and unwrought, £2,474,311; hardware and cutlery, £1,888,126; copper manufactures, £2,367,433; machinery, £14,265,122; chemicals, £8,496,333. The value of the coal exported was £17,375,807.

The imports of the various classes of merchandise in 1893 and 1894 were as follow:

IMPORTS.	1893.	1894.
Live animals, for food.....	£6,351,704	£9,098,796
Articles of food and drink, free..	144,267,798	189,411,601
Articles of food and drink, dutiable.....	24,736,172	21,283,880
Tobacco.....	8,549,182	8,512,601
Metals.....	20,629,506	19,062,612
Chemicals, dyes, and tanning substances.....	6,353,119	6,818,268
Oils.....	7,409,905	7,505,708
Textile materials.....	68,007,487	70,623,485
Various raw materials.....	40,988,806	43,091,143
Manufactured articles.....	65,834,296	68,958,591
Miscellaneous articles.....	15,958,085	15,730,206
Miscellaneous, by parcel post....	619,118	808,592
Total.....	£404,688,178	£408,505,718

The values of the exports of British produce of various classes for the two years were as follow:

EXPORTS.	1893.	1894.
Live animals.....	£629,991	£665,353
Articles of food and drink.....	10,619,408	10,698,194
Raw materials.....	17,035,872	19,816,100
Textile fabrics and yarns.....	96,534,056	96,090,032
Metals and metal manufactures....	80,897,175	28,045,527
Machinery.....	18,917,543	14,265,122
Apparel, etc.....	9,548,516	8,740,732
Chemicals and medicines.....	8,650,813	8,496,333
All other articles.....	29,250,140	28,267,710
Miscellaneous, by parcel post....	1,012,351	1,109,136
Total British produce.....	£218,094,565	£216,194,239

The area under grain crops in Great Britain in 1894 was 7,854,974 acres, having decreased in twenty years 1,576,516 acres; the production of hops showed a like decrease, the growing of flax has almost ceased, and green crops fell off 10 per cent., about the same amount of land being added to the meadows, while the rest of the land that went out of tillage was turned into permanent pasture, the area of which increased from 13,178,412 acres in 1874 to 16,465,069 in 1894. The crop of wheat in 1894 was 59,173,000 bushels in Great Britain and 1,666,000 in Ireland; barley, 72,295,000 bushels in Great Britain and 6,211,000 in Ireland; oats, 135,463,000 bushels in Great Britain and 55,701,000 bushels in Ireland. The number of horses in the United Kingdom in 1893 was 2,079,587; of cattle, 11,207,554; of sheep, 31,774,824; of pigs, 3,278,030.

The United Kingdom's output of coal for 1893 was 164,325,795 long tons, value £55,809,808; of iron ore, 11,203,476 tons, value £2,827,947; of iron, 3,978,694 tons, value £9,333,797; the value of all metals produced from British ores, £10,649,610; total value of mineral products, £70,767,651, which was £11,583,109 less than in 1892. There were 718,747 persons employed in the mines, 579,978 of them underground. The exports of coal in 1893 were 29,031,955 tons, valued at £14,375,476. The imports of iron ore were 4,065,000 tons; the total production of pig iron, 6,977,000 tons. The number of furnaces in blast in 1892 was 362, against 414 in 1890. The im-

ports of cotton in 1893 were 1,416,780,064 pounds; the year's consumption of raw cotton was 1,482,000,000 pounds. The imports of raw wool were 677,947,464 pounds; including the home product, wool clipped from imported sheepskins, and imports of goat hair and woolen rags, the year's supply was 951,000,000 pounds, of which 362,000,000 pounds were exported. The actual consumption of wool was 580,000,000 pounds; the consumption of flax and tow, 200,000,000 pounds. The quantity of cotton piece goods exported was 4,652,000,000 yards; of woolen goods, 194,000,000 yards; of linen, 158,000,000 yards; of cotton yarn, 206,000,000 pounds; of woolen yarn, 50,000,000 pounds; of linen yarn, 16,000,000 pounds; the total value of cotton exports, £63,700,000; of woolen exports, £20,900,000; of linen exports, £5,800,000.

Navigation.—The number of vessels in the foreign trade entered at the ports of the United Kingdom during 1893 was 59,916, of 37,142,000 tons, of which 36,587, of 26,919,000 tons, were British, and 23,329, of 10,223,000 tons, were foreign; the number cleared was 59,918, of 37,491,000 tons, of which 36,511, of 27,229,000 tons, were British and 23,407, of 10,262,000 tons, were foreign. Of 20,484,183 tons, the foreign tonnage cleared and entered, 5,013,533 tons belonged to Norway, 3,789,702 to Germany, 2,155,707 to the Netherlands, 1,848,856 to Sweden, 1,787,583 to France, 1,772,887 to Denmark, 1,165,551 to Spain, 1,022,546 to Belgium, 617,583 to Russia, 464,468 to the United States, 358,108 to Italy, and 191,136 to Austria. Of the total tonnage, 13,418,056 tons were entered at the port of London, 9,839,801 at Liverpool, 9,408,044 at Cardiff, 4,487,523 at Newcastle, 3,540,869 at Shields, 3,415,330 at Hull, 2,748,599 at Glasgow, 2,130,753 at Southampton, and over 1,000,000 each at Sunderland, Newport, Middlesbrough, Leith, Grimsby, Swansea, and Grangemouth. The vessels with cargoes entered from foreign countries had an aggregate tonnage of 28,796,000 tons, of which 20,962,000 were British and 7,834,000 foreign; the tonnage cleared with cargoes for foreign countries was 32,953,000 tons, of which 24,496,000 were British and 8,457,000 foreign.

The number of vessels registered as belonging to the United Kingdom in 1893 was 21,327, of 8,778,503 tons, of which 13,239, of 3,038,260 tons, were sailing vessels and 8,088, of 5,740,243 tons, were steamers. The merchant shipping numbered 16,828 vessels, of 8,541,388 tons, employing 240,974 men, of whom 29,549 were foreigners. There were 8,211 sailing vessels, of 518,264 tons, and 2,446 steam vessels, of 372,527 tons, engaged in the home trade; 263 sailing vessels, of 32,345 tons, and 345 steamers, of 224,562 tons, engaged both in the home and the foreign trade; and 1,994 sailing vessels, of 2,348,584 tons, and 3,569 steamers, of 5,045,106 tons, engaged exclusively in the foreign trade.

Communications.—The railroads open to traffic at the beginning of 1894 had a length of 20,646 miles. The average rate of extension since 1890 has been 191 miles a year, compared with 214 miles in the preceding ten years. There are 14,440 miles in England and Wales, 3,215 miles in Scotland, and 2,991 miles in Ireland. The capital invested was £971,323,000. The receipts for 1893 were £80,631,892, of which

£40,964,637 were from freight and £35,849,449 from 578,177,052 passengers.

The telegraphs in 1894 had a length of 35,280 miles of line, with 214,804 miles of wire. The number of messages forwarded during the year ending March 31, 1894, was 70,899,498. The revenue was £2,534,284 and expenditure £2,641,518.

During the year ending March 31, 1894, the post office carried 1,812,000,000 letters, 245,500,000 post cards, 574,300,000 book packets, 164,000,000 newspapers, and 34,000,000 parcels. The number of money orders issued was 10,524,774 for £28,720,000; the numbers of postal orders was 57,332,039 for £21,768,793. The revenue was £10,472,875 and expenses were £7,728,602.

Parliamentary Session.—The fourth and last session of the Parliament elected in July, 1892, was opened on Feb. 5. The original Ministerial majority of 41 had dwindled to 33, including the refractory Parnellites and Keir Harlie, an independent Socialist. There were 270 Gladstonian Liberals, 72 Anti-Parnellites, and 9 Parnellites on the Ministerial side, and 221 Conservatives and 47 Liberal Unionists in Opposition. In the Queen's speech the first place was given to proposals for remedying defects in the working of the Irish land law and the dealing with the cases of certain evicted tenants whose situation constitutes a peril to social order. The offenses against the law in Ireland had sunk to the lowest level recorded. A Bill dealing with the Church establishment in Wales was promised. Other bills would have for their object popular control of the liquor traffic, the abolition of the system of plural voting, and a provision for the payment of the charges of returning officers at elections. A bill would be presented founded upon the report of a commission appointed in 1893 to study the best means of improving the government of the metropolis. Agriculture continued in a seriously depressed condition and a commission appointed in the autumn of 1893 still had the subject under consideration; in the meantime a proposal would be submitted for facilitating the construction of light railways, as these were expected to prove beneficial to the rural districts. Bills would also be presented for the promotion of conciliation in labor disputes and for the amendment of the factory acts. The Scotch measures proposed were measures for completing the system of county government and further legislation in respect of the crofter population in that country. In the House of Lords the Marquis of Salisbury asked about the reform of that House which the Premier had announced, and was told that a resolution would be introduced in the House of Commons. John Redmond moved an amendment to the address calling for dissolution on the ground that the Government had failed to carry home rule. James Keir Harlie offered one expressing regret that there was no allusion in the Queen's speech to the distress prevailing among the people and asking for legislation in the direction of alleviating the sufferings of the poor. The Duke of Devonshire thought that no bill was likely to pass in any form except the Irish land bill. The practice of introducing and reintroducing measures

that had no chance of going through was likened to "plowing the sands of the seashore," and their constant defeat by Conservative tactics was called "filling the cup." Justin McCarthy was re-elected their chairman by the Irish Nationalists. Clement Higgins, a county member from Norfolk, dissatisfied with the Liberal party, announced his withdrawal from the discussions of Parliament. The Unionists had won in many by-elections. The Parnellites threatened to revolt because of the postponement of Irish measures. The Anti-Parnellites were divided by a bitter faction fight between the friends and the opponents of Mr. McCarthy, in the course of which it came out that the party had received contributions from Liberal politicians, which were expended in supporting evicted tenants. Mr. O'Brien was sued by the lawyer who conducted his libel suit against the London "Times," and was compelled to go into bankruptcy and retire from Parliament. On Mr. Redmond's amendment the Government had only a majority of 20, and on Mr. Jeffrey's amendment to the address, censuring official indifference to agricultural distress, commercial stagnation, and the increase of the unemployed, the majority sank to 12.

On Feb. 12 the Nationalist Lord Mayor of Dublin, Mr. Dillon, presented a petition of the burgesses and corporation for the release of Fenian convicts who had been many years in prison. Similar petitions were forwarded from Limerick and other Irish boroughs. Peter Callaghan and Henry McCann had been released after serving eleven years. Dr. Gallagher and the others the Government refused to amnesty.

Sir Henry James's motion censuring the Government for levying an import duty in India on cotton goods to the detriment of the Lancashire trade was lost on Feb. 21 by 304 to 109 votes. On Feb. 26 the ministry accepted, and the House of Commons approved a motion of Robert L. Everett, a Liberal member, seconded by Henry Chaplin, Conservative, that the House regards with increasing apprehension the constant fluctuation and growing divergence of the values of gold and silver, and heartily concurs in the recent expressions of opinion of the governments of France and Germany in regard to the serious evils resulting therefrom. The resolution urged upon the Government the desirability of co-operating with other powers in an international conference for the purpose of considering measures for removing or mitigating those evils. Sir William Harcourt declared later in a public utterance that the Government in any discussion in which they might take part would not admit a doubt as to their intention to adhere to the single gold standard. Sir Joseph Pease, anti-opium champion, mustered a minority of 59 for a vote of censure on the Royal Commission that inquired into the opium trade in India and reported in favor of its continuance. Arthur Wellesley Peel, who had been for eleven years speaker of the House of Commons, resigned on account of his health on April 8, and William Court Gully was elected to succeed him on April 10 by a majority of 11 over Sir Matthew White Ridley, the candidate put forward by the Conservatives.

Three members of the House of Commons,

heirs to peerages, determined to test the question whether a member could not elect to remain a commoner instead of qualifying as a peer. One of them, Viscount Wolmer, fell heir to the Earldom of Selborne in May. On his appearing in his accustomed seat Sir William Harcourt moved to have a committee appointed to inquire whether he had succeeded to a peerage. George N. Curzon and St. John Brodrick, the two eldest sons of peers who were allied with Viscount Wolmer in the contest, supported his contention in and out of Parliament. It has been the custom to treat the succession to a peerage as creating a vacancy, but the question had never been decided. The controversy ended in its being established as the law of Parliament that the succession to a peerage of a member of the Lower House vacates his seat whether he applies for or receives a writ of summons to the Upper House or not.

The budget was presented by Sir William Harcourt on May 3. The revenue for 1894-'95 had realized £509,000 more than the estimates and the expenditure, including £704,000 of supplementary estimates for Uganda, the navy, education, Cyprus, and Irish relief, varied only £34,000 from the estimates. The balance showed a surplus of £776,000. The total receipts were £3,551,000 more than the receipts of the preceding year; customs yielded £408,000 more, excise £850,000 more, stamps £1,580,000 more, income tax £400,000 more, the post office £290,000 more, and telegraphs £40,000 more. The import duty on spirits, in spite of the extra 6d. a gallon, yielded only £67,000 more than in 1893-'94, and the excise receipts from domestic spirits were £330,000 less than the estimates, whereas the extra tax of 6d. a barrel on beer did all that was expected of it. The new death duties, expected to produce £1,000,000, fell short of that figure only £32,000. The large increase in the stamps receipts was due to activity in the mining market and a general recovery in business. The public debt was reduced by £8,529,000 during 1894-'95. The interest on the Suez Canal shares owned by the British Government was set free in 1895. These shares are valued at £23,900,000. The savings banks gained in deposits £7,169,000 during the year. The funds of the friendly, industrial, provident, and building societies amounted to £240,296,733, a net increase of £60,000,000 in ten years. The expenditure of the Government for 1895-'96 was estimated at £95,981,000. The increase of £2,000,000 is due to the navy, which requires £1,400,000 more than in 1895, and to additional expenditure for the civil service, especially for the enlargement of education. The total expenditure for 1895-'96, including the imperial contribution of £7,262,000 to local revenues, is £103,243,000, which is raised by local taxation. The Government revenue proper was estimated at £95,602,000, leaving a deficit of £319,000 on the assumption that the additional beer and spirit duties would expire on July 1. To avoid this deficit the Chancellor of the Exchequer proposed to re-enact the duty of 6d. a barrel (36 gallons) on beer, which would increase the revenue to £96,162,000 and turn the deficit into an estimated surplus of £181,000. The re-imposition of the extra beer duty in preference

to the spirit duty, which was unpopular in Ireland, drew forth sarcastic comments from the Conservatives. The income tax was continued at the rate of the preceding year, 8d. in the pound, or 3½ per cent.

The Irish land law bill, prepared by Mr. Morley, altered the statutory term for the revision of rents from fifteen to ten years. It applied to terms already fixed as well as to new cases where a judicial rent was prayed for. The bill abolished the landlord's right of pre-emption and provided that the tenant should pay no rent on his improvements and that allowance should be made in respect of his occupancy. Two valuers would estimate what was a fair rent, and the Land Commission would fix the judicial rent at that figure unless the landlord or the tenant objected. The bill also abolished in certain cases the remedy of ejectment for nonpayment of rent. All improvements made since 1850 are presumed to have been made by the tenant. This clause is intended to undo the results of the decision in the law case of *Adams against Dunseath*, which affirmed that the land act of 1870 provided compensation for improvements. Mr. Morley's bill prescribes that in fixing a fair rent the court shall include in the tenant's interest any increase in the letting value of the holding that has resulted from improvements that he has made, and also the right to the continued occupation of his holding secured to the tenant by the various land acts. No contract by a tenant not to claim compensation for improvements warrants the allowance of rent in respect of any improvement, unless the landlord proves that it was made by him. Either tenant or landlord can apply to the Land Commission to have a fair rent fixed. The landlord can not determine a tenancy by subletting the land. No action to recover rent or evict a tenant can be brought if the rent has been two years overdue. When a statutory term has expired the tenant continues in occupation under the former conditions until his tenancy is determined or until a new judicial rent is fixed.

The Welsh Disestablishment bill to terminate the legal establishment of the Church of England in Wales and Monmouthshire was introduced by Mr. Asquith. The Welsh Church, originally a spontaneous national growth, having been for centuries used as a dependency of the English Church, dissent sprang up in the eighteenth century and spread until now there are 4,000 nonconformist congregations in the principality, comprising three quarters or four fifths of the population. Mr. Gladstone, dissatisfied with some of the provisions of the bill, withdrew his pair toward the close of the session. The Government accepted amendments placing schools and public chapels under a representative body, instead of disendowing them entirely.

A bill dealing with Church patronage was drawn up by the bishops. It aimed at checking the worst abuses of the patronage system, and renders almost impossible sales of the right of patronage. Sales by auction are absolutely prohibited. Persons presented to livings who are vicious or incapable can be rejected by the bishops.

The bill for the local control of traffic in intoxicating liquors was the local veto bill that was lost in 1893 with some modifications and amplifications. It provided that on a requisition signed by one tenth of the parochial electors in any ward of a town or other determined local area, a vote shall be taken as to whether all liquor licenses shall be revoked without compensation and no new ones issued within the area. If two thirds of the electors vote in the affirmative, then the liquor traffic will cease in that locality at the date of the next annual licensing meeting that occurs after three years have expired from the commencement of the act or after the lapse of one year when the act has been two years in operation. If the reintroduction of the liquor traffic in a locality where it has been prohibited is called for by one tenth of the electors, another vote is taken, and a bare majority decides whether prohibition shall be maintained or whether the local area shall have its public houses again. If a petition is signed by the same proportion of electors, not for the suppression, but for the restriction of the liquor traffic, then a poll shall be taken, and if a majority vote for a reduction of the number of public houses, all existing licenses shall be canceled at the end of a year, and the licensing magistrates shall have authority to grant new ones not to exceed three fourths of the number abolished. Ireland was exempted from the application of the bill.

Mr. Shaw-Lefevre introduced a bill to prohibit plural voting and to provide for taking the polls at Parliamentary elections on one and the same day throughout the kingdom. The number of plural voters was computed to be 160,000 in 1885, but probably the real number is much greater. It has increased enormously since the reforms act of 1832. In local elections the plural vote has already been abolished. In Parliamentary elections some electors hold property in 20 or 25 different constituencies and are therefore qualified to vote in all of them. The Conservatives denounced the bill as a gerrymander, intended to reduce their party vote in the metropolitan boroughs and other constituencies. The bill was accompanied by a measure to relieve candidates of the expenses of returning officers. This was a sop for the Radicals, who demanded the payment of members. When William Allan moved on March 22 that the members receive pay for their services Sir William Harcourt declared that the Government would advance the proposal in every way possible; it was the logical outcome of the extension of the suffrage and would not lead to corruption and the election of unfit members, for democracy would guard against that; the House was too much of one class. The resolution, which had been passed before, in 1893, with the Government's approval, was carried by 176 votes to 158.

A bill was introduced to empower municipalities and local authorities to acquire and work tramways. The general tramways act of 1870 gave power to local authorities to build and own street railroads, but required that these should be leased to companies in every case. Glasgow, under a special act, obtained in 1871 power to work its street-car lines, but nevertheless leased them to a company for a term of years. Recent-

ly the municipal authorities have taken the management of the Glasgow tramways into their own hands and have operated them with eminent success, improving the service, raising wages, and cheapening fares for work people and school children. Huddersfield obtained similar powers in 1892, finding no company willing to take the lease. The success of this town led other municipalities to petition Parliament for the right to work their tramways, but these requests were always refused, either by the House of Commons or the House of Lords, until in 1892 a standing order was passed that provided for the working of tramways by local authorities when companies can not be found to undertake it on fair terms. Besides Glasgow and Huddersfield only Blackpool, Plymouth, and Greenock availed themselves of the privilege and are actually working their street railroads, although 8 other municipalities have permission. The new act was intended to give a general right to municipalities to manage their street railroads under such circumstances as arose in Huddersfield and the other boroughs mentioned above.

The bill for the conciliation of trade disputes empowered the Board of Trade to inquire into the circumstances of a dispute between employers and employed and to report; also to act as arbitrators or to appoint a conciliator or a chairman and board of conciliation, to which the parties may submit the question at issue. A conciliator or board of conciliation appointed by the Board of Trade would act on the application of one or both of the parties. The county council could also appoint a conciliator or board of conciliation, which in certain cases would have the right to intervene and exercise compulsory powers.

Mr. Bryce's light-railways bill was all that the Government offered for the relief of agricultural depression. Its purpose was to enable local narrow-gauge railroads to be built without the special authorization of Parliament. A scheme would have to be presented first to the county council and examined by a committee of that body, which would consult all the local authorities and submit the plans to the Board of Trade for it to determine whether it is a light railway within the meaning of the act; it must also see that the requirements of the public safety are satisfied, and hear the objections of landowners through whose land the route passes. In the case of other railroads running through the rural districts the bill empowers the Board of Trade to relax some of the precautions hitherto required and sanction low expensive methods of construction and working.

Mr. Asquith's factories and workshops bill was passed by both Houses. It provided for more sanitary arrangements and stricter regulations for the safety of workers in factories and the proper fencing of machinery. To allow wearing apparel to be made up in places where there is infectious disease is made a penal offense. Children are not permitted to be employed in cleaning machinery while it is in motion. Every factory or workshop must have a fire escape. Persons receiving bodily injury and the families of persons killed through neglect of the factory acts or the regulations made under them can

recover compensation. Overtime for young persons is prohibited, for women it is restricted, and no woman, young person, or child after working the full time allowed can take work home. A register of accidents must be kept. The factory acts are extended to laundries, and the provisions requiring the fencing of machinery and notice of accidents to docks, wharves, and quays. The law relating to bakeries is extended to all kinds of bakeries. The powers of the Home Secretary to regulate dangerous employments are enlarged. Medical practitioners are required to send notice to the chief inspector of factories of any case in which disease has arisen from the conditions of employment. All workers in textile industries who are employed on piecework have a right to have supplied to them such particulars as will enable them to ascertain the rate of wages. Workshops must be registered and lists of outside workers must be furnished to the inspector of factories.

A bill for adding one or two colonial judges to the Judicial Committee of the Privy Council was unsatisfactory to the colonies because there was no provision for a salary, and therefore no active judge of the first rank in the colonies would be likely to accept the office. The House of Lords negatived, as often before, the proposal to abolish primogeniture in cases of intestacy and divide real estate in the same way as personality among the family of an intestate.

A criminal appeal bill proposed to create a Court of Criminal Appeal and to grant the right of appeal in all capital cases when there is a conviction. The court would be able to amend or set aside the sentence, not only on grounds of informality or irregularity, but if the jury was misdirected or the verdict is found to have been against the weight of evidence, and to order a new trial if there has been any miscarriage of justice. Prisoners under less sentences than that of death would only have the right of appeal by leave of the court of trial or the Court of Appeal or in certain cases of the Attorney-General. They may also apply for a revision of their sentences, subject to the peril of having them increased.

A bill was passed, in accordance with an agreement with the Russian Government, which extended the protection of the Paris arbitration award to the Russian seal fisheries in Bering Sea. The bill went further than the agreement with the United States in that it contained no limitation of time and covered the whole Pacific Ocean north of the forty-second degree of latitude. Russia agreed in return for the extension of Russian jurisdiction over English sealers beyond the three-mile limit to restrict the annual catch on the Pribyloff Islands to 30,000 seals.

Mr. Shaw-Lefevre brought in a bill to exempt horseless carriages from the regulations governing the use of locomotives on highways, which prohibit them from going at a greater speed than 4 miles an hour and require that they shall be preceded by a man bearing a red flag. A bill requiring the registration of midwives was passed; also a naturalization bill dealing with naturalized citizens residing abroad.

The Irish members proposed to extend to Ireland the institution of county councils as they existed in England and Scotland. It was supported by the Government, but the Unionists,

although the proposition was their own idea, ridiculed the bill and the motives of its authors. On a motion to erect a statue to Oliver Cromwell all the Nationalists as well as the Conservatives voted against the proposition, and the Government was saved from defeat only by the votes of Liberal Unionists. The ministers thereupon renounced the project.

Scotch bills, except those of a contentious character, were referred early in May to a grand committee including all the Scotch members. When the Government refused to refer the crofters' bill to this committee, Dr. MacGregor resigned his seat for Inverness-shire, which was won by the Opposition. The Welsh disendowment bill was the only one of political importance that was advanced in committee. The Parnellites, disappointed because the Irish bill was deferred, went into opposition. The Government majority fell to 10, and on David Thomas's proposal to omit the provision for vesting in the county councils the property of the Welsh Church the majority was only 7. On the night following, June 21, Mr. Brodric moved the reduction of the salary of the Secretary for War, alleging that there was an insufficient supply of ammunition for the infantry. Some of the Radicals refrained from voting, and when a division was taken the amendment was carried against the ministers by 132 votes to 125. Mr. Campbell-Bannerman, whom his colleagues had kept out of the Speaker's chair because they could not spare his services, immediately resigned. The Cabinet on the following day chose to resign and leave to their opponents the duty of dissolving Parliament. This task the Opposition was prepared to accept. Lord Salisbury was requested by the Queen to form a new ministry. This he was able to do without difficulty, with the co-operation of Mr. Chamberlain and the Duke of Devonshire.

The new Government obtained the necessary votes in supply, passed the Bering Sea bill, and rescued the factories and workshops bill and others of a noncontentious character, including a bill relating to inquiry into fatal accidents in Scotland, a bill for naval works, a bill to amend the corrupt practices act, the Scotch bill for the regulation of sea fisheries, the extradition bill, the naturalization bill, and the Judicial Committee bill. Parliament was prorogued on July 6 and dissolved on July 8.

The Salisbury Cabinet.—The Unionist Cabinet was constituted on June 25, as follows: Prime Minister and Secretary of State for Foreign Affairs, the Marquis of Salisbury; Lord President of the Council, the Duke of Devonshire; First Lord of the Treasury, Arthur James Balfour; Secretary of State for the Colonies, Joseph Chamberlain; Chancellor of the Exchequer, Sir Michael Hicks-Beach; First Lord of the Admiralty, George Joachim Goschen; Lord Chancellor, Lord Halsbury; Lord Privy Seal, Viscount Cross; Chancellor of the Duchy of Lancaster, Sir Henry James; Secretary of State for the Home Department, Sir Matthew White Ridley; Secretary of State for War, the Marquis of Lansdowne; Secretary of State for India, Lord George Hamilton; President of the Board of Trade, Charles T. Ritchie; President of the Local Government Board, Henry Chaplin; Lord

Lieutenant of Ireland, Lord Cadogan; Lord Chancellor of Ireland, Lord Ashbourne; Secretary for Scotland, Lord Balfour of Burleigh; First Commissioner of Works, A. Akers-Douglas; President of the Board of Agriculture, Walter Long.

The Duke of Devonshire, who was chairman of the commission that laid down the lines of army reform, the inauguration of which was announced by Mr. Campbell-Bannerman just before the vote of censure, accepted the headship of the Naval and Military Council of Defense appointed to work out the details of the reforms. The most important office outside of the Cabinet was that of Under Secretary for Foreign Affairs, in which George N. Curzon was called. Gerald Balfour was appointed Chief Secretary for Ireland; the Duke of Norfolk, Postmaster-General; and Sir John E. Gorst, Vice-President of the Council for Education. Lord Salisbury offended the retiring Secretary for War by sending at once for his seals of office.

The General Election.—At the dissolution the Conservatives in the House of Commons numbered 272 and the Liberal Unionists 49, making a gain for the Unionist party of 7 votes since the Parliament first came together in 1892, while the National Liberals, composed of 267 Liberals, 72 Anti-Parnellites, and 9 Parnellites, had lost 7 seats, reducing their normal majority from 41 to 27. The elections took place in the latter part of July.

In the electoral campaign the Conservatives and Liberal Unionists, following the lead of Arthur J. Balfour and Joseph Chamberlain, offered to the democratic masses a programme of social reforms to match that of the Radicals. The National Liberal Federation announced an electoral programme embracing home rule, disestablishment of the Welsh Church, the employers' liability bill, the Irish land bill, one man one vote, the liquor veto, sweeping reforms for dwellers in towns and for the rural population, and the submission of the House of Lords to the will of the representative Chamber. Mr. Chamberlain promised that wild projects of constitutional change and destructive legislation would be succeeded by constructive social reform.

The Radical association, called the National Reform Union, advocated one man one vote, payment of members, local legislation by local bodies alone, simplification of parliamentary procedure, and the abolition of the legislative power of the House of Lords, together with home rule, land-law reform, local option, suppression of grants and pensions, international arbitration, recognition of the rights of weaker races, closer union of English-speaking races, taxation of all land values, graduation of taxation according to ability to pay, recognition of the claims of the sick, aged, and distressed, and admission of the claims of labor to limitation of hours, right of combination, compensation for injuries, and direct representation in Parliament.

The Irish Nationalists renewed their professions of allegiance to the Liberal party on the basis of the public pledges of its leaders to place home rule in the forefront of its programme.

The platform of the Social Democrat Federation, besides the eight-hour law, free maintenance

of children, a minimum wage of 30s. a week, and wholesome dwellings, declared for the ownership of railways, factories, mines, and land by the whole people, a single chamber of paid delegates, elected by universal suffrage, and the popular initiative and referendum.

The members of the Independent Labor party, of which James Keir Hardie was chief, were pledged to sever all connection with the great political parties and vote for their own independent socialist candidates. The Welsh Nationalists, the Local Optionists, the Publicans' Association, the McCarthyites, Healyites, and Redneodites, and various other factions issued electoral manifestoes. The Agricultural Union demanded protection for farmers. The Liberty and Property Defense League denounced all state interference.

Each Liberal leader magnified on the platform the project of which he was the special advocate in Parliament. Lord Rosebery proclaimed as the need of the hour the annihilation of the legislative power of the House of Lords. Mr. Morley put home rule at the head of the programme, and Sir William Harcourt laid stress on the local veto. The Conservative programme was chiefly a negative one. The Unionists were the champions of the integrity of the United Empire and the continuity of its Constitution, and upholders of the greatness of the British Empire. Politicians of both parties had schemes to lay before the working classes. Mr. Morley advocated old-age pensions. Mr. Chamberlain came out with a larger scheme, which had the indorsement of Mr. Balfour—that of making every artisan the owner of his own dwelling and securing to every agricultural laborer a small holding and a cottage by the intervention of the credit of the Government and its right of expropriation. Mr. Balfour enumerated as tasks of the next Parliament the better housing of the working classes, the encouragement of freehold occupancy, the amelioration of the lot of the aged poor, the protection of agricultural tenants in their improvements, the preservation of voluntary schools, provision of compensation for injured workmen, the easing of the burdens of British agriculture, and the opening of markets for British industry.

The Unionists were successful in the elections beyond their anticipations. The Conservatives gained a majority over all other parties combined. The new Parliament was composed of 411 Conservatives, 71 Liberal Unionists, 177 Liberals, 70 Anti-Parnellites, and 12 Parnellites, or 411 Unionists against 259 Home Rulers, giving a Ministerial majority of 152. The English constituencies elected 323 Conservatives, 113 Liberals, 53 Liberal Unionists, and 1 Anti-Parnellite; Welsh constituencies elected 22 Radicals, 7 Conservatives, and 1 Liberal Unionist; there were returned from Scotland 30 Liberals, 20 Conservatives, and 13 Liberal Unionists; and the Irish representation was divided between 69 Anti-Parnellites, 17 Conservatives, 12 Parnellites, 4 Liberal Unionists, and 1 Radical.

The New Parliament.—Parliament was re-opened on Aug. 12. Speaker Gully was unanimously re-elected. The Queen's speech mentioned the representations made to the Chinese Government to secure the punishment of the authors of outrages upon English missionaries

and the joint intercession of the British, French, and Russian ambassadors with the Sultan of Turkey and their suggestion of reforms for Armenia; also the incorporation of British Bechuanaland with Cape Colony. No legislative proposals were made, the business of the session being confined to voting the estimates for the service of the year which were not voted by the last Parliament.

James William Lowther was elected chairman of committees. John Daly, who was chosen a member for Limerick city, was declared incapable of being elected because he was undergoing a sentence for treason-felony. Gerald W. Balfour promised the Irish members to consider a noncontentious bill for the relief of evicted tenants, but said that he would not introduce a land-law bill then on account of its controversial character. In fulfillment of his pledge the new Irish Secretary secured the re-enactment of a clause of the land act of 1891 for the reinstatement of evicted tenants with the consent of their landlords. Further than this he refused to go. Dr. Charles K. D. Tanner, Anti-Parnellite, was suspended for a week because he created a disorderly scene. The Liberals supported the demands that were made on the Government for the immediate treatment of the questions of the condition of agriculture and the unemployed. The session came to an end on Sept. 5.

London County Council.—The County Council that has managed the affairs of the metropolis for six years has been in control of the Progressive party. The Progressives desire the unification of the metropolis and seek to extend the powers of the County Council, whereas the Moderates, their opponents, propose that the metropolitan area shall be divided into 10 self-governing municipalities. The Progressives have, indeed, acceded to the creation of separate municipalities, each with its own mayor, but not to the principle that each of these shall assess and spend its own rates. The effect of that would be that rich districts, having banished all the poverty and labor into the poorer districts, would not be responsible for any of the cost of improving and keeping up these districts; that the parishes of the West End, which have their Hyde and St. James's Parks maintained out of the taxes, would be relieved of the expense of partly paying for the parks and open spaces of the East End; that poor districts, having a valuation one tenth that of the city or the luxurious divisions and in which all the insanitary areas are found, would have to clear these unhealthy areas away at the expense of the poor themselves. The Progressives have endeavored to introduce the principle of assessing the rates upon the owners rather than upon the occupiers of the land, and the Council has incurred large expenses in trying to obtain the sanction of Parliament to this method of local taxation. In education, sanitation, and other matters the metropolis has made great progress. The rates have been increased over 20 per cent., from 11½d. to 14d. in the pound, during the six years the County Council has been in existence. Six schemes of street improvements were proposed in Parliament in 1893, the Council making the condition that Parliament should pass a public bill for taxing ground values, otherwise the im-

provements would not be made. This resulted in a deadlock, for the Government declined to introduce such a bill. Later the Council was willing to proceed with some of the schemes, provided Parliament should sanction the principle of betterment, which is that owners whose land is enhanced in value by improvements should be made to pay for them in proportion to the benefit received. In furtherance of the project of unification the Progressives have proposed to take from the corporation of the city of London its ceremonial functions. In compliance with their wishes the city companies have already given up some of their surplus revenues for technical education. Many of their proposals are called socialistic, such as the municipalization of docks and markets and the establishment of municipal pawnshops. The municipalization of gas and waterworks and street railroads is not opposed absolutely by the Moderates, but the majority of the Council have not been able to agree with the opposite party or with the companies owning the existing waterworks and tramways in regard to the price and the conditions of the transfer. The County Council adopted the policy of executing all public works and conducting all the public business without the intervention of contractors. The Committee on Works regarded the results as satisfactory, although the rule was adopted to pay the trade-union rates or the highest market rate of wages to all workmen employed. The Moderates have ceased their opposition to the purchase of the street railroads since the Court of Appeals decided that the price shall not be based on the market value of the shares, and must not be more than the actual value of plant and material. The Moderates want the tramways, however, to be leased and operated by companies, while the Progressives propose that the County Council shall run them. Bills have been brought before Parliament for the expropriation of all the water companies.

Elections for a new County Council were held in March, 1895. The general reaction in favor of the Conservative and Unionist party operated in favor of the Moderates, who have been affiliated with the Conservatives. The result was a tie, 57 Moderates against 57 Progressives. The Moderates gained 23 seats. Nevertheless, the Progressives obtained a majority in the new Council with the votes of the 9 aldermen who have seats and votes in the Council. They elected their candidate for chairman, Robert Arthur Arnold, over the Duke of Norfolk by 60 votes to 57.

The Progressives, grown modest through their electoral reverses and the prospective victory of the Conservatives in the national election, offered in Parliament a compromise bill, combining betterment with worsement in assessing special taxes for local improvements. The compromise, having been arranged by Mr. Stuart with Lord Cadogan, had the support of the Moderates. The principle of worsement, securing indemnity to owners whose property is injured by improvements, has heretofore been rejected by the majority of the Council. The bill provides that in certain conditions owners may call upon the County Council to purchase the lands and houses on which a special tax has been assessed

Trade Union Congress.—The Trade Union Congress, which was held at Cardiff in the beginning of September, restored the Old Unionists to the position from which they were ousted in the Norwich congress in 1894; and yet the collectivist doctrines of the New Unionism were not repudiated. The resolution for nationalizing the winds of the means of production, distribution, and exchange remained unrepealed. The nationalization of land, mines, and railroads was approved without discussion. The municipalization of docks, with the financial and administrative aid of the state, was unanimously accepted. The present system of education was condemned as based upon commercialism and admitted to supply the educational needs of the nation. The congress called for the reintroduction into Parliament of the employers' liability bill without the clause for contracting out, and recommended an eight-hours' bill that should apply to all trades and districts. The abolition of the House of Lords was demanded because it had shown hostility to labor legislation. The amendments to the truck act passed by Parliament were declared to be ineffective as a protection against deductions from wages, because a worker may have to sign a contract to submit to deductions as a condition of obtaining employment. An additional resolution called for the payment of all wages at the first regular pay day, and one suggested by the women's trade unions condemned deductions for house rent or for workroom conveniences, such as motive power, light, or tools. Another resolution asked the Government to put into operation the principle of a fair wage and to pay the union rates always, with a minimum rate for laborers of 24s. a week; also to deal only with fair houses, in which fair conditions of labor exist, and where trade-union rates are paid for all labor and trade-union customs as to hours, holidays, and the number of hands and apprentices are observed. The congress assented to the proposition that in labor legislation perfect equality of treatment as to hours of work and remuneration should be secured to both sexes. When a mill or company does work without providing for the payment of all wages earned, it was proposed to give to the work people the right to distrain at once which a landlord has for collecting arrears of rent. The parliamentary committee was instructed to have the trade union-acts so amended that a person of the age of fourteen years may become a member of a registered union. The congress declared itself of opinion that employers should be responsible to workmen when tools are destroyed or damaged by fire on their premises.

Institute of International Law.—The fourteenth session of the Institute of International Law was opened at Cambridge on Aug. 8. An article was adopted recommending that claims against a diplomatic representative, over which, on the principle of extraterritoriality, the courts of the country to which he is accredited have no jurisdiction, should be sued in the court of the capital of his own country, or in the court of his domicile if he is able to contest the jurisdiction of the court of his capital on the ground of being domiciled elsewhere. Immunity from taxation was held not to extend beyond the official per-

sonnel of a diplomatic mission. Persons enjoying diplomatic immunities can not be cited as witnesses before local courts, but they should be obliged to give testimony within the precincts of the mission before a magistrate specially delegated by the local authority. The question of establishing an international tribunal to decide cases arising out of the international copyright treaty was postponed. The subject of guardianship over adults came up, and the institute held that the national law should apply, rather than the law of the domicile. Another decision was that the judgment of the competent national tribunal should be enforced in other countries without being ratified by the courts of those countries. Proceedings against a foreigner should, however, be provisional only, and should not be concluded without notifying the diplomatic or consular representative of the state to which the foreigner belongs, and hearing any observation made by such representative. The Bern copyright convention was discussed and amendments were suggested. The institute decided in favor of extending the author's exclusive right of translation from ten to twenty years, or to the full copyright term; also in favor of, and against altering the clause only giving the foreign author copyright for the least term allowed in either of the two countries, and allowing the term of the country of reproduction; the rules regarding adaptations should be made unequivocal, and newspaper articles should be protected, with the exception of news and political articles, and reproductions of these should contain an indication of the source. The question of contraband of war was extensively discussed, but the decision was postponed. On the subject of nationality the institute decided that no one should be without a nationality, and no one should have two nationalities; that every one should be allowed to change his nationality, but that to do it a simple declaration should not suffice; and that the nationality of origin should not be transmissible from generation to generation on foreign soil.

Colonies and Dependencies.—Besides British India (see INDIA) and the colonies possessing responsible and representative government (see AUSTRALASIA, CAPE COLONY, DOMINION OF CANADA, and WEST INDIES), Great Britain has Crown colonies and protectorates in every continent and ocean. The total area of the British Empire is estimated at 11,834,701 square miles and the aggregate population at 380,938,000. The expenditure of the mother country on the colonies is about £2,000,000 a year, mainly for military and naval purposes. There are about 32,000 British troops maintained in the British colonies and naval stations, not counting the garrisons in India and Egypt.

In Europe England has Gibraltar and Malta, which serve chiefly as naval and military bases for operations in the Mediterranean Sea. Gibraltar, governed as a Crown colony, is garrisoned by 9,000 troops. The Governor is Gen. Sir Robert Blidulph. The native population of Spaniards and descendants of the original Genoese settlers is about 20,000. The revenue in 1893 was £60,919, and expenditure £58,405. Malta, an island south of Sicily, has an area of 95 square miles and a population of 168,105, of whom 1,773 are

English. The Governor is Lieut.-Gen. Sir Arthur J. L. Fremantle. The revenue in 1893 was £291,138; expenditure, £304,993.

At the eastern end of the Mediterranean is the island of Cyprus, administered by Great Britain for the Sultan of Turkey, in accordance with a convention concluded at Constantinople on June 4, 1878. It was the compensation obtained for England in the readjustment of the Eastern question by the Treaty of Berlin. Lord Beaconsfield, who brought back "peace with honor," expected that the island would become an important military post; but the climate proved unhealthy for troops, and the island ceased to possess strategic value for Great Britain after the occupation of Egypt. The British administration has been inefficient, and its expense crushing to the inhabitants and a burden to the British taxpayer, for Parliament has granted subsidies aggregating about £500,000 for the relief of the Cypriots, and still contributes £30,000 to cover the deficit. The annual tribute due the Turkish Government and guaranteed by Great Britain is £92,800. The annual revenue previous to the British occupation was £132,000. Some of the Turkish taxes it was necessary to abandon, they were so oppressive. The revenue in 1894 was returned as £177,054, and local expenditure as £117,654. After the good harvest of 1892 no grant in aid was required for two years. The revenue is derived from customs, a salt monopoly, tithes, a land tax, excise, stamps, court dues, a tax on trade profits, military exemption fees, and taxes on sheep, goats, and pigs. The tithes are paid in kind. The Governor is Sir Walter Joseph Sendall, appointed in 1892. The area of Cyprus is 3,580 square miles. The population in 1891 was 209,286, exclusive of the garrison. The exports are grain, carobs, cotton, linseed, olives, cocoons, raisins, fruit, wine, cheese, live animals, wool, skins, vegetables, sponges, and gypsum. The imports in 1893 amounted to £316,872, and exports to £316,543.

Negotiations have been carried on with Turkey for the reduction of the tribute by its commutation into a lump sum. To this Turkey would not consent, because it would practically extinguish her rights over the island and lead to its annexation by Great Britain. The Greek inhabitants protest against the payment of tribute and demand relief from the heavy taxation that is tending to their destruction. They ask for the cession of the island to Greece.

In Asia, on the trade and military route to the East, Great Britain possesses the fortress and coaling station of Aden, with territory on the opposite coast of Africa, which serves as a basis of supplies and a gateway for trade. Aden has a population of 41,910. The island of Socotra has 10,000. The Somali coast protectorate has an area of 75,000 miles. On both sides of the African continent Great Britain has more recently acquired or claimed by treaty arrangements or partial occupation enormous spheres of influence (see EAST AFRICA AND WEST AFRICA).

At the southern extremity of India is the fertile island of Ceylon, now largely given up to the cultivation of tea on a commercial scale. It has a partly representative government. The Governor is Sir Arthur Elibank Havelock. The area is 25,365 square miles, and the population

in 1891 was 3,008,466. The natives are Buddhists, Hindus, Mohammedans, Christians, and pagans. The revenue in 1893 was 18,051,950 rupees, and the expenditure 18,276,108 rupees. The imports were valued at 72,340,662 rupees, and exports at 74,195,368 rupees. Besides tea the products of commercial importance are coconuts, coffee, rice, cinchona, areca nuts, cinchona, tobacco, and cacao. Plumbago and pearls are valuable exports. The abolition of the obnoxious paddy tax has caused a temporary decline in the revenue. The export of tea increased from 72,000,000 pounds in 1892 to 82,000,000 pounds in 1893; that of coffee from 43,000 to 55,000 hundredweight.

British North Borneo, with Labuan and the sultanates of Brunei and Sarawak, constitute a recently acquired British possession on the island of Borneo. The Governor is Charles Vandeuleur Creagh. The total area is about 85,000 square miles, and the population 475,000. North Borneo produces tobacco, pepper, coffee, woods, sago, gutta-percha, gums, gambier, rattan, pearls, and *bêche-de-mer*. Coal and gold have been found. The revenue in 1893 was \$289,220. The imports were valued at \$1,780,593, and exports at \$1,116,714.

Beyond India, guarding the sea route to China and the protected states of the Malay peninsula, are the Straits Settlements, a Crown colony comprising Singapore, Malacca, and Penang, with the dependencies of the Cocos Islands and Christmas Island. The Governor is Sir C. B. H. Mitchell. The total white population in 1891 was 3,483, and the colored population 419,901. Of the latter half were Malays and half Chinese. The revenue in 1893 was \$3,706,308, and expenditure \$3,915,482. The forts defending the new harbor at Singapore cost £100,000 to build. This expense the colony had to bear, together with an increased and growing burden for the support of the increased garrison and armaments. The imports in 1893 were valued at \$160,148,960, and exports at \$144,757,394. The exports are tin, sugar, pepper, gutta-percha, gambier, gums, copra, coffee, tobacco, tapioca, rattan, dye stuffs, and spices.

The colonists have complained seriously of the burdens they have been made to take upon themselves for imperial defense, which were doubly heavy on account of the fall in the value of the rupee. The British Government decreed that they should raise for that purpose £100,000 a year from 1894 till 1898, but afterward agreed that the contribution should be reduced to £80,000 for the first year and £90,000 for the second on condition that if the colonial finances should be more prosperous in subsequent years they should make up the sums remitted. They asked to have the amount reduced to £70,000 a year and instead of that were called upon to pay £110,000 in 1897 and £120,000 in 1898. Unable to obtain any better terms, the best known of the nonofficial members of the Legislative Council, together with the justices of the peace and the members of the Chinese Advisory Council, resigned their places by way of protest in January, 1895. The entire body of colonists signed a petition setting forth that the contribution for the year amounted to 27 per cent. of the total revenue, and asking to have a reason

able percentage of the revenue assigned for the purpose instead of an arbitrary sum. In June Lord Ripon agreed to fix the military charges at 17½ per cent. of the gross revenue.

The native states under the protection of the Straits Settlements are Perak, Selangor, Sungai Ujong, Negri Sembilan, and Pahang. Their aggregate revenue exceeds \$7,000,000. Johore is a semi-independent state. A scheme has been drawn up for confederating the protected states under a British Resident General. A rebellion broke out in Pahang in 1895, a renewal of the disturbances that ceased in 1892. The most valuable product of these territories is tin. Gold has been found in Negri Sembilan.

Hong-Kong, a military station and free commercial port in the China Sea, is a small island at the mouth of the Si-Kiang river. The population in 1894 was 246,002. There were 8,545 estates in 1892. The revenue for 1893 was \$1,240,360, not including \$137,874 of premiums from the water account. The expenditure was \$1,303,625, exclusive of \$355,144 of extraordinary expenditure for defensive works and the water account. The revenue is derived from land taxes, license fees, and the opium monopoly. There is a public debt of £341,800, raised for fortifications and waterworks. In the six years preceding 1891 there were \$647,300 spent for fortifications, and since then the expenditure has been higher. The Governor is Sir William Robinson. The trade with China increased from £23,181,000 Haikwan taels in 1893 to 133,218,000 in 1894.

The inhabitants of Hong-Kong have prayed for an amendment of the Constitution converting the colony from a Crown colony into one having a larger degree of representative government. The civil population consists of 211,000 Chinese, 2,000 Portuguese, 1,400 British, and a few hundred other Europeans and Americans. The colonists have protested as strenuously as those of the Straits Settlements against the excessive charges imposed upon them by the Colonial Office in London for fortifications, armaments, and garrison expenses, and also for public buildings and other improvements that they were not ready to undertake.

Mauritius is an island in the Indian Ocean, near Madagascar. It was originally owned and settled by the French. The area is 705 square miles, and the population is 371,655, of whom two thirds are natives of India, who came originally as coolies from Bombay to work on the sugar estates of the creoles. The revenue in 1894 was 8,103,922 rupees, and the expenditure 7,872,000 rupees. The imports were 18,899,939 rupees in value, and the exports 22,176,486 rupees. Besides raw sugar and rum, drugs, hemp, and seacotton are the principal exports. The Seychelles, Rodriguez, Diego Garcia, and other small islands are governed from Mauritius. The Governor is Sir Hubert Edward B. Jerningham. Mauritius, as well as Hong-Kong and Singapore, objects to the heavy demands of the Imperial Government for military purposes.

In America, besides the Canadian Dominion, Newfoundland, and the British Antilles, the British possessions are British Honduras and British Guiana. The former has grown out of a settlement established on the coast of Central

America for the cutting of mahogany and logwood, to which the Spanish Government granted the privilege of municipal self-government. The area is 7,562 square miles, and the population in 1893 was 31,371. The revenue in 1893 was \$301,922, and the expenditure \$363,519. The imports were valued at \$1,460,941, and exports at \$2,135,117. The Governor is Sir C. Alfred Meloney.

British Guiana has grown up from the former Spanish settlements of Demerara, Essequibo, and Berbice. The area is given as 109,000 square miles. The population in 1892 was 278,295. The limits of the colony are a subject of dispute (see VENEZUELA). The revenue in 1894 was £602,762, and expenditure £566,833. The imports were £1,920,710, and exports £2,358,918 in value. The Governor is Sir Charles Cameron Lees.

The New Laureate.—The office of poet laureate, which had been vacant since the death of Tennyson, in the autumn of 1892, was filled, late in the year, by the appointment of Alfred Austin. Mr. Austin was born in Headingly, near Leeds, May 30, 1835. His father was a merchant; his mother was a sister of Joseph Locke,

ALFRED AUSTIN, POET LAUREATE.

the civil engineer. Both were Roman Catholics. Alfred was educated at Stonyhurst College and at St. Mary's College, Oscott. He took his degree at the University of London in 1863, and four years later was called to the bar. But his heart was in literature rather than in the law. At the age of eighteen he published anonymously a poem entitled "Randolph," and two years afterward a novel. He definitely abandoned the law in 1861, and traveled on the Continent. He was a special correspondent in the field during the Franco-German War in 1870, has written much for journals and magazines, and founded and for ten years edited the "National Review." His predecessors in the office of laureate were: Edmund Spenser, 1591-99; Samuel Daniel, 1599-1619; Ben Jonson, 1619-37; William Davenant, 1660-68; John Dryden, 1670-89; Thomas Shadwell, 1689-92; Nahum Tate, 1692-1715; Nicholas Rowe, 1715-18; Lawrence Eusden, 1718-30; Colley Cibber, 1730-37; William Whitehead, 1757-85; Thomas

Warton, 1785-'90; Henry James Pye, 1790-1813; Robert Southey, 1813-'43; William Wordsworth, 1843-'50; Alfred Tennyson, 1850-'92.

Mr. Austin's prose works include 3 novels—"Five Years of it" (1858), "An Artist's Proof" (1864), and "Won by a Head" (1866)—and "A Vindication of Lord Byron" (1869); "The Poetry of the Period" (1870); "Russia before Europe" (1876); "England's Policy and Peril" (1877); and "The Garden that I love" (1894). In poetry he has published "The Season," a satire (1861); "The Human Tragedy" (1862); "The Golden Age," a satire (1871); "Interludes" (1872); "Rome or Death" (1873); "Maddonna's Child" (1873); "The Tower of Babel," a drama (1874); "Lesko the Bastard" (1877); "Savonarola," a tragedy (1881); "Soliloquies in Song" (1883); "At the Gate of the Convent" (1885); "Love's Widowhood" (1887); "Prince Lucifer" (1888); "English Lyrics" (1890); "Fortunatus the Pessimist" (1893); and "England's Darling" (1896).

GREECE, a constitutional monarchy in southern Europe. The legislative body is a single Chamber called the Boule, composed of 207 members, elected by universal suffrage for the term of four years, or until the Legislature is dissolved by the King on the advice of his responsible ministers. The reigning King is Georgios I, born Dec. 24, 1845, the second son of Prince Christian of Sleswick-Holstein-Sonderburg-Grödenburg, now King of Denmark. He was elected by the Boule in virtue of a protocol signed at London on June 5, 1863, by the three protecting powers—England, France, and Russia—and began to reign on June 27, 1863. The heir apparent is Konstantinos, Duke of Sparta, eldest son of the King, born Aug. 2, 1868, and married to Sophia, Princess of Prussia.

The ministry at the beginning of 1895 was composed as follows: President of the Council and Minister of Finance, C. Trikoupis; Minister of Foreign Affairs, M. Stephanou; Minister of the Interior, M. Boupilidis; Minister of Ecclesiastic Affairs and Education, M. Kalliphronas; Minister of War, Col. Tsamados; Minister of Marine, Capt. Bouboulis; Minister of Justice, M. Stephanou.

Area and Population.—The area of the kingdom is 25,041 square miles. The population is 2,187,208, of whom 1,133,625 are males and 1,053,583 females. Of the male population, 444,096 are engaged in agriculture and stock raising, 64,211 in mechanical arts, and 117,979 in commerce, 31,321 are in service, 15,735 are professional men, 12,109 are officials, 10,059 are clergymen, and 34,624 compose the army and navy. The people belong to the Greek Orthodox Church, with the exception of insignificant communities of Roman Catholics and Jews and a few thousand Mohammedans.

Defense.—The strength of the army in 1894 was 24,877 officers and men, with 3,739 horses and 120 field guns. There were 16,039 infantry, 1,146 cavalry, 2,287 artillery, 1,213 engineers, and 3,229 gendarmes. The legal term of active service is two years, but furloughs are commonly granted after slight instruction.

The naval force consists of 3 steel-clad vessels ("Hydra," "Spetsai," and "Psara") of 4,885 tons displacement, having 11·8 inches of armor at the

water line, and carrying 3 Canet guns of 30 centimetres caliber, 4 of 15 centimetres, and 24 small guns; two older armor clads ("Basilissa Olga" and "Basileus Georgios") armed one with 4 54-ton and 2 34-ton and the other with 2 10-ton Krupp guns; 4 unprotected cruisers, 12 gunboats, and 30 torpedo boats, not including 2 submarine Nordenfeldt boats.

Commerce and Production.—The principal commercial product is Zante currants, grown between Corinth and Patras, on the shore of the Gulf of Corinth, on the islands of Zante and Cephalonia, and in other parts of Greece, in such quantities that the price has fallen. The Greek Government has endeavored to extend the market by inducing other governments to abolish or lower their duties, and has met considerable success on the Continent, but not in England, which is the largest consumer of the Greek staple. Merchants have succeeded in opening up some new markets, notably in Russia.

The next most important exportable product is metallic ore—lead, silver, and zinc. The values, in drachmai or francs, of the principal exports in 1893 were: Currants, 46,274,650; ores, 15,002,625; wine, 4,194,250; fruit, 2,686,125; olive oil, 2,675,000; tobacco, 2,453,150; sponges, 2,290,625; silk and cocoons, 1,396,175; valonia, 1,131,500; hides, 539,325; soap, 537,500; emery, 468,925; all others, 8,384,000; total exports, 88,033,850 drachmai. The principal imports were valued, in drachmai, as follows: Cereals, 23,301,500; coal, 7,482,125; cotton goods, 5,363,175; caviar and fish, 4,049,200; woolen goods, 4,036,025. Other imports are hides, timber, sugar, coffee, animals, hardware, and metals. The total value of the imports in 1893 was 91,484,925 drachmai.

Navigation.—There were 6,582 vessels, of 2,788,815 tons, entered at Greek ports during 1892, and 5,482, of 2,340,720 tons, cleared.

The merchant navy consisted of 125 steamers, of 134,687 tons, and 762 sailing vessels, of 343,442 tons.

Railroads and Telegraphs.—The length of railroads in operation in 1893 was 568 miles, of which the Government owned 92 miles. There were 306 miles under construction.

The telegraphs have a total length of 4,751 miles, with 5,630 miles of wire. There were 817,034 internal and 347,829 foreign messages sent and received in 1892.

Finances.—The financial statements of the Greek Government have been unreliable, owing to a loose and variable system of accounts and the mutable theories of different financiers. The total revenue was estimated for 1894 at 88,729,669 drachmai, of which 18,236,900 were derived from direct taxes, 18,000,000 from customs, 12,477,067 from stamps, 11,027,000 from monopolies, 6,218,400 from excise, 4,309,672 from dues and fines, 3,535,796 from public property, 2,937,000 from posts and telegraphs, 1,961,200 from educational fees, 1,650,000 from police, 1,320,119 from sales, and arrears. The direct taxes are always in arrear, the Government refraining from collecting them, from consideration for agricultural distress, mixed with political motives.

The expenditures for 1894 were estimated at the total of 81,693,158 drachmai, divided as follows: Public debt, 21,999,083 drachmai; army, 14,761,946; Interior Department, 10,209,689; ad-

ministration, 8,902,661; Worship and Education, 7,359,521; Justice, 5,893,564; navy, 5,303,611; pensions and allowances, 5,270,494; Finance Department, 2,456,556; Foreign Relations, 2,001,322; civil list, 1,325,000; Boule, 496,561.

Municipal taxation is limited by law to 2½ per cent. of the direct taxation of the Government, besides an *octroi* duty of 2 per cent. The revenues of the municipalities amount to 17,000,900 drachmai.

The total debts of the Government amounted in 1894 to 657,633,247 drachmai payable in gold and 169,420,210 drachmai redeemable in currency. The gold debt consists of 71,521,012 drachmai, advanced by the three protecting powers in 1838, sinking-fund loans of 104,370,000 drachmai raised in 1880, 91,250,000 drachmai raised in 1884, and 133,045,000 drachmai raised in 1887, perpetual consols amounting to 155,000,000 drachmai issued in 1889, a railroad debt of 69,907,200 drachmai contracted in 1890, 16,800,000 drachmai of gold treasury notes, and 14,150,755 drachmai of temporary loans.

Change of Government.—In the beginning of January, 1895, distraint for taxes and the foreclosure of mortgages by the National Bank caused disturbances in Elis and other districts. The opposition blocked legislation in the Chamber. The Government proposed to abolish *octrois* and to impose a higher house tax and a tax on all trades and professions. The people made demonstrations against these new taxes, and the police and soldiery roughly dispersed the protesting crowds that gathered in the streets of Athens on Jan. 20. The Crown Prince, who is commander of the Athens Army Corps, seemed not being consulted as to the movements of his troops. He rode to the Field of Mars, where the great mass meeting was to be held, and ordered the prefect of police to cease interfering with the people's constitutional right of assemblage. The prefect refused to obey any orders but those of the Minister of the Interior. When the people surrounded the prince's horse he advised them to present their grievances to the King by deputations, and calmed their angry spirits, preventing the threatened collision between the crowd and the troops. Trikoupiis got together with difficulty a quorum, to prove that he could still command a majority, and immediately adjourned the Chamber. Thus fortified, the Prime Minister complained to the King about the prince's interference, and the King sustained the prince. The Cabinet thereupon resigned on Jan. 22. The King promptly accepted the resignation of Trikoupiis, and, after Admiral Kanaris had given up an attempt to form a provisional Cabinet, sent for Nikolaos Delyannis, nephew of Theodoros Delyannis, the veteran political leader. A new Cabinet was constituted on Jan. 24, as follows: President of the Council and Minister of Foreign Affairs, Nikolaos Delyannis; Minister of War, Col. Papadimitriopoulos; Minister of Marine, Capt. Kriezis; Minister of Education and Public Worship, Angelos Vlachos; Minister of Finance, Ketseas; Minister of the Interior, Col. Metaxas; Minister of Justice, Aravantinos. This was a nonpolitical ministry, composed mainly of personal friends of the King, appointed for the purpose of dissolving the Cham-

ber and superintending new elections. The ministers gave pledges that they would not be candidates for the Boule. The sessions of the Chamber were immediately suspended by royal decree for forty days. During the five months that the ministry lasted the diplomatist who presided over it did much useful work in improving the commercial relations of Greece. He concluded the negotiations for a new commercial treaty with Egypt that Trikoupiis had begun, made other new commercial treaties with Russia and Belgium, and succeeded in getting the Swedish duty on currants lowered. In the Belgian treaty the duty on currants was reduced one fifth, and abolished altogether if the currants are used for distilling. In the Russian treaty Greece agreed to reduce by one half the duties on caviare, lard, and oak timber, and Russia promised to make the same reduction in her duties on olive oil, olives, and figs, and to admit currants free. Greece furthermore agreed to use only Russian petroleum, and to take it at the price current in Bremen for American oil. The Egyptian treaty opens a market for Greek tobacco. He also established better political relations with Turkey. The internal administration was improved as well. Public order was well preserved, even during an excited political campaign, and brigandage received a blow in the extermination of two out of the three bands that infested the northern part of the kingdom.

The Delyannis Ministry.—The elections were held on April 29. The party of Delyannis was successful in obtaining a surprising majority over the followers of Trikoupiis and the outside parties. The election hinged on the readjustment of the debt. Trikoupiis having attempted to scale down the principal and interest by arbitrary decree, and having failed, Delyannis promised to rehabilitate the finances of the country, restore specie payments, and raise the price of all staple commodities by means of an arrangement with the creditors, although the organs of his party had previously criticised Trikoupiis for making too great concessions to the bondholders. The Trikoupiist party secured only 16 seats, while the party of his old rival won 155. Trikonpis lost his own seat in Missolonghi, and his most trusted lieutenants were defeated. There were 24 independents elected, and 20 supporters of Kalli, 4 Progressists, and 4 followers of Deligeorgi. Trikoupiis announced his withdrawal from public life for a time, leaving his adherents in the new Chamber free to adopt such course as they deemed best. The Government, so far from exercising the pressure and influence in the elections customary with partisan administrations, had forbidden state officials to take any part, and confined to their barracks all officers and soldiers on election day. In Missolonghi several officials were removed because they electioneered in behalf of Trikoupiis. The sudden overthrow of the late Premier was due not wholly to his failure to extricate the country from its financial difficulties, notwithstanding the crushing taxation, but partly to some unpopular measures that he instituted, such as the establishment of a military police and the exaction of fees for tuition at the university—160 drachmai a year. When the Chamber met on June 10 and elected a Delyannist

President, the Cabinet resigned. The King sent for Theodoros Delyannis, who formed a Cabinet composed as follows: President of the Council and Minister of Finance, Theodoros Delyannis; Minister of Foreign Affairs, Skouzes; Minister of the Interior, Mavromichalis; Minister of War, Smolentz; Minister of Marine, Levidis; Minister of Justice, Vavoglis; Minister of Public Instruction, Petridis.

In intrusting the Government to Delyannis, with whom he had been on bad terms since he dismissed that statesman from office in 1892, the King exacted a promise that the ministry would not interfere with the command of the army, nor introduce any bill in the Boule to diminish the authority of the sovereign as commander-in-chief, or restrain him from making promotions and assignments to duty, on grounds of seniority and fitness only, without regard to political or social considerations.

The plan of Delyannis for the service of the debt was to allocate certain revenues, after setting aside a sufficient sum for the proper working of the administrative machine to meet the claims of the public creditors. For the administration of the sequestered surplus revenues a debt commission would be appointed, composed of some of the most important and independent men of the kingdom, but containing no representatives of the foreign bondholders. The commission was to consist of the Minister of Finance, the President of the Board of Audit, the President of the Boule, the President of the Court of the Areopagus, and the managers of three of the principal banks. He proposed to complete the Chalcis section of the Piræus and Larissa Railroad, which had cost the state 85,000,000 drachmai and was falling into decay; to save from ruin also the Myli and Kalamata Railroad; and to finish the incomplete and neglected roads throughout the country. The military police were to be altered into a state civil police in the cities and a municipal police in small towns. Educational fees were to be reduced, and the contributions of municipalities for primary education abolished. After passing these measures and two bills for the relief of the producers of currants—one slightly reducing the export tax, and one authorizing the Government to take 20 per cent. of the superabundant crop and hold it back for a year—the Boule closed its session on Aug. 1. The provisional reduction of 70 per cent. in the interest on the foreign debt was continued by Delyannis pending the arrangement of a compromise with the English, French, German, and Russian creditors. Since many of the bondholders objected to the proposals that had been made by the committees that pretended to speak for them, the Greek Government demanded that the holders of Greek bonds should register their names and the amount of their holdings as a preliminary to the negotiations, and delegate persons to act for them who would be truly representative. With the premium on gold mounting up to 89 per cent., the Government could only, at a great sacrifice, obtain the money to pay even 30 per cent. of the face of the coupons. There were 118,800,000 paper drachmai in circulation, of which 16,800,000 called for gold. The provisional gold loans amounted to 14,160,000 drachmai. The debt

amounts to \$54 per capita, and the annual charge for interest and amortization is nearly \$4. Even at the reduced interest the bondholders received a fair return for their money, as most of the loans were issued for less than 65 per cent. of their face value.

The Olympian Games.—An international congress held in Paris in the summer of 1894, under the presidency of the Baron de Courcel, decided on reviving the Olympian games of ancient Greece in the form of an international athletic tournament, to be held in different European cities at intervals of four years. The first celebration takes place in Athens in the spring of 1896, and the second will be in Paris in 1900. The games include gymnastics, running, quoits, bicycling, tennis, rowing, and sailing. The festivities will be diversified by spectacles and ancient Greek music.

GUATEMALA, a republic in Central America, declared independent when the Central American Confederation dissolved in 1847. The legislative power is vested in the National Assembly, a single chamber elected for four years by universal suffrage. The President is J. M. Reyna Barrios, elected for the constitutional term of six years that ends in 1898.

Finances.—Customs duties provide nearly half the revenue, and excise duties on alcohol and tobacco more than a quarter. The principal expenditures are for the debt, the army, and education. About a tenth of the revenue goes to maintain the regular army of 3,718 officers and men and pay the necessary expenses of the militia force of 67,300 men. The Government has expended money lately to procure modern military arms. It has also erected many new public buildings and entered into heavy engagements to subsidize railroads. A national bank has been established.

Guatemala defaulted on her bonds in February, 1894. The bonds are held mostly in England, though Americans and Germans hold a part. The English bondholders formed a committee, with Sir John Lubbock as chairman, and sent an agent to Guatemala. They went so far as to suggest the forcible intervention of the British Government. The Guatemalan Government declared that it had no intention of repudiating either principal or interest of the debt, that the temporary suspension was due to the depreciation of silver, and that the customs duties hypothecated for the service of the debt were regularly deposited in the treasury. Guatemalan commissioners were sent to England, and an arrangement was finally made in May, 1895. The Government offered to give a new bond for £75 bearing 4 per cent. interest in exchange for every £100 bond of the external debt, and for the internal bonds to issue new ones for 93½ per cent. of their face value, bearing likewise 4 per cent. interest. The London bondholders agreed to accept this compromise.

Education.—Education is free and compulsory by law, and the Government maintains 1,304 primary schools, but only 43,789 children out of 143,453 of school age were in attendance in 1893. The Government expended \$1,120,000 on education in 1894, over a tenth of its income.

Railroads.—A railroad from San José to the capital, 72 miles, and one from Champerico to

Ritahuleu, 27 miles, were completed in 1883. The latter was afterward extended to San Felipe, 29 miles from Ritahuleu. A railroad from the capital to the Pacific coast, built by an American company, was opened on March 15, 1895. The division completing the line to the Atlantic coast is to be finished by 1897. The Government grants a subsidy of \$8,000 a mile.

The Mexican Boundary.—A dispute with Mexico over a part of the boundary between the two republics became so acute before the beginning of 1895 that troops were sent to the frontiers by both governments, and military preparations were made on a large scale. Each Government stood firmly by its claim to the district, and Mexico demanded compensation for the damage inflicted upon *concessionnaires* by the expulsion of their servants, the destruction of buildings, and the burning of forests. The disputed district is a gore jutting into

Guatemalan territory that looks as though it ought to belong to Guatemala. Costa Rica and the other Central American states showed strong sympathy with Guatemala, and indicated a willingness to come to her aid with their military forces. The United States Government, on Jan. 25, 1895, intervened with the suggestion that the dispute was a proper subject for arbitration, and proffered its services to bring about an amicable settlement. The Mexican Government was ready to concede the disputed district to Guatemala, but demanded an apology and reparation. A treaty was signed by Ministers De Leon and Mariscal, in the city of Mexico, that gave complete satisfaction to Guatemala, and the Mexican Senate, in April, ratified it by a unanimous vote. The question of indemnities was left to be settled by arbitration. The United States minister to Mexico was, on Sept. 16, selected as arbitrator.

H

HAWAII, a republic in the Hawaiian Islands of the Pacific Ocean, proclaimed July 4, 1894, succeeding a Provisional Government that was formed on Jan. 13, 1894, when Queen Liliuokalani conditionally abdicated the throne. The legislative power is vested in a Senate and a House of Representatives, the former consisting of 15 members elected for six years by indirect limited suffrage, and the latter also of 15 members, elected by the suffrage of native or naturalized Hawaiians and whites. The President is elected for six years by the two houses in joint session. There is a State Council of 15 members, appointed by the Senate, the House of Representatives, and the President, each naming one third.

The President is Sanford B. Dole, elected for the term that expires in 1900. His Cabinet in the beginning of 1895 was composed as follows: Minister of Foreign Affairs, Francis March Gable; Minister of the Interior, James A. King; Minister of Finance, S. M. Damon; Attorney-General, William Owen Smith.

Commerce and Production.—Sugar is the principal product. The imports in 1893 were valued at \$5,847,000, and the exports of domestic produce at \$10,742,000. The export of sugar was \$10,200,958; of rice, \$317,473; of bananas, \$105,096; of wool, \$30,239. The principal imports are provisions, cotton goods, cereals, timber, apparel, machinery, and hardware. Nearly all the exports go to the United States, and the bulk of the imports come from there, though lately Japanese, Chinese, and British merchants have diverted a part of the trade to other countries. All the sugar was formerly shipped to San Francisco, but in 1895 cargoes were sent to New York by way of Cape Horn. There were 213 vessels, of 823,685 tons, entered at the port of Honolulu in 1893.

Prosecution of Royalists.—A royalist uprising that occurred in the environs of Honolulu on Jan. 6, 1895, was quickly suppressed. Of the insurgents 12 were killed and 500 taken prisoner. On the Government side C. L. Carter, late

Commissioner to the United States, was killed. In one of the improvised forts were found 36 rifles with ammunition and 2 dynamite bombs. These munitions were landed from the schooner "H. A. Wahlberg," of San Francisco, whose entire crew was arrested. A second fight occurred in the Manoa valley on Jan. 9, in which several insurgents were slain. Among 70 persons who were arrested for complicity in the attempted rebellion were 10 American citizens and 10 British subjects. The leaders in the uprising were Samuel Nowlein, formerly colonel of the Queen's body guard, and Robert Wilcox, who directed the revolutionary uprising of 1887. There were 40 rifles and cartridge belts found in the residence of the deposed Queen. All persons not in the police or on military service were compelled to deliver up their arms. Under martial law, which was proclaimed on Jan. 7, Major Seward, formerly of the United States army, and Charles T. Gulick, who was Minister of the Interior in 1885-'86 under King Kalakaua, and who claimed to be an American citizen, were condemned to death; also an Englishman, William H. Rickard. T. B. Walker was condemned to imprisonment for life and fined \$5,000. United States Minister Willis, under special instructions from Secretary Gresham, demanded delay of execution for American citizens who were condemned to death by a military tribunal for mere complicity without participation in the revolution, or condemned for actual participation without a fair and open trial and opportunity for defense. He was instructed to report in either case the evidence relied on to support the death sentence. Identical representations were made by the British Government.

Ex-Queen Liliuokalani was arrested on Jan. 16 and imprisoned on the charge of complicity in the insurrection. On Jan. 24 she sent a letter to President Dole in which, in the hope of obtaining clemency for the misguided Hawaiians and others who had engaged in a rebellion for her restoration, but asking for no indulgence for herself, she solemnly renounced all her claims

to the throne and absolved her former subjects from all allegiance to herself and her heirs and successors, declaring her intention to live henceforth in absolute privacy and retirement from public affairs, and offering to take an oath to support the republic and never encourage or assist directly or indirectly in the restoration of a monarchical form of government. Attorney-General Smith accepted the renunciation of sovereign rights and oath of allegiance, on the understanding that the ex-Queen was in no degree exempt from liability to punishment for complicity in the rebellion, and with the reservation that her sovereign rights ceased to exist on Jan. 24, 1893, when she refused to be longer bound by the fundamental law, and promised to give full consideration to her unselfish appeal for clemency for those who took part in the insurrection.

The trial of the supposed instigators of the attempted rising began on Jan. 17. Wilcox and Nowlein pleaded guilty and gave information regarding the conspiracy. The prisoners were Gulick, Rickard, T. B. Walker, Seward, Bowler, Bertlemann, Wilcox, Nowlein, James Lane and his brother, Grey, Weidemann, and Marshall. John Cummings, Kalakaua's last Premier, was implicated. T. B. Walker pleaded guilty, and for that reason was not sentenced to death. Gulick denied guilt emphatically. A new royalist Constitution had been drawn up and a Cabinet selected, with R. W. Wilcox at its head. C. W. Ashford, a Canadian, who was named Attorney-General, was sentenced on trial to a year's imprisonment and \$1,000 fine. John S. Bowler, an Irish-American, was sentenced to five years' imprisonment and \$5,000 fine. Of 70 natives and half whites who were tried for treason or misprision 23 were convicted and sentenced to imprisonment, the terms ranging from five to ten years. While the trial proceeded fresh arrests were made daily, 700 in the course of a month. American newspaper correspondents and local journalists were arrested to prevent undesirable news from being published. J. B. Johnston, J. Cranstoun, and Alfred Muller were taken from prison and against their protest placed on board a steamer bound for British Columbia; 17 other men, mostly Englishmen, accepted the privilege of leaving the country in preference to standing trial. Charles Creighton, Attorney-General under the Queen, and other old officials, were released from prison and allowed to sail for the United States. In all, 234 were banished. The persons condemned to death by court-martial were retried by the military commission. Gulick, Seward, Rickard, Bertlemann, Nowlein, and Wilcox were sentenced to thirty-five years' imprisonment and fined \$10,000 each; Walker, W. H. C. Grey, Louis Marshall, and Judge Weidemann to thirty years' imprisonment. Nowlein and Bertlemann were released in consideration of their disclosures to the Government, their sentences being suspended. The trial of Mrs. Liliuokalani Dominis, the ex-Queen, for misprision of treason, resulted in her conviction. She was condemned to imprisonment for five years, it having been proved that she had ministers selected for the event of her restoration, but not that she knew of the intended rebellion or the secreted arms. The military commission adjourned on March 18, and

martial law was suspended. The United States and British Governments both refused to interfere in behalf of those of the convicted persons who claimed to be their citizens but had also exercised the rights of citizenship in Hawaii. The sentences of the convicted leaders were commuted on July 4 to twenty years of imprisonment. The British Government, after inquiry, represented that Rickard and Walker were British subjects, since they had never abjured their allegiance to Great Britain. The Government was not willing to recognize in their case the principle of dual citizenship, and offered to submit the rights of the matter to arbitration.

Political Affairs.—Financial and race problems complicated the political situation and added to the perplexities of the Government. After the Queen's formal abdication there was little disposition on the part of the natives to start a new rebellion. When they saw that neither the United States nor Great Britain intervened to rescue the imprisoned royalists, they generally followed the ex-Queen's advice to make the best of their lot under the white men's republic, although individual plotters still endeavored to recruit filibustering expeditions and procure arms in the United States and Canada for a fresh uprising. The Government rendered its military position secure by thoroughly training and equipping a standing army of 1,200 men, many of them from the United States. Lorrin A. Thurston, minister to the United States, was recalled, having become *persona non grata* through discussing state papers prematurely in newspaper interviews, and publishing reflections upon the diplomatic attitude of the Government to which he was accredited. Secretary Gresham requested his recall on Feb. 21. Mr. Hatch was sent to Washington in his place. The Government made new repressive laws to check open expressions of discontent. Any one who criticised the rulers could be tried under an act against persons suspected of unlawful intentions. This act provides that any person suspected of lawless intentions, hostile to public order or to the Government, may be summoned before a court and summarily examined, and, if the intention be shown to have existed, this person shall be sentenced to expulsion from the Hawaiian Islands. If the judge be not fully convinced, he may put the person under bonds. No Legislature having yet been convoked, legislation still remained in the hands of the combined Executive and Advisory Councils, the 19 men who formed the original Provisional Government. The President introduced an act giving to the Government power to suppress for a period not exceeding four years any offending newspaper or any journal started in the place of one that has been suppressed. The wealthy supporters of the Government were very anxious about the Japanese, who already made one third of the male population, and were coming in increasing numbers, who were clamoring for the suffrage and who were aggressively independent, and so united that the authorities refrained from arresting them for the same offenses that other foreigners had to suffer for, or released such as were arrested at the truculent demand of their fellow-countrymen. The Government is disposed to discourage the further immigration of

Japanese, but can only stop their importation as contract laborers, their free entrance being secured by a treaty in which most-favored-nation treatment is guaranteed. As a counterpoise to the Japanese, the Portuguese have been invited to come in larger numbers, but a Hawaiian agent who was sent to the Azores in 1894 was unable to engage many either as colonists or as laborers. An act was passed securing indemnity to officers of the Government and others for acts done under martial law for the suppression of the rebellion, and protecting them from legal claims for damages. Another act forbade the return of any person deported under martial law, or banished by sentence of any court without the permission of the Minister of Foreign Affairs. The first Legislature was convened for a special session on June 12. President Dole in his address deprecated Asiatic immigration, and proposed to settle American and other white immigrants on the crown estates and public lands.

Some of the natives and white royalists, men who had always opposed annexation, held meetings in conjunction with the Hawaiian Annexation League and members of the American League to promote the policy of annexation to the United States. These natives changed front on this question in the hope that annexation would put an end to the objectionable Government, and bring the country under the liberal laws of the United States.

The British Government, having recognized the Hawaiian Republic, recalled Major James Hay Wodehouse, for twenty-five years British minister to Hawaii, and appointed Mr. Hawes British commissioner and consul general. Major Wodehouse, on his departure, neglected to pay an official farewell to the Dole Government, and proposed to take leave of the ex-Queen, who was imprisoned in a room of the palace, but could not get permission to visit her. Col. C. S. Spalding, a sugar-planter of Hawaii, obtained a concession to lay a cable between the islands and the Pacific coast of the United States, with a subsidy of \$50,000 a year for twenty years, in return for which he promised to send all messages of the Government free. He formed a company in conjunction with American capitalists, and applied to the United States Congress for a subsidy.

HAYTI, a republic on the island of Hayti, in the West Indies. The National Assembly consists of a Senate, of 39 members, and a House of Representatives. The President and electoral colleges present separate lists of nominees, from which the House of Representatives every two years elects one third of the Senators to take the place of those whose term of six years has expired. The Representatives are elected directly for two years by the votes of all male citizens who have a regular occupation. The President is elected for the term of seven years by the direct vote of the people or by the joint vote of both houses of the Legislature. The President is Gen. L. M. F. Hippolyte, elected in May, 1890.

Finance.—Almost the sole source of the revenue is the customs tariff. Duties on exports are paid in United States gold and import duties in currency. The revenue for the year ending Sept. 30, 1893, was \$7,405,250 in gold, the export duties amounting to \$3,164,960 and import

duties to \$4,526,020 in currency. The expenditure for 1893 was estimated in the budget at \$8,498,524 in currency.

The public debt on Jan. 1, 1893, consisted of a 5-per-cent. external loan of \$4,471,312, internal loans of \$4,406,083, also paying 5 per cent., a floating debt of \$186,960 in gold and \$802,714 in currency, and \$3,085,482 of temporary loans, besides the paper currency, of which \$4,040,795 were outstanding, making a total of \$16,963,347.

Attempted Rebellion.—President Hippolyte in March, 1895, made a tour of the country with his army. In the north and on the south coast the antagonists of the President were quiet, but near the border of Santo Domingo Gen. Hippolyte was suddenly attacked while sleeping by a small band of revolutionists. He mounted his horse and directed the troops, who, after a short and sharp fight, put the rebels to flight, as they were armed with revolvers and *machetes* only. All who were taken were instantly shot. The rebels were partisans of Gen. B. Canal, successor to Gen. Anselm Prophete, deceased, as a candidate for the presidency. They knew that some of Gen. Hippolyte's troops were dissatisfied, and expected them to join the revolt.

HOLLAND. (See NETHERLANDS.)

HONDURAS, a republic in Central America. The Congress is a single chamber, containing 37 members, elected by direct suffrage for four years. The President is elected by popular vote for the term of four years, though Policarpo Bonilla, President for the term ending in 1897, became chief of the state as leader of a revolution, and was elected on Dec. 24, 1893, by a constituent assembly. There is an active army of 600 men, and about 20,000 militia. The republic is computed to be 46,250 square miles, with a population of 396,048. Tegucigalpa, the capital, has 12,000 inhabitants.

Communications.—A railroad from Puerto Cortez to San Pedro Sula, 37 miles, has been built twenty-five years. Originally it extended to Pimienta, but the whole line, being poorly constructed, fell into disuse, and under subsequent managements it never reached beyond Pimienta, until, on Feb. 22, 1895, an extension to Chamelecon, 6 miles, was opened to traffic. The line will be continued to Pimienta and Comayagua. Concessions have been granted for a railroad from Tegucigalpa to the Pacific coast and to one terminating in the Mosquito territory in Nicaragua. There are 1,500 miles of telegraph.

Central American Union.—The hostile acts of Great Britain in Nicaragua gave a fresh impulse to the movement for confederation of the five Central American republics. First a treaty establishing an offensive and defensive alliance between Honduras and Nicaragua was concluded and promulgated on May 4, 1895. The treaty did away with the commercial boundaries between the two countries, and pledged the two contracting governments to labor incessantly for the adoption of similar treaties by all the Central American republics until they become one united nation. The presidents of the other republics expressed themselves as in favor of union, and in June a conference was called by President Gutierrez, of Salvador. President Bonilla and Zelaya, the Nicaraguan

President, met him at Amapola and discussed the question of union and the terms of agreements tending toward federation. An agreement was prepared which prohibits exiles from fomenting revolutions. President Barrios declined to take part in a federation conference unless the old claim of Guatemala to supremacy on the ground of its superior size and population should be recognized beforehand. President Iglesias, of Costa Rica, on account of a boundary dispute with Nicaragua, also declined to come. A compact to establish permanent peace in Central America was drawn up and signed by the heads of the three republics. The compact unites them into a single nation in regard to their external political and commercial relations. The united republics will be known as the Greater Republic of Central America until Guatemala and Costa Rica also accept the agreement, when the title will be the Republic of Central America. The internal affairs of each republic will continue to be carried on under its own constitution by its proper legislature. All external affairs will be transacted under the directions of a Diet consisting of one deputy from each legislature and one other member representing each republic. The members serve three years. A majority vote decides. In negotiations with other governments the Diet chooses one of its members to act as plenipotentiary. It appoints all diplomatic and consular representatives. The Diet meets annually at the capital of each republic in turn. All questions now in abeyance or that may arise in future between any of the republics and a foreign government shall be discussed by the Diet according to data and instructions furnished by the interested government. If it be impossible to arrange in a friendly manner a question presented for consideration or to have the question submitted to arbitration, it shall notify all three governments, and a majority of them shall decide whether to accept the result of the negotiations or to declare war. When arbitration is agreed upon the Diet shall nominate an arbitrator, and must select from among the residents of the American republics.

HUNT, RICHARD MORRIS, architect, born in Brattleboro, Vt., Oct. 31, 1828; died in Newport, R. I., July 31, 1895. He was a son of Jonathan Hunt, a Representative in Congress for many years, and a younger brother of William Morris Hunt, the painter. In 1843 he was graduated at the Boston High School, and, having chosen the profession of architecture, went to Europe to study in the same year. He spent 1844 with Samuel Darier in Geneva, Switzerland, and in 1845 entered the *atelier* of Hector Lefuel in Paris, and also became a student at the *École des Beaux Arts*. During the nine years he was with Lefuel he made several professional journeys in Europe, Egypt, and Asia Minor. In 1854, Lefuel succeeded Visconti as architect of the new buildings connecting the Tuileries and the Louvre, and secured for his pupil the appointment of inspector of the work. Mr. Hunt was placed in special charge of the Pavilion de la Bibliothèque, opposite the Palais Royal, and under his chief made all the studies and drawings for that work. He returned to the United States in 1855, and established himself in New

York city. His first engagement here was with Thomas U. Walter, whom he assisted in preparing plans for the completion of the Capitol in Washington. On settling permanently in New York, he opened an *atelier* for students similar to those in Paris, at first in the University Building, and afterward in the Tenth Street Studio Building, which he had recently designed and erected, and was influential in founding the American Institute of Architects. His first public work comprised designs for the four southern entrances to Central Park, which were adopted by the Park Department in 1860, but up to the present time have not been carried out. In 1861-'2 Mr. Hunt was principally engaged in study and travel in Europe, being part of the time a pupil of Barye the sculptor, and in 1867 he was a member of the jury of the Paris Exposition. In 1870 he entered on the really productive part of his career, which first exhibited the results of his study and the direction of his mind in the line of domestic architecture at Newport, R. I. His work there transformed that city from a popular summer resort to a costly and artistic residential place, replete with charm and comfort all the year round. His genius soon began to find expression in great business structures, so that within a few years he distinguished himself as the creator of a unique style of both domestic and business architecture. In 1876 he was appointed a member of the jury of the Centennial Exposition at Philadelphia. His last noted public work was in connection with the World's Columbian Exposition at Chicago in 1893. He was president of the board of architects selected to confer with the Chief of Construction regarding the grouping of buildings and their architecture, and besides this advisory work he designed the noble Administration Building (see "Annual Cyclopædia" for 1891, page 838). He was awarded the Queen's gold medal by the Royal Institute of British Architects in 1893, and at the personal presentation of it President MacVickar Anderson paid Mr. Hunt and his work this compliment: "We are about to do honor to a citizen of the great Western republic, one whose name we are proud to enroll as one of our gold medalists not only on account of high personal and professional merit, but also because he is the first American whose name will appear in that roll call of illustrious artists. That the selection should this year have fallen on one who has designed the principal building in the great Columbian Exposition which attracts the world's sightseers to Chicago at the present moment, and which will hereafter associate the name of America with the most wondrous development that international exhibitions have ever reached, or perhaps are ever likely to attain, is, to say the least, a singularly fortunate coincidence. In honoring Mr. Hunt, in recognition of his eminence and of his works as an artist, we rejoice that we are thus able to pay a graceful tribute to the United States in the person of one of her most distinguished sons." On Dec. 23, 1894, Mr. Hunt received the honor of election to a vacant associate membership of the Académie des Beaux Arts, a distinction rarely conferred on a foreigner, and a graceful supplement to the honorary membership of the Institute, which he had held for some years. He was also an honorary mem-

ber of the Central Society of French Architects, the Royal Institute of British Architects, the Engineers' and Architects' Society of Vienna, and the Academy of St. Luke, in Rome, Italy, and a member of the Legion of Honor of France, the American Institute of Architects, and the Architectural League. In 1892 he received the honorary degree of LL. D. from Harvard Col-

lege, being the first artist ever so honored by that institution. Among the best-known structures designed by him, besides those already mentioned, are the monument erected by the United States Government at Yorktown, Va., in 1881; the pedestal of the statue of Liberty in New York harbor; the Astor memorial doors of bronze in Trinity Church, New York city; the United States Naval Observatory at Washington; the new academic and gymnasium buildings of the United States Military Academy at West

Point; the Marquand Chapel and Theological Library at Princeton College; the Divinity School and the Scroll-and-Key Society building at Yale College; the Lenox Library, Presbyterian Hospital, "New York Tribune" building, Coal and Iron Exchange, Guernsey office building, and the residences of William K. Vanderbilt, Ogden Mills, Elizabeth T. Gerry, John Jacob Astor, and Henry G. Marquand—all in New York city; residences of Cornelius Vanderbilt ("The Breakers"), Ogden Goslet ("Ochre Court"), J. R. Busk, Prof. Shields, and Oliver H. P. Belmont ("Belcourt")—all in Newport, R. I.; residence of William K. Vanderbilt at Oakdale, L. I.; residence of George Vanderbilt at Biltmore, N. C.; the Fogg Museum, Cambridge, Mass.; the Vanderbilt mausoleum on Staten Island; and the Mills tomb at Tarrytown, N. Y.

HUXLEY, THOMAS HENRY, an English scientist, born in Ealing, Middlesex, England, May 4, 1825; died in Eastbourne, June 29, 1895. His father was a teacher in Ealing. Of his mother he wrote: "Physically and mentally, I am the son of my mother so completely—even down to the peculiar movements of the hands, which made their appearance in me as I reached the age she had when I noticed them—that I can hardly find any trace of my father in my-

self, except an inborn faculty for drawing, which, unfortunately, in my case has never been cultivated; a hot temper, and that amount of tenacity of purpose which unfriendly observers call obstinacy. My mother was a slender brunette of an emotional and energetic temperament, and possessed of the most piercing black eyes I ever saw in a woman's head. With no more education than other women of the middle classes in her day, she had an excellent mental capacity. Her most distinguishing characteristic, however, was rapidity of thought. If one ventured to suggest that she had not taken much time to arrive at any conclusion, she would say: 'I can not help it; things flash across me.' That peculiarity has been passed on to me in full strength; it has sometimes played me sad tricks, and it has always been a danger." His earliest education was received at the school where his father taught. Poverty made a university career impossible, and he turned to reading. The works of Thomas Carlyle, John Stuart Mill, and the philosophical writers of Germany were studied with eagerness. No book came amiss. He took up one pursuit after another, but failed to continue in any very long. His great desire was to become a mechanical engineer, and he read much with this in mind. Although he failed to realize this ambition, he retained to the last a taste for the mechanical side of investigation. Finally, he began the study of medicine in the office of his brother-in-law, a physician. Thence he passed to the Charing Cross Medical School, where he was graduated in 1846 with high honors in physiology. Of this period he wrote: "The only part of my professional course which really and deeply interested me was physiology, which is the mechanical engineering of living machines; and notwithstanding that natural science has been my proper business, I am afraid there is very little of the genuine naturalist in me. I never collected anything, and species work was always a burden to me; what I cared for was the architectural and engineering part of the business, the working out of the wonderful unity of plan in the thousands and thousands of diverse living constructions, and the modification of similar apparatus to serve diverse ends." While he was in the medical school he published a paper in which he described the layer of cells of the inner root-sheath of the hair, and this is now called Huxley's layer.

As he was too young to qualify at the College of Surgeons, he applied to Sir William Burnett for a medical appointment in the navy. He was instructed to call, which he did, and he thus describes the result:

I think I see him now as he entered with my card in his hand. The first thing he did was to return it with the frugal reminder that I should probably find it useful on some other occasion. The second was to ask whether I was an Irishman. I suppose the air of modesty about my appeal must have struck him. I satisfied the director general that I was English to the backbone, and he made some inquiries as to my student career, finally desiring me to hold myself ready for examination. Having passed this, I was in her Majesty's service and entered on the books of Nelson's old ship "Victory" for duty at Haslar Hospital about a couple of months after I made my ap-

plication. My official chief at Haalar was a very remarkable person—the late Sir John Richardson, an excellent naturalist, and far famed as an indomitable Arctic traveler.

Months passed, during which his existence was apparently ignored, when suddenly "Old John" (as the chief was styled), meeting him, described the service in which the "Rattlesnake" was about to be ordered: "He said that Captain Owen Stanley, who was to command the ship, had asked him to recommend an assistant surgeon who knew something of science. Would I like that? Of course I jumped at the offer. 'Very well, I give you leave; go to London at once and see Captain Stanley.' I went, saw my future commander, who was very civil to me, and promised to ask that I should be appointed to his ship, as in due time I was." Then followed four years of absence from home, during which the "Rattlesnake" surveyed some of the passages round the coast of Australia and explored the sea between that continent and New Guinea. In the course of his voyage Mr. Huxley made extensive observations of the natural history of the sea, especially with reference to the anatomy of the mollusks and *Medusæ*. He collected a great number of specimens, and wrote several papers which he sent home. Of these he says:

During the four years of our absence I sent home communication after communication to the Linnean Society, with the same result as that obtained by Noah when he sent the raven out of his ark. Tired at last of hearing nothing about them, I determined to do or die, and in 1849 I drew up a more elaborate paper and forwarded it to the Royal Society. This was my dove, if I had only known it. But, owing to the movements of the ship, I heard nothing of that either until my return to England in the latter end of the year 1850, when I found it was printed and published, and that a huge packet of separate copies awaited me.

For three years after his return he continued in the navy, and persistently tried to persuade his superiors to contribute to the expense of publishing the scientific results of the expedition. At last, weary of his efforts, the Admiralty ordered him to join a ship, "which thing," he says, "I declined to do," and he resigned.

I desired to obtain a professorship of either physiology or comparative anatomy, and as vacancies occurred I applied, but in vain. My friend Prof. Tyn-dall and I were candidates at the same time—he for the chair of Physics, and I for that of Natural History in the University of Toronto, which, fortunately, as it turned out, would not look at either of us. I say fortunately, not from any lack of respect for Toronto, but because I soon made up my mind that London was the place for me, and hence I have steadily declined the inducements to leave it which have at various times been offered.

In 1854 his friend Edward Forbes resigned from the place of palæontologist to the Geological Survey and from the lectureship on natural history in the Royal School of Mines. "I refused the former point-blank," says Huxley, "and accepted the latter only provisionally, saying that I did not care for fossils and that I should give up natural history as soon as I could get a physiological post. But I held the office for thirty-one years, and a large part of my work has been palæontological."

Meanwhile he had begun to attain a standing among scientists. He was made a fellow of the Royal Society in June, 1851, and in 1852 one of its medals was conferred upon him. In 1859 the Royal Society published the scientific results of his expedition, under the title of "Oceanic Hydrazoa: A Description of the Calyceporidæ and Physophoridæ." Then came the memorable discussion on Darwin at the Oxford meeting of the British Association in 1860. Michael Foster, his friend for forty years, describes the event in these words:

The bishop [Wilberforce] had spoken; cheered loudly from time to time during his speech, he sat down amid rapturous applause, ladies waving their handkerchiefs with great enthusiasm, and in almost dead silence, broken merely by greetings which, coming only from the few who knew, seemed as nothing. Huxley, then well-nigh unknown outside the narrow circle of scientific workers, began his reply. A cheer, chiefly from a knot of young men in the audience—hearty, but seeming scant through the fewness of those who gave it, and almost angrily resented by some—welcomed the first point made. Then as, slowly and measured at first, more quickly and with more vigor later, stroke followed stroke, the circle of cheers grew wider and yet wider, until the speaker's last words were crowned with an applause falling not far short of, indeed equaling, that which had gone before—an applause hearty and genuine in its recognition that a strong man had arisen among the biologists of England.

To the scientific reputation that he had already achieved he thus added one of a more popular character, and thereafter he took rank among the great men of England. Other appointments followed his acceptance of the chair in the Royal School of Mines. In 1854 he was made Fullerian Professor of Physiology to the Royal Institution, and during the same year he became examiner in physiology and comparative anatomy for the University of London, which place he held for seven years. From 1863 to 1869 he was Hunterian Professor in the Royal College of Surgeons, and during the absence of C. Wyville Thompson in 1875-'76 he filled his place as Professor of Natural History in the University of Edinburgh. In 1870 he was elected a member of the London School Board, and in its deliberations he became specially prominent as the opponent of denominational education, particularly that of the Catholic Church. He retired from the board in 1872, owing to illness. In the same year he was elected Lord Rector of the University of Aberdeen, and in 1874 was installed. On the death of Frank Buckland, in 1881, he was called to the vacant post of Inspector General of Salmon Fisheries. Failing health compelled his resignation from various appointments in 1885, but at the request of the lord president he retained his connection with the Normal School of Science and the Royal School of Mines as dean and Honorary Professor of Biology. He served on many Government and royal commissions, among which were those relating to fisheries, contagious diseases, vivisection, and Scottish universities.

The degree of Ph. D. was conferred on him by Breslau, that of M. D. by Würzburg, that of LL. D. by Edinburgh and Cambridge in 1879, and that of D. C. L. by Oxford in 1886.

The King of Sweden made him a Knight of the Polar Star, and he became a privy councillor to his own sovereign in 1892. The Royal Society gave him its Wollaston medal in 1876, its Copley medal in 1898, and its Darwin medal in 1894. The Academy of Natural Sciences of Philadelphia awarded him in 1893 the Hayden memorial medal. He became its secretary in 1873, and its president in 1883, serving for two years only. The Geological Society made him its president in 1860, and the Ethnological Society similarly honoured him in 1870, while during the same year he presided over the British Association. In 1884 he was made a fellow of the Royal Col-

also lectured on the "Elements of Comparative Anatomy" and on the "Classification of Animals and the Vertebrate Skull." In 1876 he visited the United States, and after delivering an address at the opening of Johns Hopkins University, lectured in New York city "On the Direct Evidence of Evolution." He delivered the Rede lecture in Cambridge in 1883 on "The Origin of the Existing Forms of Animal Life—Creation or Evolution," and in 1893 he delivered the second Romanes lecture, "Evolution and Ethics," in Oxford. With Darwin, Tyndall, and Herbert Spencer, he brought about the general acceptance of the doctrine of

HOUSE IN WHICH PROFESSOR HUXLEY WROTE MANY OF HIS BOOKS, NO. 4 MARLBOROUGH PLACE, ST. JOHN'S WOOD.

lege of Surgeons. In 1879 he was chosen a corresponding member of the French Academy of Sciences, and in 1883 he was elected a foreign member of the National Academy of Sciences. He was also a foreign or corresponding member of academies in Berlin, Brussels, Göttingen, Haarlem, Lisbon, Munich, Philadelphia, Rome, St. Petersburg, and Stockholm.

Huxley more than any other scientist of the century influenced public opinion by his writings and public utterances. In 1860 he delivered a course of lectures to workmen on "The Relation of Man to the Lower Animals." At once his views became the subject of controversy, and a summary of the discussion is given in his "Evidence as to Man's Place in Nature" (1863). In 1862 he gave another course to workmen, and his lectures were published with the title "On our Knowledge of the Causes of the Phenomena of Organic Nature" (1863). He

evolution. Huxley's special work was that of proving it by biological evidence. Of his success Haeckel has written the following words:

Not only has the evolution theory received from Prof. Huxley a complete demonstration of its immense importance, not only has it been largely advanced by his valuable comparative researches, but its spread among the general public has been largely due to his well-known popular writings. In these he has accomplished the difficult task of rendering more fully and clearly intelligible to an educated public of very various ranks the highest problems of philosophic biology. From the lowest to the highest organisms he has elucidated the connecting law of development. In these several ways he has rendered science a service which must ever rank as one of the highest of his many and great scientific works.

Huxley's scientific papers for the most part appeared in the journals and proceedings of the Royal, Linnean, Geological, and Zoological Societies, and in the memoirs of the Geological

Survey of Great Britain. In book form, his scientific works include: "On Tape and Cystic Worms, with an Introduction on the Origin of Intestinal Worms by Carl Theodor von Siebold" (1857); "Lectures on the Elements of Comparative Anatomy" (1864); "An Elementary Atlas of Comparative Osteology" (1864); "Lessons in Elementary Physiology" (1866); "Palaeontologia Indica: Vertebrate Fossils" (1866); "An Introduction to the Classification of Animals" (1869); "A Manual of the Anatomy of Vertebrated Animals" (1871); "A Manual of the Anatomy of Invertebrated Animals" (1877); "The Crayfish: An Introduction to the Study of Zoology" (1879); and an "Introductory" to the series of "Science Primers" (1880). Concerning his more popular works it has been well said that "for mere rhetoric, for polish of expression, for structural harmony, for keen wit and sarcasm masked under the most graceful urbanity, for unsparing logic, and for luminous simplicity even when dealing with the most abstruse and difficult subjects, the books which Huxley addressed to the unscientific world are almost unparalleled in English literature." They include: "On the Educational Value of the Natural History Sciences" (1854); "Protoplasm: The Physical Basis of Life" (1869); "Lay Sermons, Addresses, and Reviews" (1870); "Essays: Selected from Lay Sermons" (1871); "Critiques and Addresses" (1873); "Hume" in the series of "English Men of Letters" (1877); "American Addresses, with a Lecture on Biology" (1877); "Physiography: An Introduction to the Study of Nature" (1877); "Science and Culture, and other Essays" (1881); and "Inaugural Meeting of the Fisheries Congress: An Address" (1883). A complete edition of collected essays, grouped in accordance with the general subject, was issued in 9 volumes, each with a new introduction (New York, 1894-'95). He was associated with Robert Etheridge in the prepa-

ration of "A Catalogue of the Collection of Fossils in the Museum of Practical Geology" (1858), and with Newell H. Martin in the "Course of Practical Instruction in Elementary Biology" (1875).

It was Huxley who coined the word "agnostic," and of its origin he wrote: "When I reached intellectual maturity and began to ask myself whether I was an atheist, a theist, or a pantheist, a materialist or an idealist, a Christian or a freethinker, I found that the more I learned and reflected the less ready was the answer, until at last I came to the conclusion that I had neither art nor part with any of these denominations except the last. The one thing in which most of these good people agreed was the one thing on which I differed from them. They were quite sure they had attained a certain 'gnosis,' had more or less solved the problem of existence, while I was quite sure I had not, and had a pretty strong conviction that the problem was insoluble. So I took thought, and invented what I conceived to be the appropriate title of agnostic. It came into my head as suggestively antithetic to the gnostic of Church history, who professed to know so much about the very things of which I was ignorant."

Still, as he saw the end approaching, he made request that the following words, written by his wife, should stand on his tomb:

And if there be no meeting past the grave,
If all is darkness, silence, yet 'tis rest.
Be not afraid, ye waiting hearts that weep,
For God "still giveth his beloved sleep,"
And if an endless sleep he will—so be it.

Concerning this, Michael Foster says: "Future visitors to the burial place on the northern heights of London, seeing on his tombstone the above lines, will recognize that the agnostic man of science had much in common with the man of faith."

I

IDAHO, a Northwestern State, admitted to the Union July 3, 1890; area, 84,800 square miles; population, according to the census of 1890, 84,385. Capital, Boise City.

Government.—The following were the State officers during the year: Governor, William J. McConnell, Republican; Lieutenant Governor, Frank B. Mills (until Aug. 10); Secretary of State, Isaac Garrett; Auditor, Frank C. Ramsey; Treasurer, C. Bunting; Attorney-General, George M. Parsons; Adjutant General, A. Case; Superintendent of Public Instruction, Charles A. Foresman; State Engineer, Frank B. Mills; Chief Justice of the Supreme Court, John T. Morgan; Associate Justices, J. W. Huston, I. N. Sullivan.

Legislative Session.—The Legislature met Jan. 7, and continued in session until March 9. In the House, 168 bills were introduced, and in the Senate 97. Of the 83 bills that were passed by both Houses, the Governor signed 77 and vetoed 6, two of which were passed over the veto.

Among the measures enacted was the repeal

of the law passed unanimously by the last Legislature, providing that all obligations shall be paid in gold or silver, all contracts to the contrary notwithstanding, the ground for repeal being that the measure had been detrimental to the business interests of the State. An act making a new legislative apportionment provides for a senator for every county, while representation in the House is on the basis of one representative for every 536 votes, or fraction over one half of 536, cast at the last election. The new game-and-fish law abolishes the office of county game warden, specifies what are the closed seasons, and prohibits transporting or dealing in hides of wild animals, as also hunting with dogs. Three irrigation bills were passed—the joint irrigation bill providing means of accepting the gift of 1,000,000 acres of land, under the Carey act, from the Federal Government, and two measures providing for the organization of irrigation districts, a system of water measurements, and the fixing of water rates in certain emergencies by the district courts. Un-

der the system it is proposed to purchase existing ditches or construct new ones by issuing bonds based on the property of the district and taxing all the land in the district for the payment of the bonds.

A radical change in the system of locating mines was made by a new mining law, whose most important feature is a provision requiring a locator to sink a shaft at least 10 feet within two months after location. Any open cut, cross cut, or tunnel which shall cut the lode at a depth of 10 feet below the surface, or an adit tunnel of at least 10 feet in and along the lode from the point where the lode may be in any manner discovered, shall, it is provided, be equivalent to the sinking of the required 10-foot shaft. In the case of the relocation of an abandoned claim, the relocater may sink the old shaft 10 feet farther in order to perfect his location.

The age of consent was raised from fourteen years to eighteen.

The office of State engineer was created in March, to which the Governor appointed the Lieutenant Governor, Frank B. Mills, who in August handed in his resignation as Lieutenant Governor, when Vincent Bierbower, President pro tem, of the Senate, became acting Lieutenant Governor. Among other laws enacted were these:

Extending the time for redemption of property sold under execution from six months to one year.

Providing for the distribution of moneys collected from liquor and gambling licenses as follows: Fifty per cent. to the school fund, 40 per cent. to the road fund, and 10 per cent. to the State treasury; in incorporated cities and towns, 50 per cent. to the school fund, 40 per cent. to the municipal treasury, and 10 per cent. to the State.

To abolish the counties of Logan and Alturas, and merge them in the county of Blaine.

To establish the county of Lincoln from the southern portion of the new county of Blaine.

Providing for exemption from execution of certain property other than that specified as homesteads.

Repealing the merchant license law.

Providing for the issuance of seven-year improvement bonds by incorporated cities for the purpose of paving streets and constructing sidewalks, the cost to be a lien on the property benefited, and payable in seven annual payments.

Repealing the test oath.

Repealing marriage licenses.

To revoke penalties on delinquent taxes in certain cases for the years 1894 and 1895.

Joint memorials to Congress were passed petitioning for free and unlimited coinage of silver and protesting against the passage of the Carlisle bill; for an appropriation of \$125,000 to be used in making surveys in Idaho preliminary to carrying into effect the provisions of the Carey law; for the removal of obstructions from the Clark's Fork of Columbia river; for the election of United States Senators by a direct vote of the people; and asking for a bankruptcy law.

The constitutional amendments to be submitted to popular vote, including one granting the franchise to women, and one providing for the election of a prosecuting attorney in each county.

On March 7, George L. Shoup was re-elected to the United States Senate, on the 53d ballot. The final vote was: George L. Shoup, Republican, 27; Willis Sweet, Republican, 12; A. J. Cook, Populist, 14.

FINANCES.—The State owes for outstanding warrants \$156,644.81, estimated interest on the

same \$5,000, total \$161,644.81; civil deficiency for 1893-'94, \$43,357.59; militia deficiency, \$7,965.08. Grand total of indebtedness, \$212,907.48. Resources to meet this indebtedness are: Cash in general fund, \$15,351.01; taxes due from counties, \$301,851; probable poll taxes, \$12,000; total, \$329,202.01. Deducting \$16,000 for delinquent taxes leaves a balance of revenue of \$213,202.01, or \$414.53 in excess of indebtedness. The estimate of expenses for 1895-'96 is \$462,480. The bonded indebtedness is as follows: Capitol building, \$80,000; insane asylum, \$1,000; refunding, \$108,000; wagon road, 1890, \$50,000; wagon road, 1893, \$125,000; total, \$374,000.

The appropriations made by the Legislature amounted to \$484,000, half of which were for the expenses of 1895. Additional sums to the amount of \$48,980 also became due this year, making a total of \$532,980. The State Board of Equalization in August fixed the valuation of the property of the State at \$29,222,210.38, an increase over 1894 of \$44,979.04. Of this increase \$69,000 was in the valuation of horses and \$142,000 in the valuation of sheep; another source of increase was in patented land, heretofore not taxable because the patents were not complete.

The valuation of the 900 old miles of railroad in the State and of the telegraph and telephone lines and instruments was \$6,456,299.58, the same as last year.

Under the restrictions of the Constitution the total tax levy can not exceed 10 mills on the dollar, of which 1½ mill is pledged for payment of debts owed prior to the admission of the State, and for redemption of university warrants. A tax levy of 8½ mills on the valuation for 1895 produces \$256,636.84. The levy for 1894 was 8½ mills.

Metal Output.—During 1894 the production of gold was 111,687 fine ounces, valued at \$2,308,775; of silver, 3,774,349 fine ounces, valued at \$7,188,630. The production of lead was valued at \$2,605,450. The total metal production was valued at \$9,702,855, an increase in valuation over the production of 1893 of \$1,109,222. The flour gold, to be found in great quantities on Snake river, has attracted unusual attention, and has contributed largely to the increased production.

Wool.—The wool clip this year amounted to nearly 8,000,000 pounds, an increase over 1894 of more than 1,000,000 pounds. In that year there were in the State 573,172 sheep, valued at \$1 each; in 1895 the number had increased to 717,339, with the valuation the same. The valuation in 1893 was a little over \$2 each. The decrease in valuation is said to be because of the change in the tariff.

Rabbit Bounties.—An inquiry from the United States Department of Agriculture has developed the fact that since 1878 Ada County has paid for rabbit scalps, at 3 cents each, \$91,063.44, which is said to be a larger amount than the aggregate of bounties paid by all other States in the West that have offered bounties on jack rabbits. As the amount paid for the last quarter was over \$2,500, and the maximum tax levy for bounties was 3 mills on the dollar, the county commissioners in October stopped payment of bounties on rabbits and gophers.

State Lands.—The State Land Department has secured the approval of 283,000 acres of selected land during the past two years, as also the rescinding of an order withdrawing from settlement 137,000 acres of land, chiefly in Kootenai County, heretofore withdrawn as a forest reservation. The State may now select lands there, and a very valuable tract of agricultural land is made available for settlement under the homestead laws.

The State has secured the reversal of a uniform line of decisions of the Interior Department, holding that double minimum lands—that is, lands within the limits of a railroad grant—could not be selected by States in satisfaction of grants made to them.

Surveys.—In the allotment of the appropriation carried in the sundry civil-service bill for public surveys in 1895, Idaho received \$23,000. The general appropriation act provides that the survey of the agricultural lands thereunder must be on the application of settlers.

Education.—The State University began its fourth year in September with an attendance of 108, an increase of nearly 50 per cent. over 1894. To it the Legislature made an appropriation of \$16,230 to reimburse the Morrill fund, and \$2,000 for regents' expenses.

The Legislature of 1893 established State normal schools at Lewiston and Albion, but made no financial provision for them. At Albion a building has been erected by the citizens and a flourishing school opened, and in August arrangements for a new building were made. This was made possible by the legislative act authorizing the issue of bonds to the amount of \$75,000 for the support of the two schools. The enrollment at Albion for the half year ending July 1 was 83, the expenses during that period were \$5,278.22. At Lewiston the people have laid the foundations for a building. The amount of the semiannual apportionment of the State school fund, made in August, was \$9,664.46.

By act of the Legislature the location of the Agricultural College was fixed at Idaho Falls.

Insane Asylum.—In this institution, for whose support the Legislature made an appropriation of \$65,000, there were in December 152 patients, of whom 56 were women.

The issuing of bonds to the amount of \$25,000 for asylum improvements was authorized by the Legislature.

Penitentiary.—On July 1 there were 115 prisoners confined in the penitentiary, of whom 7 were held on account of the United States. To this institution an appropriation of \$65,000 was made.

Soldiers' Home.—An appropriation of \$28,000 was made for the support of the home, and a bill was passed enacting that the board of trustees for the home shall consist of the Governor, Secretary of State, and Attorney-General, and that they shall serve without compensation. The number of inmates at the end of September was 27, and the number of officers and employees 11.

Decisions.—A decision of the Supreme Court affirmed the constitutionality of the law providing that water companies shall furnish water free for fire purposes and other great public necessities.

The same court also decided that women were eligible to practice law in Idaho, the Idaho statutes to the contrary notwithstanding. The ground for the decision was that the State Constitution provides that "the Legislature has no power to deprive the judicial department of any power or jurisdiction which rightfully pertains to it as a co-ordinate department of the government," and that the admission and control of the attorneys were within the purview of this section of the Constitution.

ILLINOIS, a Western State, admitted to the Union Dec. 3, 1818; area, 56,650 square miles. The population, according to each decennial census, was 55,162 in 1820; 157,445 in 1830; 476,183 in 1840; 851,470 in 1850; 1,711,951 in 1860; 2,539,891 in 1870; 3,077,871 in 1880; and 3,826,351 in 1890. Capital, Springfield.

Government.—The following were the chief officers for the year: Governor, John P. Altgeld, Democrat; Lieutenant Governor, Joseph B. Gill; Secretary of State, William H. Hinrichsen; Auditor, David Gore; Treasurer, Henry Wulff, who qualified Jan. 15, 1895, succeeding Elijah P. Ramsey; Attorney-General, Maurice T. Mahoney; Adjutant General, Alfred Overdorff; Superintendent of Public Instruction, Samuel M. Inglis; Secretary of Labor Bureau, George A. Schilling; Fish Commissioners, R. Roe, G. W. Langford, and H. Schmidt; Railway and Warehouse Commissioners, Isaac N. Phillips, J. R. Wheeler, and Jonathan C. Willis; Secretary Canal Commission, W. A. S. Graham; Secretary Live-stock Commission, A. M. Brownlee; Superintendent of Insurance, Bradford K. Durfee; Secretary of State Board of Charities, George F. Miner; Secretary of Board of Health, Dr. J. W. Scott; Secretary of Board of Dental Examiners, L. L. Davis; Secretary of Board of Pharmacy, Frank Fleury; Factory Inspector, Florence Kelley; Chief Justice of the Supreme Court, Joseph W. Wilkin; Associate Justices, David J. Baker, Alfred M. Craig, Benjamin D. Magruder, Jesse J. Phillips, Joseph N. Carter, and Joseph Meade Bailey, who died in October.

Finances.—The available surplus of the treasury was practically exhausted a month before Oct. 1, 1895, the close of the fiscal year, but an advanced payment of \$250,000 from the Illinois Central Railroad Company temporarily relieved the embarrassment.

The tax rate for 1895 was 52 cents on the \$100 valuation, as equalized by the State Board. Thirteen cents belongs to the school tax; the remainder is the general revenue tax. The aggregate was estimated at \$4,332,530. But this would be reduced by about \$250,000 from delinquencies, removals, etc. Last year assessments were made on the capital stock of 263 corporations, and this year on 274.

The total assessment of railroad property is \$79,319,385, covering 9,730 miles of track.

Legislative Session.—The thirty-ninth General Assembly was convoked Jan. 9, with 26 newly elected members, and adjourned June 17, after passing 58 appropriation and 88 other bills. The bills included one appropriating \$900,000 for the ordinary and contingent expenses of the State and one making the tax levy for school purposes \$1,000,000 per annum. The

other bills that became laws included the following:

Making appropriations for monuments to mark the location of the Illinois troops at Chickasaw, Lookout Mountain, and Missionary Ridge.

Providing for the settlement of the estates of idiots, lunatics, drunkards, and spendthrifts.

Appropriating \$50 to each county farmers' institute in the State.

Authorizing towns to issue bonds for the completion and improvement of parks and boulevards.

Providing that no freight or passenger train shall obstruct the public highway for longer than ten minutes.

To include in judgments for wages the services of the laborer's horse or team.

To prevent and punish wrongs to children.

To require highway commissioners to destroy Russian filth.

To prevent the spread of contagious and infectious diseases among swine.

Providing that where a corporation passes into the hands of a receiver or an individual makes an assignment, the claims of laborers for wages shall be preferred claims.

Providing that suits against insurance companies may be brought in the county in which the plaintiff resides.

Providing that teachers of special branches shall not be required to pass an examination in other branches than that which it is proposed to teach.

Providing that whoever hinders, obstructs, or delays another traveling upon the public highway shall be liable to a fine of \$25 and damages.

To punish the stealing of water and electricity.

To protect laborers and miners for labor performed in developing and working in coal mines.

To increase the number of companies in the Illinois National Guard from 84 to 88, so as to provide for the admission of a battalion of colored troops.

To prohibit the use of machines or devices for gambling purposes.

Appropriating \$1,249,000 for each of the years 1900 and 1901 for the ordinary expenses of the State charitable institutions.

To provide for State scholarships in the University of Illinois.

To create the Illinois Farmers' Institute.

To exempt certain personal property from attachment and sale on execution and from distress for rent.

Fixing the compensation of members of the General Assembly at \$1,000 for each regular session and \$5 a day for each special session and 10 cents for each mile necessarily traveled in going to and returning from the State capital.

Prohibiting barber shops from keeping open on Sunday.

A special session was called on June 25 for consideration of the following topics:

Building revenue equal to the appropriations.

The creation of such a revenue law as will compel all persons and corporations to pay their fair share of taxes.

The abolition of the State Board of Equalization. Legislation to put an end to the abuses and scandalous conditions prevailing in and about many of the police and justice courts.

To establish such a system of practice and procedure in courts of record as will prevent unnecessary accumulation of business.

To prevent the employment of children in such a manner as to stunt their development.

To create the proper machinery, agencies, or boards of consultation, inquiry, and arbitration between employer and employees.

To fix a reasonable maximum limit to charges for sleeping-car service.

Such legislation as will insure fair and well-earned grand juries.

To improve the convict system.

Revision of the law relating to slander and libel.

On June 29 the Assembly, being unable to come to unanimous voice regarding the revenue law, adjourned till July 9, during which time John Myer, Speaker of the House, died, and upon their reassembling some time was lost in electing W. G. Cochran as his successor. An arbitration bill and a tax-levy bill were finally passed, and both houses adjourned on Aug. 2. Among the important measures of the session were:

A libel bill providing that in any action brought for the publication of a libel, the plaintiff shall recover only actual damages if it shall appear that such publication was made in good faith, and that in the next two regular issues of said newspaper a correction was published in as conspicuous a manner as was the libel.

Creating a fund for disabled fire-insurance patrolmen and widows of deceased patrolmen.

The providing for raising the following sums by tax: For general State purposes, \$2,500,000 upon the assessed value of property for 1898, and \$2,500,000 upon that of 1899; for school purposes, \$1,000,000 upon the same rate.

Amending the law in relation to the sale of property for taxes.

Amending the law in relation to the establishment of a State home for juvenile female offenders.

Gov. Altgeld also filed with the Secretary of State, June 27, a veto of a bill to promote the construction of water ways, but its friends claim that the veto was not filed within the time required by the Constitution and that the bill has become a law without his signature. The Governor objects to the bill because it expressly declares it to be the policy of the State to undertake an enterprise that he thinks would cost hundreds of millions of dollars. As the Constitution expressly forbids any appropriations in aid of railroads or canals, he holds the appropriation made by the bill to be unconstitutional.

Revising the pharmacy law.

Revising the mechanics' lien law.

State Institutions.—All the State institutions are overcrowded, although 13 new buildings have been erected, all receiving careful legislation and liberal appropriations for the next biennial period.

The Institute for Feeble-Minded Children, at Lincoln, cared for its inmates at a cost per capita yearly of \$135.25, the lowest in the history of the institution. Its appropriation is \$165,000, to cover cost of new building and repairs.

A permanent site for the Home for Juvenile Offenders, now at Chicago, has been selected at Geneva, Kane County.

The Soldiers' and Sailors' Home, at Quincy, has received from the United States Government \$100 per annum for each veteran present for the past two years.

The Eye and Ear Infirmary of Chicago admitted nearly 16,000 patients and treated more than 13,000 indigent persons, the total expenditure being within \$50,000.

The Blind Asylum, at Jacksonville, will benefit by the new law for the prevention of blindness. The total number of pupils enrolled during the biennial term was 318.

The Southern Hospital for the Insane, at Anna, received an appropriation of \$190,000 for replacing that portion of its buildings destroyed

by fire in January. Its average number of patients annually was 562; average cost *per capita*, \$169.69; average time in hospital, two years.

The Eastern Insane Asylum, at Kankakee, was never in better condition. In connection with this asylum a laboratory has been established and a pathologist employed, who gives all his time to scientific investigations and general discussion with the physicians of the institution. The total number of patients treated was 2,467; discharged, 371, of which number 99 were recovered. Of the number treated, 78 were readmitted. The net cost *per capita* yearly was \$140.54.

The Northern Hospital for the Insane, at Elgin, had 1,001 patients, 87 being readmitted. During the biennial period 514 patients were discharged, of which number 171 had recovered. The number of deaths was 176; the gross cost *per capita* \$150.

The site for the Western Hospital for the Insane, a new institution, has been chosen at Watertown, near Rock Island.

The Joliet Penitentiary, having a deficit of \$129,144.48, asked for an appropriation, and received one of \$100,000 a year for two years. The penitentiary is greatly overcrowded.

The penitentiary at Chester is in good condition. The average number of prisoners was 658; ordinary cost *per capita*, 38 cents a day; earnings *per capita*, 23 cents.

The Reformatory Institution at Pontiac admitted 1,011 persons during the previous year, of whom 111 were offspring of dissipated parents, 8 from epileptics, and 20 from families afflicted with insanity. The daily average of inmates was 769. The *per capita* yearly cost was \$188.67.

Education.—The total value of the property belonging to the public schools and the State educational institutions, not including permanent funds, is \$37,311,136.

The State Normal University, at Normal, shows an enrollment of 620 students. The model department enrolled 550 others. The Model School was discontinued for want of funds, and the State Institute also.

The enrollment for the year at the Southern Illinois Normal School at Carbondale, numbered 716, with graduation above the average. An appropriation of \$40,000 was received from the State for a library building.

The existing normal schools being insufficient to meet the need for teachers, the thirty-ninth Assembly passed a bill authorizing the building and establishment of two new ones, to be termed the Eastern and Northern. The site chosen for the Eastern school is at Charleston.

The University of Illinois, at Urbana, received liberal gifts for the year and an appropriation from the State of \$325,000. Dr. Andrew S. Draper is the newly elected president. The new Engineering Hall was occupied in October. It is a handsome building, with a central hall and two wings, and was designed by a graduate of the class of 1882 of the School of Architecture, in competition with 15 other graduates. The chief point of interest in the report of the extra work of the university for the year was the establishment at Champaign of a biological station for continuous investigation of the aquatic life of Illinois river and its dependent waters

near Havana, and an elaborate experimental work, with measures for the destruction of the chinch bug, and especially for the dissemination of the contagious diseases of that insect, undertaken by the laboratory staff. Part of the university appropriation was to establish a department of economic geology at the laboratory for study of the soils of the State, with special reference to their value for purposes of manufacture. The appropriations were framed to cover the cost of purchasing the College of Physicians and Surgeons, and its consolidation with the university. Military science is taught at the university by an officer of the United States army.

The university enrollment for the year numbers 718 students, of whom 609 were men and 109 were women.

At the Newberry Library, in Chicago, John Vance Cheney is the successor of Dr. William F. Poole, who died in March, 1894, as librarian. His report for 1895 gives these statistics: There are in the library 123,516 volumes and 30,556 pamphlets, exclusive of pamphlets in the medical department, not yet accessible. These pamphlets number probably 17,000. The cash balance was \$2,931,261.66. Of the readers during the year, 45,850 were men and 12,768 were women.

The Lincoln Homestead and Monument.—

The furniture, relics, etc., in the Lincoln homestead, Springfield, were claimed by Mr. Oldroyd as his personal property, and he was allowed to remove them. Extensive repairs have been made, and the property is now in a fairly presentable condition. A number of authentic relics associated with Mr. Lincoln's life have been obtained by donation, and have been placed in the homestead as the property of the State. Under the new law, which went into effect July 1, the Lincoln Monument became the property of the State, and it was transferred, with impressive ceremonies, to the custody of the newly appointed board of commissioners, at Springfield, July 3.

Factory Inspection.—The State Inspector's report shows that in 1894 3,440 factories and workshops, employing 130,065 persons, were inspected; an increase of 1,078 factories and workshops, employing 45,121 men, 7,047 women, and 1,674 children, over the number in 1893.

Agriculture.—The Permanent State Fair, at Springfield, is the latest of the State institutions. There are beautiful buildings devoted to its uses, recently erected, the most important of which is the Dome Building, for agricultural expositions. The dome is from the Horticultural Hall of the World's Fair at Chicago, and cost \$68,000. The entire cost was \$100,000. The fair was opened Sept. 1, and was very successful, showing marked improvement of agricultural matters in the State since the first State fair, which was held in 1853, when a few cattle were corraled within a rail fence, and the highest premium for agricultural exhibits was a silver mug costing \$10. The present fair grounds contain 156 acres. Sangamon County gave the additional donation of \$139,800 to the Board of Agriculture toward the expenses of the project. The Board of Agriculture's receipts for the year were \$182,500, and the disbursements \$176,700.

The Farmers' Institute was held at Springfield in January, and the Illinois Breeders' Association during the same month.

The average yield of buckwheat was 20.1 bushels, against 16.1 the year before; the average yield of potatoes, 100.7 bushels; tobacco, 743 pounds; and hay, 1.06 tons.

State Banks.—Tabulated statements to March 30 showed the business at the beginning of the year as follows: Deposits had decreased \$2,800,000 since Dec. 14, 1894. Loans had decreased \$3,000,000. Cash and sight exchange amounted to \$22,371,300, and deposits to \$73,006,629, or a cash reserve of a fraction less than 32 per cent. The call dated June 11 showed an increase of \$6,000,000 in loans and of \$8,000,000 in deposits, the average cash reserve being 32 per cent., and in Chicago 34 per cent. On Dec. 11, 1895, the items were as follow: Loans and discounts aggregated \$39,447,449.83; cash on hand, \$12,725,380.68; savings deposits subject to notice, \$294,612,384.97; individual deposits subject to check, \$11,359,719.89; demand and time certificates of deposit, \$13,844,149.35; total resources, \$132,429,981.53.

Railroads.—The summary of the railway business for the year shows these items: Total capital stock, \$2,112,570,715, or \$50,891 per mile of road operated; gross earnings, \$282,762,993; operating expenses, \$191,140,759; total income from operations, \$91,633,234; income from property owned, but not operated, \$12,056,936; making total gross income of \$103,689,170 above operating expenses. Forty-two roads showed a net income of \$28,169,958; 36 showed a net deficit of \$6,687,575. The number of passengers carried was 82,281,655; tons of freight, 56,736,687; employees, 61,300; total annual pay, \$46,848,606.81; passengers killed, 65; injured, 258; employees killed, 134; injured, 1,057.

Insurance.—The number of companies transacting business in Illinois Dec. 31, 1894, was: Illinois joint-stock fire and marine companies, 7; Illinois mutual fire companies, 9; joint-stock fire and marine insurance companies of other States, 103; mutual fire insurance companies of other States, 15; foreign fire and marine insurance companies, 35; total, 169. Illinois district mutual fire companies, 12; Illinois County mutual fire companies, 40; Illinois township mutual fire companies, 142; Illinois district mutual windstorm companies, 2; Illinois County mutual windstorm companies, 4; total, 200. This report contains the statements of 8 more companies than the previous report. The amount of losses incurred in the State was \$7,543,306, a decrease of \$308,049. The decrease in premium receipts in the State was \$28,074.

Mining.—The Governor appointed in October 7 new mining inspectors under the new law for stricter inspection and safeguards at the 830 shipping mines throughout the State. The statistics of the coal mines of the State for the year ending July 1, 1894, include these items: The total output was 17,113,576 tons, against 19,940,564 tons the year before; number of mines and openings of all kinds, 836; number of employees, 38,477; number underground, 32,046; aggregate home value of total product, \$15,292,111; average price per ton for hand mining, 67 cents. There are 296 mining machines in use. There were 72 fatalities, and 321 men were injured. The number of new mines opened and old ones reopened was 156. St.

Clair County stands first in production, with 1,623,684 tons; Macoupin, 1,575,045; Sangamon, 1,142,299. The number of boys employed in mines is decreasing.

Fisheries.—The plants of 1894 suffered badly from the drought. From Havana to a point 70 miles below less than 6 lakes held water enough to keep fish alive. Chisolm lake, with a watershed of 5,000 acres, had crevices 12 inches deep in the dry bed.

With the steamer "Lotus," belonging to the commission, fish were saved from drying streams and carried long distances to renew the supply, thus saving millions of pounds. The fish used for distribution, selected from those saved from drying pools along the Illinois and Mississippi rivers, consisted chiefly of black bass, crappie, wall-eyed pike, warmouth bass, white bass, and spotted catfish.

From one point on the Illinois 250,000 pounds of carp were sent to Chicago and New York.

Swamp Lands.—There were on the books of the General Land Office two years ago swamp-land selections in Illinois aggregating 1,920,561 acres, and since then 352,963 acres have been rejected. So far as the claims of Illinois for cash indemnity is concerned, the work demanded by the General Government has been complete in case of nearly all the counties from two to three years. Only the counties of Henderson, La Salle, and Livingston remain to be examined. There can be no cash indemnity until those are settled. With tiled drainage the swamp lands have become the most productive; the health of their vicinage is improved, public roads are kept in good repair, and their value has increased from \$1 to \$30 an acre.

INDEPENDENT ROMAN CATHOLIC CHURCH, a religious organization formed in Cleveland, Ohio, Sept. 14, 1892, as the result of a convention of Polish Catholic churches. The convention consisted of about 90 delegates from 22 independent churches, their chief contention being independence of the Roman authorities in matters affecting the owning of church property. The four points that caused the most discussion were: Church property to be owned by the people; financial affairs of the churches to be in the hands of a committee selected by the people; the people to have a voice in the choosing and the dismissing of pastors; a better education to be provided for children. After a full discussion of these points, a resolution was passed requiring all parish schools connected with independent churches to use the same text-books as the public schools in the city where they are located, and all teachers in the parish schools to understand the English language. The priests were also expressly prohibited from preventing any who desired from sending their children to the public schools. The name of Independent Catholic Church was changed to that of Independent Roman Catholic, and every member was required to obligate himself to perform all the duties of a Roman Catholic in the Church. The members of the Central Committee signed a protest to the Pope "against the arbitrary manner in which the bishops of the Roman Catholic Church in the United States have treated and are now treating the Polish Catholics of this country. The said bishops are treating the Polish people

in a tyrannical and arbitrary manner, looking upon them as mere cattle, refusing them their just rights, and in every manner trampling upon them. The people so used by the bishops are educated persons and not wild beasts; and we desire to enter our solemn protest before the American people against the unjust, illegal, tyrannical, and arbitrary manner in which they are treated by the said bishops." The greatest strength of the movement is in Chicago, Cleveland, and Buffalo. It should not be confounded with the Polish National Alliance, which see.

INDIA, an empire in southern Asia subject to Great Britain, governed under general acts of the British Parliament by a Governor General under instructions from an English Secretary of State for India, who is a member of the Cabinet, responsible to Parliament. The Viceroy and Governor General is the Earl of Elgin and Kincardine, appointed in October, 1893. The ordinary members of the Council of the Governor General in the beginning of 1895 were Sir A. E. Miller, Sir Charles B. Pritchard, Lieut.-Gen. Brackenbury, James Westland, and Sir A. P. MacDonnell. The commander in chief of the Bengal troops, Gen. Sir G. S. White, is an extraordinary member, as also is the governor or lieutenant governor of the province where the Council sits. The governors of Madras and Bombay, Lord Wenlock and Lord Harris in 1895, have each a separate executive and legislative Council and civil service. The Viceroy's Council, assisted by a dozen adjunct members, half of whom are natives of India, acts as a legislative council for the framing of laws and regulations, to be passed upon later by the Governor General or submitted with his approval to the British Parliament. Henry Fowler was succeeded as Secretary of State for India at the end of June, 1895, by Lord George Hamilton. (For area and population, see "Annual Cyclopædia" for 1894.)

Defense.—The European army provided for in the estimates for the year ending March 31, 1895, consists of 3,477 officers and 70,563 men, comprising 85 general officers in the infantry and cavalry, 29 general officers unemployed, 80 officers in the staff corps, 27 officers and men in the invalid establishment, 1,508 officers and 52,232 men in the infantry, 261 officers and 5,418 men in the cavalry, 280 officers and 74 men of the royal engineers, and 497 officers and 12,822 men of the royal artillery. The native army numbers 145,738 officers and men, making the total active army, European and native, 219,778 of all arms. The native army is composed of 33 European and 26 native officers and 4,472 men in the artillery, 362 European and 627 native officers and 22,439 men in the cavalry, 1,127 European and 2,045 native officers and 110,642 men in the infantry, and a corps of sappers and miners consisting of 58 European and 63 native officers and 3,845 noncommissioned officers and privates. Of the European soldiers 46,372 are stationed in Bengal, 13,465 in Bombay, and 14,176 in Madras. There is a volunteer corps, composed of European employees and other residents, the effective strength of which is 24,950 men. The contingents furnished by native princes and inspected by European officers form an *élite* force of 19,294 men.

The naval force for coast defense consists of 2 turret ironclads, of about 3,000 tons, each armed with 4 8-inch guns, a dispatch vessel, 2 first-class torpedo gunboats, and 7 torpedo boats.

Finances.—In 1894 the net revenue was Rx 50,328,000 and the net expenditure Rx 51,874,000. The estimates for 1895 were framed to meet a further decline in the value of the rupee, which for the preceding year was taken as 14'6d. Having exhausted the resources of taxation, the Government abandoned military works, suspended the famine insurance fund, and drew on the provincial revenues. The net revenue was estimated at Rx 50,943,500, and the net expenditure at Rx 51,245,400. But the exchange fell in the earlier months of the year from 14d. to 12'5d. The Indian Government then proposed and the Secretary for India, Henry Fowler, assented to putting on a duty of 5 per cent. on cotton goods, promising the Lancashire manufacturers that if it should prove protective in its operation it would be readjusted. The railroad receipts showed an improvement, there was a reduction in the army expenses, and the opium revenue was largely increased by levying a higher tax on Malwa opium. The tax on petroleum was increased, and a duty was levied on silver imports. The budget estimates for 1895 made the total revenue Rx 92,024,900 and the total expenditure Rx 92,326,800. The items of revenue were: Land, Rx 25,703,600; opium, Rx 6,393,600; salt, Rx 8,629,200; stamps, Rx 4,561,800; excise, Rx 5,317,600; provincial rates, Rx 3,525,300; customs, Rx 2,872,900; assessed taxes, Rx 1,740,900; forests, Rx 1,646,000; registration, Rx 440,000; tribute, Rx 775,200; interest, Rx 856,800; post office, telegraphs, and mint, Rx 2,656,500; civil departments, Rx 1,611,700; railways, Rx 20,408,400; irrigation, Rx 2,463,800; buildings and roads, Rx 629,200; military departments, Rx 809,700; miscellaneous, Rx 982,700. Expenditure under the various heads was estimated as follows: Interest, Rx 4,611,400; refunds, etc., Rx 1,808,200; charges of collection, Rx 8,854,400; post office, telegraphs, and mint, Rx 2,595,800; civil salaries, Rx 14,959,200; miscellaneous civil charges, Rx 5,754,000; famine relief insurance, Rx 55,000; railway construction, Rx 24,400; railway revenue account, Rx 22,538,300; irrigation, Rx 2,909,400; buildings and roads, Rx 5,489,100; army, Rx 23,759,700; defense works, Rx 152,300; total, Rx 93,511,200, from which is deducted Rx 1,184,400 of expenditure from provincial balances. The capital expenditure on railroads and irrigation works not charged against the revenue was estimated at Rx 5,000,000. The additional taxes and extraordinary resources that were resorted to converted the budget into an estimated surplus of Rx 1,230,000 in spite of the embarrassing loss by exchange, which amounted to 27 per cent. of the net revenue.

In the budget for 1896 the expenses of the Chitral expedition (see **AFGHANISTAN**) had to be provided for, and extraordinary resources could no longer be drawn upon. The Chitral expedition cost Rx 2,360,000 and the expense of the occupation of Chitral is Rx 200,000 a year. Military expenditure was further increased by rais-

ing the pay of the sepoys from 7 to 9 rupees a month, and there was a further loss by exchange of Rs 2,500,700. The total increased expenditure was Rs 6,850,000. This was not balanced within Rs 1,212,000 by the saving of Rs 422,000 in interest by the conversion of the debt, an increase of Rs 427,900 in the general customs duties, Rs 1,455,000 expected from the cotton duties, and an estimated improvement in the general revenue.

The rupee debt of India amounts to Rs 122,000,000. The assets in the form of railroads, loans to municipalities, irrigation works, etc., are valued at Rs 149,542,000. In 1894 the permanent debt was converted and the rate of interest reduced from 4 to 3½ per cent. The sterling liabilities in England amount to £110,006,000, against which the Government has purchased railroads, cash balances, and loans to railroad companies amounting to £67,091,000. The sterling debt has been increased by about £9,000,000, which the Government has allowed to stand against its credit in London in preference to selling bills at lower rates.

Commerce.—The imports of merchandise for the year ending March 31, 1894, were valued at Rs 5,860,957. The imports of silver were Rs 15,278,734, and of gold Rs 3,146,530, making the total imports Rs 92,382,213. The exports of Indian merchandise were Rs 102,015,615; of foreign merchandise, Rs 4,431,975; of silver, Rs 1,519,453; of gold, Rs 2,506,284. Total exports, Rs 110,472,327. The commercial movement was strongly affected by the closure of the mints to silver on July 26, 1893. The exchange value of the rupee rose at once from 14½d. to 16d., and the Government made this the official rate, but could not hold it, and was afterward compelled to sell bills at a lower rate. Importers took advantage of the artificial rate of exchange to put goods on the Indian market, and continued their importations after the rupee began to fall, being apprehensive that the fall would continue until the rupee reached its bullion value. The result was that importations exceeded those of the preceding year by 18 per cent. The closure of the mints had the unexpected result of stimulating the importation of silver. Quantities of the metal were rushed in at first in the hope of their arriving before the mints closed, and afterward the bankers imported silver bars and exchanged them for rupees in preference to buying Council bills at a fixed rate, for the natives were eager to take advantage of the cheapness of silver, thinking it to be only temporary, and bought bullion freely in order to have it made into ornaments. Moreover the rulers of native states imported silver to coin into rupees. The outflow of gold that began in 1893 continued, though in lessening volume. In the imports of merchandise the largest increase, amounting to more than half of the whole, was in cotton goods and yarns. The imports of metals also greatly increased. More than half the total imports consisted of cottons and metals. The trade in cotton goods was stimulated by the expected import duty, and exports of cottons were retarded by the same cause. The total exports showed no appreciable increase over those of the year preceding. In cotton yarn and goods there was a decline of Rs

1,558,100, being nearly 23 per cent.; in opium the decline was Rs 1,235,585, being 13½ per cent.; in grain and pulse there was a decline of Rs 4,237,890, or 30·6 per cent. One result of the closure of the Indian mints to silver was to check the large export of cotton yarns to Japan, and enable the Japanese manufacturers to take away the foreign market of the Bombay mill owners in the same way as these had cut into the trade of the Manchester capitalists until the latter almost ceased to produce heavy wools for the Oriental market.

The values of the leading imports and classes of imports were for 1893-'94 as follow:

Cotton manufactures	Rs 99,377,440
Metals, hardware, and cutlery	1,000,200
Silk, raw and manufactured	1,100,000
Sugar, raw and refined	2,000,000
Woolen goods	1,000,000
Liquors	1,000,000
Railway plant and rolling stock	1,000,000
Oil	1,000,000
Machinery and mill work	1,000,000
Coal	1,000,000
Provisions	1,000,000
Apparel	1,000,000
Halt	1,000,000
Spices	1,000,000
Glass	1,000,000
Drugs	1,000,000
Paper	1,000,000
Umbrellas	1,000,000
Grain and pulse	1,000,000

The values of the principal exports of Indian produce for the same year were as follow:

Rice	Rs 10,000,000
Wheat	1,000,000
Raw cotton	1,000,000
Cotton manufactures	1,000,000
Opium	1,000,000
Oil seeds and other seeds	1,000,000
Hides and skins	1,000,000
Jute	1,000,000
Jute manufactures	1,000,000
Tea	1,000,000
Indigo	1,000,000
Other dyes and tan	1,000,000
Coffee	1,000,000
Wool	1,000,000
Spices	1,000,000
Lac	1,000,000
Sugar, raw and refined	1,000,000
Silk, raw and cocoons	1,000,000
Silk manufactures	1,000,000
Oil	1,000,000
Wool	1,000,000
Wool manufactures	1,000,000
Provisions	1,000,000
Salt-peter	1,000,000

The shares of different countries in the commerce of India for 1893-'94 are shown in the following table:

COUNTRIES.	Imports.	Exports.
Great Britain	Rs 30,000,000	Rs 10,000,000
China	1,000,000	1,000,000
France	1,000,000	1,000,000
Italy	1,000,000	1,000,000
Straits Settlements	1,000,000	1,000,000
United States	1,000,000	1,000,000
Egypt	1,000,000	1,000,000
Belgium	1,000,000	1,000,000
Austria	1,000,000	1,000,000
Ceylon	1,000,000	1,000,000
Australia	1,000,000	1,000,000
Japan	1,000,000	1,000,000
Germany	1,000,000	1,000,000
Maritime	1,000,000	1,000,000
Arabia	1,000,000	1,000,000
Netherlands	1,000,000	1,000,000
East Africa	1,000,000	1,000,000
Perth	1,000,000	1,000,000
Spain	1,000,000	1,000,000

The value of the trade across the land frontiers is not included in the foregoing figures. It was valued in 1893-'94 at Rx 4,037,400 for imports and Rx 3,431,700 for exports. While the trade with Candahar and Cabul has declined, and that with Nepal and Cashmere shows some falling off, there has been an increase of imports from Tibet, and the trade with the Shan States and with Siam and western China is growing at a rapid rate.

Navigation.—There were entered during the year 1893-'94 at the ports of India 5,030 vessels, of 3,797,911 tons, of which 1,976, of 3,076,277 tons, were British; 925, of 134,821 tons, were British Indian; 1,506, of 82,739 tons, were native; and 623, of 504,074 tons, were foreign. The total number cleared was 4,965, of 3,867,975 tons. Of the vessels entered, 712, of 1,575,836 tons, and of those cleared, 928, of 1,987,474 tons, passed through the Suez Canal. The number of vessels entered coastwise with cargoes was 105,764, of 11,324,193 tons; the number cleared was 96,145, of 11,159,078 tons. There were 98 vessels, of 3,280 tons, built during the year in India.

Railroads.—The Government, owing to its financial embarrassments, has abandoned for the present the policy of subsidizing railroads and invited private enterprise, but still it will not encourage the building of lines to compete with the guaranteed roads. The existing lines have been planned with reference to British commerce rather than to the commercial needs and populousness of the districts served. Bombay, the chief source of Indian cotton and wheat for England has 1 mile of railway to 8,000 inhabitants, and the wheat-growing Punjab, with small commercial interests, has 1 mile to 11,000 of population, while Bengal, with enormous tea production, with steam textile manufactories, with vast undeveloped coal-fields and prospective metal industries, has only 1 mile to 29,000 of its population. The Indian network had a total length of 18,856 miles on March 31, 1895. During the previous year 356 miles were built. There were 2,217 miles under construction or sanctioned. There were in 1894 8,606 miles belonging to the Government but operated by companies, 5,199 miles operated by the Government, 2,587 miles operated by guaranteed companies, 403 miles belonging to assisted companies, 809 miles owned by native states and operated by companies, 838 miles owned and operated by native states, and 58 miles of foreign lines. The gross earnings of all the railroads in 1893 were Rx 24,048,229 and the operating expenses Rx 11,347,728, being 47·12 per cent. of the receipts. The net earnings were Rx 12,325,777, giving an average return of 5·46 per cent. on the capital. During 1893 there were transported 135,520,447 passengers and 28,851,531 long tons of freight. In 1894 gross earnings were Rx 25,508,856; working expenses, Rx 11,983,920, or 46·98 per cent. of the receipts; and net earnings, Rx 13,524,936. The net profit on the capital invested was 5·69 per cent., but the Government sustained a net loss of Rx 1,970,000. The Government pays an average rate of 4½ per cent. on the capital raised by the guaranteed companies, which is increased to over 7 per cent. by the fall of exchange. In the Ganges delta a beginning has been made of railroad construction by pri-

vate native enterprise with rupee capital and native Indian managers and engineers and an entire native staff. The first line thus built has a length of 31 miles. To facilitate the undertaking of feeders to the trunk lines by attracting English capital, the Government carried a bill in 1895 empowering companies to pay dividends out of capital during the construction of railroads.

The Hurnai Railroad, opened in 1885, which cost the Indian Government millions of pounds, has been abandoned because landslides make the route unsafe, and in its place a new double line has been built through the Bolan pass to connect Sibi and Quetta. Another strategic line is being built to connect the fortress of Quetta, which is already in direct communication with Karachi on the one side and Lahore on the other, with Peshawur also.

Posts and Telegraphs.—The number of letters and other mail matter carried in 1893 was 360,209,076. The revenue was Rx 1,488,863 and expenditure Rx 1,518,555.

The Government telegraph lines on March 31, 1893, had an aggregate length of 41,030 miles, with 120,251 miles of wire. The number of paid messages was 3,981,411 during the year; receipts were Rx 937,743, and expenses Rx 875,073. A junction between the Chinese and the Indian systems was effected on the frontier of Upper Burmah on March 16, 1895.

Opium Commission.—A royal commission, appointed by the British Parliament on Sept. 2, 1893, to inquire into the Indian opium traffic made its report in the spring of 1895. The English Society for the Suppression of the Opium Trade, of which Sir Joseph W. Pease was president, had called for an inquiry into the best method of adjusting the finances of India to the abolition of the opium traffic, and Mr. Gladstone, then Prime Minister, accepted instead the proposition to investigate the conditions of the trade. The first president of the society, the Earl of Shaftesbury, when he was Lord Ashley, offered a resolution in the House of Commons condemning the opium trade as producing ill feeling between England and China, but withdrew it. Sir Wilfrid Lawson's resolution was lost in 1870 by 150 votes to 46. After the society was started in 1874 frequent motions were made in Parliament calling for the gradual extinction of the traffic or for prohibition of the sale except for medical purposes. The antiopium league condemned primarily the action of the English Government in coercing China by war and menaces to admit Indian opium and the position of the Indian Government in drawing a revenue from the vice thus fastened upon the Chinese by treaty. Latterly the society gave its attention also to the evils arising from the spread of the opium habit in India. In that country opium is eaten in the crude form, or sometimes drunk in an infusion whereas in China a strong preparation is smoked in a pipe. In 1891 a vote was carried in a third house which condemned the opium traffic, except for medical purposes, as morally indefensible. As a sequel to this vote Mr. Gladstone's Government proposed the opium commission in June, 1893. The commission was ordered to report whether the growth of the poppy and sale of opium should be prohibited, except for medica-

purposes, in British India, whether such prohibition should be extended to the native states, and on what terms existing transit arrangements with those states could be terminated; also as to what effect prohibition of the sale and export of opium would have on the finances of India, taking into consideration the amount of compensation to be paid, the cost of necessary preventive measures, and the loss of revenue; whether any change short of total prohibition should be made in the system at present followed for regulating and restricting the opium traffic and for raising a revenue therefrom; what the consumption of opium is in the different districts and by the different races of India, and what its effect upon the moral and physical condition of the people; and what was the disposition of the people of India toward the prohibition of the use of opium for non-medical purposes, and whether they would be willing to bear the whole or a part of the cost of prohibitive measures. The commission was composed of Lord Brassey, Sir James R. Lyall, Sir Lakshmiswar Singh, of Darbhanga, Sir William Roberts, R. G. C. Mowbray, H. U. Fardave, Arthur Pease, Haridas Viharidas, and H. J. Wilson.

The Indian Government controls and limits the cultivation of the poppy, and has a monopoly of the manufacture and sale of opium. No one can grow the poppy without a license. The Government subagent, after measuring the ground that he is permitted to sow, gives him an advance of 20 per cent. on the value of the prospective crop and pays the rest of the price when the crop is delivered. The extract for home consumption and for export is made in Government factories. The main part is intended for export. The chests are sent to Calcutta, and there sold to merchants by public auction. The area devoted to the poppy is about 100,000 square miles, lying in the district of Behar in Bengal and in the Northwest Provinces and Oudh. Outside of British India the poppy is cultivated in certain native states of Central India and Rajputana and in the territory of Gurwah. Their product is known as Malwa opium. The total annual value of the Indian opium crop is estimated at £13,000,000, divided between the Government and the growers and landlords. The share of the Government is nearly two thirds of the selling price, while on Malwa opium the Government imposes a tax in the form of transit dues that is more than two thirds of the value. Of the total opium revenue, which has greatly fallen off in late years, over 90 per cent. is paid by the Chinese on the opium exported to China, Hong-Kong, and the Straits Settlements.

The royal commission examined 723 witnesses, of whom 406 were natives of India or China and 257 Europeans. Of the medical witnesses nearly all the missionaries, half the private practitioners, and a fraction of the officials were in favor of the suppression of the traffic. The commission drew up a report which was signed by 8 out of the 9 members. Mr. H. J. Wilson in a brief minority report contested all the conclusions of his colleagues. The majority report sustained the Indian Government in all its conclusions. According to the weight of evidence submitted, prohibition was not necessary nor

demanding by the Indian people. If the paramount power extended prohibition to the protected states it would act without precedent or justification and provoke the resentment of the native chiefs and their people. It would inflict a loss of public revenue on the Indian Government that it was unable to bear. In regard to the export of the drug to China, there was no occasion to revise the existing treaties in the interest of the Chinese when the Chinese Government had formally admitted that the treaties contained all that it desired. The testimony of medical experts convinced the commission that the use of the drug, unless taken in excess, is by no means harmful. The physical and moral effects of excessive indulgence are evil, but not productive of lesions or insanity, as is alleged. Besides being used as a stimulant opium is the common household medicine in all parts of India, taken in cases of specific disorders, such as rheumatism, diabetes, chills, and diarrhoea. It is regularly administered to unweaned children. The people have faith in its efficacy and medical men approve its use in these disorders. The people believe in it as a prophylactic and a remedy for malarial fevers. The common use of opium in India is a moderate use, leading to no evil effects. Excess is exceptional and is condemned by public opinion. The mass of native opinion is opposed to prohibition as an unnecessary restriction on individual liberty and an interference with native habits and customs. The only classes of native Indians who are in favor of prohibition are certain small Mohammedan and Hindu sects that would abolish the use of stimulants of all kinds. The Indian Congress, though urged by friends in England, declined to include the opium question in its programme. Mercantile bodies, the community of planters, and the Europeans in India are strenuously opposed to prohibition. A preventive system would be enormously expensive and would prove impracticable. The prohibition of planting and manufacture could not be extended to the native states, which would get hold of the trade abandoned by the Indian Government. The existing Bengal monopoly seemed to be the best system for regulating the production of opium. The regulations for the restriction of consumption might be amended, especially by making it more difficult for smokers to obtain the drug. A distinction is drawn between the common way of taking opium in pills or decoctions and the comparatively rare and novel practice of smoking preparations of opium known as *chandu* and *madak*. This use of the drug is considered respectable, and public opinion might not view with disfavor legislation against saloons and clubs where smoking is carried on. In Burma, where there is a considerable Chinese population and where smoking is much resorted to in certain parts of the country, restrictions are necessary, but the commission did not recommend any modification of the regulations recently introduced. The extensive use of opium in India for non-medical or quasi-medical purposes is rarely attended with injurious consequences; in some cases it is beneficial. The non-medical uses are so interwoven with the medical uses that it would be impracticable to draw a distinction between them in the distri-

bution and sale of the drug. The habitual use of opium as a stimulant by young people is generally condemned. The testimony was unanimous that the people of India would be unwilling to bear the cost of prohibitive measures. The commission decided that existing transit arrangements could not be terminated without the voluntary agreement of the native states, which would involve large pecuniary compensation both to the state and to individuals.

H. J. Wilson in his minute of dissent pointed out that the commission had selected witnesses representing the official classes, both native and European, or who echoed their views or considered their own interests at stake, including military medical officers, titled persons, landowners, and others. While violent crimes were not attributed to opium, he believed that there was much evidence to show that habitual consumers, when poor, resort to petty stealing to obtain money for the purpose of getting opium. He contended that the imperious craving for the periodical dose, the powerful sway that the opium habit was admitted by every witness to have over the habitual consumer, was necessarily degrading to the moral nature of man. Mr. Wilson recommended the cessation of the growth of the poppy and the manufacture and sale of opium in British India, and that, as soon as the Chinese opium trade shall have been brought to an end and licenses to cultivate are no longer granted, licenses for the transit of opium from native states be withheld. The plan of compensating cultivators and landlords he declared to be without precedent. He condemned the present system of sale through private contractors and vendors, advising rather that official vendors be appointed, with instructions to restrict the sale. He further recommended the total prohibition of smoking.

After the report was published Sir Joseph Pease assailed the commission and offered another resolution in the House of Commons declaring the opium traffic morally indefensible, which was lost by 176 votes to 59.

Another commission, appointed by the Indian Government, came to the conclusion, after examining 700 witnesses, that the smoking of ganja and the drinking of bhang are as innocuous as the royal commission found opium eating to be. The hemp drugs, although their excessive use is sometimes productive of poverty or violent crime, have an inappreciable effect on the general statistics of crime, pauperism, insanity, disease, and longevity, since only 1 in 200 of the inhabitants consumes ganja at all, and not more than 1 in 4,000 consumes the hemp stimulants to such an extent as to render himself objectionable to his neighbors or distinguishable from the total abstainers. Ganja, the form in which the narcotic is taken by the common people, is declared to afford 1,000,000 people a harmless pleasure, and in some cases a beneficial stimulation. The pleasant summer beverage made from bhang and drunk by the well-to-do is said to be harmless.

Official as well as native opinion dreads the growing use of alcohol in the social entertainments of the wealthy and, with especially injurious results, among the new operative class in mines and factories, who begin to find the more

active stimulant necessary to enable them to withstand the severe and continuous strain of their work. The opinion is general that alcohol is not only demoralizing but fatal to the native races, and that the prohibition of opium and the hemp drugs would only substitute that fierce and deadly stimulant for the mild narcotics to which the people have been accustomed from time immemorial. The Government intends to place upon the hemp drugs the utmost restrictions compatible with fairness by increasing the tax where it is not already as high as the article can stand without encouraging illicit production. The public storehouses established in Bengal will be extended to Madras and Bombay, and the growth and distribution of the products will be gradually taken in hand by the Government.

Legislation.—An act providing that the people of a district in which riots occur shall bear the cost of extra police drafted into it and pay compensation for damage done aroused much excitement in native circles. The Government considered that the frequent religious riots justified such a measure, but accepted an amendment authorizing the local government to grant exemption from liability to individuals or classes. An amendment to the Cantonments bill removed, in pursuance of a resolution of the House of Commons, the restrictions which have hitherto kept down virulent diseases that weaken the health and efficiency of the European army in India. A bill for the sanitation and inspection of pilgrim ships, embodying the rules approved by the Paris convention of the Sanitary Conference, was generally welcomed by the Mohammedan community. The whole of India resounded with the outcry that was made when the Legislative Council at the dictation of the English Government, which had promised as much to the Lancashire cotton manufacturers, voted to impose an excise duty on cotton yarns finer than 20 hanks to the pound, to counterbalance the import duty on cotton manufactures. The main Indian product was 20's or under, while England produces nothing as coarse. The excise duty caused the Indian manufacturers to cease spinning the higher grades altogether, but their expulsion from the field did not benefit their English competitors so much as it did the Japanese and Chinese spinners, who had already begun to produce the finer yarns from cotton imported from America.

Religious Tumults.—While priests from Ceylon were engaged in installing on Feb. 25, 1895, an ancient and artistic statuette of Buddha, the gift of the Buddhist high priest of Japan, in the great temple of Budh-Gaya, Bengal, which is the most sacred shrine of Buddha in the world, a mob of Hindu worshippers rushed in and seized the image and threw it on the ground outside, while the dedicators remained devoutly in their attitude of religious contemplation. The Hindus were offended because the image had not been consecrated according to their rites, for they also worship Buddha as an incarnation of Vishnu in the same temple. The Government custodian of the temple intervened, and the rioters were fined for disturbance of religious worship.

At Dhulia, Bombay, Mohammedans on Aug. 24 attacked and routed a Hindu bullock procession and a week later obstructed the Hindu *ganga* procession and beat the British collector, who rode at its head to preserve order, whereupon the armed police fired into the mob, killing 10 persons and wounding 40.

INDIANA, a Western State, admitted to the Union Dec. 11, 1816; area, 36,350 square miles. The population, according to each decennial census since admission was 147,178 in 1820; 343,081 in 1830; 685,866 in 1840; 988,416 in 1850; 1,290,438 in 1860; 1,680,637 in 1870; 1,978,301 in 1880; 2,192,404 in 1890. Capital, Indianapolis.

Government.—The following were the State officers for the year: Governor, Claude Matthews; Lieutenant Governor, Mortimer Nye; Secretary of State, W. D. Owen; Auditor, Amos C. Daily; Treasurer, F. T. Scholz; Superintendent of Public Instruction, David H. Greeting; State Statistician, S. J. Thompson; State Geologist, W. S. Blatchley; Adjutant-General, Irvin Robbins; Attorney-General, W. A. Ketcham; all Republicans except the Governor, Lieutenant Governor, and Adjutant-General. Chief Justice of the Court of Appeals, George F. Ross; Associate Justices, Theodore F. Davis, Orlando J. Lotz, George L. Reinhard, Frank R. Gavin; Chief Justice of the Supreme Court, J. H. Jordan; Associate Justices, Leonard J. Hackney, Timothy E. Howard; Joseph S. Daily, James McCabe, L. J. Monks.

Finances.—The total receipts for the year were \$5,525,219.33; the expenditures, \$3,342,994.39, which, with the balance on hand a year ago leaves a balance on hand of \$573,726.42. The State paid for maintenance of its benevolent institutions \$959,525.39, for reformatories \$119,000, and for penal institutions, \$190,484.12. In direct payments to the colleges that come under the title of State institutions the State contributed \$233,923. During the year \$1,331,000 was paid on the State debt. The State now has a debt of \$7,030,000, exclusive of the bonds held by the State educational institutions, which were issued merely as a means of securing to those institutions a certain amount of money annually. The annual interest on this for foreign debt is \$219,525. The domestic or school debt amounts to \$484,000; interest, \$24,200.

A recent decision of the Supreme Court in relation to the loaning of public funds is to the effect that a county treasurer loaning public funds for his own use and benefit, and taking a note therefor, is not permitted to appeal to the law for collection of the money. The ruling applies also to township trustees. It has long been held that this was the law in reference to the Treasurer of State.

Valuations.—The valuation of land in the State in 1891 was \$454,131,203; of improvements on these lands, \$86,544,952; of lots in the State, \$140,283,802; of improvements on lots, \$123,441,643; value of personal property, \$291,085,843; of telephone property, \$3,513,035; of railroad property, \$157,125,035. The aggregate of all property subject to taxation is \$1,665,106,515.

State Institutions.—The report of the Northern Hospital for the Insane shows that the appropriation of \$95,000 for the year was

just sufficient to meet the expenses. The earnings from sales of material and old clothing were \$128.63, paid into the State treasury.

The Eastern Hospital received an equal appropriation, \$95,000, and reported a balance of \$26.04. The new construction fund of \$35,000 was all used. At the beginning of the fiscal year there were 450 patients in the institution. During the year 76 were admitted, 46 were discharged, and 24 died, leaving 456 in the hospital at the close of the year. The cost per capita for the year was \$175.27.

The Southern Hospital showed a balance of \$15.20 out of the appropriation of \$95,000. This institution earned \$69.59.

The Institution for the Blind received an appropriation of \$30,739.98, and reported a balance of \$1.63. A little more than half the entire cost, \$15,855.71, was used in paying salaries.

The report of the Reform School for Boys, which was printed in the institution, shows that during the year 163 boys were admitted and 222 released. The average number present during the year was 558. Each county must pay half the expense of maintaining its representatives. The annual cost of supporting each inmate is \$120. In the last six months a large building has been erected by the boys. Although the school farm has been enlarged by the purchase of 195 acres the Reform School is no longer known as a "farm school." The management has found that boys from the cities will not take to farming, and they are taught trades.

The two penitentiaries have about 1,500 convicts within their walls. Both prisons are short of funds, the Northern to the extent of \$12,000 and the Southern to the extent of \$17,500. At the middle of the year but 350 of the 800 men at the Southern prison were under contract, and but 2 contractors were employing labor there, while the appropriation for the year was nearly exhausted; but by the close of the year 755 prisoners were under contract.

The population of the charitable and penal institutions of Indiana has increased 320 in five years, which is 15.9 per cent., while the total increase of the cost of maintenance is 43 per cent. Each year the cost of maintenance has declined from \$190.68 in 1891 to \$171.64 in 1895.

Plans for the State Soldiers' Home at Lafayette were accepted in April, and the Women's Relief Corps of the Logan Post laid the corner stone of the first cottage in October.

Vital Statistics.—Figures given out by the State Statistician show, from reports received from the clerks of all the counties except Cass, that the number of divorces granted in the State during the year ending June 30, 1895, was 2,730. For the same period in 1894 the number was 2,279. A comparison of these figures shows an increase of nearly 400 cases in the State. Of the number of divorces procured in the last year, 1,867 were granted to wives and 863 to husbands. The records of marriage licenses do not show a material increase. During the year ending June 30, 1895, there were 22,507 marriages. The number of people confined in the county jails of the State during the year was 31,161. Of this number 1,475 were women. The report shows that 1,735 foreigners were naturalized during the year.

Loan Associations.—According to a summary of the annual reports of the building and loan associations of the State, they have loaned on mortgage security \$11,552,616.89; on stock and pass-book security, \$741,436.84; and on other security, \$297,836.76. They hold real estate to the value of \$275,320.81. The amount of installment stock and credited dividends due to members is \$9,513,487.97, and on paid-up stock and credited dividends \$3,245,125.09. The undivided profits amount to \$537,627.61. The associations have issued 321,831 shares of installment stock and 45,907 shares of paid-up stock. There are 50,205 shareholders that have not borrowed from the associations, and 19,176 that have. The authorized capital is \$94,620,000, of which \$38,821,220 has been subscribed.

Railroads.—During the past six years more than half the track mileage of main lines has been laid with heavy steel rails, and 75 per cent. of the wooden bridges have been replaced with iron structures resting on stone abutments, and the lighter rails taken up have been used for side tracks, thus greatly increasing the business facilities. Grades have been reduced and curves straightened on many of the roads.

Education.—The amount of State money for schools was reported as \$1,436,852.04, all of which, except a balance of \$15,222.90, was distributed, \$15,000 going to the State Normal School. The number of children of school age was 808,261.

Since the founding of the Northern Indiana Normal School twenty-three years ago more than 100,000 names have been entered on its rolls. The average attendance for the year ending in August was over 2,500, while more than 6,000 students have been in attendance during the year, and 300 more were graduated than in any previous year, the total number being 1,307.

The State Normal School at Terre Haute sent out this year a class of 101, the largest in the history of the school. The total attendance at the spring term was 1,224.

A course in journalism has been added to the curriculum of the State University. It includes studies in English, general history, political theory, constitutional history, and economics. There were 87 graduates in the various departments in June. Wabash College, at Crawfordsville, graduated 28, and Franklin College 16.

The North Manchester College, which has been conducted by the United Brethren Church, has been bought by the citizens, to be given, together with \$5,000, to the Dunkard Church, which will establish an institution there.

The Medical College at Indianapolis graduated 50 at its twenty-fifth commencement.

Butler University sent out 19 graduates in June, and Purdue, which has entered its twenty-second year, graduated 76.

Earlham College, at Richmond, which is conducted by the Society of Friends, has been embarrassed for want of funds, but received at the time of the Yearly Meeting an additional endowment of about \$30,000. The whole number of students enrolled during the year was 236; professors, 12; teachers in other departments, 4.

A large disparity on the wrong side between the income and expenses of De Pauw University has led to a change in its management. The

president retired, and his place has been temporarily filled. The number of graduates was 63.

The college presidents of the State, in convention at Indianapolis, in March, declined to amend resolutions passed in the previous December virtually abolishing football. They were petitioned to reconsider, but were of opinion that the game should be prohibited until the rules shall have been materially changed and professionalism entirely taken out. This year they went a step further and passed a resolution making the rule forbidding the playing of football with professional teams applicable to all college athletics.

Military Matters.—The positions of Indiana regiments on the field of Chickamauga were all determined early in the year. It was decided that the monuments should be built of Indiana stone, and they were dedicated Sept. 18. When the State did not have so many regiments in the battle as some States, Indiana lost more men killed and wounded than any other. The Legislature appropriated \$40,000 for the purpose.

More controversy has arisen in reference to the Soldiers' Monument at Indianapolis than "Annual Cyclopædia" for 1893, p. 405. In consequence of criticisms on the quality of the art and other matters connected with the management, one of the three members of the commission resigned in February, and three regents were appointed in May under a new law—Gen. Lew Wallace, Gen. Fred. Kneller, and Major G. V. Menzies, all of whom accepted; but Gen. Wallace soon resigned in consequence of the rejection by the other regents of certain resolutions which he offered, the significant portions of which were these:

That the monument be devoted to the State of Indiana exclusively.

That the female figure at present covering the shaft of the monument be taken down, and a fitting statue in bronze of Gov. Oliver P. Morton be erected in its place. That the four pedestals now in place about the monument be reserved exclusively for soldiers of the Territory and State of Indiana actually slain in battle or by hand hostile to the republic.

The State encampment of the Grand Army of the Republic was held at Muncie in April. One of the questions discussed was the inadequacy and unfairness of the treatment of the civil war in the United States histories in use in the public schools of the State. A protest against them, signed by the Indianapolis posts, was referred to a committee, and a memorial stating the objections to the books was prepared for presentation to the State Board of Education.

Products.—During the fiscal year 63,651,523 cigars were manufactured in Indiana. Seventeen distilleries were operated, 14 being grain distilleries, consuming 1,500,000 bushels of grain; 969,478 gallons of spirits were rectified, 8,700 cattle and 7,125 hogs were fed, and 10,538,822 taxable gallons of distilled spirits were gauged. The production of fermented liquors amounted to 592,224 barrels.

The corn crop, as reported in November, was 131,105,991 bushels, from an acreage of 3,706,146. The acreage in wheat has been gradually decreasing in recent years, having fallen from 3,063,348 in 1882 to 2,540,424 in 1894. The yield this year was estimated at 20,000,000 bushels.

The apple crop was unusually large, but low

water in the streams interfered seriously with the shipments, and in many places the fruit had to be left on the ground or sold at extremely low prices. A large quantity of apple brandy was made.

The tomato crop was reported about 60 per cent short of that of 1894.

The State geologist has been investigating the value of clay and stone. In the western part of the State, where the coal deposits crop out, is a red stone composed of sand and iron, which will be a valuable building material. It can not be mined, but must be taken out with chisels and hammers. Oolitic stone to the extent of 25,000,000 cubic feet was quarried in the State in 1894. Investigation of the clays showed valuable varieties—one shale found in unlimited quantities suitable for drain tile, and one for fire brick, and deposits of clay such as is used in cream-line factories. Alleged discoveries of gold are occasionally reported, and on this point the geologist says: "There is gold in very small quantities in the sands of Brown County which loaded there with the glaciers, but nobody could make wages in hunting for it." As to the gas and oil, he says: "Indiana has a larger gas territory than Ohio and Pennsylvania combined, but there is every reason to urge economical use of it. New oil wells are developed almost every day, and there seems to be no limit to the supply." A new oil field is developing at Parker City.

Supreme Court Decisions.—In an opinion handed down in a Carroll County liquor case it is held that a liquor dealer is responsible for actionable injuries caused by the sale of liquors made by his agents or servants. The fact that the sale was made without the knowledge of the dealer constitutes no defense.

The court affirmed the decision of the Allen County Superior Court in a suit in which the Humane Society of Fort Wayne was involved. Two members of the society caused two horses to be killed, and the owner was awarded damages to the Allen County Court.

A case of general interest was decided in December. It was held, in the case of the Indiana Natural Gas Company against Henry Jones and others, that in the assessment of damages in condemnation proceedings no allowance shall be made for future prospective damages that could accrue only through an accident.

An important decision was given in the case of the president of a bank at Martinsville against the County Board of Review. The suit was on the question of the right of the bank to refuse to allow the board to examine the books containing the names of the bank's depositors for the purpose of discovering whether persons in general had unlisted cash in the bank in the form of greenbacks. The president of the bank refused to answer the questions or permit an examination of the books. He was fined \$1, and an appeal was taken. The decision declares that "it is not easy to see how the statute could have more fully conferred upon the Board of Review the power to do what it was attempting to do in this case. The board had authority to make the examination. It had authority by any member of it to administer the oath to the witness, and it had authority to require him to be sworn and answer as to the matters required of him."

Political.—The enumeration of voters by counties, which is made once in six years as a basis of legislative apportionment, was finished in October. There are 627,072 voters in the State. A comparison of the number of voters reported by the township trustees and the number of men assessed shows that more than 200,000 escaped poll tax. The difference in the enumeration of 1890 and 1895 is as follows: Increase of white votes, 73,745; increase of colored votes, 2,297.

Legislative Session.—The Legislature adjourned March 11, after a session of sixty days. Among the bills passed was one called the State-house-custodian bill, which was to have the result of removing the present custodian and a number of subordinates and putting Republicans in their places. The Governor wrote a veto to the bill, which was sent to him about two days before the adjournment; but the veto message was held back until just before 12 o'clock on the night when the session expired, with the design (so the Republicans asserted) of having it handed in to the Legislature at the very moment of adjournment, so that the bill could not be passed over the veto. It was also asserted that the clock was kept at ten minutes before twelve in order to deceive the members as to the time remaining in which to act; that the veto was to start from the Governor's office downstairs within three minutes to twelve, and when it reached the House (so the plan was said to be arranged) the hands on the electric clock were to give one bound and leap past that minute point which marked the expiration of the Fifty-ninth Assembly's life. Democratic members of the House were to be the witnesses that the hour of twelve had struck before the measure was passed over the Governor's objections. But the Republican members had information that the veto was coming; and when the elevator arrived at the assembly-hall landing, at one minute before twelve, bringing the Governor's private secretary with the message, the custodian whose office was in danger and others (2 Republican members) pushed in. The Republicans closed the door and, seizing the lever, sent the elevator upward. A rough-and-tumble fight ensued in the elevator between the two members on one side and the secretary and the custodian on the other. After the elevator had gone up and down several times the door was opened and the fight continued in the corridors and became general. The doors of the Assembly chamber were locked and the effort to break them in on the part of the veto bearers was resisted by the Republicans. One door was finally forced, and the secretary fought his way slowly to the desk amid a surging crowd of contestants on both sides, and reached it just after the Speaker had declared the House adjourned, though, according to law, the session had expired at 12 o'clock, some minutes before.

When the Governor made proclamation of the acts of the session as laws he excepted the State-house-custodian bill, claiming that it had been vetoed. The proclamation was not presented to the Secretary of State for his signature to attest that of the Governor, as required by law in official documents. It was also claimed that the Governor exceeded his authority in affixing the

seal to his proclamation; for, though he is the custodian of the seal, a statute says that the Secretary of State shall affix it to official documents. These precautions of the Governor seem, however, to have been unnecessary, as the Secretary is reported to have said that he would attest any proclamation the Governor might make. He holds that the proclamation carries with it nothing more than a mere formal notice. According to the law, the new acts were in force at the time the copies were received by the last county, which was June 28, and no act or omission of the Governor could prevent their being effective at that time.

One of the most important measures of the session was that on temperance, called the Nicholson bill. Mr. Nicholson is president of the Indiana Good Citizens' League. The law provides for local option, but the option is to be exercised by petition instead of by ballot. The applicant for license is to be required to describe specifically the "room in which he desires to sell such liquors, and the exact location of the same, and if there is more than one room in the building in which such liquors are intended to be sold said applicant shall specifically describe and locate the room in which he desires to sell such liquors in such building." Those holding license to sell intoxicating liquors in less quantities than a quart at a time are to provide for the sale in a "room separate from any other business of any kind, and no devices for amusement or music of any character, or partitions of any kind shall be permitted in such room." The rooms are to be on the ground floor or basement and fronting the street or highway, and so "arranged, either with window or glass door, as that the whole of said room may be in view of the street or highway." The penalty for violations of these provisions is \$10 to \$100 fine, to which may be added imprisonment not exceeding ninety days; and on conviction of a second offense the license is forfeited. Drug stores are allowed to dispose of liquors in quantities less than a quart at a time only on the written prescriptions of reputable physicians. The vote on the bill in the Senate was 28 for and 20 against; in the House, 75 for, 20 against. The vote was not divided on party lines.

An act was passed designed to prevent township trustees from retaining surplus school moneys, and at the same time do away with the enormous fees to the Attorney-General for covering such moneys into the treasury.

The apportionment act of 1893 was repealed on the ground that the courts have practically declared it unconstitutional, and the State was redistricted. Of the 13 congressional districts by the new division, the largest contains 8,410 inhabitants above the average, and the smallest 7,787 below, while 7 are within 2,000 of the average.

These acts were vetoed by the Governor, but were passed over the veto, as was also one providing for the appointment of boards of control for the State prisons, to be chosen by the Governor, Secretary of State, Auditor, Treasurer, and Attorney-General.

A fee-and-salary law takes the place of that of 1891, declared unconstitutional by the courts.

The so-called Roby bill prohibits racing on

any track from Nov. 15 to April 15, for purse or prize, in the presence of 50 persons, and the calling of any race meeting on any one track oftener than three times a year. The validity of the bill was upheld by the Supreme Court.

An act affecting the militia appropriated \$45,000, and made more liberal provision for armories, etc., but the more important changes are those that relate to authority in time of riot and disturbance, and to trials of militiamen for results attending the firing upon a mob. The practical effect of the bill is to place the officer commanding the militia in authority over the civil officers, and to place under martial law any community or section where the military may be called to preserve order. In the trial of soldiers who are charged with the injury or death of the members of a mob the military is made superior to the civil courts, the provision being that soldiers so charged shall be tried by court-martial, and that the finding of the military tribunal shall be final.

By the terms of the benevolent-institutions bill, the Board of Trustees is made bipartisan.

The State tax levy was placed at 28 cents on \$100, a reduction of $\frac{1}{2}$ cent from the previous years; for the general fund, 9 cents; benevolent institutions, 5 cents; school tuition, 11 cents; sinking fund, 3 cents. Aside from this is the direct tax for the support of the State educational institutions, amounting to one sixth of a mill on the dollar. The State University gets one fifteenth of a mill, and the other two one twentieth each.

The number of employees at the State House was materially reduced.

An appropriation of \$75,000 was made to establish a State Soldiers' Home at Lafayette.

The law on the publication of libels in newspapers was materially changed. If it appears upon trial that the article was published in good faith, that its falsity was due to mistake, and that a full and fair retraction was published in a conspicuous place and type the plaintiff shall receive only actual damages.

A fraudulent-marriage act makes it a felony for a man to desert or treat cruelly, within two years, a wife whom he has married to escape prosecution for seduction.

Several acts were passed, designed to provide for new and improved roads in townships where a majority are in favor.

Among other acts passed were the following:

Providing for a commission to consider the matter of a centennial (1900) industrial exposition.

Authorizing city councils to sell bonds and raise money for water works in which cities may be part owners.

Giving the Auditor further control over insurance companies, and abolishing the 80-per-cent clause in insurance policies; also requiring companies to add cash to their capital up to \$100,000.

Prohibiting the landing and beaching of family shanties or flatboats on shore for a longer period than ten hours without consent of the owner.

Defining when property shall be taxed, providing for county boards of review, and extending the session of the State Board of Review—an amendment to an act of 1891.

Amending all laws authorizing city councils to divide cities into wards.

Authorizing cities of 10,000 population or more to provide for a police maroon.

Specifying the terms on which the Governor, Auditor, and Treasurer of State may issue and sell bonds.

Authorizing cities and towns to sell bonds for funding or refunding, and requiring boards of trustees to levy taxes for the payment of interest on bonds and for a sinking fund.

Making the stockholders of State banks responsible for the par value of their stock, and requiring that any impairment of capital shall be made good.

Making it unlawful to take fish in any lake in Indiana between April 1 and June 15.

Subjecting any railroad company or other corporation, or their agents, to exemplary damages if any discharged employee shall be blacklisted.

A joint resolution, looking to an increase in the number of judges of the Supreme Court, by the terms of which the number may be from 7 to 16, but must be either 7, 10, 13, or 16, proposing an amendment to the Constitution to that effect. Another proposed amendment to the Constitution, adopting voting by mail, was embodied in a resolution that passed both Houses.

IOWA, a Western State, admitted to the Union Dec. 28, 1846; area, 56,025 square miles. The population, according to each decennial census since admission, was 192,214 in 1850; 674,919 in 1860; 1,194,020 in 1870; 1,624,615 in 1880; and 1,911,896 in 1890. By the State census of 1895 it was 2,058,069. Capital, Des Moines.

Government.—The following were the State officers during the year: Governor, Frank D. Jackson; Lieutenant Governor, Warren S. Dunham; Secretary of State, W. M. McFarland; Auditor, C. Y. McCarthy; Treasurer, John Herriott; Attorney-General, Milton Remley; Superintendent of Instruction, Henry Sabin; Railroad Commissioners, John W. Luke, George W. Perkins, C. L. Davidson. Mr. Luke died Dec. 20. Chief Justice of the Supreme Court, Josiah Owen; Associate Justices, J. H. Rothrock, L. G. Kinne, C. T. Granger, C. S. Robinson, H. E. Desmor. Justice Kinne is a Democrat; the other justices and the State officers are Republicans.

Finances.—The total assessed valuation is \$351,000,000, a decrease of about \$9,000,000 in the past biennial period. The tax levy was placed at 2½ mills.

The State Treasurer's report for the two years ending June 30 shows a total general revenue from all sources from July 1, 1893, to June 30, 1895, inclusive, of \$3,524,251.35; balance from last report, \$412,981.45; total, \$3,937,232.80. The total Auditor's warrants redeemed was \$3,624,478.29; cash balance on hand at close of business June 30, 1895, \$312,854.41.

The aggregate cost of criminal proceedings in the State in one year was \$504,040.45, not including the salaries of county attorneys, which amounted to \$82,355.26.

Banks.—There was an increase of 14 banks during the year 10 of which were savings and 4 State banks, and during the two years an increase of 39. There was an increase of deposits, though in the year from 1893 to 1894 there was a decrease. No bank was compelled to close its doors during the time, but in September the Auditor reported the Buena Vista State Bank at Stern Lake as being in poor condition, and asked for the appointment of a receiver.

The last Legislature enacted several laws af-

fecting banks. Directors were empowered to make good by assessment impairment of the capital stock of a State or a savings bank; the liability to the State bank on the part of an officer was limited; loans to directors must be passed upon by the board; an examining committee, to make quarterly examinations and report to the full board, was provided for; bank officers were prohibited from using the funds of the bank or its deposits except for regular business transactions; and it was made a penal offense for any bank officer, agent, or clerk to make false entries or statements in regard to the condition of the bank to any person authorized to examine it.

Loan Associations.—The Union Building and Savings Association went into the hands of a receiver in January. His report, rendered in February, showed that the liabilities amounted to \$199,334.29, and the assets considered good to \$69,419.36. Many of the loans had been made to the manager on security of doubtful value, and the running expenses had been increased under his management by a large amount. Three indictments were found against him for embezzlement and one for conspiracy. He was acquitted on one of the charges in June. After the affairs of the association were made public the other companies in Des Moines, with the exception of the Iowa Deposit and Loan Company, asked for an investigation of their business by a committee to be appointed by the State Executive Council. Later, new directors were added to that company, and they asked for an investigation. The committee found that the affairs of the Iowa Deposit and Loan Company as to loans were in good condition, but that the management had been extravagant, and the funds had been used for purposes not contemplated by the stockholders. After the investigation the company was reorganized with a new manager.

The other Des Moines associations were found to be in good condition.

Insurance.—The report for 1894, published in May, gives the following figures: The Iowa fire insurance companies show a total of risks written, \$94,657,546; premiums received, \$2,002,382; losses paid, \$894,728.93; percentage of losses paid to premiums received, 44.7. The totals of other than Iowa fire companies were: Amount of risks written, \$155,514,939; premiums received, \$2,351,976.48; losses paid, \$1,513,282.58; percentage of losses paid to premiums received, 67.2. Companies other than fire and life: Risks written, \$8,889,256; premiums received, \$84,108.93; losses paid, \$51,459.92; percentage of losses to premiums, 61.2.

The Council Bluffs Insurance Company was put into the hands of a receiver, whose report, made in August, showed the assets to be \$19,699, and the liabilities \$79,944.

In a case before the Supreme Court in which the Northwestern Legion of Honor was the defendant, the decision was to the effect that the order was an insurance company. Acting under this decision, the Auditor notified the fraternal societies doing insurance business in the State that they must comply with the insurance laws. Representatives of 26 of these societies met in Des Moines, Dec. 13, and prepared a bill for the

protection of their interests, to be presented to the next Legislature.

Railways.—The assessment of railway property for 1895 places it at \$44,364,542, a decrease of \$509,144 from the valuation of 1894. The sleeping-car assessment is reduced also. In 1894 it was \$186,028, and this year it is \$151,091. The sleeping cars are assessed \$4,000 each, and the tax is distributed according to the number of miles the cars run in Iowa.

The council is also required to classify the railways for the purpose of fixing their charges for passenger fares, and according to this classification two roads were changed from Class A to Class B and allowed to charge $3\frac{1}{2}$ instead of 3 cents a mile, and two others were allowed to charge 4 cents instead of $3\frac{1}{2}$.

At a meeting in January the Railroad Commissioners refused to allow an increase in rates for freight, as petitioned for by the companies.

Education.—The annual statistics of the schools include the following: Number of ungraded schools, 12,456; rooms in graded, 4,520; number of male teachers employed, 5,281; female, 22,782; average monthly compensation, males, \$38.19; females, \$31.60; total average attendance, 331,408; average tuition per month per pupil, \$1.89; trees set out on grounds and in thrifty condition, 196,095.

The department of college professors adopted resolutions, with one dissenting vote, declaring "that we hereby agree to suspend all intercollegiate games of football in our respective institutions until the accepted rules and safeguards of the game shall have been so modified as to make it proper to be played by gentlemen."

The Danish Government made an appropriation for the Danish University, lately founded at Des Moines, endowing a chair with 2,000 crowns annually.

The income and the cost of the professional departments of the State University for the past three years are as follow: Medical department—disbursements, \$41,985.85; income, \$24,060.09. The number of students during that time was 513. Homœopathic department—disbursements, \$12,514.55; income, \$8,697.64. The number of students in this department was 203. Law department—income, \$31,196.36; disbursements, \$29,538.67; attendance, 620. Dental department—income, \$32,577.09; disbursements, \$28,316.11; attendance, 448. Pharmacy department—income, \$12,002.58; disbursements, \$8,254.54; attendance, 171.

The Soldiers' Home.—There has been a constant increase in the number of inmates in the home at Marshalltown, from 140 the first year (1888) to 516, the average enrollment for 1895. In all, 1,396 have been admitted.

Monument at Spirit Lake.—The monument ordered by the twenty-fifth General Assembly is in place at Spirit Lake. It is to the memory of the victims of the Indian massacre there in 1857, when 38 pioneer settlers were murdered and 4 women were carried into captivity. Two of these were rescued later in the year, and 2 were murdered by the Indians. Two members of the relief expedition were frozen to death on the return march. Thirty-three persons who had fled from the attack on Springfield, Minn., were rescued by this expedition. The monu-

ment is a shaft of Minnesota granite, 55 feet high, of alternate rough and polished stones, bearing on bronze tablets the names of the victims and those of the rescued and members of the relief expedition. The cost was \$4,500.

Indian Lands.—In reference to a lease of their lands in Tama County by the Sac and Fox Indians, running from Sept. 16, 1892, to March 1, 1898, the Attorney General has given the opinion that it is illegal. He says: "These lands were purchased by the Indians with their own funds, and are not a reservation. They were permitted to locate in Iowa by an act of the Legislature giving them special authority to do. The title to the lands was taken in the name of the Governor of the State as trustee for the Indians." The lease was executed by a United States agent, acting for the Indians. The Attorney General is of opinion that the United States would have no authority over the lands, and he finds that the rental is grossly inadequate.

Miners' Association.—Representatives of the principal mining camps in the State reorganized their union, Nov. 21, under the name Iowa Mine Workers' Protective Association, withdrawing from the District Association of the Mine Workers of America, which included mining territory in Missouri.

The new organization will have a benevolent fund attachment, and will take upon itself some of the forms and plans of a lodge providing a sick benefit, a death benefit, and a benevolent fund for the families of miners in distress. It will affiliate with the Mine Workers of America and the American Federation of Labor, but will have power for independent action.

Coal Operators.—The coal operators of the State met at Des Moines, May 23, and formed an association, the object of which is to secure a general improvement in the coal business in the State by equalizing wages and doing away with certain unfavorable conditions.

The Mule Law.—The Supreme Court decided, April 2, that this law is constitutional, Justice Kinne alone dissenting. It is held that there is in the act no delegation of the legislative power, and that it does not confer on communities a so-called pardoning power for violation of the prohibitory law. Cases arising from it have been in the courts during the year. Fourteen druggists were indicted for selling liquor illegally by the grand jury of Polk County. A convention of those opposed to the law was called to meet at Davenport, Feb. 2, and the Liberal League of Iowa was formed by the 31 authorized delegates in attendance.

Political.—A decision adverse to the right of women to vote at school and municipal elections was rendered, April 10, in the district court at Cedar Rapids. An election had been held to choose directors and to vote upon the division of the district. The election was carried by the party opposed to division, by means of the votes of about 30 women. The court held that their votes were illegal, and ordered the district divided. The opinion declares that the Iowa statute granting women the right to vote at school and municipal elections on propositions involving the expenditure of money or levying of taxes is unconstitutional, because the

Constitution of the State provides that only male citizens may vote. More than 100 women took advantage of the new statute to vote at the school election in Des Moines, March 11.

The State Federation of Labor, in session at Ottumwa, May 21, refused to commit itself to the advocacy of free silver. A committee was appointed to visit the miners of southern Iowa and settle the trouble among them.

A nonpartisan convention in the interest of free silver met at Des Moines, June 5. Resolutions were adopted declaring that "the gold monometallists of the world are seeking to fasten the single gold standard upon this country as its permanent financial policy, with the ultimate design, boldly avowed, to retire all greenbacks and Treasury notes by converting the same into interest-bearing bonds, thus transferring the complete control of our currency to the hands of banking corporations."

A convention of Free-silver Democrats met in Des Moines, June 6, and passed resolutions declaring that "the free and unlimited coinage of gold, silver and gold, at the ratio of 16 to 1, without waiting for the action of other nations, is a cardinal principle of Democratic faith, and that such coinage shall be a legal tender for all debts, public and private"; and favoring "the repeal of any and all laws which permit the making of contracts which discriminate against payments in any kind of money which is by law made legal tender."

The Convention of the People's party met in Des Moines, June 11. Their nominees were: For Governor, Sylvester Crane; Lieutenant Governor, A. R. Starrett; Justice of the Supreme Court, L. W. Ivory; Superintendent of Public Instruction, Rev. L. B. Tabor; Railroad Commissioner, E. J. Stason. The resolutions announced "the late decision of the Supreme Court on the income tax, the recent acts of Government by injunction in the interests of corporate wealth, and the issue of interest-bearing bonds"; declared in favor of the restoration of silver, the adoption of the initiative and referendum, and that until such time as a Government system of finances can be established all banking institutions—national, State, and private—are required to give security to depositors for all moneys received for deposits; demanded, further, that the Legislature provide for the "inspection of all workshops and factories where more than 10 persons are employed, that the physical and sanitary conditions may be improved and the lives, limbs, health, and convenience of the employees be better guarded"; and that the salaries of public officers be reduced in proportion to the reductions in the price of the products of labor; favored a graduated State tax upon incomes and an inheritance tax like those of New York and Illinois; and called for "a State tax of 10 per cent. upon all future contracts made payable in gold, the same to be paid by the holder."

The Prohibitionists met in convention at Des Moines, June 19. On one of the flags on the platform was a poster that read as follows:

Telegraph E. R. direct from earth to hell. Operated under the protection of the United States Government, to which we pay \$1,500,000 a year revenue tax. Finest made on board. Ladies in attendance. Spe-

cial high-license coaches. A few local-option cars. Special attention given to young men. Last stop at Chicago. Last year we carried 100,000 through passengers, 1,000,000 more on the way. Ship over at Murphysville. Special Tillman coaches. No accidents. Only slow trains. Easy chairs for preachers; sleeping cars for Christians. Annual receipts \$1,500,000,000. Boys always in demand. Have you one to spare? Through tickets in every season.

The announcement that the Supreme Court had refused to interfere with the decision of the district court declaring the saloon petition invalid, was greeted with loud applause, and the convention joined in singing "Praise God, from whom all blessings flow." The platform, which was very long, after declaring in favor of absolute prohibition "with the Prohibition party behind it," a tariff for revenue, but with "special reference to the protection of our domestic labor, for "the gold and silver coinage of the Constitution and a national currency issued by the General Government only," for Government ownership or control of railroads, telegraphs, etc., for restricted immigration, for exclusion of the teaching of foreign languages in the public schools, for Sunday legislation, for liberal pensions, for settlement of differences by arbitration, for an income tax, and for the initiative and referendum system, made the following declarations in regard to State politics:

We denounce in unqualified terms the so-called mullet law of this State, and we arrange the Republican party which enacted it for purity and transparency to the vote of the sovereign people cast for prohibition June 27, 1902.

We demand that the revenue laws of Iowa shall be radically reconstructed, to the end that the wealth of the wealthy shall bear its just proportion of taxation.

We demand a reduction of the legal rate of interest in this State to 6 per cent.

The ticket nominated was: For Governor, Frank Bacon; Lieutenant Governor, M. P. Atwood; Judge of the Supreme Court, J. W. Rogers; Superintendent of Public Instruction, Mrs. L. D. Carhart; Railroad Commissioner, H. F. Johns.

The Republican Convention, held in Des Moines, July 10, nominated the following candidates: For Governor, Francis M. Drake; Lieutenant Governor, Matt Parrott; Judge of the Supreme Court, Josiah Given; Superintendent of Instruction, Henry Sablin; Railroad Commissioner, George W. Perkins. The platform included the following declarations:

The Democratic party is envious of abiding power in 1892 under false pretenses. In its platform it declared the principle of protection to be unconstitutional, and in its campaign it denounced the policy as robbery. But, with complete power in its hands, its lawmakers have utterly failed to carry out the policy to which they were pledged. It is a farcical pretense for the Democratic party to claim credit now for a measure from which nine months ago its President withheld his approval and denounced as a humiliating abandonment of their cardinal principle.

We deplore the fact that the Democratic party, while professing special interest in enlargement of our export trade, has destroyed the reciprocity arrangements established by a Republican administration. Its attitude for foreign trade has been exhibited only in the admission of foreign goods to our markets without obtaining any reciprocal favors from foreign nations.

We are unalterably opposed to reducing the Amer-

lean workmen to open competition in our own market with the poorly paid labor of the Old World.

We believe in maintaining not only the highest wage rate for the laborer, but the integrity of money in which he is paid.

We urge that the United States exert its influence to establish with the important commercial nations of the world such an international agreement as will enable this country to reopen its mints to the free and unlimited coinage of both metals without loss of one or the other from the volume of our money.

Restricted immigrations and liberal pensions were favored.

The Democratic Convention, which met in Marshalltown, Aug. 7, was divided on the subject of coinage, but the monometallists were in the majority and elected their chairman. The minority report of the Committee on Resolutions presented a resolution calling for free coinage of gold and silver at the ratio of 16 to 1; but it was defeated by a vote of 420 in favor, to 651 opposed. The majority report, which was adopted, contained the following:

We declare the rescue of the finances of the country from the baleful effects of the Sherman law, the repeal of the un-American Federal election law, and the uprooting of McKinleyism to be works worthy of the history and prestige of the great Democratic party and of a courageous Democratic administration.

We condemn the cowardice and trickery of the Republican party of Iowa in failing to meet in its last State platform any of the issues important and vital to the interests of our State.

We believe that the mule tax fails to meet the requirements of a good excise statute.

We repeat our demand of the past five years for a local-option high-license law, and on behalf of the commercial interests of our State we favor a law permitting the manufacture of liquors, thus affording a market for the products of the farm and labor of the State, and saving to our people the enormous sums now expended in other States.

The resolutions also favored election of United States Senators by direct vote of the people, "just and liberal pensions to all deserving veterans," nonpartisan control of State institutions, and the speedy completion of the Hennepin Canal and the deepening of water ways from the Great Lakes to the ocean. The nominations were: For Governor, W. I. Babb; Lieutenant Governor, G. L. Bestow; Judge of the Supreme Court, T. G. Harper; Superintendent of Instruction, Lyman B. Marshall; Railroad Commissioner, George Jenkins.

The Republican ticket was successful at the election, the return of the vote for Governor being as follows: Drake, Republican, 208,689; Babb, Democrat, 149,433; Crane, People's party, 32,118; Bacon, Prohibition, 11,052. The other candidates were elected by the following vote: Lieutenant Governor, 210,888; Judge, 212,186; Superintendent, 212,852; Railroad Commissioner, 212,611. The next State Senate will have 43 Republicans and 20 Democrats; the House, 80 Republicans and 7 Democrats.

IRISH NATIONAL ALLIANCE, an organization formed in convention in Chicago, Sept. 26, 1895, having for its object "the securing of the independence of Ireland by any means within its power consistent with the laws and usages of civilized nations." The qualifications for membership are good moral character, birth on Irish soil or descent from Irish parentage, and

the taking of a pledge to aid by every means, in conformity with the constitution and by-laws of the Irish National Alliance, in securing the independence of Ireland. The organization has a president, a vice-president, a treasurer, and an executive council of nine members, who hold office for two years. The State organizations are modeled on the national plan, and all authority to organize must come from the national executive council.

Each local subdivision of the Alliance is known as a council, to be designated by the number of the charter furnished by the national executive council. The convention passed resolutions of sympathy with the Cubans, and commended the work now being done by the Gaelic League and the National Literary Society in Ireland, and by the Gaelic societies of the United States. The most important of the resolutions adopted were these:

We earnestly protest against the continued incarceration in English prisons of Irish patriots; we consider it inhuman and against the policy of civilized nations to keep in prison men who have acted only in the interest of their country and human liberty, and that the release of these men is imperatively demanded not only by the Irish people, but by civilization; we recommend the formation of military companies wherever practicable, in order to foster and preserve the military spirit of the Irish race and to prepare for action in the hour of England's difficulty.

Early in December, 1895, it was reported that a large number of councils had been formed, in New York, Brooklyn, Montreal, Quebec, St. Louis, Chicago, San Francisco, Cleveland, Boston, and Detroit. The movement commands attention on account of the military arm of the Alliance, to be a member of which the applicant must also belong to a lodge of the Clan-na-Gael. In this manner, a full regiment has been raised in the city of New York, and others of the large cities are following the example. When President Cleveland sent his message to Congress relative to the boundary of Venezuela, in December, 1895, the Alliance issued a manifesto against England, and declared it would furnish 100,000 men in case of a war with that nation.

ITALY, a constitutional monarchy in southern Europe. The Constitution is that of the ancient kingdom of Sardinia, adopted in 1848 and extended to the united countries of Italy in 1861. The throne is hereditary in the male line of the house of Savoy. The reigning King is Umberto I, born March 14, 1844. The Senate is composed of the royal princes and 390 members nominated for life from among persons who have attained certain official positions or have rendered eminent services to the country or pay 3,000 lire of taxes. The Chamber of Deputies contains 508 members, elected directly in separate districts by all citizens who can read and write and who pay 20 lire of direct taxes. The Council of Ministers, constituted on Dec. 15, 1893, is composed of the following members: President and Minister of the Interior, Francesco Crispi; Minister of Foreign Affairs, Baron Blanc; Minister of Finance, Paolo Boselli; Minister of the Treasury, Giorgio Sonnino; Minister of Justice and Worship, Andrea Calenda di Tavani; Minister of War, Gen. Stanislao Mocenni; Minister of Marine, Admiral Constantino Morin; Min-

Minister of Education, Augusto Bacelli; Minister of Public Works, Giuseppe Saracco; Minister of Agriculture, Industry, and Commerce, A. Barracco; Minister of Posts and Telegraphs, Dr. M. Perraro.

Area and Population.—The area of Italy is 110,023 square miles. The population on Dec. 31, 1894, was computed to be 30,913,663. The number of marriages in 1894 was 231,581; of births, 1,149,191; of deaths, 822,623; excess of births, 326,568. The number of emigrants in 1894 was 235,346, of whom 110,771 went to European countries, 41,256 to Brazil, 34,731 to the Argentine Republic, Uruguay, and Paraguay, 31,316 to the United States, 4,137 to other parts of America, and 3,135 to Africa, Asia, and Oceania. The population of the largest cities at the end of 1893 was: Naples, 522,700; Rome, 431,000; Milan, 432,400; Turin, 335,900; Palermo, 276,000; Genoa, 215,300; Florence, 200,300; Venice, 150,900; Messina, 146,400; Bologna, 142,000.

Finances.—The receipts of the treasury for the year ending June 30, 1894, were 1,853,394,087 lire, and the expenditures 1,912,149,991 lire, leaving a deficit of 58,855,904 lire. For the year 1895-96 the ordinary receipts were estimated in the budget at 1,655,207,382 lire, and extraordinary receipts at 43,881,243 lire; total, 1,699,088,625 lire. The ordinary expenditures were estimated at 1,578,300,068 lire and extraordinary expenditures at 111,042,696 lire; total, 1,689,342,764 lire. The revenue from railroads and other property is 87,128,904 lire; from the income tax, 288,183,300 lire; from land and house taxes, 193,400,000 lire; from registration, stamps, succession dues, the tax on railroad receipts, etc., 215,607,000 lire; from customs, 235,000,000 lire; from consumption duties, 52,050,000 lire; from the tobacco monopoly, 192,000,000 lire; from the salt monopoly, 71,500,000 lire; from taxes on the manufacture of spirits, beer, powder, and sugar, 39,500,000 lire; from the lottery, 65,000,000 lire; from posts, telegraphs, school fees, prisons, etc., 81,897,900 lire; repayments, 57,102,209 lire; various receipts, 8,410,740 lire; from domains, interest, contributions of Rome and Naples, etc., 88,427,329 lire; from sales of domains and ecclesiastical lands, etc., 15,180,203 lire; from nickel money, etc., 17,129,000 lire. The chief expenditures are: Interest on the consolidated debt, 463,351,963 lire; interest on extinguishable loans, 70,023,751 lire; annual payment on the purchase of railroads, 27,770,010 lire; railroad guarantees and interest on the floating debt, 124,032,024 lire; pensions, 78,000,000 lire; civil list and appanages, 15,050,000 lire; Senate and Chamber, 2,120,000 lire; service of the amortizable debt, 34,387,518 lire; interest, 8,505,512 lire; extraordinary expenses for amortization, etc., 33,499,332 lire; administration of finances and cost of collection, 189,153,004 lire; foreign affairs, 9,431,880 lire for ordinary and 68,400 lire for extraordinary purposes; justice, 22,751,952 lire for ordinary and 82,889 lire for extraordinary purposes; public instruction, 40,784,830 lire for ordinary and 669,113 lire for extraordinary purposes; interior, 56,903,159 lire for ordinary and 2,299,543 lire for extraordinary purposes; public works, 26,686,634 lire for ordinary and 62,400,483 lire for extraordinary pur-

poses; posts and telegraphs, 55,637,629 lire for ordinary and 56,516 lire for extraordinary purposes; war, 223,434,843 lire for ordinary and 2,548,000 lire for extraordinary purposes; marine, 94,721,270 lire for ordinary and 4,491,000 lire for extraordinary purposes; agriculture, commerce, and industry, 8,285,150 lire for ordinary and 1,183,863 lire for extraordinary purposes. The total expenditure on account of the debt in 1894-95 was 568,113,950 lire for interest and 1,557,528 lire for amortization.

The Army.—The peace effective of the army in 1895 was: Staff and military establishments, 3,558 officers and 4,461 under officers and men; 346 battalions and 98 district companies of infantry, 7,148 officers and 146,494 men; 144 squadrons and 24 depots of cavalry, 865 officers and 24,406 men; 267 batteries and 76 companies of artillery and 40 companies of train, 1,207 officers and 30,452 men; 64 companies of engineers and 10 of train, 285 officers and 7,666 men; 12 sanitary companies, 191 officers and 2,271 men; 12 commissary companies, 126 officers and 1,746 men; 12 legions of carabinieri, 562 officers and 24,087 men; veterinary corps, 196 officers; African troops, 225 officers and 3,622 men; total, 14,463 officers and 245,205 men, with 50,200 horses and mules. The war effective is 1,508,954 trained and 520,424 partly trained troops and 1,368,411 untrained men of the territorial militia.

The Navy.—The fleet in 1895 consisted of 10 first-class battle ships of from 11,000 to 15,000 tons, with 14 to 22 inches of armor over the vital parts, each armed with 4 105-, 100-, or 67-ton guns, carried in barbettes by 8 of them ("Italia," "Lepanto," "Ruggiero di Lauria," "Andrea Doria," "Francesco Morosini," "Re Umberto," "Sardagna," and "Stella") and by 2 in turrets ("Duilio" and "Dandolo"); 6 second-class battle ships ("Affondatore," "Ancona," "Casteldardo," "Marco Polo," "Maria Pia," and "San Martino"), armed, the first with 18-ton, the others with 4-ton guns; 5 fourth-class ships of the line ("Etna," "Fieramosca," "Giovanni Bausan," "Stromboli," and "Vesuvia"); 8 of the fifth, 13 of the sixth, and 2 of the seventh class; 5 first-class, 94 second-class, 89 third-class, and 21 fourth-class torpedo boats; 29 auxiliary vessels of various classes; and 8 auxiliary cruisers.

Commerce.—The special imports of merchandise in 1894 amounted to 1,094,600,000 lire; imports of precious metals, 108,100,000 lire. The special exports of merchandise amounted to 1,026,500,000 lire; transit trade, 27,800,000 lire; exports of precious metals, 31,500,000 lire. The principal imports were: Cotton, 119,800,000 lire; coal, 110,400,000 lire; silk, 80,100,000 lire; cereals, 79,900,000 lire; hides and skins, 47,900,000 lire; iron, 43,900,000 lire; woollen, 34,800,000 lire; machinery, 34,600,000 lire; tea, 32,800,000 lire; coffee, 29,900,000 lire; timber, 28,800,000 lire; colors, 23,500,000 lire; chemicals, 25,200,000 lire; wool, 24,700,000 lire; sugar, 23,000,000 lire; cottons, 22,400,000 lire; silks, 19,300,000 lire; gums, 17,800,000 lire; seeds, 17,300,000 lire; animals, 17,100,000 lire; jewelry, 16,900,000 lire; tobacco, 16,900,000 lire; petroleum, 11,900,000 lire. The chief exports were: Silk, 296,100,000 lire; olive oil, 63,500,000 lire;

wine, 49,000,000 lire; eggs, 40,000,000 lire; hemp and flax, 34,200,000 lire; vegetables, 30,000,000 lire; wood manufactures, 27,800,000 lire; animals, 27,000,000 lire; silk goods, 23,500,000 lire; sulphur, 21,500,000 lire; fruits, 19,900,000 lire; skins, 19,300,000 lire; cotton goods, 16,800,000 lire; almonds, 16,500,000 lire; colors, 13,900,000 lire; tartar, 13,400,000 lire; marble and alabaster, 12,900,000 lire; poultry, 12,800,000 lire; butter, 11,800,000 lire; rice, 11,700,000 lire; cheese, 11,600,000 lire; zinc ore, 10,500,000 lire. The values, in lire, of the special trade with the principal foreign countries, in 1894 are given in the following table:

COUNTRIES.	Imports.	Exports.
England.....	242,400,000	121,800,000
France.....	131,000,000	144,000,000
Germany.....	132,900,000	142,700,000
Austria.....	113,400,000	126,100,000
Switzerland.....	43,800,000	202,600,000
United States.....	109,900,000	91,200,000
British India.....	74,600,000	13,500,000
Russia.....	71,900,000	13,900,000
Argentine Republic.....	20,500,000	29,600,000
Belgium.....	24,800,000	21,700,000
Egypt.....	21,300,000	10,600,000
Turkey.....	12,100,000	16,900,000
Spain.....	16,800,000	12,700,000
Netherlands.....	8,500,000	14,500,000
Greece.....	7,900,000	7,000,000
Sweden and Norway.....	9,600,000	2,500,000

Navigation.—There were entered during 1894 in Italian ports 115,197 vessels, of 29,038,182 tons, of which 15,953, of 7,962,369 tons, were engaged in foreign trade, 9,579 of these, of 2,009,568 tons, being Italian, and 99,244, of 21,075,813 tons, were coasting vessels. The number of vessels entered from long voyages with cargoes was 12,682, of 6,384,198 tons. The number of steam vessels engaged in foreign trade was 6,716, of 7,262,709 tons. The total number of vessels cleared was 113,983, of 28,215,422 tons, of which 16,138, of 8,195,558 tons, were engaged in foreign trade, and of these latter 9,820, of 4,369,023 tons, carried cargoes.

The merchant marine on Jan. 1, 1895, consisted of 6,231 sailing vessels, of 571,605 tons, and 328 steamers, of 207,530 tons.

Railroads, Posts, and Telegraphs.—There were 14,944 kilometres, or 9,280 miles, of railroad in operation on Jan. 1, 1895.

The post office in 1893 forwarded 140,133,907 letters, 57,936,433 postal cards, and 215,640,616 newspapers and circulars.

The length of the telegraphs in 1893 was 38,288 kilometres, with 148,348 kilometres of wires. The number of paid internal messages sent was 7,506,134; of international messages, 814,694.

Prosecution of Giolitti.—Ex-Premier Giolitti, who on Dec. 15, 1894, submitted to the Chamber of Deputies a *pliego* or sealed envelope containing charges against Crispi fortified by documents apparently implicating the Premier in the Banca Romana scandals, and afterward fled to avoid arrest when the session of the Parliament was suddenly suspended, returned to Rome on Feb. 27, 1895, to meet accusations brought against him of abstraction of papers from the archives and illegal possession of letters of Signora Crispi. The original complaint was for forgery and slander. Giolitti demanded a trial before the Senate. The Court of Cassa-

tion on April 24 sustained his appeal, and the case against him was abandoned, since further proceedings could be taken only by vote of the Chamber of Deputies.

General Elections.—Prime-Minister Crispi prorogued Parliament in December, 1894, because he found it impossible to command a majority for his measures and feared a vote of censure in the excitement caused by the accusations brought against him in the Chamber of Deputies by ex-Prime-Minister Giolitti. For six months he governed without a Parliament, putting off dissolution and the summoning of a new Chamber until it should become necessary for the voting of the budget. The Chamber was formally dissolved by royal decree on May 8, and elections were appointed to take place on May 26. The electoral lists meanwhile were revised under a new registration law enacted on June 11, 1894. The Pope renewed his injunction *non expedit*, forbidding Catholics to take part in the elections either as candidates or as voters (*ne eletti ne elettori*). The inhibition was universally respected. The politicians of all parties predicted that the elections would give Crispi a majority of 100 in the new Chamber. Results can be thus foretold because the prefects have power to control largely nominations and elections, but ministerial candidates often change their attitude after they are elected, and vote against the ministry on questions that arise in the Chamber. The people did not generally believe the imputations against the personal honesty of Signor Crispi, although they were revived by the Radical leader Cavallotti. Nothing had been actually proved against him in connection with the Banca Romana or the voting of a decoration for the Panama swindler Herz that was not capable of being explained in a way that was consistent with his lifelong record of probity. His assumption of a military dictatorship for the suppression of economic disorders in Sicily and his extension of the law of *domicilio coatto* to anarchical propaganda lost for him many adherents of liberal tendencies, but more votes were gained in the conservative section of the community. The improvement in the national finances was an achievement of Crispi's ministry that made him seem indispensable even to his multitudinous personal and political enemies. Baron Sonnino was able to boast that the rate of exchange had fallen 10 points, while 80,000,000 lire of fractional currency had been withdrawn from circulation; that the paper money was decreased 150,000,000 lire, while 44,000,000 lire of gold and 85,000,000 lire of silver had been added to the metallic reserve; that the Bank of Italy was successfully reconstructed and progress made in the reorganization of the Bank of Naples, and the official rate of discount had been lowered from 6 to 5 per cent.; that the debts abroad had decreased, consolidated stock had been withdrawn to the amount of 50,000,000 lire, 40,000,000 lire of treasury bonds had been redeemed, and 90,000,000 lire of Italian silver had returned from abroad; that Italian stock had risen to the highest quotations in spite of an increase in the tax; that imports had diminished by 69,000,000 lire, while exports increased 303,000,000 lire; that there was a reduction of 80,

600,000 lire in expenditures, and an increase of 100,000,000 lire in revenue. In view of such results the country could forgive the dictatorial methods of Crispi, including the levying of taxes that were not yet authorized by Parliament.

The elections passed off quietly in most places. Crispi was elected in 9 constituencies. Two imprisoned socialists, Barbato and Felice-Giuffrida, were each elected in 2 or 3. Garibaldi Isola, another condemned Sicilian socialist, was also elected. After the elections an attempt was made at Rimini upon the life of Count Luigi Ferrari, a socialist who denounced violence and illegality and was elected over Barbato, the candidate of the anarchists. Count Ferrari died from his wounds.

In the new Chamber the Ministerialists numbered 220 and the various groups of the Opposition 172. The Constitutional Opposition numbered 104, of whom 40 or more were Conservatives, following the Marquis di Rudini, and the rest Progressives, acknowledging Brin, Giolitti, and Zanardelli as leaders. The extreme left was 60 strong, about a third being advanced Socialists.

Session of Parliament.—The nineteenth Italian Parliament was opened on June 10, the day appointed by the royal decree. When the members took the oath of allegiance the Socialist Deputies were absent. The King in the speech from the throne spoke of further measures to insure the stability of the budget that were required before the problems of communal taxation and administrative reform could be considered. Modifications of the laws were to be proposed by the Government for the better protection of private rights and public tranquillity. All citizens, even those filling high positions, might to be subject to the common law. Legislation giving a higher and more effective significance to the principle of human fraternity was relied on to guarantee social peace and lead the misguided to better things. The education in the common schools would be directed to the same end. The glory of his reign he sought in ameliorating the lot of the lowly. The intended visit of the Italian fleet at Portsmouth, which took place on July 9, was mentioned as being a return to the British fleet of greetings of most intimate friendship. In Africa the Government, far from pursuing a policy of adventure, wished only to consolidate the Italian possessions and pave the way for the colony's financial independence.

The new financial measures included changes in the customs tariff, a tax on insurance policies, and a revision of the probate duties, by which means 9,000,000 lire of new taxes would be obtained; 18,000,000 lire had already been realized by the decrees of the Government. Retrenchments would amount to 20,000,000 lire. The budget fixed expenditures at 1,615,000,000 lire, giving an estimated surplus of 2,578,000 lire. Bank notes were to be reduced 100,000,000 lire. The Socialists attacked the Italian policy of the Government. They demanded amnesty for political offenders, and when Signor Crispi declared that no mercy would be shown to leaders of revolt a physical encounter ensued on June 19. Sonnino's tax bills were carried substantially unchanged. On Sept. 17, the anniversary of the entry into

Rome, all political prisoners were set free with the exception of 4 leaders of the Sicilian riots. Giuseppe de Felice-Giuffrida had been elected again to the Chamber at a by-election in Rome. Laws against socialists and anarchists were introduced after Parliament reassembled on Nov. 21. Signor Crispi, having failed in his policy of conciliation toward the Pope, recalled his offered "truce of God" and returned to his old aggressive policy.

Dependencies.—Italy possesses a colony called Erythrea on the Red Sea coast of Africa, containing about 955,000 square miles, and claims a protectorate over the Empire of Abyssinia or Ethiopia (see AFRICA). In December, 1894, in consequence of the rebellion of Ras Mangaschia, a son of the late Emperor Johannes, the Italian authorities decided to incorporate the Kingdom of Tigre, over which he was governor, in their colony. They attempted the occupation of the country, being provoked by numerous raids of the Abyssinians into their territory. Protests made to King Menelek had no effect, for he had no effective authority in Tigre, which was in a state of rebellion against him, and, moreover, was inclined to encourage the people of Ras Mangaschia in their hostilities against the Italians and to join them when his plans were ripe in a blow for the independence of Abyssinia. He did not acknowledge the right of suzerainty claimed by Italy, which was based upon a construction of the treaty of Uccial that he would not accept. Menelek still lived in his own Kingdom of Shoa, south of Abyssinia proper. For three years he has been collecting arms and storing up food for the contest with Italy. When Gen. Baratieri, after his plans had received the approval of the Italian Government, began the conquest of Tigre in January, 1895, Menelek did not stir. Ras Mangaschia collected an army of 10,000 men to resist the invasion of the Italian forces, but they defeated him at Belesa and Coatit, and afterward captured his camp at Senapeh and drove him out of his country, occupying the capital and all the northern and central districts. Suddenly, early in December, hostile forces began to pour into the country. A force of 1,800 native troops, commanded by Major Toselli, was surprised at Ambalagi and surrounded by an army of 25,000 Abyssinians. Major Toselli had under him 30 Italian officers and 40 noncommissioned officers. When the ammunition for the small arms and mountain battery was exhausted the enemy fell upon them, 20 to 1, and cut them to pieces. They killed 14 Italian officers and 700 men, and after the battle 300 were missing. Gen. Arimondi, who went to the succor of Major Toselli, encountered several bodies of the enemy and stopped their advance upon Adigrat. He arrived upon the field and found the remnant of 300 men beleaguered and hard pressed by the Abyssinians. Driving back the enemy, who were believed to have a Russian officer to direct their operations and were partly armed with rifles brought through the French possessions, Gen. Arimondi conducted a retreat to Makalle. The Abyssinian loss was reported to be 2,000 killed or wounded. The Italian forces in that region were concentrated at Makalle, which was well fortified; but later, when it was invested,

as well as Antolo, and Adua was also threatened, Gen. Baratieri, the Italian commander-in-chief, ordered all the forces to retire to Adigrat, where he established his headquarters.

The Abyssinian army that entered Tigre numbered at least 70,000 men, commanded by Ras Mangascia and Makonen. The latter had shortly before, as a ruse, made overtures of peace in behalf of King Menelek.

The Government asked for and received an

immediate credit of 7,000,000 lire and began at once to embark troops for Africa. Gen. Baratieri ordered the forces at Andowa to fall back upon Adigrat. Makalle and Antalo, as well as Adua, were besieged by the Abyssinians. The Government promised to limit its demands for the campaign to 16,000,000 or 20,000,000 lire. The British Government refused permission to land Italian troops at Zeila, on the Somali coast, the nearest point to Menelek's capital.

J

JAPAN, a constitutional monarchy occupying the long chain of islands between Kamchatka and the Philippines. By the treaty between Spain and Japan, ratified in Tokio Aug. 7, 1895, the line of demarcation was fixed at the line parallel to a degree of latitude passing through the middle of the navigable part of the Bashee Channel. Spain declares that it will never lay claim to the islands lying to the north and northeast of this line, and Japan promises likewise concerning islands to the south and southeast of this line. No part of the Asian continent proper belongs to Japan. The treaty signed at Pekin, Nov. 11, 1895, by Tadasu and Li-Hung-Chang specified that on the payment of 30,000,000 Kuping taels Japan would retrocede to China, and within three months evacuate, the Liao-Tung peninsula. The Emperor, Mutsuhito (peace man), was born Nov. 3, 1852, and the heir apparent, Yoshihito, of one of the imperial concubines, Aug. 31, 1877. The Empress, Haruko, born May 28, 1850, was married Feb. 3, 1869. The title of Mikado is now popularly obsolete. In the dynastic line, the oldest in the world, Mutsuhito is recognized as the one hundred and twenty-second in descent from the sun-goddess. Officially the empire began with Jimmu, a. c. 660. In the lawfully published list of portraits, 1895, besides the 9 females, 2 shorn Buddhist monks, warriors in arm, and children who were puppets (showing the vicissitudes of Japanese politics), the six "false" or "northern" emperors of the rival dynasty in the civil wars of 1336-'92 are now presented. Modern critical science rejects the first seventeen names in the list, and recognizes the credibility of Japanese history from about 400 A. D. The Emperor is sole executive, but is advised by a Cabinet made up of the heads of 10 departments, presided over by a Minister President, and consults with the Privy Council, composed of 20 statesmen of rank and experience.

Government.—The Constitution, proclaimed Feb. 11, 1889, is theoretically the gift of the sovereign to his people. It makes the ministers of state responsible to the Emperor, and not to the Diet. Only a comparatively small portion of the national expenses is under the control of the two houses: the great bulk of appropriations in the budget, being "fixed by law," can not be influenced by legislation. The ends sought by the various progressive parties is to limit by degrees the imperial prerogative, control the whole budget, make the Cabinet ministers responsible to the Diet, enlarge the franchise, and terminate

forever the practical monopoly of power, office and emolument held since 1868 by men sprung mainly from the two clans of Satsuma and Choshu—in a word, to approximate the British and American models of government. The tenth session of the Diet opened in Tokio, Dec. 22, 1895. After six months of negotiation between the Liberal or opposition party and the Cabinet or Government leaders, issuing in promises from the latter of long-contemplated reforms and an appeal to the country if defeated in the Diet, union between the two sets of statesmen has been made. Government by party is thus introduced in Japan. In the election of Sept. 1, 1894, out of 460,113 electors, or 11 to every 1,000 inhabitants, 392,036 voted, or 85 per cent. of the whole number for 300 representatives in 257 electoral districts. On Dec. 31, 1894, the number of peers was 599, and of persons decorated 16,231, of whom 1,789 were foreigners. Of decorations received from foreign governments by Japanese there were 959. There are now 636 peers, of whom 120 have been made since 1868, the vast majority being Satsuma and Choshu men. Since the war with China 2 viscounts and 22 barons, with allowances to each person from the civil list of 20,000 and 10,000 yen respectively, have been created. The pension allowance to the families of those who lost their lives during the late war is 8 *sen* (about 7 cents) per diem. The standard of value is the silver *yen* (worth 7 cents), in which all statements concerning money in this article are expressed.

Population.—The annual census is made late in December and published in detail during the next year. Statistics since 1872, which then gave a total of 33,110,825 souls, show that Japan has gained over 8,000,000 in population since the old immoral, economic, and sumptuary checks on natural human increase have been removed. The average annual enlargement of the census figures is not far from half a million. The pressure of population upon the food product is relievable by the colonization of Yezo and Formosa, both fertile and thinly peopled islands. On Dec. 31, 1894, the enumeration showed that 41,810,202 natives, of whom 21,121,398 were males and 20,688,804 were females, lived in 7,883,369 houses. In the three social ranks were 3,884 nobles, 2,039,475 *shizoku* or gentry, and 39,766,843 *heimin* or commoners, the heads of households numbering 607,432,159, and 7,918,474 respectively. Of the unregistered persons, 4,401 were unadopted foundlings and 1,214 prisoners. There were 251,146 marriages and 112,362 di-

sources. Absconders numbered 312,735, and persons going abroad 53,791. Of centenarians, 24 women and 10 men reached ages ranging from 104 to 110 years. In Hokkaido (Yezo and Chishima) there are but 530,000 persons, of whom 50,000 immigrated in 1893. In Formosa and its islands, with their area of 15,000 square miles, there is a population of 3,500,000, which makes the total number of inhabitants in the Japanese Empire 45,000,000.

Finances.—At the session of the Diet, Jan. 25, 1895, the country being in the midst of war with China, all parties presented a unanimous front, and the budget, substantially as presented by the Government, was voted without discussion: Total revenue, 90,300,700-45 yen; total expenditures, 80,957,415-73 yen, of which 87,633,995 are reckoned as ordinary, and 2,666,783 as extraordinary yield. Compared with 1894, when the estimated revenue was 88,040,000-70, while the outlay was 80,140,000 yen, there is shown an increase of 6,157,743-10 yen in the ordinary and a decrease of 3,912,267-80 yen in the extraordinary yield. In the items of taxes, largely from duties on alcohol, the estimated increase is over 4,200,000 yen, and in receipts accruing from Government enterprises 1,000,000 yen. Current expenditures of departments have been reduced, but in the items of national loan, pensions, etc., there is a total increase of over 4,000,000 yen. In extraordinary items there is an increase of over 3,000,000 yen in order to hasten by two years the steel-clad battle ships now building in Europe. In the War Department, an additional sum of 550,000 yen for cost of cavalry, remounts, and the rise of price of fodder and provisions is noted. (Forty thousand horses were called into requisition in preparation for and during the late war). The sources of ordinary revenue are: Land tax, 70,902,341 yen; licenses and fees, 2,540,381 yen; Government industries and property, 12,290,207 yen; miscellaneous, 686,093 yen; interest on deposits, 1,214,002 yen.

In 1894 the public debt was 235,814,851 yen, of which 166,482,450 yen bears 5 per cent. interest; 45,405,121 yen is an inheritance from feudal days, debts of the old daimios, pensions to retired territorial nobles and gentry, etc.; and 2,957,280 yen is foreign; with 37,704,773 yen (15,704,773 yen for Treasury notes and 22,000,000 for silver certificates) held as a guarantee of the paper money in circulation. Japan's credit at the Bank of England, Dec. 1, 1895, on account of indemnities paid her by China, amounted to 118,643,910 yen.

The Army.—The military operations of 1894-95, both in the field and with the reserves, showed the accuracy of the official statistics as heretofore given in this "Annual Cyclopaedia." In the budget for 1896 "the already fixed expenditures for the army" aggregate 12,558,109 yen, and 16,314,163 yen of ordinary and 19,268,360 yen of extraordinary expenditure are asked for, the increase being for enlargement of the army and expansion of the war administration, which are to be completed by 1905, when the total expenditure on account of the army will be 25,006,689 yen. This programme has in view the doubling of the present military force and the power, within ten years, of landing and maintaining an

army of 200,000 first-class soldiers for a lengthened campaign on the Asian continent.

The Navy.—The Imperial Japanese Navy List made out in September, 1895, shows 40 men-of-war afloat or in an advanced state of construction. Of these, 17 are wooden, iron, or composite. The others are of steel and equipped in best modern style. In the budget of 1896 the ordinary expenditure for the Navy Department is fixed at 7,663,986 yen, and the extra amount asked for is 29,456,555 yen, of which 6,450,940 yen are for the construction of war ships "already ordered" and 23,005,614 for "naval extension." The programme is to raise the total displacement of the navy to 200,000 tons by A. D. 1904.

Commerce.—The total foreign commerce of Japan in 1893 was 177,970,031 yen. In 1894 it rose to 230,728,035 yen (of which 98,712,861 yen were for imports and 117,482,951 yen were for exports), thus exceeding the average by about 30 per cent. The depreciation in silver has for some years past facilitated exports, though standing in the way of imports, but the excess of even the latter over the former, in 1894 compared with 1893, shows clearly the development of the Japanese people's purchasing power. In 1894 the outflow of specie exceeded the inflow by about 7,600,000 yen. In the first half of 1895 the foreign trade amounted in exports to 59,444,559, and in imports to 60,087,078 yen, making a total of 119,471,637 yen, compared with 106,752,306 yen of the first six months of 1894, an aggregate expansion of 12,719,332 yen. In specie transactions the excess of 15,290,634 yen export over import is explained by the purchase of war material abroad. On the prosperous condition of the silk trade and general revival of business in Japan an estimated total trade for 1895 of 250,000,000 yen is based. Especial developments of trade with Australia and the United States are to be noted. In 1894, exports, chiefly rice and native manufactures, to Australia amounted to 246,020 yen, while imports, chiefly leather and raw products, were valued at 31,009 yen. In 1893 Japan sold to the Australians 880,657 yen and bought 319,034 yen worth of commodities. With the United States the chief trade is in kerosene and raw cotton. From Jan. 1 to July 1, 1895, 76,393,439 catties, or over 100,000,000 pounds of raw cotton, valued at 11,528,158 yen, were imported, an increase over 1894 of 14,112,732 pounds. Owing to the increase in cotton mills, with 750,000,000 spindles in 1895, compared with 500,000 in 1894, the demand for American cotton in 1895 was for 50,000 bales.

Communications.—The year 1895 was noted for great activity of transport on land and sea, the railways and shipping performing handsomely, safely, and with celerity the extraordinary requirements of war and peace. The length of railways in operation at the end of March, 1895, was 2,130 miles; that of lines under construction or projected was 1,043 miles, and the number of private railway companies was 29. State railways have a capital of 56,354,322 yen, with a total mileage of 979 miles, of which 381 were already open in March. The 29 private companies have a capital of 86,643,000 yen, and 1,550 miles of their total projected mileage (2,193 miles) are open to traffic. Grand total in Japan:

Capital, 143,197,532 yen; mileage, 3,173; open for traffic, 2,131 miles. Floods, storms, and earthquakes cause much annual loss.

In shipping, the Japanese in 1893 had 17,309 junks and 587,490 boats in native style, with 749 sailing vessels, with a tonnage of 44,967, in European form, and 680 steamers, of 110,205 tonnage and 24,080 horse power. By July, 1894, within thirty days, 87 ships, of 132,963.55 tons, mostly steamers and over 2,000 tons burden, had been bought. Japan's normal demand, however, is for steamers of from 200 to 1,000 tons. In May, 1895, there was a total of 503 vessels of modern build and 314,512 tons burden, owned wholly by Japanese. In the expansion of maritime enterprise following the war direct trade with the United States at Tacoma has been opened. The Nippon Yusen Kaisha made a profit of 3,500,000 yen by chartering steamers and transports to the Government during the war, and have set aside 2,500,000 yen for maintaining a line to Europe with 5 first-class vessels of 5,000 to 6,000 tons each. In 1894 there were 716 telegraph offices with 10,232.06 miles of wire in Japan, over which 6,444,463 messages were sent, while 52,865 international dispatches were received and 58,781 forwarded. Of telephone stations there were 28, most of the lines being between Tokio and Yokohama and Kioto and Osaka. From the 3,818 post offices were sent, and over the 100,000 miles of land and water routes were carried 321,471,080 articles, showing an increase of 15.5 per cent. over the total of 1894. Of this increase, 28.2 per cent. was in commercial samples, 18.7 in postal cards, newspapers 12.1, and letters 11.8. In international mail matter, 1,583,509 packages were received and 1,155,337 forwarded.

Formosa.—The treaty of Shimonoseki stipulated that at the end of two months the Chinese Government should transfer Formosa to the flag and Crown of Japan. Expecting easy occupation, a board of administration was formed in Tokio on a purely civil basis, the soldiery to be used chiefly in overcoming the savage aborigines. On the contrary, the Hakkas, Black Flags, and Peihoans or semicivilized natives rose in arms, organized by Liu. On May 24 a fleet of 14 transports carried the Imperial Guards from Port Arthur to Keelung. Four months of steady fighting began, and re-enforcements were necessary, making a total of 50,000 troops. These, under the command of Lieut.-Gen. Oshima, the hero of Ping-Yang, penetrated the mountain fastnesses and bamboo forests, and forced or stormed the walled towns. Keelung and Tamsui were first occupied, and the northern end of the island pacified before the summer rains. Despite the intense heat, fever, guerrillas, and rainstorms steady advance was made southward to Tek-cham, Chung-hua, Kagi, and Taiwan. In some of the battles as many as 10,000 men were engaged, the resistance being more desperate than in Manchuria. The final stand of Liu's army was made at Pang-liau, near which the Japanese fleet, which had been actively co-operating with the troops during the summer, were able to land late in September a force that compelled the unconditional surrender of the Chinese insurgents. Their leader, Liu, escaped to China, and, except a few later skir-

mishes with rebels in bamboo jungles and mountain strongholds, the whole island was pacified by Dec. 1. In both killed and wounded and by accident and invalidism the Japanese, who employed 130,000 men in all services, lost more men in the Formosan than in the Korean and Manchurian campaigns, in which 340,000 men were occupied. Formosa and the Pescadores were first occupied by Japanese colonists in the thirteenth and during the two following centuries, and some of the current geographical names are but Chinese pronunciations of those of old Japanese heroes. In 1894 the total foreign trade at the 4 open ports amounted to \$12,895,772. Contracts have been given for telegraphs, railways, and a submarine cable to connect Formosa with Hondo and Tokio. The chief products of the island are gold, sugar, rice, tea, camphor, drugs, spices, and timber in vast variety.

Events of 1895.—The chief military events of this year of Japan's territorial expansion were the winter campaigns in Manchuria and the summer occupation of Formosa. After the fall of Port Arthur the naval forces concentrated for an attack on Wei-Hai-Wei. Troops were landed Jan. 20, and the Chinese ships and forts passed into the hands of the Japanese, Feb. 16. Prince Arisuga-wa-no-Miya, uncle of the Mikado and commander-in-chief of the army, died Jan. 30, and was succeeded by Prince Komatsu. A fresh expedition sailed from Hiroshima Jan. 10. The members of the first Chinese peace embassy arrived at Kobe Jan. 30, but were not officially received, their powers to treat being insufficient, and they returned home Feb. 2. The cruiser "Suma-kan" was launched March 9, about which time also M. Boissonade, for twenty years past engaged in codifying the laws of Japan, returned to France. Li-Hung-Chang, Chinese plenipotentiary, arrived at Shimonoseki Feb. 19, to begin peace negotiations, which were greatly influenced in favor of China by the attempt made upon his life Feb. 24. The assassin was one of the fanatical young patriots, called Soshi, who abound in modern Japan. These half-educated persons presume to dictate policy to Cabinet ministers, endanger the national reputation, and disarrange grave business of state by their easy and frequent resort to violence and murder. Viscount Inouye Ki, Minister of Education and long "the Emperor's pen," was buried March 22. Armistice was declared March 30, to apply only to the northern parts of China, but it extended until May 8, or the end of the war. On April 1 the fourth national exhibition opened at Kioto. It lasted six months, and included the grand celebration of the eleven-hundredth anniversary of the founding of the city. April 13, an expedition sailed for the conquest of the Pescadores and Formosa. The treaty of peace was signed April 17, and the ratification took place at Chefoo May 8. The imperial rescript announcing conditions of peace was issued April 21. These being unpopular with the press, 55 newspapers were suspended and many others severely purged by the censors between April 4 and May 5. Under pressure of Russia, Germany, and France, Japan yielded possession of the Liao-Tung peninsula, receiving pecuniary indemnity from China instead. The Emperor left Hiroshima April 27, after a stay of two hundred

days, for Kioto, where he remained until May 20, reaching Tokio the same day amid unique demonstrations of rejoicing. Severe storms, during which a train containing 400 invalid soldiers was derailed, several being killed, visited the country in July. Sir Ernest Mason Satow, who from 1861 to 1883 had been an active member of the British legation in Japan, making himself one of the leading authorities in the language and literature of Dai Nippon, arrived as Queen Victoria's plenipotentiary, July 28. Cholera, resulting in 54,928 cases of disease and 27,601 of death, ravaged the empire from July to November, accompanied with typhoons and unusually chilly weather. Of dysentery there were 31,000 cases and 6,500 deaths. In the bacteriological station, Dr. Kitacato, a pupil of Koch, who had discovered the vital cause of the plague in Canton, China, succeeded in inoculating for leprosy, and has declared it curable. Prince Kitashirakawa-no-Miya died in Formosa, Oct. 28, though, as in like instances, not being officially deceased until after posthumous arrival, promotion, and decoration within the precincts of the imperial palace in Tokio. In Government documents he was alleged to have died Nov. 5, and his funeral took place Nov. 11. The treaty with China for the retrocession of Liao-Tung was signed Nov. 8, and the evacuation soon began, being completed at 3 p. m., Dec. 25. Most of the Imperial Guards and other troops returned from Formosa about the same time. The supplementary convention on the tariff between Japan and Great Britain was ratified in Tokio Nov. 21. The Diet was opened by the Emperor in person Dec. 28. The long-talked-of union or *modus vivendi* between the Government and the Opposition, which had been practically accomplished by conference and with documents, was shown in the rejection in the Diet by a heavy vote of the address to the throne censuring the ministerial foreign policy (retrocession of Liao-Tung, etc.), and calling for their resignations. The youngest daughter of the late Tyeon, Keiki, who resigned in 1868, was married Dec. 26. The Japanese cruiser "Kobai" was lost off the Pescadores and some of her crew were drowned.

JEWS. The record has been notable for the Jews of the United States in a marked advance in the sphere of education and activity in religious matters. The trend of the year was early shown in the session of the Women's Council at Washington, when representatives of the National Council of Jewish Women took a spirited part in the meetings. The new influence on American Israel was indicated by the essays read by American Jewesses. The keynote of the year was thus struck by the American Jewess, and the work of the various circles in about 20 cities has been of marked benefit. The scheme of operation consisted in monthly meetings, at which papers and discussions on topics of the day were presented; and of fortnightly meetings in small circles, which were devoted to study of the Bible, the history of Israel to the Christian era, and of the methods and aims of preventive philanthropy. In addition, efforts were made to improve and systematize Sabbath-school instruction, and there was issued a simple guide for the study of the prophets Isaiah, Jere-

miah, and Ezekiel. The moral effect of this movement, which has spread in the chief cities from San Francisco to New York and has brought thousands into social and intellectual contact, arousing interest in Jewish study and benevolent methods, can hardly be overestimated. Certainly it has shown that the American Jewess is not Oriental in her exclusiveness, but can work along the lines of education, charity, religion, reform, in even step with her sisters of other creeds. Graceful, then, were the resolutions passed by the National Women's Council, protesting against Russian persecution of the Jews, and the invitation extended by Miss Willard to the American Jews to join her Temperance Union.

In religious matters proper, at the session of the Central Rabbinical Conference in Rochester, composed almost exclusively of rabbis of the reform wing of American Judaism, there was a further breaking away from the old traditions in the admission of proselytes, and the following formula of confession was adopted as alone necessary:

I believe with a sincere and a steadfast faith that there is a God, who is One and only One, the Creator, Preserver, and Ruler of the World.

I believe with a sincere and steadfast faith that man is created in the image of God, innocent and pure, endowed with reason, conscience, and free will, and capable of triumphing over sin and developing to perfection.

I believe with a sincere and steadfast faith that the soul of man is immortal, and righteousness brings reward, while wickedness brings punishment.

Unto Thee, O Lord, belongeth kindness, for thou wilt recompense every one according to his deeds.

I believe with a sincere and steadfast faith in the common fatherhood of God and the common brotherhood of men. To make this real is the great aim and hope and mission of Israel.

And God will be King over all the earth that day. God will be One and his Name One.

The new Union Prayer Book has been universally adopted by the reform congregations throughout the country. The question of circuit preaching received more attention, and Rev. E. N. Calisch in Virginia, Rev. Max Heller in New Orleans, and Dr. A. S. Isaacs in New York made efforts in that direction. Rev. Dr. J. Kranshoff, of Philadelphia, made further progress in his plan to establish an agricultural school for Russian immigrants near Philadelphia. Rev. Dr. H. Berkowitz, of Philadelphia, succeeded in extending the Chautauque idea, and giving impetus to a summer school of Jewish studies to be located at Forest Park, Pike County, Pa. Rev. Henry Hlowitz wrote some effective articles against tendencies in American Judaism, pleading for greater loyalty and sincerity. Another attempt to organize normal classes for Jewish teachers of Sabbath schools was made in New York late in the year.

There has been the usual number of new synagogues and charitable institutions. The Russian Jewish exodus showed a marked decline. A summary of the work of the United Hebrew Charities of New York city for the year ending Sept. 25, 1895, will throw light upon its operations: The receipts were \$144,520; expenses, \$138,895. The number of cases dealt with was 7,508, representing 27,015 persons; 6,629 persons

were given employment, 1,900 provided with transportation; 33,352 cases were investigated, 957 free interments, 5,071 visits made by nurses, 3,545 physicians' visits. Among the disbursements, \$18,498 went in monthly stipends, \$37,712 money gifts, \$16,354 transportation, \$14,354 clothing and fuel, \$11,765 medical maternity relief.

At the convention of the Order of Benai Berith, in Cincinnati, it appeared that there are 383 lodges in the United States and Germany, and 9 in the Orient. In the United States, since 1890, 4,709 have been initiated, 381 reinstated, 3,965 suspended, 1,621 withdrawn, 1,907 died. In benevolence \$2,676,723 has been expended since 1890, of which \$289,872 was for homes, \$214,555 sick benefits, \$2,160,535 endowment, and \$51,761 other charities. On Jan. 1, 1895, the lodges had on hand \$2,218,098, of which \$1,360,195 was for endowments, and \$857,903 for general purposes. The receipts since 1890 were \$37,908; expenses, \$18,432. This is the largest of the Jewish fraternities in the United States, and numbers about 25,000 members.

The Gratz College, of Philadelphia, instituted a series of lectures on Jewish and biblical subjects. The Atlanta Exposition had an interesting exhibition of Oriental Jewish objects, arranged by Dr. Cyrus Adler, of the Smithsonian Institution. Temple Emanu El, of New York, celebrated its fiftieth anniversary. On Thanksgiving Day union services were held in 12 cities, in which rabbis participated with Christian clergymen in church and synagogue. At the religious congresses in Toronto and Chicago Judaism was represented. The project of establishing a Jewish university was advocated at length in "The Jewish Messenger." New Jewish weeklies appeared in Atlanta and San Francisco.

In literature, Miss Josephine Lazarus's "The Spirit of Judaism," advocating the abolition of all forms, and an approach in spirit to the religion of the founder of Christianity, free from the dogmas and forms of the Church, aroused considerable discussion; Mrs. Frances Hellman issued a translation of Leroy Beaulien's "Israel among the Nations"; Simon Wolf wrote in vindication of the Jew as patriot and soldier; the American Jewish Publication Society issued its regular volumes and announced a competitive prize of \$1,000 for the best juvenile story; Mrs. Harriet Lieber Cohen translated Sacher-Masoch's "Jewish Tales"; Mrs. Morris Jastrow published a translation of some essays by the late James Darmesteter.

Turning from America to Europe, one is disappointed at the continued unrest in Russia, expulsion of the Jews and restriction still being matters of daily recurrence. In Roumania Jews are the objects of exceptional measures and are practically disfranchised, notwithstanding the formal stipulations of Article XLIV of the Berlin Treaty of 1878. In Turkey Sultan Abdul Hamid has evinced the customary good will displayed by Ottoman rulers to the Jews, and he and his officials have taken increasing interest in the progress of education and charity in the Jewish community. The latest report of the Alliance Israelite Universelle gives these statistics as to its work: At the close of 1894 it

had 56 schools in the Orient, 35 for boys, 19 for girls, and 2 for infants, with a total number of 11,555 pupils (6,936 boys and 4,662 girls). These schools are open to all denominations, and among their pupils are Protestants, Roman Catholics, Greek Catholics, Armenians, and Mohammedans. One of the most important is the Technical School in Jerusalem. The Agricultural School at Jaffa shows remarkable results. The net receipts from the strictly agricultural department, in 1893 but 351 francs, rose in 1894 to 16,346 francs. The income of the Alliance for 1894 was 697,987 francs, which included 184,617 francs subscriptions, a donation of 352,677 francs from Baron de Hirsch, and 54,747 francs, the income for the year of his gift of 1,000,000 francs for education in Turkey; 560,329 francs were expended for educational purposes.

On Sunday, Aug. 18, services were held in the Berlin Jewish cemetery in memory of the dead soldiers of the Franco-German War. About 500 old soldiers attended, and Rev. Dr. Weiss said that 12,000 soldiers of the Jewish faith took part in the war.

The income of the Jewish community of Berlin for all objects during the current year reached 3,630,102 marks (about \$900,000). Members' contributions aggregated 1,188,847 marks (exclusive of 122,176 marks from seat rentals and 163,134 marks from reserved graves). The salaries of rabbis, readers, etc., reached 160,242 marks. Jewish and Talmudic science lost by death Jacob Reifmann, David Rosin, and Joel Müller. The Institute of France celebrated the centenary of its foundation. The Jewish element includes Michel Bréal, Henri Weill, and Jules Oppert. The first Jew to enter the institute was F. Halévy, composer of "La Juive." Of 1,879 artists represented at the two exhibitions opened in Paris in October, 68 were Jews and 35 Jewesses. The chief rabbi of France issued a circular letter to the rabbis of the republic, urging them to organize young people's societies for the study of Judaism, its literature and history. The total income of the London United Synagogue grew from £14,880 in 1871 to £25,916 in 1894, and the expenses from £8,886 to £16,183. The number of male seatholders rose from 1,505 to 3,353 and of female from 778 to 1,847. Nearly 80 Hungarian rabbis met in Buda-Pesth on Oct. 20 and passed a resolution relating to mixed marriages, with respect to which the rabbis declared, with one dissentient only, that while recognizing the validity of the civil ceremony, they could not bless such unions either by the marriage ceremony or other religious form. The anti-Semitic excesses in Vienna were grave enough to be repressed by the authorities, while the autonomy of the city was abrogated by the Emperor, owing to the election as burgomaster of Dr. Lueger, an anti-Semitic agitator.

From the full report of the Hirsch colonies in South America, it appears that before this year there were 563 families established in four colonies on 209,000 acres. During the present year 10 groups of about 400 families were settled in the Argentine Republic. The association has 444,780 acres, of which 246,077 are unoccupied. From its foundation to Sept. 30, 1894, it spent £376,369. In England, at the recent general election among those returned to Parliament were

Sir Samuel Montagu, Baron Ferl. de Rothschild, Sir Julian Goldsmid, Messrs. Arthur Strauss, Harry S. Samuel, Benjamin L. Cohen, and Baron Henry de Worms. Sir Israel Hart was knighted. Alderman George Faudel Phillips and Sir Francis Montefiore were appointed high sheriffs for the counties of Middlesex and Sussex. Prof. Raphael Meldola was elected President of the Royal Entomological Society. Hon. Isaac A. Isaac was appointed Attorney-General of Victoria. New synagogues were formed at Buluwayu (Matabeleland) and Salisbury (Mashonaland).

There was unwonted activity in the Jewish literature of the year abroad. From the lighter work of Joseph Jacobs in "As Others saw him" and Israel Zangwill in "The Master," to Mrs. Henry Lucas's "Songs of Zion" and Miss Lowy's translation of Prof. Erera's book on "The Jews of Russia," the transition is easily made. But there is a large number of more scholarly books and brochures in biblical and

Oriental science and a mass of dissertations on rabbinical subjects. Profs. Barker, Kaufmann, Büchler, D. H. Müller, L. Blau, Drs. J. Lewy (of Berlin), Barkavy, Wiener, Friedlander, Gaster, and Hirschfeld were active in this field, while "The Jewish Quarterly Review" contained many contributions of permanent worth.

The closing weeks of the year were marked by the visit of Ahlwardt, the notorious German agitator, to New York (with the avowed purpose of arousing an anti-Semitic movement in the United States), and the opening of a fair in Madison Square Garden, New York, for the benefit of the Hebrew Educational Alliance and the Hebrew Technical Institute. In this the entire Jewish community, rich and poor, reform and orthodox, participated, and it was substantially aided by other than Jewish donors. At the same time the Jews and Christians of New Orleans were organizing a fair for the benefit of the Touro Infirmary.

K

KANSAS, a Western State, admitted to the Union Jan. 29, 1861; area, 82,080 square miles. The population, according to each decennial census, was 107,306 in 1860; 364,399 in 1870; 906,096 in 1880; and 1,427,096 in 1890. By the State census of March, 1895, it was 1,834,668. Capital, Topeka.

Government.—The following were the State officers during the year: Governor, Edmund S. Morrill, Republican; Lieutenant Governor, James A. Troutman; Secretary of State, W. C. Edwards; Auditor, George E. Cole; Treasurer, Otis L. Atherton; Attorney-General, F. B. Dawes; Adjutant General, A. J. Davis, succeeded March 1 by S. M. Fox; Superintendent of Public Instruction, Edwin Stanley; Bank Commissioner, John W. Breidenthal; Superintendent of Insurance, George T. Anthony; Labor Commissioner, W. S. Bird; Fish Commissioner, Otis E. Saddler; Grain Inspector, A. C. Merritt; Oil Inspector, M. C. Kelley; Mine Inspector, Bennett Brown; State Architect, J. C. Holland; State Board of Charities, M. Albaugh, George A. Clark, K. E. Willcockson, George A. Baker, and W. N. Allen; State Board of Irrigation, W. B. Sutton, D. M. Frost, and M. B. Tomblin; Chief Justice of the Supreme Court, Albert H. Horton, succeeded, April 12, by David Martin; Associate Justices, W. A. Johnson and S. J. Allen; Justices of the newly created Appellate Court, Eastern Division, W. A. Johnson (Republican) and George W. Clark (Populist); Central Division, T. F. Carver (Republican) and A. W. Dennison (Populist); Western, Elrick C. Cole (Republican) and A. D. Gierson (Democrat).

Finances.—At the close of the biennial period ending June 30, 1894, the State treasury held a balance of \$842,326.23. The debt on Oct. 15 was \$788,500, of which the various sinking funds held \$545,000. The assessed valuations were: Real property, \$237,086,283; personal, \$40,773,498; railway, \$59,764,683; total, \$337,624,464. The total assessed valuations reached their highest

point in 1880, \$360,815,073, and the decrease since has been due in the main to the reduction in railway valuations by the State Board of Assessors. In 1895 the amount of State taxes paid was reported at \$1,316,257.63, of which the 4 eastern tiers of counties paid \$653,349, or \$9,539 less than half of the taxes of the entire State, Shawnee County paying the most, \$60,678.

Banking.—On Oct. 15 Judge J. S. West decided that section 16 of the State banking laws of 1891, which made it a crime for a banker to receive deposits after he had knowledge of the insolvency of the bank, was unconstitutional and contrary to the second subdivision of section 16, Article II, of the Constitution of the State. This provides that when the Legislature seeks to amend a section of a pre-existent law, such part of the section as is desired to be continued shall be incorporated in the new section, and the old section shall be repealed. In the new banking law no reference was made to the old section, and as a result there are two sections providing for different penalties and making a difference as to what constitutes the crime.

Education.—The State has an interest-bearing public-school fund, in bonds and contracts, of \$9,686,993; an Agricultural College fund of \$502,927; a State University fund of \$140,781; and a State Normal School fund of \$137,211—all derived from the national land-grant endowment. The State University has received by bequest a greater sum than that from the Government, but the excess is not included in the above. There are in the State 9,968 public-school buildings, which have cost about \$10,702,706. The number of teachers employed is 11,888, to whom \$3,000,439 was paid in wages. The tax collected for school purposes in 1894 was \$3,339,986, and the total sum paid for public education was about \$5,300,000. There are also 24 private institutions of learning, mostly maintained by religious organizations, which have property aggregating in value \$1,713,920.

State Institutions.—The following are the charitable, educational, and penal institutions of the State, with the cost of grounds and buildings, to 1895: School for the Blind, \$85,449; School for the Deaf and Dumb, \$144,250; Asylums for the Insane, at Topeka \$616,378, at Ossawatimie \$420,000; Asylum for Imbeciles, \$29,078; Soldiers' Orphans' Home, \$49,561; Grand Army Home, \$49,000; State University, \$320,000; State Agricultural College, \$180,930; State Normal School, \$127,375; Penitentiary, \$1,659,700; Reform School, \$119,863; Reformatory, \$310,000; Industrial School for Girls, \$40,700; and State Capitol, \$2,000,000, for the completion of which about \$1,000,000 more will be needed. The total present cost of all State buildings, with grounds and equipments, is \$6,932,175.

Railroads.—On Dec. 31, 1893, there were 8,931.28 miles of single-track railroads in the State. During 1894 one line constructed 3.3 miles of new track, making a total on Dec. 31, 1894, of 8,934.58 miles, and giving Kansas the fourth place as a railroad State. The State Board of Assessors in 1895 made a total assessment against railroad property of \$59,645,740.88, a decrease of \$118,942.40 from the total of the previous year.

Stock Yards.—The annual reports of Jan. 2, 1895, show that the stock yards at Kansas City, Kan., form the second largest plant in the world, being surpassed in extent and operations only by that in Chicago. During 1894 the receipts of stock of all kinds aggregated 4,953,414 head, valued at \$98,577,164, and the total receipts from the opening of the yards in June, 1871, till Jan. 1, 1895, were 52,024,924 head, valued at \$858,525,683. The receipts of 1894 comprised 1,692,512 cattle, 2,550,691 hogs, and 587,599 sheep. Shipments were made to 26 States and Territories.

Agriculture.—The United States Department of Agriculture reported as follows on the principal crops of 1894: Corn, 3,731,940 acres, 41,797,728 bushels, value \$17,973,023; wheat, 3,295,698 acres, 35,315,259 bushels, value \$15,538,714; oats, 1,436,088 acres, 25,705,975 bushels, value \$7,968,852; rye, 149,445 acres, 866,781 bushels, value \$398,719; barley, 16,164 acres, 142,243 bushels, value \$69,699; buckwheat, 3,675 acres, 32,340 bushels, value \$29,106; potatoes, 108,213 acres, 4,436,733 bushels, value \$3,016,978; hay, 3,305,889 acres, 2,545,535 tons, value \$13,364,059; total value, \$58,359,150.

Taxable Manufactures.—In the fiscal year ending June 30, 1894, the collections of internal revenue aggregated \$362,739.97, from the following sources: Distilled spirits, \$65,008.49; tobacco, \$62,736.75; fermented liquors, \$16,460.39; oleomargarine, \$217,035.22; and penalties, \$1,499.12. The same sources yielded a total of \$277,633.81 in the fiscal year ending June 30, 1895. In the last year there were 308 single-account cigar factories, which used 383,561 pounds of tobacco, and had an output of 20,425,329 cigars, and 45 other factories, which had an output of 10,333 pounds of plug and 32,877 pounds of smoking tobacco. Other taxable manufactures were: Apple brandy, 1,212 gallons; grape brandy, 1,347 gallons; fermented liquors, 6,013 barrels; wheat whisky, 351 gallons; and oleomargarine, 7,189,335 pounds.

Natural Gas.—The discovery of natural gas in Allen and Neosho Counties has been followed by a similar "find" on Hickory creek, Peoria Township, Franklin County, where men were boring for a well. A syndicate controlling the Allen County field has secured a franchise from the City Council of Fort Scott for the construction of gas works and the installation of a complete plant there.

State Census.—The census taken in March showed a total population of 1,334,668, an increase in ten years of 66,138. Forty counties showed an increase over the enumeration of 1894, aggregating 30,246, and 61 counties showed a decrease aggregating 33,909. The most populous counties were Wyandotte, 57,286; Shawnee, 47,978; Sedgwick, 39,108; Crawford, 33,846; Cherokee, 30,651; Cowley, 28,860; Labette, 27,023; Atchison, 26,995; Reno, 26,492; Bourbon, 25,849; Osage, 24,818; Marshall, 24,567; Sumner, 24,138; Montgomery, 23,948; Lyon, 23,794; Douglas, 23,587; Washington, 21,602; Dickinson, 20,926; Franklin, 20,734; Marion, 20,374; and McPherson, 20,317. The most populous cities and towns were Kansas City, 40,673; Topeka, 30,151; Wichita, 20,841; Leavenworth, 20,822; Atchison, 15,500; Fort Scott, 11,108; Lawrence, 10,084; Pittsburg, 8,932; Hutchinson, 8,515; Emporia, 8,225; Parsons, 7,573; Ottawa, 7,059; Arkansas City, 6,904; Salina, 5,703; Argentine, 5,504; Newton, 5,148; and Winfield, 5,031.

Judicial Decisions.—Besides the decision mentioned under "Banking," two other important ones were rendered. In October the Supreme Court sustained the action of the Legislature of 1895 in adopting a law abolishing certain judicial districts and reapportioning the State. On Dec. 8 the same authority handed down an opinion sustaining the constitutionality of the laws of 1893 which gives eighteen months' time to debtors to redeem their property on all sales on execution or foreclosure made prior to the passage of the law.

Legislative.—The Legislature assembled in biennial session on Jan. 8. The message of Gov. Lewelling was principally devoted to an attack on the Republican party and the courts of the State. He urged the strictest economy in appropriations; recommended assessment of all property at its actual value; denounced the fee system; declared that the charitable institutions of the State should be under non-partisan management; upheld the strike of the coal miners; demanded the exercise of State's rights as against "the increasing tendency of the Federal courts to draw to themselves entire administration of affairs of the States and to constitute themselves general guardians of the State governments"; and acknowledged the need of a court of appeals, but one whose findings should not be final. Charles E. Lobdell, of Lane, was elected speaker, and all the subordinate officers who were nominated in the Republican House caucus and the Populist Senate caucus were installed.

The Republican Governor-elect, Edmund N. Morrill, was inaugurated on Jan. 14. His address was a brief review of the material progress of the State and of the condition of its most important interests. In his message to the Legis-

lature he called attention to many measures requiring immediate consideration; urged the creation of an appellate court as a relief to the Supreme Court; pronounced prohibition a settled State policy which must be enforced; advocated an early constitutional convention; denounced repudiation; favored moderate State aid in irrigation; recommended a reduction of judicial districts and the adoption of a new redemption law as an incentive for capital to seek investment in the State; wanted bribery made a crime; and urged that the State Board of Agriculture be kept out of politics.

The total appropriations for the biennial period 1895-96 were \$2,500,000, or about \$300,000 less than the aggregate of the previous session. Among the general measures adopted were bills abolishing 6 judicial districts; reapportioning the State into 8 congressional districts; authorizing cities of the first class to fund their indebtedness incurred for internal improvements; establishing the Kansas Industrial Reformatory at Hutchinson; creating an appellate court; providing for an irrigation commission; exempting from legal process to beneficiaries the proceeds of life-insurance policies; prohibiting lotteries; making gambling a felony; establishing a Grand Army Museum in the State Capitol for the preservation of mementoes of the civil war; and making it a felony for any public officer to receive, in any manner, any consideration to influence his vote, with a special application to legislators.

Luckin Baker, Republican, of Leavenworth, was elected United States Senator, to succeed John Martin, Democrat, for the term ending March 4, 1901.

KENTUCKY, a Southern State, admitted to the Union June 1, 1792; area, 40,400 square miles. The population, according to each decennial census since admission, was 220,955 in 1800; 496,511 in 1810; 564,135 in 1820; 687,917 in 1830; 779,828 in 1840; 982,405 in 1850; 1,155,084 in 1860; 1,321,011 in 1870; 1,648,090 in 1880; and 1,828,635 in 1890. Capital, Frankfort.

Government.—The following were the State officers during the year: Governor, John Young Brown; Lieutenant Governor, Mitchell C. Alford; Secretary of State, John W. Headley; Treasurer, Henry S. Hale; Auditor, L. C. Norman; Superintendent of Public Instruction, Edward P. Thompson; Attorney-General, William J. Hendrick; Adjutant General, A. J. Gross; Commissioner of Agriculture, Nicholas McDowell; Commissioner of Insurance, Henry T. Dumas; Register of the Land Office, G. B. Swanger; Railroad Commissioners, C. C. McCord, C. B. Poyntz, and Urey Woodson; Chief Justice of the Court of Appeals, William S. Fryer; Associate Justices, Joseph H. Lewis, James A. Hazledrigg, John R. Grace, Thomas H. Poynter, George B. Eastin (succeeded in November by George Durell), and B. L. D. Guffy—all Democrats except Judges Durell and Guffy.

Finances.—At the end of the fiscal year, June 30, 1895, there was a deficit in the treasury of \$41,968.17 and \$39,981.77 to the credit of the school fund. On Dec. 31, 1895, this deficit is said to have been \$19,355. There was at that date \$119,688.94 in the sinking fund, set apart, however, to pay military bonds and interest then

due. The sheriffs had paid in all taxes due the State except \$5,992, owing by the sheriff of Bracken County. The total indebtedness of the State is \$2,992,990.16.

Products.—It was reported in the spring from various parts of the State that the crops were threatened by vast numbers of cut worms or army worms—the third visitation in forty-five years. The hemp industry, formerly the source of great revenue to the blue-grass region of Kentucky, was now greatly depressed, whereas ten years ago it brought in from \$1,000,000 to \$1,500,000 annually; the product now hardly reaches \$300,000. The low price of tobacco has called out appeals to growers to reduce the acreage, since it requires the best land, exhausts the soil, and calls for more labor.

State Institutions.—The number of inmates of the two penitentiaries is about 500. The branch penitentiary is overcrowded. The convicts are practically unemployed. The balance unpaid on appropriations to enlarge buildings of charitable institutions is \$170,000 and the unpaid expenses for last quarter \$113,000. The superintendent of the Central Lunatic Asylum reports that there is no additional room for colored lunatics in any of the State asylums. The appropriation for enlargement of buildings for the whites at the last General Assembly has enabled the construction of buildings that will make ample provision for several years.

Prisons.—The report of the Penitentiary for the year ending Nov. 30, 1895, shows that 524 prisoners were received, 12 of whom were under fifteen years of age, 106 under twenty, and 102 between twenty and twenty-five. In the past nine years the population of the prison has doubled, while the population of the State has not increased more than 20 per cent. The total number at the end of the year was 1,164. Of these, 130 are confined for murder and 194 for manslaughter; 43 of the prisoners are women. The average cost of each prisoner for a year was \$82.86, including officers' salaries and amounts paid to discharged prisoners. The net earnings of the convicts amounted to \$38,786.42.

The total number at the branch penitentiary, at Eddyville, Nov. 30, 1895, was 260, of whom 337 were negroes. The receipts from the State treasury for the biennial period were \$21,524.52, and the expenditures \$21,179.82.

Charities.—The Central Asylum for the Insane, at Lakeland, had a population of 1,683, Oct. 1, 1895, of whom 445 were women and 199 were negroes. The receipts for the year amounted to \$168,257.42, and the expenditures to \$169,547.42. New buildings, for which the Legislature appropriated \$65,000, were erected during the year.

The biennial report of the Institution for Deaf Mutes at Danville shows that the whole number instructed Oct. 31, 1895, was 263, of whom 39 were in the colored department. The total number of new pupils received during the year was 91. The total receipts for the white department were \$45,473.45 for 1895-96, and \$55,114.71 for 1894-95; for the colored department, \$5,727.27 the first year, and \$7,361.54 the second.

The Institute for the Blind, at Louisville, had 104 white and 26 colored pupils during the year

ending Oct. 31, 1894. The receipts for the year were \$31,504.40, and the expenses \$26,576.54.

The receipts of the Institution for Feeble-minded Children were \$23,624.07, and the expenditures \$23,000.83. There were remaining at the end of the year 49 girls and 45 boys.

Mob Law.—Several lynchings took place in the State during the year, notably one of a negro at Winchester, charged with an assault which, as afterward appeared, had not been committed, and another, the murder of a man and a woman in Marion County by a mob who burned the woman in her house and shot the man to death as he attempted to escape. The Governor suggested that a statute be enacted providing severe penalties against all who, by word or act, shall encourage such violence.

Military.—The twenty-ninth annual encampment of the Grand Army of the Republic was held in Louisville, beginning Sept. 9. On the 11th a parade of about 45,000 was seen by more than 300,000 spectators. At the head of the column marched two Kentuckians who enlisted in the Confederate service at the outset of hostilities and fought to the end. One bore aloft the Stars and Stripes, the other a silken banner of white, having in its center a golden dove and in its mouth an olive branch. This was called "The Emblem of Peace"—the reunion, thirty years after, of the victors and the vanquished.

An address of welcome by Henry Watterson was responded to by Past-Commander-in-Chief Warner, and a poem was read by James Whitcomb Riley. St. Paul was selected as the place for the next annual encampment, and the following officers were elected: Commander in Chief, Ivan N. Walker, of Indiana; Senior Vice Commander in Chief, E. H. Hobson, of Kentucky; Junior Vice Commander in Chief, S. G. Cosgrove, of Washington; Surgeon General, J. B. Whiting, of Wisconsin; Chaplain, T. E. Bliff, of Utah.

The Committee on Resolutions reported favorably on the suggestion that a permanent national headquarters be selected. The offer of Philadelphia to store the records of the Grand Army in Independence Hall was accepted.

Other resolutions were as follow:

Appointing a committee to arrange for the erection of a monument at Washington to commemorate the loyal women who served as nurses or in other ways aided the soldiers of the Union during the rebellion.

Permitting posts to consolidate as the memberships grow fewer.

Recommending that Congress pass a law equalizing the pensions of war widows so that all shall receive at least \$12 a month.

The report on pensions concluded as follows:

We demand for our comrades the just treatment which the country gladly concedes. No niggardly cutting down of pensions under the guise of reissues; no partial and grudging allowances that cut here and pare there will meet the full measure of duty that the country owes to its surviving heroes. Nothing short of full measure—dealt with an honest hand, a liberal heart—will ever meet with the approbation of the American people. Receding from no position that we have heretofore taken, reaffirming all our previous declarations on the subject, we specially demand a liberal and just construction of the laws passed for the benefit of the pensioner.

The report on membership showed: Members in good standing, June 30, 1894, 371,555; gain by muster in, 14,672; gain by transfer, 5,554; gain by reinstatement, 13,471; gain from delinquent reports, 9,343—aggregate, 414,595. Loss by death, 7,368; loss by honorable discharge, 1,437; loss by transfer, 5,763; loss by suspension, 33,589; loss by dishonorable discharge, 140; loss by delinquent reports, 8,659; total loss, 56,956. Members remaining in good standing, 357,639.

A leading feature was the annual reunion and parade of the sailors, and additional interest attached to the event from the fact that it is probably the last time that the Jack tars will be seen at a Grand Army encampment.

Political.—The election in the Fourth District for the office of judge of the Court of Appeals, held Nov. 6, 1894, was reported to have resulted in favor of Sterling B. Toney by a majority of 25, and he received a certificate of election. His opponent, St. John Boyle, contested the election, basing his claim on contested ballots returned by the officers of election to the clerk of Jefferson County. The case was heard by the State Board of Contest, consisting of 5 of the State officers, and a majority of them decided in favor of Toney, but the Governor and the Auditor voted negatively on the resolution to declare him elected, believing that Boyle had a majority of 27 on the ballots that should have been counted. Judge Toney then resigned, Feb. 21, and the Governor accepted the resignation.

Judge Eastin was appointed and remained on the bench till the end of the year, when he was succeeded by Judge George Durell, elected to the office in November.

The Republican State Convention met in Louisville, June 5. The platform contained the following declarations:

We are opposed to the free and unlimited coinage of silver, believing that it would involve the country in financial ruin. We believe in a sound currency and in the use of both gold and silver for coinage, provided always that a dollar in one is made precisely as valuable as a dollar in the other.

We favor a tariff so regulated as to protect the interests of all classes of our citizens upon articles that may be successfully manufactured or produced in this country, thus insuring good wages to the laborer and a home market to the producer; and in connection with this we favor the re-establishment of the doctrine of reciprocity. In view of the past financial history of the Democratic party, its devotion to the old State-bank system and wild-cat tendencies, we affirm that the Republican party can be more safely trusted to regulate the financial system of the nation.

When the Democratic party came into power in Kentucky it found the State able to pay every debt and have millions of surplus left. In the meanwhile it has collected millions of dollars of taxes under the most urgent systems of revenue, and yet we are today in the humiliating attitude of being unable to pay the current expenses of the State, and upon a fair valuation of assets are in debt millions of dollars. They have overridden the Constitution, refused to elect one fairly elected by the people, engaged in extravagant legislation, accepted salaries, created unnecessary offices, manifested incompetency to manage the penitentiaries, brought convict labor into competition with honest free labor, diverted the school fund, failed to provide a decent State Capitol, and left its charitable institutions without the necessary means for their proper operation.

The ticket placed in nomination was: For Governor, William O. Bradley; Lieutenant Governor, W. J. Worthington; Secretary of State, Charles Finley; Auditor, Samuel H. Stone; Treasurer, George W. Long; Attorney-General, W. S. Taylor; Superintendent of Public Instruction, W. J. Davidson; Register of the Land Office, Charles O. Reynolds; Commissioner of Agriculture, Lucas Moore.

The Democrats met in State convention in Louisville, June 25. The party is divided on the silver question, and the two leading candidates for the gubernatorial nomination each represented one of the opposing factions. P. W. Hardin was the Free-silver candidate, and C. M. Clay, Jr., the so-called Sound-money candidate. The majority report of the Committee on Resolutions was adopted after some debate, and after a motion to "dispense with the indorsement of Cleveland and Carlisle" had been rejected by a vote of 270 to 598, and one to approve the bond issue by a vote of 844 to 24. The resolutions adopted, after declaring against the re-establishment of a protective tariff, continued as follows:

We declare that our present national Democratic administration is entitled to the thanks of the party for its honest, courageous, and statesmanlike management of public affairs; and we express our undiminished confidence in the Democracy and patriotism of President Grover Cleveland and his distinguished cabinet and Secretary, John G. Carlisle, of Kentucky.

When the Democratic party came into power in 1867 the bonded indebtedness of Kentucky was over \$1,000,000. Since 1867 the bonded indebtedness has been reduced to \$650,000, and the available assets of the sinking fund more than equal that sum.

We have increased the annual appropriations for the support of our charitable institutions from \$250,000 in 1867 to \$600,000 in 1895, and while improving our judicial system by increasing the number of courts and the frequency of their terms we have been compelled to increase our expenditures, one of the greatest items of which is the cost of criminal prosecutions, and a noticeable fact in connection with which is that the increase is greatest in districts controlled by Republican officials. We have, nevertheless, been able to decrease the current rate of taxation for general revenue purposes from 20 cents on the \$100 of taxable property in 1867 to 15 cents in 1895. The Democratic majority has voluntarily increased the annual expenditures for the support of common schools from \$250,000 in 1867 to about \$2,000,000 in 1895, and by wisely providing separate schools for the two races are to-day giving to the children of the colored race opportunities for education they nowhere else enjoy.

In the face of unexampled difficulties the Democratic party has succeeded in wholly withdrawing convict labor from competition with free labor and in abolishing the practices inherited from the Republican party of loading the convicts to parties interested solely in making profit out of their labor.

The vote that adopted this platform was 647 to 222. The ticket follows: For Governor, P. W. Hardin; Lieutenant Governor, R. T. Trier; Secretary, Henry S. Hale; Auditor, L. C. Norman; Treasurer, R. C. Ford; Register, G. B. Swango; Attorney-General, W. J. Hendrick; Commissioner of Agriculture, Ion B. Nall; Superintendent of Public Instruction, Ed. P. Thompson. The vote on candidates for the nomination for Governor was as follows: Hardin, 468; Clay, 330; Stone, 76; Waterson, 3.

There was a sharp contest over the naming of the candidate for Secretary of State, the leading names being H. S. Hale and J. W. Hendley; neither was in accord with the nominee for Governor. Charles R. Long was made chairman of the State Central Committee in place of D. Carroll, a Free-silver man.

During the canvass debates were held in various places between the Republican and Democratic candidates for Governor. The free-silver position of the Democratic candidate was not approved by the whole party, and in some quarters there was a demand for his withdrawal.

The People's party held a State convention at Louisville in July, and adopted a platform favoring free coinage, a graduated income tax, and economy in State expenditures. T. S. Pettit was nominated for Governor, John G. Blair for Lieutenant Governor, Don Singletary for Secretary, C. H. Deane for Auditor, M. R. Gardner for Treasurer, H. H. Farmer for Superintendent, Mr. Spencer for Register, W. L. Scott for Commissioner of Agriculture, and S. M. Payton for Attorney-General.

The Prohibition party had a ticket in the field, headed by W. B. Demaree for Governor.

The election resulted in the success of the entire Republican State ticket. The vote for Governor stood as follows: Bradley, Republican, 172,436; Hardin, Democrat, 162,324; Pettit, Populist, 16,911; Demaree, Prohibitionist, 4,186. The vote for Lieutenant Governor, which was substantially the same as that for the remainder of the ticket, was: Worthington, Republican, 164,990; Tyler, Democrat, 156,045; Blair, Populist, 957; Hughes, Prohibitionist, 872. The political character of the Legislature is given as follows: Senate, 32 Republicans and 16 Democrats; House, 46 Republicans, 52 Democrats, and 2 Populists.

The city of Louisville was also carried by the Republicans.

Gov. Bradley was inaugurated Dec. 10.

KOREA, an independent kingdom adjoining Russia and Chinese Asia, between the Yellow Sea and Sea of Japan. Capital, Seoul. (For area, population, and history see "Annual Cyclopaedia" for 1894.)

Government.—The royal line of Yi came to an end Jan. 15, 1864, while three royal widows were living. Queen Cho nominated Yi-Kang, a lad of twelve, son of one of the royal princes, heir apparent. The father of this boy, to whom was given the title Tai-Wen-Kun, or great Palace Prince, seized the reins of authority, and for more than thirty years has been the most active figure in Korean politics, and most of the time the real ruler of the kingdom. In 1876 the King attained his majority, and married a lady of the Min clan. The Queen, representing and moved by the most powerful faction of nobles, being withal a woman of extraordinary insight, shrewdness, and political ability, has been the chief opponent of the prince father. Two sons have been born to the King. After French, American, and Japanese invasions and hostilities, the first treaty made as a sovereign state by Korea with a foreign power was with Japan, Feb. 22, 1876. This was followed by treaties with the United States, England, Russia, France, Italy, and other nations.

One of the first results of the Japanese victories over the Chinese and the Tong-Haks was the attempted reform of the entire national administration. The Min faction and the pro-Chinese element were practically eliminated. Jan. 8, 1895, the King made an imposing journey to the tombs of his ancestors, and with solemn oath and ceremonies abjured all allegiance to or dependence on China, asserted Korean independence, and promised reforms. These latter are: Separation of national expenses from the civil list; fixing of the line of succession so as to avoid all court intrigue through the influence of the Queen and palace underlings; a public budget to be made annually; young men to be sent abroad to study; reform of the military system and of civil and criminal law; appointment to office to be made according to ability and not by favoritism; employment of foreign talent for advice and assistance. Of these articles of reform some, despite great difficulty and opposition, have been carried out. Korea is now a constitutional monarchy instead of an irresponsible despotism. On June 20 the first of a series of royal ordinances completely reorganized the provincial administration. The "eight provinces" became geographical expressions only. In their place are 23 prefectures, with 151 districts, in which are 230 revenue officers. In place of the old triple premiership is a Cabinet of 8 boards of administration. These are: Foreign, Home, Finance, Army, Justice, Education; Agriculture, Commerce, and Public Works; and Royal Household. In addition, a new judiciary has been established, with new codes of laws and 6 courts or systems, as follows: Special, convened only by the King on recommendation of the Minister of Justice; supreme, circuit, and for the capital, treaty ports, and provinces. There are now 3 legations abroad, the minister at Washington being Hon. Pom-Kwong-Soh. A postal system was inaugurated in July, 1895, with stamps of 4 denominations, engraved in the United States. The army consists of 5,000 men, under the instruction of American and Japanese officers. There is no mint or navy. A telegraph runs from Seoul to Wi-ju, on the Chinese frontier, and from Seoul to Fusan. The survey of a proposed railway from Chemulpo to Seoul, and from Seoul to Fusan, has been completed. In February a 21-inch tramway, 55 miles long, from Cheung-Nam-Po to Ping-Yang, the power used being human muscle, was completed. April 21 117 Korean lads went to study in Japan. Mrs. Esther Pak is a student of medicine in Chicago.

Finances.—The Government derives its revenue from various sources: 1, A land tax, which changes from year to year according to the harvest gathered; 2, a house tax; 3, customs revenue at three open ports; 4, licenses to trading guilds, gold miners, etc.; 5, miscellaneous taxes. In 1895 the Government borrowed from Japan \$3,500,000 to carry out reforms. For 1895 the official statement is: Revenue, 4,809,410 yen; expenditure, 6,273,384 yen, showing a deficiency of 1,463,974. The items of expense are: Royal household, 500,000; Foreign Office, 71,392; Home Department, 1,406,153; Treasury Department, 1,740,006; Army, 1,028,401; Justice, 47,294; Education, 124,422; Agri-

culture, Commerce, and Public Works, 183,416; extras, 372,300; reserve fund, 800,000 yen.

Seoul and the Ports.—The capital is finely situated on a soil of decomposed granite, and has good drainage into Han river. The streets are laid out with drains on either side, yet the city is astonishingly filthy, with narrow streets. On the north and south rise imposing mountains. The 3 palace inclosures are on the north side of the city, facing the sun. On the few elevations above the general level the Japanese, American, British, and Russian legations, and the Methodist and French Roman Catholic establishments are built, breaking the general monotony of one-story tiled or thatched houses. Most of the dwellings are horseshoe-shaped, with an open court and a high wall, which shuts out the view of one neighbor from the other. There is one very broad avenue in the city, running from east to west, from which diverge the wide roads leading to the palace gate, in front of which most of the events that in recent years have been described in Western newspapers have taken place. Leading from the imposing gate towers that loom up over the city wall on the southwest are wide highways, which open into the center of the main street, where stands the big bell, near which are the chief shops, factories, and storehouses. A crenelated wall 16 feet high incloses the whole city, crossing hill, valley, and stream. The native population of the city and suburbs is computed at 300,000. On June 15, 1895, the Japanese population consisted of: Males, 901; females, 537; total, 1,438. The white foreigners, diplomatists, and missionaries number more than 100. Three treaty ports are opened to commerce and foreign residents. Chemulpo, 20 miles south of the capital, contains a Japanese population of 4,243 and about 200 Americans and Europeans. It has 1 or 2 well-metalled and curbed streets, with several buildings in foreign style. Fusan, on the southeast coast, contains 1,307 Japanese. Geyuan on Broughton's Bay, has a small settlement of Japanese and other nationalities. The Chinese are steadily advancing in numbers and business capacity to the status held before the war of 1894-95.

Christianity.—In 1777 some literary men in the annual Korean embassy to Peking received a present of books from the Jesuit missionaries. On their return home they organized Christianity after the model of the Roman Catholic Church. After Chinese priests had been sent in the first French missionary, disguised as a Korean mourner, penetrated the forbidden country. Others followed, and native converts increased, despite the ban and bloody persecutions of the Government. In 1864 19 Frenchmen had entered Korea, a dozen of whom were then living. When, to the joy of the hunted native Christians, a fleet of Russian ships seemed to threaten the isolation of the kingdom the Tai-Wen-Kun ordered fresh persecutions. Nine Frenchmen were beheaded, and more than 10,000 Koreans were killed, exiled, or made refugees in Russian territory. In more peaceful times the French missionaries returned. In 1895 Seoul had a church, the orphanage of St. Paul de Chartres with a mother superior and 4 sisters, and the college of Ryong-San with 14 French instructors; the entire establishment in Seoul under the apostolical

vicer numbering 24, with several "religious" in other parts, all under the Society of Missions Rangsirens de Paris, with more than 20,000 native adherents. Protestant missions began in 1860, when Dr. H. S. Allen introduced scientific medicine and surgery. American Presbyterians and Methodists quickly followed, with appliances of sewing, teaching, printing, and preaching. The tenth anniversary of reformed Christianity in Korea was celebrated Oct. 9 to 11, 1895. The statistics show 42 congregations, meeting weekly, with which 19 stated preaching services are observed. Of 528 baptized persons on the rolls, two thirds are males, one third are females. There are 9 Sunday schools, with 445 persons enrolled. In 1894 903 communicants, or 61 per cent. of the present whole church membership, were

dividuals, who mortgage their crops and other property. The chief products of the country are rice, cotton, silk, hides, tobacco, and beans. The exports of rice for 1894 amounted to 459,682 piculs, valued at \$605,000. Of hides, the export was \$55,000 less than in 1893, but a diminution in this item shows that rinderpest is not so prevalent as usual. Awabi shells (500 pounds in 1894) are exported for button making and inlaid work. Only a fraction of the gold dust that is carried out of the country figures in the official returns. Ginseng, heretofore a Government monopoly and yielding a revenue from \$500,000 to \$1,000,000 annually, is now free, though a heavy tax is laid upon the traffic in certain kinds. The American product has powerfully influenced the whole Korean ginseng trade. In imports, Japa-

THE WEST GATE OF SEOUL.

received. Of the native churches 6 have Korean pastors. The Church of England, the Canadian and Australian Presbyterians, and 2 independent religions are also at work. Some of the best soldiers in the country are those of the missions in the capital and the seaports. Besides tracts and Scripture translations, the missionaries have provided an excellent apparatus for the study of the Korean language, including grammars, dictionaries, and schoolbooks, and "The Korean Repository" is published monthly in Seoul.

Foreign Trade.—Despite the Chino-Japanese war, trade statistics for 1894 show the largest volume since the country was opened to foreigners. Nearly all the shipping in Korean waters is in Japanese hands, mostly belonging to the Nippon-Komo-Kaisha, other vessels that figure in the official returns being chartered only for temporary purposes. The capital in the country invested in special enterprises is almost wholly Japanese, and is lent to the Government and in-

vested in cotton goods, which in 1893 amounted to \$25,000, rose to \$128,000 in 1894. Owing to the low rate of exchange, to their cheap labor, to the saving effected in dispensing with tarpaulins, from hoops, and tin-lined cases, and to lower freights, the Japanese are able to undersell the British fabrics, besides making a profit of from 15 to 30 per cent. During 1894-95 the Japanese had the Korean market almost entirely to themselves, but the Chinese are now returning. In dronoffs, shoes, hats, caps, and cotton yarns the Japanese importers are crowding out their European competitors. A large variety of miscellaneous imitations of American and European goods find their way into Korea from Japan, the labels being imitated with unblinking dishonesty. The petroleum used in Korea in 1894 was in value: American, \$49,500; Russian, \$1,000.

Events.—At the Royal College in Seoul lectures on Korean history were begun, one of the first of several plans to develop an intelligent

spirit of patriotism. A famine broke out in Quelpaert island, and the Government sent for relief 200,000 yen and 5,000 bags of rice. Other famines broke out in the districts desolated during the Tong-Hak disturbances. Prince Yi-Chun-Tong, twenty-three years old, nephew of the King and grandson of Tai-Wen-Kun, charged with conspiracy against the sovereign and implicated in the assassination of Kim-Hak-On, the leader of the Reform party, was arrested and tried on charge of treason by the special court and banished for ten years in a one-room hut to Kyo-Dong island. After being five hundred years under ban, Buddhist priests were permitted to enter the capital and walled cities. In July the Tong-Haks made uprisings in the southern provinces. Queen Min, apparently retaining full power, crowded the palace with women, servants, and underlings, as in the old days, and so managed affairs that the Home Minister, Prince Pak (Boku), was compelled to leave the capital, escorted by Japanese troops. The national costume of white was changed by decree to black, and the universal yard-long tobacco pipe was shortened by 2 feet. A conspiracy, plotted by native soldiers whom the Queen had discharged, by irresponsible Japanese and various bad characters, headed by the Tai-

Wen-Kun, resulted, Oct. 8, in an attack on the palace, in which the gates were forced, the Queen was murdered, the verdict of the special court was reversed, and several remarkable proclamations, one of which degraded the queen to the level of a servant, were issued. Later royal proclamations heaped posthumous honors upon Queen Min, appointed a staff of biographers and ordered a funeral, to cost 70,000 yen. Oct. 26 the lunar calendar was abolished, the sixteenth day of the eleventh moon of the five hundred and fifth year of the dynasty to be Jan. 1, 1896. Sunday has been made a day of rest in the Government offices. Nov. 27 there was another attack on the palace by Koreans who were opposed to the new spirit and policy of the Tai-Wen-Kun. The chief participants in the *émeutes* of Oct. 8 and Nov. 27 were brought to trial and executed Dec. 28. In December the officials and many of the people had their hair cut, an act of vast significance, which changed the style of coiffure in vogue during the past five hundred years. During December most of the Japanese troops evacuated the country. The 4 parties in native Korean politics are called, respectively, the pro-Japanese, the pro-Russian, the pro-Chinese, and the "Korea for the Koreans."

L

LITERATURE, AMERICAN, IN 1895.

More books were published in our country in 1895 than in any previous year, the record showing 335 more than the total number issued in 1893, the largest book-producing year hitherto. In all, there were 5,469 books sent from the press, of which 5,101 were new books and 368 new editions. In 1894 647 out of the total of 4,484 were new editions, showing an increase of publication of original work, albeit not of a high order of merit. Of the total number of books manufactured in this country 3,396 were by American authors—by far the greater number of reprints made belonging to fiction—847 were by English and other foreign authors, and 1,226 were imported into this country, bound or in sheets, bearing an American imprint. By far the greatest increase was shown in fiction, the total of novels standing 1,114 against 729 in 1894. Of this number, however, only 287 were by American authors, while 589 were reprints and 238 importations. A marked increase was also noticeable in the department of literary history and miscellany—455 new books against 208 in 1894—and in poetry, while a falling off was shown only in books of the useful arts and those relating to sports and amusements. The chief importations were in theological and juvenile works and in poetry and biography. No book made any decided sensation.

Biography.—The most important work of the year falling under this head was beyond doubt "John Sherman's Recollections of Forty Years in the House, Senate, and Cabinet: An Autobiography," in 2 volumes, the appearance of which created a great sensation in political circles. A new cheaper edition was also made of "The Sherman Letters," published last

year. Mary Abigail Dodge (Gail Hamilton) published a "Biography of James G. Blaine," and another work of intense interest, from an opposing standpoint was "The Life of Samuel J. Tilden," by his lifelong friend John Bigelow, who was peculiarly qualified to give the details contained in these two volumes. Ward Hill Lamon's "Recollections of Abraham Lincoln, 1847-1865," were edited by his daughter Dorothy Lamon, and were of an entirely personal nature. L. E. Chittenden gave us a compilation of "Abraham Lincoln's Speeches," and the 42 articles contributed to the New York "Independent" in commemoration of the thirtieth anniversary of the assassination of April 4, 1865, was entitled "Abraham Lincoln: Tributes from his Associates; Reminiscences of Soldiers, Statesmen, and Citizens," and supplied with an introduction by William Hayes Ward, D. D. The "Political Debates between Abraham Lincoln and Stephen A. Douglas in the Celebrated Campaign, 1858 in Illinois" filled a handsome quarto volume and yet again we had "Political Speeches and Debates of Abraham Lincoln and Stephen A. Douglas, 1854-1861," edited by Alonzo T. Jones. "George Washington Day by Day" was the title of a new issue of the Father of his Country, by Elizabeth Bryan Johnston, and Dr. Eliphalet Nott Potter presented "Washington a Model in his Library and Life," a lecture delivered May 12, 1895, at All Angels Church, New York city. "The True Story of George Washington" was told for youngest readers by Elbridge S. Brooks. "General Sheridan" was a single issue in the "Great Commanders Series," the author being Gen. Henry E. Davies. A large octavo volume of "Critical Sketches of Some Federal and Confederate Commanders," by John Codman Ropes, Col. Theodore Ayrault Dodge, Gen. Francis Walker, and others, was edited by Col. Theodore Dwight, and from Lieut. Arthur Sinclair, of the Confederate States navy, we have a record full of interest of "Two Years on the 'Alabama.'" Albert Gallatin Riddle, who was a Member of the Thirty-seventh Congress, proffered "Recollections of War Times," a v

ness of reminiscences of men and events in Washington in 1800-55, while "Cole's Cavalry," by C. Armas Newcomer, detailed the experiences of three years in the middle in the Shenandoah valley. "Under the Hammer: A Woman's Reminiscences of the Civil War," by Mrs. Annie Wittenmyer, had an introduction by Mrs. U. S. Grant, and Vol. II appeared of the life of Anna Ella Carroll, under the title of "A Military Woman," by Sarah Ellen Blackwell. Thomas W. Higginson wrote a "Boys' Life of General Grant," a companion volume to which might be termed "The Life of Gen. Robert E. Lee for Children," by Mrs. Mary L. Williamson. "Jewels of Memory" contained the reminiscences of Col. John A. Joyce. "Three Men of Letters" delightfully discoursed of by Prof. Mame C. Elyot were respectively George Berkeley, Timothy Dwight, and Joel Barlow. "Letters of John Thaxter" were appreciatively edited by "her friends, A. F. and R. L." and contain a sweet and refreshing charm. "Under the Old Elms," by Mrs. Mary B. Claflin, recalls many famous personages gathered in the historic mansion of Gov. Calves, as named by Henry Ward Beecher, while "Walks in Our Churchyards, Old New York, Trinity Parish," by John Flavel Mines (Felix Oldboy), possessed interest for many readers. "The Old Landmarks of New York, and Other Papers," by William Loring Andrews, and "Sketches of Printers and Printing in Colonial New York," by Charles R. Hildreth, were issued in limited, expensive editions. "The Life and Letters of Dr. Samuel Hahnemann" was now to Thomas Lindsey Bradford, M. D. "Conversations with Walt Whitman, by Sadakiehi," written in 1884, was by Sadakiehi C. Hartmann, a Japanese by birth, and "Down at Caxton's," by Walter Henry, was the title of a number of biographical and literary sketches of noted authors. Charles K. Townsend filled 2 volumes with "Personal Recollections of Notable People," "Recollections of Life in Ohio, from 1815-1840," by William Cooper Howells, proved valuable in a twofold sense, as it not only supplied an admirable picture of the hardships of the early days of settlement in that State, but also furnished a clue to many of the mental characteristics of the son of the author, the eminent novelist, who contributed an introduction to the volume. Joseph A. Wilford told of "Half a Century with Judges and Lawyers" in the Superior Court of Boston. The second of the 5 volumes which will contain "The Life and Correspondence of Rufus King," edited by his grandson, Charles R. King, appeared during the year, with a similar service was rendered to a grand-lance by Rev. Charles Cotesworth Pinckney in "The Life of General Thomas Pinckney," the interest of which extends far beyond the borders of his native State of South Carolina. "Carter Henry Harrison: A Memoir," was from the pen of Willis J. Abbot, and another, John D. Long published a volume of "Afterthoughts and Other Speeches." "Townsend Harris, First American Envoy in Japan," by William Elliot Grella, contains much new material of high historic value, opportunely presented. Dr. Asahel C. Kendrick, assisted by Florence Kendrick Cooper, wrote a biography of "Martin B. Anderson, LL. D.," the late President of the University of Rochester, and Richard Elmore Clark, M. D., prepared for the Filson Club of Louisville, Ky., "The Life and Writings of Rufus," including a bibliography that comprise over 800 titles. "The Pilgrim Fathers of New England, and their Puritan Successors," were comprehensively treated by John Brown, D. D., Dr. A. E. Dunning supplying an introduction to the volume, while "Margaret Winthrop" was selected by Mrs. Alice Morse Faris to introduce a new series of "Women of Colonial and Revolutionary Times." Charlemagne Tower, Jr., contributed by far the most important work ever published upon "The Marquis de Lafayette in the American Revolution," with some account of the attitude of France toward the War of Independence, in 4 volumes, characterized by the most thorough research and warm but impartial admira-

tion for his subject. "Gustavus Adolphus," by Col. Theodore A. Dodge, in the "Great Captains Series," purported to be a history, in fact, of the art of war from its revival after the Middle Ages to the end of the Spanish succession war, while Ruth Putnam portrayed "William the Silent, Prince of Orange," as "The Moderate Man of the Sixteenth Century" in 3 volumes, based upon his own letters, those of his friends and enemies, and upon official documents. Montgomery B. Gibbs traced the "Military Career of Napoleon the Great," and "Napoleon Bonaparte's First Campaign" was reviewed, with comments, by Lieut. Herbert H. Sargent, U. S. A. "A Short Life of Napoleon Bonaparte," by Ida M. Tarbell, was profusely illustrated, and James A. Weslin suggested "Historic Doubts as to the Execution of Marshal Ney." "Attila Chénier" was the subject of a memorial by Louis R. Heller. "Famous Leaders among Women" was the theme of Mrs. Ward K. Bolton, and "Famous Women of History," by William Harlecastle Brown, contained nearly 2,000 brief biographies. The life of "Josephine, Empress of the French," was written by F. A. Otter in the light of recent research, much space being given to her early life in the island of Martinique, while several famous characters are commemorated in "An Old Convent School in Paris, and Other Papers," by Sarah C. Woolsey (Susan Coolidge). Bernardino and Lorenzo de Medici were respectively considered as "The Monk and the Prince," by Arthur G. Haywood, Sr. From Ashton R. Willard we have "A Sketch of the Life and Work of the Painter Domenico Morelli," one of the foremost contemporary Italian artists. "Pioneer Days," by M. E. D. Tenbrunck, told the life story of Gershom and Elizabeth Day, while "How Marcus Whitman saved Oregon," by Oliver W. Nixon, M. D., with an introduction by Frank W. Gunsaulus, D. D., and "The Story of Marcus Whitman," by J. G. Craighead, D. D., will vindicate early Protestant missions in the Northwest. "Luther Halsey Gulick, Missionary in Hawaii, Mongolia, Japan, and China," was written by his daughter, Frances Gulick Jewett, and as William Rankin we owe "Memorials of Foreign Missions of the Presbyterian Church." "Great Misdeeds of the Church," by Dr. Charles C. Crogan and Mrs. Josephine A. R. Goodnow, had an introduction by Dr. Francis E. Clark. "Charles Francis Barnard: A Sketch of his Life and Work," by Francis Tiffany; a "Life of John Livingston Nevins, Forty Years a Missionary in China," by Mrs. Helen S. Cunn; "Forty Years in South China: The Life of the Rev. John Van Ness Talmage, D. D.," by Rev. John Goodwin Fagg; "Reminiscences" of Bishop Thomas M. Clark of Rhode Island; a "Memoir of Rev. Barnum Jew, D. D.," compiled by Rev. J. C. Starkbridge; "Memoirs of the Life and Religious Labors of Frederick P. Gardner," an autobiography; and "William Mackenzie Taylor, Pastor of the Broadway Tabernacle Congregational Church," a memorial volume, being a religious biography, while "One Hundred Years ago, in the Life and Times of the Rev. Walter Dabney Adams, 1749-1848," was compiled from original papers by Elizabeth H. Murray. A new illustrated edition was issued of "Threescore Years and Beyond," a book for the aged containing the experiences of a large number of representative men and women of advanced years, by William H. De Puy, D. D. Vol. III appeared of "The Writings of Thomas Paine," collected and edited by Murray D. Conway, covering the period 1770-1804. Charles F. Horne edited "Great Men and Famous Women," a series of pen and pencil sketches of the lives of more than 200 of the most prominent personages in history, in 4 volumes, and an anonymous volume supplied photographs and biographies of "America's Greatest Men and Women." "Studies of Men," by George W. Sumner, were collected from the "New York Tribune." Mary Powell Bunker compiled "Long Island Genealogies: Families of Albertson, Bechtel, Bowen, Cushman, Carr, Cresson (and others), being Kindred Descendants of Thomas Powell, of

Bethpage, L. I., 1688"; Henry Carrington Bolton and Reginald Pelham Bolton traced "The Family of Bolton in England and America, 1100-1894," and W. G. Stannard prepared "A Chart of the Ancestors and Descendants of Rev. Robert Rose."

Criticism and General Literature.—Under both of these heads fall "My Literary Passions," confided to us by William Dean Howells with charming *abandon*, which awaken many a sympathetic chord. Prof. Hiram Corson defined "The Aims of Literary Study," and Henry Matson, the author of "References for Literary Workers," discoursed of "Knowledge and Culture." Margaret S. Mooney offered "Foundation Studies in Literature," and Greenough White published Part I of an "Outline of the Philosophy of English Literature," devoted to the Middle Ages. Hjalmar Hjorth Boyesen contributed 7 enthusiastic "Essays on Scandinavian Literature," to which his "Commentary on the Writings of Henrik Ibsen," issued last year, must be regarded as supplementary. "Old Pictures of Life," by David Swing, to which Franklin H. Head supplied an introduction, filled 2 volumes, and Laurence Hutton was heard from upon "Other Times and Seasons" in the Harper's "American Essayists Series." Gustav Karpeles wrote on "Jewish Literature and Other Essays." Vol. III of "English Lands, Letters, and Kings," by Donald G. Mitchell (Ik Marvel), carries us through the times of "Queen Anne and the Georges," closing with a portrayal of Wordsworth. "Books and their Makers during the Middle Ages" were the subject of 2 volumes by George Haven Putnam, and Brander Matthews wrote of "Books and Play-Books." A new enlarged edition was issued of "Essays in Miniature," by Agnes Repplier. Thoughts of John Vance Cheney on poetry and the poets were entitled "That Dome in Air," while from Miss Vida Dutton Scudder we have 3 thoughtful volumes, the first tracing "The Life of the Spirit in the Modern English Poets," and the second offering "The Witness of Denial" in modern English prose writers. Frank Preston Stearns was particularly interesting in "Sketches from Concord and Appledore," and in this connection may be here mentioned "Literary Shrines: The Haunts of Some Famous American Authors," by Theodore F. Wolfe, M. D., who also made "A Literary Pilgrimage among the Haunts of Famous British Authors," both volumes exquisite in the technique of book making and fascinating in their affectionate treatment of the subjects of each. Elbert Hubbard also made "Little Journeys to the Homes of Good Men and Great." "Idyls of the Big World" were from the pen of W. D. McCrackan. Prof. F. M. Warren chose an apparently limited field in his study of "The Novel before the Seventeenth Century," which, however, was found to be wider than was supposed, and which he traversed in an interesting and instructive manner. "Twenty-five Letters on English Authors" came to us from Mary Fisher. Prof. R. G. Moulton edited "Four Years of Novel Reading," the account of an experiment in popularizing the study of fiction, which he regards, as he tells us in his introduction, as an art, and Hugo Erichsen, M. D., gave special attention to "Methods of Authors." John A. Kersey examined "Ethics of Literature." "Rhetoric: Its Theory and Practice" was the title given to the lectures upon "English Style in Public Discourse," delivered twelve years ago by Dr. Austin Phelps to the students of Andover, edited in text-book form by Prof. Henry Allyn Frink. A new revised and enlarged edition was also issued of "The Principles of Rhetoric," by Adams Sherman Hill. Gilbert M. Tucker made a plea for the proper use of the English language as "Our Common Speech," and Frances Bennett Callaway treated of "Charm and Courtesy in Letter Writing." Charles A. Dana collected 3 lectures upon "The Art of Newspaper Making" into a small volume. From Henry Van Dyke we had "Little Rivers: A Book of Essays in Profitable Idleness," and from Rev. George H. Hepworth "Brown Studies; or, Campfires and Morals." George H. Ellwanger entitled 6 com-

mentaries concerning some of those who have apostrophized the joys of the open air "Idyllists of the Country Side"; and among books chiefly descriptive of the beauties of Nature are to be mentioned "Among the Northern Hills," by William Cooper Prime, the author of "Along New England Roads"; "From a New England Hillside: Notes from Underledge," by William Potts; "Broken Notes from a Gray Nursery," by Julia Sherman Hallock; and "Through Glade and Mead," by Joseph Jackson. Sketches of life, scenery, and character in Fairfield, Conn., were published by Frank S. Child as "An Old New England Town," and Mrs. Alice Morse Earle portrayed "Colonial Dames and Good Wives" in pleasing fashion. "The Fast and Thanksgiving Days of New England," as examined by Rev. William Deane Love, Jr., presented a striking picture of the religious, social, and political life of the times, and also contained a unique calendar in tabular form of all these days actually observed from 1620 to 1815, running through 50 pages. "The Growth of the Idyls of the King" was traced by Prof. Richard Jones. "Francis Bacon and his Shakespeare," by Theron S. E. Dixon, renews a controversy which is still further set forth in "The Plays of Shakespeare founded on Literary Forms," by Henry J. Kuggles, who presumes these forms to have been laid down by Bacon. Vols. IV and V appeared of "Sir Francis Bacon's Cipher Story," as discovered and deciphered by Orville W. Owen, M. D., who published also "The Historical Tragedy of Mary, Queen of Scots" and "The Tragic Historie of our Late Brother, Robert, Earl of Essex," both derived from the same source. Prof. Felix E. Schelling selected and edited "A Book of Elizabethan Lyrics," with an introduction, and 100 pages of notes; "Readings from the Old English Dramatists; with Notes," by Catherine Mary Reynolds Winslow, filled 2 volumes, and Prof. Morton W. Easton edited "Readings in Gower." "The Broken Heart" of John Ford was also edited, with notes, by Clinton Seollard. Prof. Albert S. Cook prepared "Exercises in Old English," based upon the prose text of his "First Book in Old English." "Elementary Greek Education," by Frederick H. Lane, outlined the aims, methods, and results of education in Greece prior to 404 B. C., and "Roman Life in Latin Prose and Verse" consisted of illustrative readings from Latin literature, compiled and edited by Harry Thornton Peek and Robert Arrowsmith. J. W. Mackail made a compact survey of "Latin Literature." "A Modern English-Greek Dictionary," by A. M. Janaris, purported to be a concise dictionary of the English and modern Greek languages as actually written and spoken. H. A. Guerber published 3 works, "Stories of the Wagner Operas," "Myths of Northern Lands," narrated with special reference to literature and art, and "Legends of the Rhine"; M. A. B. Evans wrote of "Nymphs, Nixies, and Naiads"; while Charles Godfrey Leland gave "Legends of Florence." "Snow-Bird and the Water-Tiger, and Other American Indian Tales," told by Margaret Compton for young people, was illustrated with drawings by Walter Conant Greenough. "Bahama Songs and Stories," by Charles L. Edwards, formed Vol. III of "Memoirs of the American Folklore Society." Edwin Lawrence Godkin's "Reflections and Comments, 1848-'95" were collected from the files of the "Nation," in which they appeared during the period specified. "Select Conversations with an Uncle," by H. G. Wells, and "Cousin Anthony and I," by Edward Sanford Martin, discussed divers matters and various aspects of life, while Mary H. Perkins (Dorcas Nickerson) looked at life in sunshine and shadow "From my Corner." Mary Davies Steele describes "A Happy Life," chiefly from an invalid's point of view; Henry Hardwicke explained "The Art of Living Long and Happily"; William M. Thayer proffered hints and helps for young men and women respectively in "Aim High" and "Womanhood," and also treated of "Turning Points in Successful Careers." Edward W. Bok pointed young men "Successward." John

Bryan published Vol. I of "Fables and Essays," and A. Wallace "Popular Sayings dissected." "How to Win" was a book for girls by Frances E. Willard, with an introduction by Rose Elizabeth Cleveland, and Rath Ashmore held "Side Talks with Girls." "About Men: What Women have said" was a compilation by Rose Porter. "Life and Love" were discussed by Margaret Werner Morley, the author of "A Song of Life," with the same refinement of thought and style that characterized her previous work, while she addressed a maturer audience. In conclusion we have "Initial Studies in American Letters," by Henry A. Beers, originally published in 1887 as "An Outline Sketch of American Literature"; "Masterpieces of British Literature," with biographical sketches, notes, and portraits; "Southern Literature, from 1779 to 1884," by Louise Manley; "Children's Stories in American Literature, 1640-1860," by Henrietta Christina Wright; "American Literature," by Mildred Cabot Watkins, in the series of "Literature Primers"; "Specimens of Narration," chosen and edited by William T. Brewster in "English Readings"; "Outlines of German Literature," by Mrs. Mary Jefferson Foster; "Modern German Literature," by Prof. Ferdinand W. Wells; and "German Historical Prose," selected and edited, with notes, by Hermann Schoen-berg. A "Dictionary of Burning Words of Brilliant Writers" was compiled by Josiah H. Gilbert, forming a compendium of quotations from the literature of all ages, to which Dr. C. S. Robinson contributed an introduction. William I. Fletcher and R. R. Bowker prepared "The Annual Literary Index" for 1894, and the "Book Lover's Almanac for the Year 1895" completed the third year of that publication. The handsomest addition, from a typographical standpoint, ever made to American bibliographical literature was the description of "The Library of Robert Hoe"—one of the most remarkable private libraries in the United States—by O. A. Bierstadt, designed as a contribution to the history of bibliophilism in America, and illustrated with 110 archetype reproductions from manuscripts and books in the collection. A beautiful new folio edition of "The Works of John Burroughs" was issued in 9 duodecimo volumes with several portraits of the lover of Nature and with engraved title pages. A new birthday edition in 2 volumes was also made of Dr. Holmes's "Over the Topography."

Humorous books, which may as well be included here as anywhere else, were "The Adventures of Jones," by Hayden Carruth; "Suppressed Chapters and Other Bookishness," by Robert Bridges (Droch); "The Idiot," "A House-Boat on the Styx," and "Mr. Bismarck of Corsica," the last a burlesque life of Napoleon, by John Kendrick Bangs; "The Literary Shop and Other Tales," by James L. Ford; "Aunt Melinda's Points of View and A Modern Mrs. Malaprop," by Lydia Lloyd Farmer; "Barby Coey's Philosophy," by William Fenimore Cooper (Barby Coey); and Edward Townsend's two "Chimmie Fadden" books. "Biltry" was a parody on "Tribby," by Mrs. Mary Kyle Dallas, and "Drilby Reversed," a burlesque in verse of the same book, by Leopold Jordan.

Education.—James Phinney Munroe traced an outline of the growth of "The Educational Idea" in modern times, William Noelling made "Notes on the Science and Art of Education," and Bishop J. L. Noelling considered the "Means and Ends of Education." "A Manual of Pedagogics," by Daniel Putnam, "Psychology in Education," by Ririe N. Roark, and J. N. Patrick's "Elements of Pedagogics" relate rather to the theory of teaching, while the practical side was set forth in "The Philosophy of School Management," by Arnold Tompkins. A new edition, with special preface, was issued of "The Teacher and the Parent," by Charles Northend. Prof. Albert Bushnell Hart published "Studies in American Education," and Catherine Alken suggested "Methods of Mind-Training, Concentrated Attention, and Memory." "Frederick's Gifts," by Kate Douglas Wiggin (now Mrs. George C. Riggs) and Nora Archibald

Smith, was the first of a series of 5 volumes to be entitled "The Republic of Childhood," and from Florence Hull Winterburn we had a volume upon "Nursery Rhymes." "The Evolution of the Massachusetts Public School System" was traced by George H. Martin in the "International Education Series," and "Herbert and the Herbaritans," by Charles de Garma, was added to the "Great Educators Series." William Howe Tolson added a "History of Higher Education in Rhode Island" to the "Contributions to American Educational History," issued by the United States Bureau of Education, which also published a "History of Education in Maryland," by Bernard C. Steiner. "Four American Universities: Harvard, Yale, Princeton, and Columbia," were respectively described by Charles Eliot Norton, A. T. Hadley, W. M. Sloan, and Brander Matthews, and a "History of the Rensselaer Polytechnic Institute, 1824-1894," was written by Palmer C. Ricketts. "A History of Amherst College during the Administrations of its First Five Presidents, from 1821 to 1891," by William S. Tyler, D. D., is at once an abridgement and a continuation of the "History of Amherst College during the First Half Century, 1821-1871," and had an introductory note by Dr. Richard Walter Stearns. A second edition was made of "How to teach Natural Science in Public Schools," by Hon. William T. Harris, in "School Bulletin Publications," and Frank Owen Payne found "One Hundred Lessons in Nature Study around my School." Isabella G. Oakley published "Simple Lessons in the Study of Nature for the Use of Pupils," and "Little Nature Stories for Little People" were adapted from the essays of John Burroughs and edited by Mary E. Bart. From James A. McLehlan and John Dewey we had "The Psychology of Number and its Applications to Methods of Teaching Arithmetic"; from Gordon A. Southworth Book II of "The Essentials of Arithmetic, Oral and Written," for upper grades; from John Jackson "The Teaching of Handwriting"; from Spencer Trotter, M. D., "Lessons in the New Geography for Student and Teacher"; from Amos M. Kellough "Party Lessons in Clay Modeling"; from W. Bertha Blinn "Illustrative Blackboard Sketching"; and from Annie K. Cross "Free-hand Drawing," "Color Study," and "Mechanical Drawing," manuals for teachers and students. In collaboration with Amy Swain the same author also prepared an "Outline of Drawing Lessons" for primary and for grammar grades. In the series of "Eclectic School Readings," we have "Stories of Great Americans for Little Americans," and "Stories of American Life and Adventure," by Edward Eggleston, while "The Story of Patriots' Day, Lexington and Concord, April 19, 1775," by George J. Varney, shows how the anniversary may be commemorated by schools. "Arthur Day and Aids for its Proper Observance by the Schools of Wisconsin" was issued by the Department of Public Instruction of that State. Charles M. Levermore and Frederick Reddall compiled "The Auditory Song-Book," for use in schools and colleges, Edward K. Ellis edited "The Youth's Classical Dictionary for Boys and Girls," and "The Schoolmaster in Comedy and Satire" was arranged and edited as a companion volume to "The Schoolmaster in Literature."

Fiction.—Ten hundred and fifty new books of fiction were recorded in 1894 against 125 in 1893, and but 64 new editions against 144 the preceding year. F. Marion Crawford continued the story of "Katherine Lauderdale" in 2 volumes devoted to "The Italians," and then returned to his more congenial Italy for the setting of the powerful story of "Casa Braccio," which was also issued in 2 volumes and illustrated by A. Castagnoli. Richard Harding Davis told a sweet and satisfactory love story in "The Princess Alina." Frank R. Stockton was hardly at his best in relating "The Adventures of Captain Horn," but his admirers were delighted with "A Chosen Few" of his best short stories collected into a volume, which contained an etched portrait of the author. Many well-known authors were represented only by vol-

umes of short stories. Henry James published "Terminations"; Henry Harland (Sidney Lusk) entitled his "Gray Roses"; F. Hopkinson Smith portrayed "A Gentleman Vagabond and Some Others"; Constance Fenimore Woolson was sadly recalled by "The Front Yard, and Other Italian Stories" and "Dorothy, and Other Italian Stories"; Charles Egbert Craddock (Mary N. Murfree) published 2 volumes, "The Phantoms of the Footbridge, and Other Stories" and "The Mystery of Witchface Mountain, and Other Stories"; and Kate Douglas Wiggin gave the title of "The Village Watch Tower" to 6 tales. Maria Louise Pool contrasted the opposing temperaments of our widely separated sections of country in her novel, "Against Human Nature," and Eliza Orne White produced a strong story in "The Coming of Theodora." "The Life of Nancy," as told by Sarah Orne Jewett, was at once pathetic and hopeful, while from Mrs. Constance Cary Harrison (Mrs. Burton Harrison) we had "An Errand Wooing" under varied skies. "With the Procession" was another novel of Chicago life by Henry B. Fuller (Stanton Page), who apparently succeeds as well in his realistic vein as in his ideal and romantic one. From Brete Harto came "Clarence" and "In a Hollow of the Hills," and Capt. Charles King told "The Story of Fort Frayne," publishing also "Captain Close and Sergeant Cressus," 2 stories in 1 volume, and "Trooper Ross," with which was also bound "Signal Butte." He also edited "Captain Dreams, and Other Stories." "A Madeira Party," by Dr. S. Weir Mitchell, was the title given to a volume of 2 short stories which show he has lost none of his power, and "Philip Vernon," also from his pen, proved to be a tale in prose and verse of the days of Elizabeth and the Spanish Armada. "Mr. Rabbit at Home" was intended as a sequel to "Little Mr. Thimblefinger and his Queer Country," by Joel Chandler Harris, whose "Uncle Remus" went through a new and revised edition during the year. "A Singular Life" was outlined by Elizabeth Stuart Phelps (Mrs. Herbert D. Ward), and "A Dash to the Pole" was made by her husband in a wildly imaginative flight in an air ship. "The Wise Woman" was the title of Mrs. Clara Louise Burnham's helpful novel, and Rose Porter made a charming picture of "My Son's Wife." "Bernicia," the only contribution of Mrs. Amelia E. Barr, was an English story of the close of the eighteenth century. "On the Point" was a summer idyl by Nathan Haskell Dole; Hezekiah Butterworth related the romance of a colonial fireside "In Old New England"; and Dr. Charles Conrad Abbott described "A Colonial Wooing." Mary Catherine Lee, the author of "A Quaker Girl of Nantucket," was equally successful with "A Soulless Singer"; Mary Hallock Foote was welcomed once more with "The Cup of Trembling, and Other Stories"; "The Sister of a Saint, and Other Stories," by Grace Ellery Channing, appeared in the "Carnation Series"; and Julien Gordon (Mrs. Julia Van Kesselcruger) told of "A Wedding, and Other Stories." Amanda M. Douglas sent out 3 books, "Sherburne Cousins," "A Sherburne Romance," and "In Wild Rose Time. The vexed problem of capital and labor formed the theme of an entirely new writer, Helen Choate Prince, a granddaughter of Rufus Choate, in "The Story of Christine Rochefort," the scene of which is laid in Hlois in our own times. The book preserves throughout not alone its interest, but the elevated tone which is its most attractive characteristic. "The Doctor, his Wife, and the Clock" and "Doctor Izard" belonged to Anna Katharine Green (Mrs. Charles Robtfs). A local flavor attaches to "Miss Cherry-Blossom of Tokyô," by John Luther Long, and "The Panglima Muda," a romance of Malaya, by Rounseville Wildman. "The Princess Sonia," by Julia Magruder, was a pretty romance of the Latin quarter. "Notes of a Professional Exile," by E. S. Nadal, analyze the character and foibles of the American woman abroad. "In the Land of the Sunrise" was the story of a Japanese family and the wonderful

land they live in, written by Robert N. Barrett with the object of awakening interest in missionary labor, while "The Land of the Sun (Vistas Mexicanas)," by Christian Reid (Mrs. Frances C. Fisher Tiernan), under the form of a story, gives a vivid impression of travels in that republic. "Wild Rose," by Francis Francis, was a tale of the Mexican frontier, and "Mercedes: A Story of Mexico," by Sarah Hale, inveighed strongly against the methods of the Catholic Church in that country, and "Through Forest and Plain: A Tale of Flowers and Fillibusters," by Ashmore Russan and Frederick Boyle, and "Under the Lone Star," a story of the revolution in Nicaragua, by Herbert Hayens, are akin in theme—viz., the expedition of William Walker. "Sinners Twain" and "The Devil's Playground," by John Mackie, were romances of the Canadian northwest, and, returning to our own country, we have "Lisbeth Wilson: A Daughter of New Hampshire Hills," by Mrs. Eliza Nelson Blair, the wife of Senator W. Blair, who appears for the first time in the literary world with this sweet and simple story. From Alice Brown we have "Meadow Grass," 5 tales of New England life; from Dane Conyngham, "Eunice Quins," a New England romance; from Henrietta G. Rowe, "Queens-Hilth," quaintly named from an old English custom; from Christopher Craigie, "An Old Man's Romance"; from William Whittemore Tuttle, "A Market for an Impulse"; from Francis H. Underwood, "Doctor Gray's Quest"; from Emory J. Haynes, "A Farmhouse Cobweb," a tale of rural life in Vermont in the war time; from Augusta Campbell Watson, "Off Lynnpport Light"; from Anne Kendrick Benedict, "An Island Story"; and from George Wharton Edwards, "The Rivalries of Long and Short Codiae," 10 short stories of the coast of Maine, illustrated by himself. "The Keys of Fate," by Herman Shores, also has its scene laid in New England, and deals with current questions of reform. "Four Girls at Cottage City" had their adventures narrated by Emma D. Kelley Hawkins, and Bls Perry described a Connecticut town as "The Plated City." "Doctor Hathern's Daughters" was a story of Virginia by Mrs. Mary J. Holmes; "A Girl's Life in Virginia before the War," by Letitia M. Burwell, was illustrated by W. A. McCullough and Jules Turcas; and "Christmas Week at Bigler's Mill" was, according to Dora E. W. Spratt, a sketch in black and white. James Lane Allen published "Aftermath," Part II of "A Kentucky Cardinal," and "Young Greer of Kentucky" was the title of a novel by Eleanor T. Kinkaid. "The Heart of Old Hickory, and Other Stories of Tennessee," by Miss Will Allen Dromgoole, had a preface by B. O. Flower, and "A Little Sister to the Wilderness," by Lillian Bell, told of life among the poor whites of West Tennessee. Opie P. Read (Arkansas Traveler) located a romance "On the Suwanee River," and North Carolina was the scene of "Jack O'Doon," by Maria Beale, as Texas in the war time was that of "Under the Man-Fig," by Mrs. M. E. M. Davis. "Mammy Mystie," by M. G. McClelland, and "Beatrice of Bayou Téche," by Alice Ilgenfritz, have for motif the existence of African blood in their respective heroines, and the race problem of the South is discussed in "The Sons of Ham," by Louis Pendleton, who published also "Corona of the Nantahala." "The Hand of Fate" was a romance of the navy, by Kate Lilly Blue, and rural life in Arkansas formed the background of "Beholding as in a Glass," by Mrs. Virginia D. Young. "Stories of the Foothills" of Southern California, by Mrs. Margaret Collier Graham, were collected into a volume, and the same country is the scene of "Go Forth and Find," by Thomas H. Brainerd. "Cension: A Sketch from Paso del Norte," by Maude Mason Austin, appeared in "Harper's Little Novels," and Louis B. France led his readers with interest "Over the Old Trail" to a Colorado mining camp. "The Company Doctor," by Henry E. Rood, pointed out the dangers resulting on unrestricted emigration as exemplified in the coal

regions of Pennsylvania, which are the scene also of "On a False Charge," by Seward W. Hopkins; and Hercules Hill made a plea for free silver in "The Story of a Cation." Demonization of silver and its attendant evils were the theme of "A Tale of Two Nations," by William H. Harvey. Eugene F. Caldwell and Maurice Eisenberg wrote "Doctor Canalis," in the interest of toleration for the Jews. "Lady Olivia," by W. C. Falkner, carries the reader back in days before the Revolution; H. C. Chatfield Taylor published "Two Women and a Fool." New York life is portrayed in "The Manhattaners," by Edward S. Van Zile; "His Father's Son," by James Brander Matthews; and "Dolly Dillencock," by James L. Ford, who was also the author of "Polonia Invaded, and Other Stories." Historical romances of fiction were: "The Story of the Other Wise Man," by Henry Van Dyke; "Hadassah; or, Esther, Queen to Ahasuerus," by Mrs. T. F. Black, in the "Golden Rod Edition," or "Dervogilla; or, The Downfall of Ireland," by Anna C. Scanlan, completed and revised by Charles M. Scanlan. "In Defiance of the King" was a successful romance of the American Revolution by Chauncey C. Hotchkiss; "The Head of a Hundred," by Maude Wilder Goodwin, the author of "The Colonial Cavalier," contained an account of certain passages in the life of Humphrey Hutton, an anonymous officer in the Colony of Virginia, and "Daughters of the Revolution and Their Times, 1768-1776," was yet another historical romance, by Charlotte Carleton Coffin. An episode of the civil war was chosen by Stephen Crane for the theme of his spirited novel "The Red Badge of Courage," and two other war stories were "Jack Allen: A Story of Adventure in the Virginia Campaigns, 61-65," by Warren Lee Goss, and "Under the War Flags of 1861," a romance of the South, by William Leverage Pickard. Joan of Arc formed the theme of "The Shield of the Fleur de Lis," by Constantine Goldard Du Bois, who published also "A Modern Pagan." Other stories with a French setting were: "The Friend of the People," by Mary C. Rowell, a tale of the reign of terror; "Idwymon," a story of Napoleonic complications, Orleans and Bourbon entanglements, by Frederick A. Randile; and "Camaraderie by Command," a story of Napoleon at play, by M. M. Blake. "The American in Paris," was a biographical novel of the Franco-Prussian War, the siege and the Commune of Paris, from an American standpoint, by Eugene Coleman Savidge, and yet again we have "The Red Republic: A Romance of the Commune," by Robert W. Chambers. "Doty Donkers," a story of the garden of the Antilles, by Mary Farrington Foster, had an introduction by Fred. Elliott Coates. From Archibald Claverling Gunter we had two books, "The First of the English" and "The Ladies' Juggernaut"; J. A. Mitchell chose an unusual theme for his first novel, "Amos Judd," and two novels with a foreign setting were "A Norse Idyl," by Calvin Gale Horne, and "Diplomatic Disengagement," by Mrs. Edith Bigelow. Carlisle B. Holding described "An Odd Fellow," as Julian Starr did "The Disagreeable Woman," and Frances E. Russell "A Quaint Spinster." "The Veiled Doctor" was the title of a strong, if gruesome, story by Varina Anne Jefferson Davis, a daughter of the late President of the Confederate States. Music was the theme of "Miss Träumerei: A Weimar Idyl," by Albert Morris Bagby, and "The Minor Chord," a story of a piano duet, by J. Mitchell Chapple. Mrs. Reginald de Koven wrote "A Sawdust Doll"; C. E. Francis, "Every Day's News"; Clement Wilkes, "Sidney Forester"; Mrs. Katharine S. Macquoid, "Berris"; Mary Barrett Norris, "Lakewood"; Mrs. Julia Callahan Flavellyn, "Hill-Crest"; Mrs. Evelyn H. Raymond, "The Mushroom Cave"; George Herbert Bartlett, "Water Tramps; or, The Cruise of the Seabird"; Mrs. Lida Ostrem Venance, "Two Women; or, Over the Hills and Far Away"; and Amy E. Blanchard, "Girls Together." "The Master Knot, and 'Another Story,'" by Conover Duff, appeared in

the "Buckram Series"; and Jean Forsyth, told of "The Making of Mary." Jessie Van Zile Holden met "Fate at the Door," and Ethel Davis found something left after all "When Love is done." Blanche Peering told the story of "Roberta." "The Lady and her Tree," by Charles Stokes Wayne, was professionally a story of society; as was "Fanny Elliott: A Story of Society and Bohemia," by Clarence H. New. H. S. Wells described "The Time Machine; An Invention." "The Young Reporter: A Story of Printing-House Square," by William Drysdale, came out in the "Brain and Brawn Series"; Mabel Henshaw Ward published "The Diary of an Old Maid." Francis Tillou Hawk settled the affairs of "A Man of Two Minds," and "Miss Jerry," by Alexander Black, proved interesting as expanded from a reading into a novel. "His Way and Hers," by W. A. Robinson; "Three-and-Twenty," by Mrs. Nathaniel Conklin (Jennie M. Drinkwater); "The House of Hollister," by Fanny E. Newberry; and "Almost a Genius," by Adelaide L. Koss, were all helpful in tone. Elizabeth Knight Tompkins attempted the social problems in "Her Majesty," a romance of to-day. William H. Bishop solved the labor question to his satisfaction in "The Garden of Eden, U. S. A.," and a strike is described with effect in "Men Born Equal," by Harry Perry Robinson. "An Experiment in Altruism" was by Elizabeth Hastings (Margaret Pollock Sherwood). "A Street in Suburbia," by Edwin W. Pugh, "The Human Drift," by King C. Gillette, and "Altruism," by Tine K. Smith, deal also with social questions, and "A Modern Despotism," by Marcus Peterson, claimed to be a true story of American political life in 1900. "A Daughter of the Tenements," by Edward W. Townsend, the successful author of "Chronic Follies," was illustrated by E. W. Kemble, and from Alvan Francis Sanborn we had "Moody's Lodging-House and Other Tenement Sketches." "Doctor Julian," by William Kossor Cobbe, was intended as a portrayal of the opium habit, and "A Voice in the Wilderness," by Maria Weel, also protested against it. "At Last," by Mrs. Maria E. Lander, was written from the W. C. T. U. standpoint. Frances Campbell Spenshaw again made a plea for the Indian in "Anger, Intrigue and Inspectors Noddy: A Tale of Spain." "A Minister of the World," by Caroline Atwater Mason, "A Great Appointment," by Myra Goodwin Plantz, "The Rev. John Henry," by Freviel R. Benson, and "One Woman's Story," by Ellen A. Lane, were religious in tone; "What I told Dorian," by Mary E. Ireland, was intended for mission workers; and "Zeinab, the Panjahi," by E. M. Wherry, D. D., claimed to be founded on facts. "Religious from a Parsonage Veranda" we owe to Mrs. E. Juliette Graham. "The Fisherman's Daughters," by Anne Kendrick Benedict, "Five Stars in a Little Pool," by Edith Carrington, and "A Wolf—A Prisoner," by Rev. W. T. Andrews, were written with a motive, as was also "After which all Things," by George W. Warder. Among books written for amusement solely, and with no attempt at edification, are to be mentioned "Patricia," a sequel to "Two Bad Brown Eyes," by Marie St. Felix; "The Kiss of Mrs. Simpson," by Robert Appleton (Roman I. Zahed); "A Title Rejected," by Octavia Channing; "A Modern Pharisee," by Edward De House; "Sarah Martha in Paris," by Salome Boesman; "Campaigns of Civility," an account of the journalistic adventures of an American girl in London, by Elizabeth L. Banks; "Paul St. Paul," by Ruby Feryl Kyrie; "The Last of the Danvers," by Edward Lyman Bull; and Alvan Ross's two books, "Out of Waylock" and "A Black Adam." Richard Henry Stoddard was prolific as ever, publishing "Miss Devereux of the Marquise," a story of bonanza days in Nevada; "A Daughter of Judah," a *fin de siècle* tale of New York city life; and "In the Old Chateau," a story of Russian Poland. Hallie Erskine Elives, a cousin of Annie Elives, contributed "A Fool in Spots." "The Strange Disappearance of Eugene Comstock," by Mrs. Mary R. F. Hatch, and

"Caught: A Romance of Three Days," by George Douglas Tallman, were both detective stories; "A Social Highwayman" was the hero of Elizabeth Phipps Train, and "Konbar," by R. S. Dement, advanced opinions and facts connected with the free coinage of silver. William Gill told of "The Woman Who Didn't" and William C. Hudson (Barclay North) asked "Should She have left Him?" "Storm King" was a story of want and wealth which involved the invention of an air ship, and another improbable story was "Thomas Boobig," by Luther Marshall. "The Mystery of Evelin Delorme" was a hypnotic story by Albert Bigelow Paine; spiritualism was the answer to "Pilate's Query," according to S. C. Clark; and theosophy was responsible for "Etidorpha; or, The End of Earth," by Jewell Lyn Drury and John Uri Lloyd, a handsomely illustrated volume of philosophical fiction; as well as for "The Double Man," by F. B. Dowd, "The Hidden Faith," by Alwyn M. Thurber, and "In the Sanctuary," by A. Van der Naillen. Psychic science was touched upon in "Zaphra," by John P. Stockton, and "Brother of the Third Degree," by Win. L. Garver, must close the list of works of the kind. "A Savage of Civilization" was published anonymously; Wilbertine Teters entitled her novel "The Snows of Yesteryear"; and in the "Enterprise Series" we had "The Adventures of Uncle Jeremiah in the South," by C. M. Stevens; and "An Appalling Passion," by Steele Mackaye.

Volumes of short stories not previously mentioned were: "Foam of the Sea, and Other Stories," by Gertrude Hall; "A Mad Madonna, and Other Stories," by L. Clarkson Whitelock; "Yarns," by Alice Turner; "Old Man Savarin, and Other Stories," by Edward W. Thompson; "The Old Settler, the Squire, and Little Peleg," by Edward Mott; "Bunch-Grass Stories," by Mrs. Lindon W. Bates; "College Girls," by Abbe Carter Goodloe; "The Nimble Dollar; with Other Stories," by Charles Miner Thompson; "Tales of an Engineer," with rhymes of the road, by Cyrus Warman; "A Man without a Memory, and Other Stories," by W. H. Shelton; "Tenement Tales of New York," by J. W. Sullivan; "People we Pass," life among the masses of New York city, by Julian Ralph; "Princeton Stories," by Jesse Lynch Williams; "Yale Yarns," by John Seymour Wood; "A Cumberland Vendetta, and Other Stories," by J. Fox, Jr.; "Aunt Billy, and Other Sketches," by Alyn Yates Keith (Mrs. Eugenia L. Morris), the author of "A Hilltop Summer"; "Hippolite and Golden-Beak: Two Stories," by George Bassett, in the series of "Harper's American Story-Tellers"; "An Accidental Romance," by William Sidney Rossiter; "The Bachelor's Christmas, and Other Stories," by Robert Grant; "Red Men and White," by Owen Wister; "A Truce, and Other Stories," by Mrs. Mary Tappan Wright; "The Face and the Mask," by Robert Barr; "Kitwyk Stories," of Holland, by Anna Eichberg King; "Men's Methuselah, and Other Episodes," by Harriet Ford; "Legends of Fire Island Beach and the South Side," by Edward R. Shaw; and "From Dixie to Canada," romances and realities of the underground railroad, by H. U. Johnson. An edition of Cooper's novels, known as the "Mohawk Edition," was published during the year, in 32 volumes; and Thomas Nelson Page's "Uncle Edinburg" was made into a holiday volume, uniform with "Marne Chan" and "Meh Lady," and illustrated by B. W. Clinedinst. William McCrillis Griswold published "A Descriptive List of Novels and Tales dealing with the History of North America"; Part I of a similar volume covering ancient history; "A Descriptive List of Books for the Young"; and a new enlarged edition of "A Descriptive List of International Novels."

Fine Arts.—In summing up the literature of art for the year we find fundamentals treated in "Aesthetic Principles," by Henry Rutgers Marshall, the author of "Pain, Pleasure, and Aesthetics"; George Lansing Raymond considered "Painting, Sculpture, and Architecture as Representative Arts" in a profusely illustrated volume, which he termed in subtitle an essay

in comparative æsthetics, and which follows out the principles laid down in "Art and Theory," published by him last year, as applied to the arts of sight. Two other essays on "Rhythm and Harmony in Poetry and Music" and "Music as a Representative Art," also from his pen, were bound in one volume. John La Farge published lectures given by him at the Metropolitan Museum of New York, under the title of "Lectures on Art, Considerations on Painting," and John C. Van Dyke was an authority upon "Old Dutch and Flemish Masters," the engravings of which (80 in number) were the work of Timothy Cole, from the original paintings, and were collected from the "Century Magazine," in which they have appeared during the last three years. The book was intended as a companion volume to "Old Italian Masters." Frank Preston Stearns treated of "The Midsummer of Italian Art," and William Orinway Partridge of the "Technique of Sculpture." "A Cyclopædia of Architecture in Italy, Greece, and the Levant," edited by William P. Longfellow, was a sumptuous quarto, abounding in illustrations, which represented the labor of years in preparation, and was issued in uniform style with the "Cyclopædia of Painters and Painting" and "Cyclopædia of Musicians." William Winter brought out a third series of "Shadows of the Stage," and Charles E. L. Wingate dealt with "Shakespeare's Heroines on the Stage." S. S. Curry published Course I of "Lessons in Vocal Expression," given to "Principles of Thinking in the Modulation of the Voice." John H. Knewald compiled "The Musician's Leisure Hour," full of facts and fancies of interest to the music lover, and Margaret Reintzel arranged "The Musician's Year-book." Anna Siedenburg gave instruction in the different kinds of "Glass Painting," and Mrs. Flora E. Haines published "A Ceramic Study" of half a dozen dinner plates. Aimée Osborne Moore made "Studies in the Science of Drawing in Art." James Brander Matthews contributed "Bookbinding, Old and New: Notes of a Book Lover" to the "Ex-Libris Series." Foremost among illustrated works is to be mentioned "The Abbey Shakespeare," or, more properly, "The Comedies of Shakespeare," in 4 volumes, containing 131 full-page photogravure reproductions of drawings by Edwin A. Abbey; and from another publisher we had reproductions of "The Quest of the Holy Grail," a series of paintings done by the same artist for the decoration of the delivery room in the Boston Free Public Library, with descriptive text. Gilbert White's "Natural History of Selborne" was brought out in a handsome holiday form in 2 volumes, illustrated by Clifton Johnson, and furnished with an introduction by John Burroughs, who, with the artist, visited the quaint little Hampshire village in order that the part of each might be performed satisfactorily. Another beautiful book of American manufacture was Edmund H. Garrett's "Victorian Songs," a companion volume to his "Elizabethan Songs." Joseph Jefferson's "Rip Van Winkle" was illustrated with drawings and photogravures; 5 from paintings of the actor himself; and yet other gift books were "Dames of High Degree," by Thomson Willing, portraits of beautiful women by old English masters; "A Cluster of Gems," selections of poems, edited by Volney Streamer, with facsimiles of water-color paintings by Ellen G. Emmet; "Facsimiles of Water Colors," by W. Granville Smith; and "Fair Women of To-day," previously unpublished poems by Samuel Minturn Peek, illustrated with facsimiles of paintings in water color by Caroline C. Lovell. Irving's "Tales of a Traveler" were issued in 2 volumes of the "Buckthorne Edition," uniform with "The Alhambra" and "Sketch Book." Frederiek Remington furnished 22 full-page illustrations for "The Song of Hiawatha," and Mrs. Jane G. Austin's "Standish of Standish" received artistic treatment at the hands of F. T. Merrill. Scott's "Rob Roy," "The Betrothed," and "The Talisman," and De Amicis's "Spain and the Spaniards" were made into superb volumes.

General Science.—Works falling under this head were, as usual, largely of a popular character. Among the first in point of interest is to be mentioned "Domesticated Animals: Their Relation to Man and to his Advancement in Civilization," by Prof. Nathaniel Southgate Shaler, illustrated by such famous artists as Delart, of Paris, who drew the horses; Hermann Lang, the dogs; Edwin Lord Weeks, the beasts of burden; and Ernest E. Thompson, the Canadian ornithologist, the birds. Rush Shippen Hindekoper, M. D., made a study of "The Cat." "Elementary Lessons in Zoology," by James G. Needham, was intended as a guide in studying animal life and structure in field and laboratory, and Margaretta Burnet prepared a "Zoology for High Schools and Academies." "Geological Biology," by Henry Shaler Williams, proved no less interesting to the general reader than to the students in universities and colleges, and Davis Starr Jordan published under the title of "The Factors in Organic Evolution" a syllabus of a course of elementary lectures delivered in Leland Stanford, Junior University. Biological lectures delivered at the Marine Biological Laboratory of Wood's Holl in the summer session of 1894 were collected into a volume and an outline of the forms and probable relationships of "Fishes Living and Fossil," illustrated by the author, Ashford Dean, appeared in the "Columbia University Biological Series," edited by Henry F. O. Iles Coates. Parts IX, X, XI, and XII of the second volume of H. Nehrling's "North American Birds" were issued; "Birdcraft," by Mabel Osgood Wright, was a handbook of 300 song, game, and water birds, with numerous full-page plates; Frank M. Chapman wrote a "Handbook of Birds of Eastern North America"; and Dan Giraud Elliot "North American Shore Birds," a reference book for the naturalist, sportsman, and lover of birds. Prof. M. A. Wilcox supplied a "Pocket Guide to the Common Land Birds of New England," and a new edition of Henry D. Minot's "Land Birds and Game Birds of New England" was published, edited by William Brewster. Prof. John Henry Comstock and Anna Botsford were joint authors of "A Manual for the Study of Insects," "Fruit Children of the Air," as Samuel Hubbard Knapp entitled his excursions into the world of butterflies, consisted of selections for the general reader from his costly work upon the "Butterflies of the Eastern United States and Canada." Parts XV and XVI of W. H. Edwards's third series of "The Butterflies of North America" appeared, and yet two other useful little books were "The Night Moths of New England" and "The Day Butterflies and Dusk-flies of New England," by Edward Knobel. Vol. VII of "The Silva of North America," by Charles Sprengle Sargent, was issued, devoted to "Cupulifera." Emily L. Gregory set down the "Elements of Plant Anatomy," and D. T. Macdougall treated of "Experimental Plant Physiology" for American students. William Hamilton Gibson not only told of "Our Edible Toadstools, and How to Distinguish them," but illustrated the selection of 30 native food varieties with many full-page colored plates and 57 drawings in black and white. "Wild Flowers of the Northeastern States" were drawn and described from life by Ellen Miller and Margaret Christine Whiting, and a new revised and enlarged edition was issued of Mrs. Frances Theodora Dana's "How to know the Wild Flowers," to which 52 new plates were added and descriptions of 60 additional flowers. "Familiar Flowers of Field and Garden" were described and illustrated by F. Schuyler Matthews; Edward Knobel furnished "A Guide to find the Names of all Wild-growing Trees and Shrubs of New England by their Leaves," and another for the determination of "Ferns and Evergreens of New England." The relations existing between "Ten New England Blossoms and their Insect Visitors" were traced in a dainty volume from Prof. Clarence Moores Wood, and W. Whitman Bailey was at home "Among Rhode Island Wild Flowers." S. C. Young illustrated with many photogravures from the living

plant "All of Nature's Fashions in Lady's Slippers for the Northern and Eastern Parts of the United States." In astronomy we have a handsome volume upon "Mars," by Percival Lowell, the result of a special study of that planet from an observatory at Flagstaff, Arizona, erected for the purpose during the last opposition; "The Source and Mode of Solar Energy throughout the Universe," by J. W. Heyliger, M. D., and "Studies in Spherical and Practical Astronomy," by George C. Comstock, the last a bulletin in the "University of Wisconsin Science Series." "Meteorology" was the subject of a volume by Thomas Russell. "Minerals and how to study them" was a book for beginners in mineralogy by Edward Salisbury Dana, and Alfred J. Moses and Charles Lethrop Parsons were joint authors of "Elements of Mineralogy, Crystallography, and Petrology Analysis" from a practical standpoint. William Herbert Hubbs made "A Contribution to the Mineralogy of Wisconsin" in the bulletins published by the University of that State, and a monograph upon "The Constitution of the Silicates," by Prof. Frank W. Clark of the United States Geological Survey was sent out by the Government Printing Office. From John H. Long appeared "An Elementary Course in Experimental and Analytical Chemistry"; Ira Remsen and Wyatt W. Randall published "Chemical Experiments prepared to accompany Remsen's 'Introduction to the Study of Chemistry'"; a "Laboratory Manual of Inorganic Preparations," by H. T. Voile and George M. S. Neustadt, was designed to meet a long-felt want in training the student to prepare and test his own reagents; E. W. Morley added a monograph "On the Densities of Oxygen and Hydrogen and on the Ratio of their Atomic Weights" to the "Smithsonian Contributions to Knowledge"; and a "Manual of Home-made Apparatus, with Reference to Chemistry, Physics, and Physiology" was a small but helpful publication by John F. Woodhull. "The Principles of Physics" were set forth by Alfred P. Gage in an entirely new work; S. P. Meads arranged "Elements of Physics for Use in Secondary Schools"; Part I of "Physics for University Students," by Henry S. Gantt, covered "Mechanics, Sound, and Light." Vol. III of "The Elementary Principles of Mechanics," by A. J. Du Bois, was devoted to "Kinetics"; A. D. Kisteen treated of "Molecules and the Molecular Theory of Matter" in a popular manner; and Robert Stevenson in "Elasticity a Mode of Motion" gave a popular description of a new discovery in science. Two volumes contained the "Fourteenth Annual Report of the United States Geological Survey" for the year 1892-93 by the then director, J. W. Powell, and from the same distinguished authority we have several brochures, published in the series of "National Geographic Monographs," into which he has condensed the results of a lifetime of study and exploration. These are respectively "Physiographic Regions of the United States," "Physiographic Provinces," and "Physiographic Features," the two last illustrated. To the same series Prof. G. K. Gilbert contributed "Niagara Falls and their History"; Prof. Nathaniel S. Shaler, "Beaches and Tidal Markings of the Atlantic Coast"; William Morris Davis, "The Physical Geography of Southern New England"; C. Willard Hayes, "The Southern Appalachians"; and Lewis Clark Russell, "Present and Extinct Lakes of Nevada." From the last-mentioned author we had also a volume upon "Lakes of North America," intended as a reading lesson for students of geography and geology. Prof. R. S. Woodward prepared the "Smithsonian Geographical Tables," the second volume of the new series of valuable tables issued by that institution. In ethnology we have "A Primer of Mayan Hieroglyphics," by Dr. Daniel G. Branton, in the "Publications of the University of Pennsylvania," and "Notes on the Ethnology of Tibet," by William Woodville Rockhill, taken from the "Report of the United States National Museum." "The Origins of Invention," a study of industry among primitive peoples, by Prof. Otis T. Mason, appeared in the "Contemporary Sel-

ence Series." "Some First Steps in Human Progress" were traced by Frederick Starr, who also contributed an introduction to "The Beginnings of Writing," by Walter J. Hoffman, M. D., in the "Anthropological Series."

To mental philosophy there were some important additions, notably "Philosophy of Mind," an essay in the metaphysics of psychology, by George Trumbull Ladd, and "Mental Development in the Child and the Race," the methods and processes of which were traced by Prof. James Mark Baldwin. "Thinking, Feeling, Doing," by Dr. E. W. Scripture, Director of the Psychological Laboratory in Yale University, is, it is claimed, "the first book on the new or experimental psychology written in the English language," and contains over 200 illustrations. "The Growth of the Brain," a study of the nervous system in relation to education, was contributed by Prof. Henry Herbert Donaldson to the "Contemporary Science Series"; a second edition was issued of "The Psychology of Childhood," by Frederick Tracy; and an introduction to the study of mental phenomena was offered by E. A. Kirkpatrick under the title of "Inductive Psychology." "The Unity of Fichte's Doctrine of Knowledge," by Anna Boynton Thompson, one of the "Radcliffe College Monographs," had an introduction by Josiah Royce; "Comte, Mill, and Spencer," by Prof. John Watson (Canada), was presented as an outline of philosophy according to the tenets of the idealistic school; C. C. Post published "Metaphysical Essays"; "Elements of Inductive Logic" were treated by Prof. Noah K. Davis in a companion volume to his "Elements of Deductive Logic"; and in mathematics we have "Elements of Descriptive Geometry," by C. W. MacCord, with applications to isometrical and cavalier projection; "Elements of Geometry, Plain and Solid," by John Macnie, edited by Emerson E. White; "Problems of Differential Calculus Supplementary to a Treatise on Differential Calculus," by W. E. Byerly; and "An Experimental Study of Field Methods, which will insure to Stadia Measurements greatly Increased Accuracy," a thesis for the degree of civil engineer submitted to the University of Wisconsin by Leonard Sewal Smith. Park Benjamin wrote a history of "The Intellectual Rise in Electricity"; Francis E. Nipher, "Electricity and Magnetism," a mathematical treatise for advanced undergraduate students; Arthur Vaughan Abbott, "The Electrical Transmission of Energy," a manual for the design of electrical circuits; H. T. Parshall and H. M. Hobart described "Armature Windings of Electric Machines"; Edward Trevert contributed "Electricity for Students"; Philip Atkinson "Electricity for Everybody"; D. E. Connor "A Treatise on Electro-magnetism"; and A. E. Watson told "How to build a Fifty-Light Dynamo or Four Horse-Power Motor."

History.—Brooks Adams covered the whole field of the philosophy of history in "The Law of Civilization and Decay." Vol. IV appeared of "A History of the People of the United States from the Revolution to the Civil War," by John Bach McMaster, devoted largely to the War of 1812, and Vol. III was also issued of James Ford Rhodes's "History of the United States from the Compromise of 1850," covering the period of 1840-62. "The Making of the Nation, 1783-1817" was traced by Gen. Francis A. Walker in the "American History Series," and "The Mississippi Basin," by Justin Winsor, carried on the struggle in America between England and France from 1697 to 1763, with full cartographical illustrations from contemporary sources. "The Campaign of Trenton, 1776-77" was commemorated by Samuel Adams Drake in the series of "Decisive Events in American History," and Henry Ferguson contributed "Essays in American History." "The Growth of the American Nation," by Harry Pratt Judson, belonged to the "Chautauqua Reading Circle Literature"; Harlow Godard prepared "An Outline Study of United States History"; Mrs. Susan Pendleton Lee wrote "A School History of the United States," to which

Louise Manly contributed questions and summaries for reviews and essays; Dr. Oscar H. Cooper, in collaboration with Harry F. Estill and Leonard Lemon, prepared a "History of Our Country," also a text-book for schools, written from a Southern point of view, but without sectional prejudice; and William H. Mace was the author of "A Working Manual of American History for Teachers and Students." "Turning on the Light: A Dispassionate Survey of President Buchanan's Administration from 1860 to its Close," by Hon. Horatio King, is in reality a defense of that Executive against the charge of treason in his relations to the Southern States; Noah Brooks pictured "Washington in Lincoln's Time," from personal recollection and scrapbooks kept during that period. A new enlarged edition was issued of the two volumes published by the Massachusetts Military Historical Society, covering respectively "Campaigns in Virginia, 1861-1862" and "The Campaign of 1862 under General Pope." A new limited edition also appeared of "Ohio in the War," by Whitelaw Reid, and J. T. Scharf's "History of the Confederate States Navy" went through a second edition. In the "Johns Hopkins University Studies" "The Provisional Government of Maryland (1774-1777)" was treated by John Archer Silver; "Government of the Colony of South Carolina," by Edson L. Whitney; "The Early Relations between Maryland and Virginia," by John H. Latané, "Is History Past Politics?" by Herbert B. Adams, being included in the volume; "White Servitude in the Colony of Virginia," by James Curtis Ballagh; "The Genesis of California's First Constitution (1846-49)," by Rockwell Dennis Hunt; and "The International Beginnings of the Congo Free State," by Jesse Siddall Reeves. "Europe in Africa in the Nineteenth Century" was the theme of Elizabeth Wormeley Latimer. The "Mutiny of the Bounty and Story of Pitcairn Island, 1790-1894" was written by Rosalind Amelia Young, a descendant of one of the mutineers and a native of the island. "Arcadia: Missing Links of a Lost Chapter in American History," by Edward Richard (An Arcadian), filled two volumes; "The Story of the Indian," by George Bird Grinnell initiated the "Story of the West Series," edited by Ripley Hitchcock; and Alexander Scott Withers's "Chronicles of Border Warfare," first published in 1831, were edited with annotations by Reuben Gold Thwaites. Anna L. Bicknell told from personal observation of "Life in the Tuileries under the Second Empire," having been for nine years a governess in the family of the Duchesse de la Pagerie. "Brief Outlines in European History" was a syllabus designed for the use of students in history, by Earle Wilbur Dow, and a valuable contribution was made by Prof. Philip Van Ness Myers in "A History of Greece for Colleges and High Schools." Mrs. Mary Parmele gave a brief historical sketch of England, entitled "The Evolution of an Empire"; Henry M. Baird concluded the historical series begun by him with the "Rise of the Huguenots" and the "Huguenots and Henry of Navarre," with 2 volumes upon "The Huguenots and the Revocation of the Edict of Nantes"; Frances Gregor told "The Story of Bohemia"; "The Jew and the German; or, From Paul to Luther" was an historical study by Franke Kelford; while Edward S. Holden chronicled "The Mogul Emperor of Hindustan, A. D. 1398-A. D. 1707." H. J. Desmond revived "Mooted Questions of History." The issue of Vols. IV and V completed "History for Ready Reference from the Best Historians, Biographers, and Specialists," by Josephus Nelson Larned, and from Prof. J. Franklin Jameson we had a "Dictionary of United States History, 1492-1895." "New York City and Vicinity during the War of 1812-15" was a military, civic, and financial local history of that period, with incidents and anecdotes, in 2 volumes, by R. S. Guernsey, and "A History of the City of Brooklyn and Kings County," by Stephen M. Ostrander, also in 2 volumes, was edited with an introduction and notes by Alexander Black. "Municipal Consolidation: Historical Sketch of the Greater New

York," by Albert E. Henschel, was brief and popular in form, and presented the views of the author, who was Secretary of the Municipal Consolidation Inquiry Commission. Part I appeared of the first number of "The Lower Norfolk County Virginia Antiquary," edited by Edward W. James. A tiny useful volume was "A Pocket History of the Presidents and Information about the United States," compiled by Thomas Rand. Vol. I of the first series of "Official Records of the Union and Confederate Navies in the War of the Rebellion," published under the direction of the Secretary of War, covered "The Operations of the Cruisers from Jan. 19, 1861, to Dec. 31, 1862."

Housekeeping.—As usual, but few works are to be mentioned as falling under this department. Foremost among them, however, is "The Century Cook-book," by Mary Ronald, which not only contained formulas for every-day needs, but covered the etiquette of entertainments, decorations for the same, etc., the illustrations being from photographs. Mrs. Charles H. Gibson was the author of "The Maryland and Virginia Cook-book," and "The Little Epicure" contained 700 choice receipts, each accompanied by the price of the materials employed. "The Murrey Collection of Cookery Books," by Thomas J. Murrey, originally published separately, were collected into one volume, and a new revised edition appeared of the "Complete Housekeeper," by Mrs. E. K. Parker. "European and American Cuisine," emanated from Gustav Lemecke, author of "Desserts and Salads," and principal of the Brooklyn Cooking College.

Jurisprudence.—"A Treatise upon Some of the General Principles of the Law," in 7 volumes, by Charles T. Bacon, was intended as a supplement to Wail's "Actions and Defenses," and from the same author appeared a "Text-book of Law and Practice," for students and young practitioners, in the form of questions and answers. Edwin E. Bryant published "The Outlines of Law"; a second edition was issued of Isaac Franklin Russell's "Outline Study of Law," and a tenth edition of Timothy Walker's "Introduction to American Law" was revised by Clementt Bane. Lawrence O. Murray and Charles E. Riordon collaborated upon the "Student's Review of Law and Equity." William A. Alderson prepared "A Practical Treatise upon the Law of Judicial Writs and Process in Civil and Criminal Cases," and a second edition of Benjamin J. Shijman's "Handbook of Common Law Pleading" was made an issue of the "Hornbook Series." "Pleadings and Forms," by Charles Hogg, was a practical treatise on the system of common-law pleading supplemented with numerous precedents and declarations, plans, replications, and court orders now in use in the State of West Virginia, while "The Principles of Argumentation" were laid down broadly by George Percy Baker. Three volumes of an "Encyclopedia of Pleading and Practice," compiled under the editorial supervision of William M. McKinney, were issued, the last covering from attachment to certified cases; "Lectures on Law," delivered by Judge Arthur MacArthur before the Spencerian Business College of Washington, D. C., were collected into a volume, and a second edition was issued of the "Examination Compend for Law Students" of the District of Columbia. A "Handbook of American Constitutional Law," by Henry Campbell Black, was issued in the "Hornbook Series"; James Bradley Thayer published Parts III and IV of "Cases on Constitutional Law," and for the use of students William C. Sykes prepared "Quizzer, No. 5," and Earl P. Hopkins "Problems and Quiz on American Constitutional Law." "Modern Equity," by Charles Flak Beach, Jr., filled 2 volumes, and from Norman Fetter came a "Handbook of Equity Jurisprudence," in the "Hornbook Series," and "Illustrative Cases upon Equity Jurisprudence." Another volume bearing the same title as the last was selected (largely from it) by Prof. H. R. Hutchins. Two volumes contained "A Treatise on Equity Practice in Pennsylvania," by F. Carroll Brewster, and Vol. I was sent to press of "Equity in Pennsylvania," by Ellis Ames Ballard.

"The Principles of Equity and Equity Pleading," by Elias Merwin, was edited by H. C. Merwin, and "A Review in Law and Equity for Law Students" was a useful handbook by George E. Gardner. Earl P. Hopkins again contributed "Problems and Quiz on Equity Jurisprudence." From Austin Aldrich came "Select Cases on the Law of Evidence as applied during the Examination of Witnesses," with notes, and a second enlarged edition was issued of his "Select Cases on Code Pleading." "Ohio Decisions on Evidence" were collected by Seymour Cunningham. "The Law and Principles of Evidence" were illustrated by questions and answers by Peter F. Smith, and R. C. Minor drew up an "Analytical Abstract of Greenleaf on Evidence and Prof. Gilmore's Notes on Greenleaf." Vol. I of the fourth edition of "New Criminal Procedure," by Joel Franklin Bishop, "being a new work based on former editions," was complete in itself, and was entitled "General and Elementary." A second edition, revised and enlarged, was published of "A Practical Treatise on Criminal Law and Procedure in Criminal Cases," by John H. Gillett; "Selected Cases on Criminal Law" were annotated and arranged by William L. Clark, Jr., with reference to "Clark's Handbook of Criminal Law," practically identical with which were "Fisher's Selected Cases on Criminal Law." "Cases on Torts" were edited by Melville M. Bigelow to accompany his own work on that subject; Hon. Thomas M. Cooley was an authority upon "The Elements of Torts"; and 2 volumes contained the "Handbook of the Law of Torts," by Edwin A. Jaggard, in the "Hornbook Series." "Machon's Cases on the Law of Damages" were printed for use in connection with the professor's lectures in the law school of the University of Michigan, as were "Machon's Cases on the Law of Succession to Property after the Death of the Owner." James M. Kerr filled 2 volumes with "A Treatise on the Law of Real Property"; as Lewis N. Dembitz did 2 with "A Treatise on Land Titles in the United States." Part II of "Illustrative Cases in Realty," by W. S. Patton, covered "Estate in Land," and Part III, "Title to Estates." Robert Ludlow Fowler's "History of the Law of Real Property in New York" was intended as an easy introductory to the study of the revised statutes of that State. "Practice in Matters of Cost," by George W. Bradner, contained a table of cases and appendix of fees; "Illustrative Cases upon the Law of Bills and Notes" were selected and annotated by Eliza F. Johnson, and a second edition of Charles P. Norton's "Handbook of the Law of Bills and Notes," in the "Hornbook Series," had an additional chapter on checks by William L. Clark, Jr. Roscoe W. Hefron set forth the "Elements of the Law of Agency," and James Paige supplied "Illustrative Cases in Agency with Analysis and Citations." Five volumes were issued of the 6 which will contain "Commentaries on the Law of Private Corporations," by Seymour D. Thompson; Vol. III appeared of the "American Corporation Legal Manual," edited by Charles J. Hengemyer; and from Henry C. Van Schenck we had "Van Schenck's Manual for Corporations." "Membership and Religious Corporations" were the theme of Robert C. Cunningham and Frank R. Gilbert. "The Law of Voluntary Societies, Mutual Benefit Insurance and Accident Insurance" was set forth by William C. Niblack, and "An Outline of the Law of Insurance" emanated from C. R. Elliot. Vol. I was published of "American Negligence Cases," prepared and edited by T. F. Hamilton; "The Law of Negligence in New York" was traced by John Brooks Leavitt, who condensed, codified, and classified all the reported cases in negligence and kindred subjects in the court of last resort of that State in Jan. 1, 1895; and Charles A. Ray considered "Negligence of Imposed Duties, Carriers of Freight." Simon G. Croswell wrote "A Treatise on the Law relating to Electricity," and Vols. II and III of "American Electrical Cases," edited by William W. Merrill, covered the years 1888-89 and 1890-92. A fifth edition appeared of

"A Treatise on the Law of Domestic Relations," by James Schouler; Richard A. Ballinger published "A Treatise on the Property Rights of Husband and Wife"; and William T. Nelson "A Treatise on the Law of Divorce and Annulment of Marriage" in 2 volumes. "The Legal Status of Married Women in Massachusetts," as set forth by George A. O. Ernst, was published by the Woman Suffrage Association. Vol. XIX of "Decisions of the Department of the Interior and General Land Office in Cases relating to Public Lands," edited by S. V. Proudft, covered the six months from July to December, 1894; Thomas B. Hall gave an "Outline of the Infringement of Patents for Inventions, not Designs," based solely on the opinions of the Supreme Court of the United States; and Francis M. Wright sent out "Wright's Annual Index of Patent Practice, 1894." Other important works were "A Treatise on the Law of Marine Collisions," by Herbert R. Spencer; the "Law of Naturalization in the United States of America, and of Other Countries," by Prentiss Webster; a second edition of "The Law of Building Associations," by Gustav A. Endlich; "The Road Rights and Liabilities of Wheelmen," by George B. Clementson; and Vol. II of "Medical Jurisprudence, Forensic Medicine, and Toxicology," by R. A. Withaus and Tracy C. Becker. "The Law relating to the Production and Inspection of Books, Papers, and Documents in Pending Cases" was the subject of an address delivered by Thomas J. Sutherland before the Illinois State Association. Vols. XXVII and XXVIII appeared of the "American and English Encyclopedia of Law," compiled under the editorial supervision of Charles F. Williams, by David S. Garland, as well as Vols. XLVI, XLVII, and XLVIII of "American and English Corporation Cases" and Vols. LIX, LX, and LXI of "American and English Railroad Cases," both edited by William M. McKinney. Vols. I, II, and III of "A Digest of Railway Decisions," embracing all the cases from the earliest period of railway litigation to the present time in the United States, England, and Canada, were the work of Stewart Rapalje and William Mack, and Vol. II was issued of "American Street-Railway Decisions," edited by Charles A. Richardson and Alfred J. Hook. Vols. X and XI of "American Railroad and Corporation Reports" were published. A "Digest of Decisions and Precedents of the Senate and House of Representatives of the United States, relating to their Powers and Privileges respecting their Members and Officers," by Henry H. Smith, came from the Government Printing Office at Washington. The tenth annual volume of the "General Digest of the Decisions of the Principal Courts of the United States, England, and Canada" was received, as well as Vols. XXXIX to XLV of "American State Reports," edited by A. C. Freeman; Books VI to XIX of "Federal Cases," Books XXV to XXVIII of "Lawyers' Reports," and the annual "American Digest" for 1895, as well as the various "Reporters' series" and "Reports" of the several States. Austin Abbott prepared "A Digest of New York Statutes and Reports from Jan. 1, 1894, to Jan. 1, 1895," a third edition was made of "A Treatise on the Common and Statute Law of the State of New York," and among publications of sectional value may be mentioned "Citations to the Code of Virginia," by Abram C. Eby; "Civil and Criminal Codes of Practice and Amendments enacted prior to 1895," in Kentucky, with notes, etc., by Hon. Joshua Bullitt; "A Citation of Supreme and Appellate Courts Decisions" of Indiana, by Shaffer Peterson; and Vol. II of "A Digest of the Decisions of the Supreme Court" of Kansas, by C. F. W. Dwyer. "The Assessor's, Collector's, and Town Clerk's Manual," by Will Lansing, met many requirements. The tenth annual issue of "Story's Legal Digest" for 1895 was issued, as well as "Boyer's Legal Directory" and Hubble's "Legal Directory" for the same year.

Juvenile.—Books for young people continued to be written in increasing numbers during 1895, and on their title pages appeared names of authors who have

delighted maturer minds. At their head was Mrs. Frances Hodgson Burnett, with her story of "Two Little Pilgrims' Progress: A Story of the City Beautiful" at Chicago, and Marguerite Bouvet, the author of "Sweet William," again charmed childish readers with "A Child of Tuscany." Charles Ledyard Norton published "Jack Benson's Log; or, Afloat with the Flag in '61," in the "Fighting for the Flag Series." "Quarterdeck and Fok'sle" was the title of stories of the sea by Molly Elliot Seawell; "Hero Tales from American History" came from Henry Cabot Lodge and Theodore Roosevelt, while "The Knight of Liberty," by Ezekiah Butterworth, was a tale of the fortunes of Lafayette. For boys there were: "The Watch Fires of '76," by Samuel Adams Drake; "Three Colonial Boys," a story of the same period, by Everett T. Tomlinson, in the "War of the Revolution Series," and, from the same author, "The Boy Soldiers of 1812" and "The Boy Officers of 1812," both in the "War of 1812 Series"; "Captain John Crane, 1783-1815," by Thomas W. Knox; "In the Saddle" and "A Lieutenant at Eighteen," 2 volumes of the "Blue and the Gray—On Land Series," by William T. Adams (Oliver Optic); "Chilhowee Boys in War Time," by Sarah E. Morrison; and "Afloat with the Flag," by W. J. Henderson, the author of "Sea Yarns for Boys." Elbridge S. Brooks sketched the lives of "Great Men's Sons" from Socrates to Napoleon, and also narrated the history of "A Boy of the First Empire." Howard Pyle told "The Story of Jack Ballister's Fortunes" and also a poetic fairy tale of "The Garden behind the Moon," illustrating both volumes himself; Maurice Thompson described "The Ocean Boy" in a story of Florida town and forest, and Leo Pendleton carried his two youthful heroes through exciting adventures "In the Okefenokee." "Under the Red Flag," by Edward King, contained the adventures of two American boys in the days of the Commune. Annie Fellows Johnston, the author of "Big Brother," wrote another Kentucky story, "The Little Colonel," and "Joel: A Boy of Galilee," a story of the time of Christ; and Mrs. Laura E. Richards published "Nautilus," "Hildegard's Neighbors," and "Jim of Hellas." "Chris and the Wonderful Lamp," by Albert Stearns, was illustrated by Ronald Birch and E. B. Bensell, and "Dorothy and Anton" was a sequel to "Dear Daughter Dorothy," by A. G. Plympton, who also wrote "A Bud of Promise," as a warning to ambitious parents. James Otis (James Otis Kaler) was unusually prolific, sending out "Wood Island Light," "Andy's Ward," "How Tommy saved the Barn," "Jerry's Family," "The Boys of 1745 at the Capture of Louisbourg," "Ezra Jordan's Escape from the Massacre at Fort Loyal," and "Neal the Miller: A Son of Liberty," the four last in the series of "Stories of American History." "The Young Cascadillo," a story of bark hunters in the Ecuador forests, by Marlon Downing, and "Colonel Thorndike's Adventures," by Harry W. French, were bound together in one volume, and delighted many a boyish heart. Familiar writers for boys were represented: Willis Boyd Allen by "The Mammoth Hunters," whom he carried to Alaska; Harry Castlemon (Charles A. Fowdick) by "Elam Storm, the Wolf" and "The Missing Pocketbook"; Kirk Munroe by "At War with Pontiac" and "Snow-Shoes and Sledges," the last a sequel to "The Fur Seal's Tooth"; and William O. Stoddard by "The Partners" and "Chumley's Post," the last a story of the Pawnee trail. Horatio Alger told of Oliver Conrad's plucky fight, "Adrift in the City"; Charles G. D. Roberts told of the success of "Reube Dare's Shad Boat," and from Edward S. Ellis came five books: "Comrades True," "Jack Midwood," and "The Young Conductor" in the "Through on Time Series" and "The Young Ranchers" and "The Path in the Ravine" in the "Forest and Prairie Series." John T. Trowbridge published but one book, "The Lottery Ticket." For girls there were several pretty and suggestive books. Elizabeth Knight Tompkins followed her successful novel published during the year with "An Unles-

and (Hrl.) a story of school life; Mrs. Elizabeth W. Champney introduced us to "Witch Winnie at Vernalis," and also wrote the history of "Paddy O'Leary and his Larned Pig"; Anne Hallingworth Matthews contributed "A Last Century Maid, and Other Stories for Children"; and Mrs. Elizabeth Thomas Toulmin Smith (formerly L. T. Meade), wrote "New and Old" and "The Least of These, and Other Stories," "Oakleigh," by Ellen Douglas Ireland; "Bush Prenties," by Marion Thorne; "A Happy Discipline," by Elizabeth Cummings; "A Flock of Girls and Boys," by Nora Perry; "What They Couldn't," by Mrs. Isabella M. Alden (Pansy); "The Green Garnet," by Natalie L. Rice; "The Joyous Neighborhood," by Mrs. I. H. Foster (Faye Huntington); "The Master of Deepawn," by Mrs. Harriet K. Colter; "Dams Prison," by Margaret H. Matthews; and "The Hobbledshoy," by Belle C. Thomas, found enthusiastic readers; as did "Katharine Yesterday and Other Christian Endeavor Stories," by Grace Livingston Hill; "His Great Ambition," by Anna F. Heckman; "Dorothy and her Magic," by Mary Hubbard Howell; "The House with Two Doors, and Other Stories," by Mrs. Alice Emily Currier; and "A Jolly Good Summer," by Mary R. Wells Smith, in the "Jolly Good Series." "A Girl's Talestaple" was a story for girls and boys by Sophie Sweet; Sophie Rebecca Clarke (Sophie May) added "Kylie Dunlee, A Golden Girl" to the "Little People's Children Series"; Emma J. Gray contributed "A Golden Week"; Laura Updegraff contributed "Was Dorothy's True Valentine" to the "Cosy Corner Series"; Harriet A. Cheever told of "Little Jolly's Christmas"; Francis V. and Edward J. Austin caught the conversation that passed between "Ethel and the Katydid"; while delightful fairy stories were "The Keeper of the Salamander's Order," by William Shattuck; "A New Year in the Old Wonderland," by A. M. Richards, continued by Anna M. Richards, Jr.; "The Enchanted Butterflies," by Adelaide Upton Crosby; "The Kester Girls," by Mary L. B. Branch; "Old Fairy Fables," by Christopher H. McCook, the author of an exhaustive work on "American Spiders and their Spinning Work," who retells much contained therein for youthful readers in this pleasant form; and "The Brownies through the Union," by Palmer Cox. Bishop Gailor contributed an introduction to "Dear Little Marchioness," by A. Tracy, and "Frowzie the Runaway," a fable for children by Lily F. Wesselhoef, was illustrated by Anne McDermott Walcott, who also contributed the poems for "Ruby's Vacation," by Mrs. George A. Ford (Minnie E. Kenney). From the same author appeared also during the year "A Tangled Web, and other Tales" and "Lassie." For little girls there were "Bambi and Bee," by Mary D. Brine; "Little Miss Phoebe Gay," by Helen Dawes Brown; "Nim and Cuz and the Wonderhead Stories," by Catherine Brooks Yale; and "The Little Boy who lived on the Hill," by Annie Laurie. Martha F. Finley described "Elsie's Journey on Inland Waters." Three stories of college life were "The Impostor," by Charles R. Talbot; "Kings and Cupbearers," by George Huntington, and "Two College Boys," by Edward A. Rand. "Matouchon" was a story of Indian child life by Annie M. Barnes; M. Carrie Hyde published three stories—"Goostle," "Under the Stable Vine," and "Yan and Nochie of Tappan Sea"; "Caroline Starr Morgan" was the author of "Charlotte's Revenge"; C. Emma Cheney of "Number 49 Tinkham Street"; Mary G. Bonesteel of "Army Boys and Girls"; Ella Reeve Ware of "Three Little Lovers of Nature"; B. Freeman Ashley, the author of "Tan Pils Jiao," wrote "Dick and Jack's Adventures on Sable Island"; Edward Stratemeyer told of "Jensen Stone's Discovery" in the "Ship and Shore Series"; "A New Samaritan" was the story of an Indian, by Mrs. Julia MacNair Wright; many authors contributed to the "Mysterious Voyage of the Dolphin, and Other Stories for Boys and Girls";

Mrs. Mary Lowe Dickinson told of "The Temptation of Katharine Gray" and also "Spring Blossoms; an Easter Story"; Lancelotti Mitchell's "Narrow: A Ducky Idyl" had for its hero a little colored boy; and the same author wrote also "Toss, the Story of a Wolf," "Shut In: A Story of the Silver Cross, and Other Stories" came from Mattie M. Hotter; Agnes Gilman and others collaborated to produce "Hungering and Thirsting," and other stories; Ernest Gilman wrote "A Pot of Daisies"; Helen R. Williams, "Hugh Pennock"; Josephine R. Barker, "Go's Trap"; Howe Benning (Mrs. Maria H. Henry), "Garden Hill"; Amos R. Wells, "Foreman Jennie"; Elizabeth Lloyd, "The Old Red School House"; and Will H. Glasscock, "Stories of Columbia," "Young Master Kirke," by Penn Shirley, continued the "Little Miss Weary Series." "The Old Toss Pump," by Margaret Sidney (Mrs. H. M. Lathrop), was one of her best; "Roger, the Ranger," by Eliza F. Pollard, told of the conquest of Canada by the British; "The Horse Fair," by James Baldwin, was no original in conception as interesting in the information it contrived to convey; and, finally, we have a little book of "Child Sketches from George Eliot," by Julia Magruder, illustrated by R. R. Birch and Amy Brooks, and "Oliver Optic's Annual" for 1894.

Medicine and Surgery.—Works on medicine comprised a "Synopsis of the Practice of Medicine," by William Blair Stewart, M. D.; "An Index of Medicine," by Seymour Taylor, M. D.; Vols. I, II, and III of "Twentieth Century Practice," an international encyclopedia of modern medical science, by leading authorities of Europe and America, edited by Thomas L. Stedman, M. D.; "An Eclectic Compendium of the Practice of Medicine," by Lyman Watkins, M. D.; a "Syllabus of Eclectic Materia Medica and Therapeutics," compiled from notes taken from the lectures of F. J. Locke, M. D., edited with pharmacological additions by Harvey W. Foster, M. D., and with notes on specific medicines by John Uri Lloyd, the two last being "Eclectic Manuals"; and "A Pathogenetic Materia Medica based upon Drs. Hahnemann and Dake's 'Cyclopaedia of Drug Pathogeny,'" by the Medical Investigation Club of Baltimore, Md. For students of human anatomy were issued Parts III and IV of "Dissections Illustrated," by C. Gordon Howie, with plates drawn and lithographed by Percy Haskely, and "Outlines for Dissection to be used in Connection with Morris's 'Anatomy,'" by W. A. Campbell, M. D. "Higher Medical Education" was the subject of two addresses delivered by Dr. William Pepper before the medical department of the University of Pennsylvania on Oct. 1, 1877, and Oct. 2, 1884, issued in one volume. Horatio R. Bigelow, M. D., prepared an "International System of Electrotherapeutics" for students, general practitioners, and specialists; C. T. Hood, M. D., "A Manual of Electrotherapeutics," and Charles S. Newmeyer, "Electro-Therapeutical Practice," a ready reference guide for physicians in the use of electricity. R. H. Chittenden delivered the Cartwright Lectures for 1893 before the Alumni Association of the College of Physicians and Surgeons of New York on "Digestive Proctodysia"; A. Mathieu, M. D., wrote on "Treatment of the Diseases of the Stomach and Intestines" for the "Medical Practitioners' Library"; "Lectures on the Diagnosis of Abdominal Tumors" were delivered by William Osler, M. D., before the post-graduate class of Johns Hopkins University in 1893; Dr. Nicholas Rosen wrote upon "The Pathology and Surgical Treatment of Tumors"; Alfred H. Allen, in "The Anatomic Examination of Diabetes, Albuminuria, and Gouty Urine"; J. Conington Burnard, M. D., on "Gout and its Cure"; and George R. Fowler, M. D., "A Treatise on Appendicitis." W. Roger Williams was the author of "A Monograph on Diseases of the Breast, their Pathology and Treatment," with special reference to cancer; "The Pulse Symptomata," by William Ewart, M. D., was a study in facile ephemerology, and W. Watson Cheyne considered "Treatment of Wounds, Ulcers, and Abscesses." William Murrell,

M. D., published "Clinical Lectures on the Prevention of Consumption"; a fourth edition was made of Dr. John M. Scudder's work "On the Use of Medicated Inhalations in the Treatment of Diseases of the Respiratory Organs"; "Catarrhal Diseases of the Respiratory Passages" were the theme of J. M. G. Carter, M. D., as were "Nose and Throat Diseases of the Respiratory Tract" of P. Watson Williams, M. D. A second edition appeared of the "Manual of Diseases of the Ear," by Albert H. Buck, M. D. Henry G. Piffard, M. D., was the author of an elaborate work entitled "A Practical Treatise on Diseases of the Skin," and Parts VII to X were issued of the "Atlas of the Diseases of the Skin," by H. Radcliffe Crocker, M. D. "Enlargement of the Prostate: Its Treatment and Radical Cure," came from C. W. Mansell Moullin; Henry Morris wrote on "Injuries and Diseases of the Genital and Urinary Organs"; James Nevins Hyde, M. D., and Frank H. Montgomery, M. D., were joint authors of "A Manual of Syphilis and the Venereal Diseases"; and M. L. Holbrook, M. D., advocated the "Physical, Intellectual, and Moral Advantages of Chastity." "Medical Gynecology" was a treatise on the disease of women from the standpoint of the physician, by J. C. Alexander; J. W. Long, M. D., based his "Syllabus of Gynecology" on the "American Text-book of Gynecology"; Edmund B. Wilson, with the co-operation of Edmund Leaming, M. D., prepared an "Atlas of the Fertilization and Karyokinesis of the Ovum"; J. Clarence Webster, M. D., chose for his subject "Ectopic Pregnancy"; "Pregnancy, Labor, and the Puerperal State" was written by Egbert H. Grandin, M. D., and George W. Jarman, M. D.; and W. A. Yingling, M. D., contributed "The Accoucheur's Emergency Manual." Anna M. Galbraith, M. D., wrote on "Hygiene and Physical Culture for Women," and Aimée Raymond Schroeder contributed "Health Notes for Young Wives." Henry Bixby Hemenway gave plain talks to nonprofessional readers on "Healthful Womanhood and Childhood," and J. P. Crozer Griffiths, M. D., told all that was necessary for "The Care of the Baby." Francis X. Dercum, M. D., edited "A Text-book on Nervous Diseases" by American authors; B. Sachs was the author of a "Treatise on the Nervous Diseases of Children"; B. K. Rachford, M. D., considered "Some Physiological Factors of the Neuroses of Children"; and J. A. Benson, M. D., prepared a brief "Synopsis of a Course of Lectures on the Anatomy, Physiology, and Histo-chemistry of the Nervous System." Theodore B. Hyslop, M. D., wrote on "Mental Physiology," especially in its relations to mental disorders, and Theodore Kirchhoff, M. D., added a "Handbook of Insanity" to the "Medical Practitioners' Library." H. D. Noyes, M. D., edited "The Relation of Diseases of the Eye to General Diseases," by Max Knies; Chalmers Prentice, M. D., wrote on "The Eye in its Relation to Health"; and Edward Jackson, M. D., considered "Skiascopy and its Practical Application to the Study of Refraction." W. Gilman Thompson, M. D., considered "Practical Dietetics," with special reference to diet in disease; "The Art of Massage" formed the theme of J. H. Kellogg, M. D.; A. Symons Eccles treated of "The Practice of Massage"; and A. Rabagliati, M. D., of "Massage for Symptoms which Simulate Disease of the Pelvic Organs in Woman." "Immunity, Protective Inoculations in Infectious Diseases, and Serumtherapy," by George M. Sternberg, M. D., belonged to the "Medical Practitioners' Library." "Blood Serum Therapy and Antitoxins" came from Dr. George E. Krieger. "Suggestions to Hospital and Asylum Visitors," by Drs. John S. Billings and Henry M. Hurd, had an introduction by Dr. S. Weir Mitchell; and a new revised edition was issued of Dr. Roger S. Tracy's "Handbook of Sanitary Information for Householders." Ernest B. Hoag and H. Kahn were responsible for "Elementary Technique in Histology and Bacteriology"; Langdon Frothingham, M. D., for a "Laboratory Guide for the Bacteriologist"; and Charles Platt for "Laboratory Notes

in Qualitative Analysis and Medical Chemistry." A second edition was also made of "Directions for Work in the Histological Laboratory," especially arranged for the use of classes in the University of Michigan, by G. C. Huber, M. D. The most important contribution to surgery was Vol. I of "A System of Surgery," by American authors, edited by Drs. F. S. Dennis and John S. Billings, to be complete in four octavo volumes; second revised editions were made of the "Principles of Surgery," by Dr. Nicholas Senn, and of "An American Text-book of Surgery," edited by Drs. W. W. Keen and J. W. White. Power D'Arny wrote upon "The Surgical Diseases of Children and their Treatment," Bertha M. Voswinkel, on "Surgical Nursing"; while from Charles Beck, M. D., we had "A Manual of the Modern Theory and Technique of Surgical Asepsis." Samuel Waggaman published "A Compendium of Botanic Materia Medica," and a new fifth edition appeared of Dr. W. Simon's "Manual of Chemistry," especially adapted for students of pharmacy and medicine. E. Wallis Hoare was the author of "A Manual of Veterinary Therapeutics and Pharmacy," and Henry L. Shumway compiled "A Handbook on Tuberculosis among Cattle," with considerations of the relation of the disease to the health and life of the human family and of the facts concerning the use of tuberculin as a diagnosis test. "The Secrets of Health" were revealed by Dr. S. H. Platt; Nathaniel E. Y. Davies considered "Health and Condition in the Active and Sedentary"; Dr. L. C. Parkes set forth "The Elements of Health"; and A. M. Davies published "A Handbook of Hygiene." Dr. J. G. Kerr made a brief plea for "Medical Missions." Vol. XVI of the "Index-Catalogue of the Library of the Surgeon-General's Office" was reached, covering W-Zythus.

Poetry.—More than twice the amount of poetry was published in 1895 than saw the light in the year previous. Little possessed lasting value. "Last Poems" of James Russell Lowell were sent to press, which, however, rather disappointed expectation. "Later Lyrics" were selected from "Mercutio," "The Sisters' Tragedy," "Wyndham Towers," and "Unguarded Gates," by Thomas Bailey Aldrich himself; and Will Carleton astonished his familiar friends by an almost total abandonment of the vernacular in "Rhyines of Our Planet." "Stops of Various Quills," by William Dean Howells, were sympathetically illustrated by Howard Pyle; "The Singing Shepherdess, and Other Poems" came from Mrs. Anne Fields; "The Hawthorn Tree, and Other Poems" from Nathan Haskell Dole; "From Dreamland Sent" was the title of 70 short poems by Lilian Whiting, the author of "The World Beautiful"; "Fact and Fancy: Humorous Poems by Cupid Jones," were in reality written by Francis S. Saltus; "Poems of Home and Country," by Dr. Francis S. Smith, the author of "America," with which are included his "Sacred and Melodious Verse," were edited by Henry B. Carrington in the first authorized complete edition; 14 poems of Rev. George Lambie Raymond were entitled "Pictures in Verse"; "In Canphor," anonymous short poems, were illustrated by Howard Chandler Christy; Samuel Mintum Peck contributed "Rhymes and Roses"; Mrs. Sarah Knowles Bolton, "The Inevitable, and Other Poems"; while Charles Knowles Bolton told "The Love Story of Ursula Wolcott" in verse; Clinton Scollard explored "The Hills of Song"; and "Chocorus's Twoants" were the subject of exquisite poetic description by Frank Bolles. "Poems," by Joseph O'Connor, was a notable volume from an American poet who does not depend upon any clap-trap to secure an audience, but writes poetry as Tennyson and Lowell wrote it; "A Sea Mark" was a threnody for Robert Louis Stevenson, by Bliss Carman, in an edition limited to 50 copies; and from the same author we had "Behind the Arras: A Book of the Unseen," with designs by T. B. Meteyard. "The Marriage of Guenevere" was sung by Richard Hovey, who made also an admirable translation of the

"Plays" of Maurice Maeterlinck. Another translation was that of "The White Snake" from the German into the original meters, by Madison Cawein. A sorrowful interest attached to the new edition of "Echoes from the Sabine Farm," by Eugene and Brewster Martin Field, the announcement of which was made coincident with the death of the poet and kindly humorist. "Select Poems" of Sidney Lanier were edited, with an introduction, notes, and bibliography, by Morgan Calloway, Jr. "Little Knights and Ladies" was the title of verses for young people, by Mrs. Margaret E. Sangster, and for little people there was a charming volume by Edith M. Thomas, entitled "In the Young World." "The Poetry of Freemasonry," by Robert Morris, Sr., appeared in a new revised edition, with a portrait and authentic biography by his son, Robert Morris. Charles Gustafson Leland sang "Songs of the Sea and Lays of the Land"; "Ballads of Blue Water, and Other Poems" were written by James Jeffrey Roche; "The Black Willows, and Other Lines," by Stephen Crane; "First Poems and Fragments," by Philip H. Savage; "Mimosa Leaves," by Grace Denio Litchfield; "Quintets, and Other Verses," by W. H. Thorne; "Sappho, and Other Songs," by L. R. Pemberton; "The White Tree, and Other Poems," by Henry Bellow, were illustrated by J. Steeple Davis; Mary Ashley Townsend published a volume of sonnets entitled "Distaff and spindle"; Mary Berri Chapman illustrated her own "Lyrics of Love and Nature"; Ellen M. H. Under recounted "The Treasures of Kurium"; while other collections of verse were "The Vacant Chair, and Other Poems," by Henry Stevenson Washburn; "An Ode of Verse," by Mary Anna and Alice E. Sawtelle; "A Bundle of Poems," by Mrs. Harrington Austin; "Songs in the Night," by Mrs. Kate A. Bradley; "In the Garden, and Other Poems," by Emily E. Veeder; "Heart Treasures," by Fannie A. Deason; "In Sheltered Ways," by D. J. Donahoe; "Around the Hearth, and Other Poems," by Millen Sanford Greene; "Songs from the Golden Gate," by Ida Cuddeith; "Life and Dreams," by L. E. K.; "Song Blossoms," by Julia Ann Wolfcott; "The Tower," by Mrs. Emma Huntington Nason; "Verses," by L. R. Hamberlin; "The Web of Life," by Augusta C. Bristol; "Heart Melodies," by Thomas Sloss Turner; and "On Wings of Fancy Blown," by Mary Tild Shapleigh. Mrs. Elizabeth Stoddard published a collection of her "Poems"; William Wells Newell, "Words for Music"; James G. Burnett, "Love and Laughter"; Richard Burton, "Dumb in June, and Other Poems," in the "Oaten Stop Series," another issue of which was "A Doric Reed," by Zittella Ocker; Samuel Walter Foss caught "Whiffs from Wild Meadows"; Will S. Hays gave us "Poems and Songs"; William Cranston Lawton, "Folia Dispersa"; Edward Willard Watson, "To-day and Yesterday"; and Mary D. Leonard, "The Story of Portia and Songs of the Southland." "The Gods give us Donkey Wings" was the prayer of Angus E. Abbott in the "Carnation Series"; "Hawthorne Leaves," by Mrs. Martha J. Claiborne; "In Woods and Fields," by Miss Augusta Larned; "Fagots," by Bessie A. Banalet; "Autumn Leaves," by Mary Bennett Clarke (Ida Fairfield); "A Collection of Wild Flowers," by Belle C. Woodruff; "Poems," by Sarah S. Walverton; "Idle Rhymes," by Helen Louise Moriarity; "A Bank of Violets," by Fanny Bonnette Poole; and "Thoughts in Verse," by Clifford Howard, found readers, as did "The Rabbit With, and Other Tales," in verse, by Katharine Fyfe; "Vahlia," a poem in 7 books, by John Argusian; "Eonia," a romance in rhyme, by Laura Dayton Emmenden; "Philoctetes, and Other Poems and Sonnets," by J. E. Nesmith; "Ben's Isabella," by Josephine Tyler; "Life Songs," by Theron Brown; and "God's Parable, and Other Poems," by Susanna Mayes. "A Drama of the Revolution," by Ethan Allen, was an attempt to vivify the personages of that period. "The Poet among the Hills—Oliver W. Holmes in Berkshire," came from J. E. A. Smith.

Among volumes of selections, we have "A Victorian Anthology, 1837-'94" from Edmund Clarence Stedman, consisting of selections illustrating the editor's critical review of British poetry in the reign of Victoria; "Classic English Lyrics" were compiled by James Baldwin; and to Mrs. Katrina Trask (Mrs. Eugene Trask), the author of "Under King Constantine," we owe a collection of "Sonnets and Lyrics." "Selections from the Poetry of Robert Herrick" were edited by Edward Everett Hale, Jr., and "Poets' Days" was a compilation by Elizabeth Richardson. "The Child's Garden of Song" was selected and arranged by William L. Tinslin and illustrated by Ella Eckette; Charles Elliot Norton edited "The Heart of Oak Books," a collection of traditional rhymes and stories for children, in 6 volumes; Mary I. Lovejoy compiled "Nature in Verse" as a poetry reader for children; David C. Bell edited "The Reader's Shakespeare" in 3 volumes; and a new edition appeared of Bayard Taylor's "The Echo Club" in the "Fly-Leave Series."

Political, Social, and Moral Science.—The first of 3 volumes of "Commentaries on the Constitution of the United States, Historical and Jurisprudential," by Roger Foster, was published during the closing days of the year, and is the first attempt since the work of Story to treat the subject exhaustively and to place the matter which has arisen since in a form accessible to the professional and general reader. It covered from "Preamble to Impachment." Hon. George S. Boutwell wrote upon "The Constitution of the United States at the End of the First Century"; and Joseph West Moore, in "The American Congress," gave a history of national legislation and political events from 1774 to 1894. "The Rise and Development of the Bicameral System in America" was traced by Thomas F. Moran in the "Johns Hopkins University Studies"; and "The Geographical Distribution of the Vote of the Thirteen States in the Federal Constitution, 1787-'94," by Otis Grant Libby, was one of the bulletins of the University of Wisconsin. Eben Greenough Scott made a study of "Reconstruction during the Civil War in the United States of America"; Joshua W. Caldwell published "Studies in the Constitutional History of Tennessee"; Bernard C. Steiner wrote on "Citizenship and Seignior in Maryland"; and Albert Shaw devoted a volume, respectively, to "Municipal Government in Great Britain" and "Municipal Government in Continental Europe." "Municipal Home Rule" was a study in administration by Frank J. Goodnow; "Municipal Reform Movements in the United States," by William Howe Tolman, had an introductory chapter by Dr. Charles H. Parkhurst, who told in a volume of his own "Our Fight with Temperance"; "The Individual and the State: An Essay on Justice," was the title of a thesis by Thomas Wallaw Taylor, accepted by the faculty of Cornell University for the degree of Doctor of Philosophy; "Ideals and Institutions" was the title of a thesis for the same degree presented by John Ernest Merrill at the University of Minnesota; "Anarchy or Government?" by William Mackintosh Salter, was an inquiry in fundamental politics. J. G. Bourinot explained "How Canada is Governed," and "How the Republic is Governed" was a useful little volume by Noah Brooks, who also made "Short Studies in Party Politics." A new revised edition was published of "The American Government," by R. A. Hinckley, and Thomas J. Morgan condensed the essentials of "Patriotic Citizenship" into the form of questions and answers. "Government and Co., Limited" was an examination of the hindrance of privileges in the United States, by Horatio W. Seymour, and Edward Atkinson contributed an introduction to the new revised and enlarged edition of J. K. Upson's "Money in Politics." Charles Wesley Eldridge edited the "United States Internal Revenue Tax System," embracing all internal-revenue laws now in force as amended by the latest enactments, including the income tax enactments of 1894 and 1894; Thomas G. Shearman wrote on "Natural Taxa-

tion" in the "Questions of the Day Series"; and Francis Walker on "Double Taxation in the United States" in the series of "Studies in History, Economics, and Public Law." Roger Foster and Everett V. Abbot were joint authors of "A Treatise on the Federal Income Tax under the Act of 1894"; Wilson Lloyd Bevan made a study in English economic literature, entitled "Sir William Petty"; and W. A. Wetzel treated of "Benjamin Franklin as an Economist" in the "Johns Hopkins University Studies." Robert Ellis Thompson wrote a "Political Economy for High Schools and Academies," and Simon N. Patten delivered a lecture on "Economics in Elementary Schools" in the summer meeting of the American Society for the Extension of University Teaching, at Philadelphia, July 18, 1894. Benjamin Rand prepared "A Bibliography of Economics," and a third edition was made of "Selections illustrating Economic History since the Seven Years' War." Five papers read at the seventh annual meeting of the American Economic Association, Dec. 27-29, 1894, were published in book form, and the same association published the "Poor Laws of Massachusetts and New York," by John Cummings. "Un-American Immigration: Its Present Effects and Future Perils" was a study from the census of 1890, by Rena Michaels Atchison, which had an introduction by Joseph Cook; "Statistics and Sociology," by Richmond Mayo Smith, formed Part I of the "Science of Statistics"; John Bascom contributed "Social Theory" to Crowell's "Library of Economics and Politics"; "The Laws of Social Evolution," by Rev. Franklin M. Sprague, was a critique of Benjamin Kidd's "Social Evolution," and a statement, according to the author, of the true principles which govern social progress; and "Social Growth and Stability," by D. Ostrander, was a consideration of the factors of modern society and their relation to the character of the coming state. The seventh special report of the United States Commissioner of Labor, Hon. Carroll D. Wright, covered "The Slums of Baltimore, Chicago, New York, and Philadelphia"; and from the same authority, in his individual capacity, we had a review of "The Industrial Evolution of the United States" in the "Chautauqua Reading Circle Literature." W. A. Croft addressed a memorial to the United States Senate on the labor question, explaining "How Everybody's Wages can be Doubled." In "Wealth and Waste" Alphonso A. Hopkins sets forth the principles of political economy in their application to the present problems of labor, law, and the liquor traffic; David Hilton Wheeler portrayed "Our Industrial Utopia and its Unhappy Citizens"; Frank Loomis Palmer wrote upon "The Wealth of Labor"; F. J. Stimson delivered four lectures at the Plymouth School of Ethics on "Labor in its Relations to Law"; Uriel H. Crocker explained "The Cause of Hard Times"; and John Yeiser considered "Labor as Money." "The Way Out" of all difficulties, financial, sociological, and ethical, was pointed by Moses Samuelson. Of books and pamphlets on finance there was an unusual number written. "Monetary Systems of the World" was a study of present currency systems and statistical information relative to the volume of the world's money, with complete abstracts of various plans proposed for the solution of the currency problem, by Maurice L. Muhleman, Deputy Assistant Treasurer of the United States, New York; Alexander Del Mar, M. E., published a "History of Monetary Systems"; "Principles and Practice of Finance" were set forth by Edward Carroll, Jr.; Arthur I. Fonda recommended original means for securing "Honest Money"; Henry Loomis Nelson demonstrated "The Money we Need." In the "Questions of the Day Series" appeared "Real Bimetallism," by Everett P. Wheeler; "Joint Metallism," by Anson Phelps Stokes, in a third enlarged edition; "Congressional Currency," an outline of the Federal money system, by Armistead C. Gordon; and "A Sound Currency and Banking System: How it may be Secured," by Allen

Ripley Foote. Horace White published "Money and Banking illustrated by American History"; "The Finances of the United States from 1775 to 1789, with Especial Reference to the Budget," by Charles J. Bullock, was a bulletin of the University of Wisconsin; Roeliff Morton Breckenbridge explained "The Canadian Banking System, 1817-1890" in publications of the American Economic Association; and William C. Cornwall considered "The Currency and the Banking Law of the Dominion of Canada" with reference to currency reform in our own country. A new edition was issued of Samuel Dan Horton's work on "Silver and Gold and their Relation to the Problem of Resumption," published in 1876; and "A New Monetary System," proposed by Edward Kellogg in 1843, was also revived. Arthur Kitson offered a "Scientific Solution of the Money Question"; Melville D. Landon (Eli Perkins) discussed "Money; Gold, Silver, or Bimetallism"; Charles Elton Blanchard made a "Report of Uncle Sam's Homilies on Finance"; Ignatius Donnelly discussed "The American People's Money"; J. F. Cargill in "A Freak in Finance" discussed the lessons learned in William H. Harvey's "Coin's Financial School" and "Coin's Financial School up to Date," which were also reviewed in "Coin at School in Finance," by George L. Roberts; "Sound Money," by John A. Fraser and Charles H. Sergel; "Cash vs. Coin," by Edward Wisner; "Base 'Coin' Exposed," by Silas Homest Money; "Coin's Financial Fool," by Horace White; and "Facts about Money," by J. Lawrence Laughlin, which included the debate with W. H. Harvey at the Illinois Club, Chicago, May 17, 1895. Other publications on the much vexed silver question were "Bug vs. Bug," by William N. Osgood; "Dollars, or What?" by W. B. Mitchell; "The White Dollar," by Murat Halstead; and "The Monetary Standard," by Edward T. Peters. "Hull House Maps and Papers" was a presentation of nationalities and wages in a congested district of Chicago, with comments and essays on problems growing out of the social conditions by residents of Hull House, a social settlement at No. 335 South Halsted Street, Chicago, Ill. "The Poor in Great Cities: Their Problems, and What is doing to solve them" were the theme of a volume by Robert A. Woods, W. T. Elsing, Jacob Riis, and others. "American Charities" were discussed by Prof. Amos G. Warner in "Crowell's Library of Economics and Politics," another issue of which was "Punishment and Reformation," an historical sketch of the rise of the penitentiary system, by Frederick Howard Wines. Arthur Macdonald made a sociologic and scientific study of "Abnormal Woman"; Charles Coppers published "A Brief Text-book of Moral Philosophy"; James H. Hyslop analyzed "The Elements of Ethics"; Joseph H. Hertz examined the "Ethical System of James Martineau" in the "Columbia College Contributions to Philosophy, Psychology, and Education"; and "Life and the Conditions of Survival" was the title given to popular lectures and discussions before the Brooklyn Ethical Association. Edward Everett Hale told of much to be seen on the bright side of life in "If Jesus came to Boston."

Publications of the American Academy of Political and Social Science included: "The Unit of Investigation in the Social Sciences," by Arthur F. Bentley; "The Social Basis of Proportional Representation," by J. W. Jenks; "State Supervision for Cities," by John R. Commons; "The Custody of State Funds," by E. R. Buckley; "Wiesor's Natural Value," by David I. Green; "Industrial Services of the Railways" and "Railway Departments for the Relief and Insurance of Employees," by Emory R. Johnson; "Uniform State Legislation," by Frederick J. Stimson; "The Minimum Principle in the Tariff of 1828 and its Recent Revival," by S. B. Harding; "Money and Bank Credits in the United States," by Henry W. Williams; "Sources of American Federalism," by William C. Morey; "The Break-up of the English Party System," by Edward Porritt; "Pacific Railway

Public," by R. T. Colburn; "Terminology and the Nomenclature Conference," by H. H. Powers; "A National Socialism," by Frederick C. Clark; and "The Story of a Woman's Municipal Campaign," edited by Mrs. Talbot Williams. "The Problem of Civilization Defined," emanated from Mrs. Mary Elizabeth Loomis, and Black Worthington proposed "Politics for the Present People." Rev. J. Preston Fugate argued for "Marriage a Covenant—Not Indissoluble."

Sports and Pastimes.—First among books of this class was "Fancy Tracks," by Frederick Remington, who accompanied his sketches of pioneer and sporting life with illustrations. T. S. Van Dyke, the devotee of the gun and author of "The Still Hunt," described "Game Birds at Home." "Strength" was a treatise on the development and use of muscle by C. A. Sampson, and Norman W. Bingham, Jr., edited "The Book of Athletics and Out-of-Door Sports." "A Sporting Encyclopedia," by Caspar W. Whitney, gave much information concerning sports at home and in England. James F. Lee prepared a practical manual of "Golf in America"; "Cycling for Health and Pleasure," by Father H. Porter, claimed to be an indispensable guide to the successful use of the wheel; Henry Kraus wrote on "Pleasure Cycling"; and from Frances E. Willard came "A Wheel within a Wheel: How I learned to ride the Bicycle," with some reflections by the way. Samuel L. Boardman was the author of a "Handbook of the Turf," and A. L. Kennedy contributed "Boat Sailing in Fair Weather and Bad." To the "Outing Library," Marion Lowell added "Harmonious Gymnastics and Pantomimic Exercises," and Mary Tucker Magill offered "Pantomimes; or, Wordless Poems." "Whist Tactics," by E. F. Foster, was illustrated by 112 hands played by correspondence between 16 of the best players in the American Whist League. In "What Shall We Do?" Mark Hall offered suggestions for entertainments for home and for public representation, and Thomas S. Boston supplied "Lively Plays for Live People," as Robert Ingersoll did "The Boston Charades," 116 in number.

Theology.—As usual, a large number of works were issued falling under this department. Vol. II of a series of "Institutes of the Christian Religion," by H. Enslin, V. Gerhart, and, as did Vol. I, published in 1894, had an introduction by Philip Schaff, D. D. Dr. Cornelius Walker offered "Outlines of Christian Theology"; "Studies in Theology" was the title of courses delivered in Chicago Theological Seminary by James Denney, D. D.; and Vol. IV of "Studies in Theology," by Randolph S. Foster, was devoted to "Christ, God in Time and Space." Two out of 3 contemplated volumes of "Outlines of Dogmatic Theology," by Rev. Sylvester J. Hunter, were issued, and a second edition was made of "An Outline of Systematic Theology," by E. H. Johnson, D. D., to which Henry G. Washburn contributed an outline of ecclesiology. "The Doctrine of the Church and of Last Things," by Rev. Francis J. Hall, appeared in "Theological Outlines." "The Messiah of the Apostles" concerned, avowedly, the confession of faith of Dr. Charles A. Briggs, and was the third of the series of discourses begun with "Messianic Prophecy" in 1892, and followed with "The Messiah of the Gospels" last year. "The Christ of To-day" was the theme of Dr. George A. Gordon; Dr. (now Bishop) Henry Y. Butler drew the distinction between "A Creedless Gospel and the Gospel Creed," and Frederick Palmer gave "Studies in Theologic Definition underlying the Apostles' and Nicene Creeds"; "Christian Evidences" were again examined by Dr. Ezekiel Gilman Johnson, and J. S. Black traced the relation of "The Christian Conscience" to evolution in morals and customs. Dr. Alvah Hovey wrote on "Christian Living and Life," and in "Doctrine and Life" Dr. George Barker Stevens made a study of some of the principal truths of the Christian religion in their relation to Christian experience. The Bishop of Padua's Lectures for 1895 were delivered by Dr. Robert C. Fiske upon "The Unity of the Faith as influ-

enced by Speculative Philosophy and Logical Inference"; "The Preacher and his Place" were the theme of the Lyman Beecher Lectures on preaching, delivered at Yale University by David H. Gray, D. D.; the Boston Lectures for the year were given by Bishop Hugh Miller Thompson upon personality and responsibility, and entitled "The World and the Wrestler"; Bishop J. M. Thoburn delivered addresses upon "The Christian Nations" at Syracuse University on the Graven foundations; "Light on Current Topics," the Bennett Lectures for 1895, were edited by James Reed, and the Carey Lectures for 1894 by Dr. E. B. Andrews, upon "Wealth and Moral Law," were also published. Those for 1895, on the same foundation, were by Dr. Charles Cuthbert Hall upon "Qualifications for Ministerial Power." The Lowell Lectures were given by Dr. Philip Stanford Mason upon the Church in the first three centuries, under the title of "From Jerusalem to Nicea." "The Breath of God," by Rev. Frank Hallam, was a sketch, historical, critical, and logical, of the doctrine of inspiration; Dr. Marvin E. Vincent contributed two pamphlets on the same subject, "Biblical Inspiration and Christ" and "That Monster, the Higher Criticism"; Andrew C. Zeeb stated "The Elements of the Higher Criticism"; Edwin Stanley Carr traced "The Development of Modern Religious Thought, especially in Germany"; Dr. Bernard C. Taylor considered "The Historical Books of the Old Testament" in the series of "Bible Handbooks for Young People"; Dwight L. Moody supplied "Notes from my Bible, from Genesis to Revelation"; Dr. William H. Green took up "The Higher Criticism of the Pentateuch," and also dwelt upon "The Unity of the Book of Genesis." Prof. Ernest de Witt Burton arranged "The Records and Letters of the Apostolic Age" for historical study; Rev. George W. Gilmore made a review of "The Johannine Problem" for English readers; "Studies in the Greek New Testament," by Richard M. Smith, were edited with an introduction by John J. Tigert; Prof. R. S. Dean published "An Outline of Bible History"; W. H. Thompson, M. D., was an authority upon "The Parables and their Home"; Bishop S. M. Merrill made a Scriptural study of "Mary of Nazareth and her Family"; and Dr. W. G. Munhall was the author of "Studies in the Mediaeval Institutions." "Four Periods in the Life of the Church" were the theme of as many lectures by Henry Ferguson, and Dr. John Williams contributed an introduction to a study of "Lent Past and Present," by Herman Lilienthal. "The End from the Beginning," by Loring C. Webster, was a statement of divine providence as divine realization of future contingencies. Henry M. Alden published "A study of Death," complementary to his previous thoughtful and suggestive volume, "God in His World"; Edmund Kelly considered the relation of "Evolution and Effort" to religion and politics; Thomas Jay Holman, the author of "The Law of Psychic Phenomena," made "A Scientific Demonstration of the Future Life"; and Dr. John H. Dodson presented what he believed to be "Christ's Idea of the Supernatural." J. C. Mabry gave "A Lapid View of the Trial of Christ." "Faith and Science," by Henry E. Brownson, shows how revelation agrees with reason and admits it. "Agnosticism and Religion" was the title of a dissertation by Rev. George J. Linn for the doctorate in theology at the Catholic University of America. "St. Paul's Vocabulary and St. Paul as a Purveyor of Words" were the theme of 2 discourses pronounced by Rev. Myron Winslow Adams to the Hartford Theological Seminary for the degree of Doctor of Philosophy, published in 1 volume. "Evangelical Ideas of the Present Age" were treated by Washington Gladwin; Rev. Henry E. Ross delivered 11 lectures on "Good Sense in Religion"; Dr. Cornelius Walker, "Lectures on Christian Ethics"; Dr. Thomas Murphy interpreted "The Messages to the Seven Churches of Asia"; "Make Way for the King" was the title given to a collection of week-day addresses by Dr. Flavine J. Briden, of Chicago, delivered in

Boston; "Love, the Law of Universal Life" was a discourse upon Paul's eulogium on character by Dr. J. T. Wightman; Dr. George Dana Boardman published a dissertation on the thirteenth chapter of the First Epistle to the Corinthians, entitled "Coronation of Love"; from Dr. Adoniram Judson Gordon we had "The Ministry of the Spirit"; "How Christ came to Church," a spiritual autobiography, which was accompanied with a biographical sketch and interpretation of this "pastor's dream," by Rev. A. T. Pierson; "Risen with Christ," an address on the resurrection; and a short pamphlet on "Elements of Christian Character." "Christ and His Friends" was the title of a series of revival sermons by Dr. Louis Albert Banks, who also published another volume of temperance revival discourses, "The Saloonkeeper's Ledger," to which Dr. Theodore L. Cuyler furnished an introduction, and "Heavenly Trade Winds," a collection of 22 sermons. Rev. J. F. Love edited "The Southern Baptist Pulpit"; Dr. James D. Burrell preached "The Spirit of the Age, and Other Sermons"; from J. W. McGarvey we had "Sermons delivered in Louisville, Kentucky, June-September, 1894," while E. P. Tenney chronicled "The Triumphs of the Cross" in a large octavo volume of 700 pages, with upward of 300 woodcuts, to which special contributions were made by Edward Everett Hale, Theodore L. Cuyler, Alexander McKenzie, Bishops Huntington and Vincent, Dr. Dorchester, Gen. Booth, Dr. Parkhurst, Joseph Cook, and others. The seventh series of "Sermons," by Phillips Brooks, was edited by Rev. John Cotton Brooks. Dr. J. R. Miller sent out 3 books, "Life's Byways and Waysides," "The Blessing of Cheerfulness," and "Family Prayers for Thirteen Weeks"; Horatio W. Dresser dwelt at length upon "The Power of Silence"; and E. H. Kellar gave "Lessons in Soul Winning," with special reference to house-to-house visitation. Dr. G. M. Grant considered "Religions of the World in Relation to Christianity" in the "Guild Text-books"; Dr. William Elliot Griffith collected into a volume lectures delivered on the Morse foundation upon "The Religions of Japan from the Dawn of History to the Era of Meiji"; and Edward Washburn Hopkins contributed "The Religions of India" to the series which it initiated of "Handbooks on the History of Religions," edited by Morris Jastrow, Jr. In the "National Church History Series," we had "The Church in America," by Bishop Leighton Coleman; new revised editions were issued of "Christianity in the United States" and "The Problem of Religious Progress," by Dr. Daniel Dorchester; Charles Woodruff Shields published essays upon "The United Church of the United States"; "Christ and the Church" were the theme of lectures delivered at Chautauqua, July 5-12, 1894, by different writers, to which Dr. Amory H. Bradford contributed an introduction; Bishop William Stevens Perry added to his long list of works on Church history "The Episcopate in America"; "The Historical Position of the Episcopal Church" was defined in a brief paper by Rev. Francis J. Hall; 2 volumes appeared in the "American Church History Series," one containing the "History of the Presbyterian Churches in the United States," by Dr. Robert Ellis Thompson, and the other "A History of the Reformed Church, Dutch; The Reformed Church, German; and the Moravian Church in the United States," by E. T. Corwin, D. D., J. H. Dubbs, D. D., and J. T. Hamilton. "The Presbyterian System" was explained by Rev. William H. Roberts; "Addresses delivered at the Quarter Century Anniversary of the Reunion of the Old and New School Presbyterian Churches," held in Pittsburg, Pa., May 23, 1895, by Dr. Francis Landy Patton, Dr. Henry Matthias Booth, and William H. Roberts, were collected into a volume; Vol. II appeared of "Annals of Trinity Church, Newport, Rhode Island," by George Champlin Mason, completing the work; Charles H. Corey wrote "A History of the Richmond Theological Seminary," with reminiscences of thirty years' work among the

colored people; and William P. White, D. D., compiled and edited "The Presbyterian Church in Philadelphia," giving a camera and pen sketch of each church and institution. "The relation of Religion to Civil Government in the United States of America," by Isaac A. Cornelison, proved us a state without a church but not without a religion; William Pral delivered sermons upon "Civic Christianity"; Joseph Cook contributed an introduction to special lectures upon "Practical Christian Sociology" given by Rev. Wilbur F. Crafts before Princeton Theological Seminary and Marietta College; Dr. W. S. Rainford preached a sermon which was published in pamphlet form on "The Church's Opportunity in the City To-day." "Social Problems and the Church" was an article by Bishop Frederick D. Huntington, reprinted from the "Forum," and "The Christian State," as a political vision of Christ, was the theme of 6 lectures by Dr. George D. Herron. Archbishop (now Cardinal) Francis Satolli spoke on "Loyalty to Church and State"; lectures delivered under the auspices of the Church Club of New York in 1894 on "The Rights and Pretensions of the Roman See" were bound together; and John S. Hittell enlightened us as to "The Spirit of the Papacy." Dr. John T. Christian asked "America or Rome, Which?" A "Chronology of the Society of Friends, 1644-1895" was the work of Alice N. Townsend. Vol. V of Henry Graetz's "History of the Jews" was published, running down to 1870 C. E., from 1648; Josephine Larrus, a sister of the gifted poetess, made a plea against persecution in "The Spirit of Judaism"; and Isabel E. Cohen compiled "Readings and Recitations for Jewish Homes and Schools." To missionary literature belong "A Hundred Years of Missions," by Rev. Delavan L. Leonard; "The Islands of the Pacific from the Old to the New," a sketch of missions in the Pacific, by Rev. James M. Alexander; "Modern Missions in the East," by Edward A. Lawrence, D. D., with an introduction by Dr. Edward T. Eaton; "Missions at Home and Abroad," papers and addresses presented at the World's Congress of Missions, Oct. 2-4, 1893, compiled by Dr. E. M. Wherry; "The Iroquois and the Jesuits," by Dr. Thomas Donohoe; "Indian and White in the Northwest," by Rev. L. B. Palladino; "The Minute-Man on the Frontier," by Rev. W. G. Puddefoot; and a second series of "The Miracles of Missions," by Dr. Arthur T. Pierson, who published also "Lessons in the School of Prayer as Taught by the Lord Jesus Christ himself" and "Life-Power," devoted to character, culture, and conduct. Joseph Merlin Hodson delivered a discourse on the resurrection from the text "With what Manner of Body do they Come?" "The Lambs in the Fold" was a consideration of the relation of children to the Church and their proper Christian nurture, by Dr. John Thompson, a subject which was further set forth in "The Children, the Church, and the Communion," by Rev. Charles Cuthbert Hall; Rev. G. V. Reichel asked "What shall I tell the Children?" Mary Hastings Foote wrote "A Life of Christ for Young People in Questions and Answers"; and Louis Seymour Houghton told of "Antipas, Son of Christ, and Others whom Jesus loved," also for children. Jesse Lyman Hurlbut and Robert Remington Doherty prepared "Illustrative Notes, 1896," as a guide to the study of the Sunday-school lessons; Dr. A. F. Schaeffer suggested "Ways of Working" for Sunday-school officers and teachers; "The Teacher and the Class" was a symposium of Sunday-school teaching; and M. C. Hazard wrote for "Home Classes" of the same. In "The Fishin' Jimmy Club" Dr. John Clark Hall made a brief contribution to evangelic liturgies. Dr. S. G. Wilson published "Occasional Addresses and Sermons." Vol. VII of the second series of "A Select Library of Nicene and Post-Nicene Fathers," edited by Drs. Philip Schaff and Henry Wace, contained the "Letters and Select Works of St. Basil." "Church Harmonies New and Old" were edited by Charles R. Tenney and Leo R. Lewis; Rev. Robert Stuart MacArthur found "Quick Truths in Quain

Texts"; "The Wise Men of Ancient Israel and their Prophecy" formed the theme of Charles Foster Kent; and Noah K. Davis entitled a study in the Hebrew lyrics "Juda's Jewels." Dr. T. A. Goodwin published "Lovers Three Thousand Years Ago as Illustrated by the Song of Solomon." Volumes of selections were "Light Unto My Path," compiled by Dr. John Hall; "Beautiful Thoughts of Life Eternal," by Elizabeth Curren; "Responsive Readings," selected from the Bible and arranged under subjects for common worship by Henry Van Dyke; "Gleanings, Pure, Painted, and Practical" for Christian Endeavor and Epworth League members; and "Tabernacle Sayings," which we owe to Rev. Henry Cohen. William Marshall treated of "Nature as a Book of Symbols," and Dr. David O. Mearns wrote "Inspired through Suffering." "Literature of Theology," by Bishop John Fletcher Hurst, was a classified bibliography of theological and general religious literature, and a third revised and enlarged edition was published of Dr. John Wright's "Early Bibles of America." Parts II to V appeared of "A Hebrew and English Lexicon of the Old Testament," by Dr. Francis Brown and others. Two books, not exactly theological in character, but which dealt with the life of Christ on earth were: "As Others Saw Him," an anonymous work, which attracted much attention in England, and "Jesus Nazarene: The Story of the Life of Jesus the Nazarene," by Peter von F., Anna F., and B. A. F. Mamreov. Part I of the "Woman's Bible" contained comments on the first five books of the Bible by leaders of the woman's suffrage movement.

Undated—Supplement I of "The United States," by Joseph Dought Whitney, covered "Population, Immigration, Irrigation"; in "The Building of a Nation," Henry Gannett traced the growth, present condition, and resources of our country, with a forecast of the future; William M. Black described "The United States Public Works"; and the "United States Treasury Bureau of Statistics published the seven-monthly annual "Statistical Abstract of the United States" for 1894. Parts III-VII appeared of "Yankee Doodle at the Fair." A handsome volume by Samuel Ward Stanton upon "American Steam Vessels" contained over 300 illustrations of the most famous vessels built since 1807, while only those of the past five years were covered by "Steam Vessels and Marine Engines," by G. Foster Howell. "Screw Propellers and Marine Propulsion" was written for workmen by I. McKim Chase; W. J. Henderson wrote "The Elements of Navigation," and Howard Patterson published "Patterson's Naval Dictionary illustrated." James Mansur treated of the "Attack of Fortified Places"; Arthur L. Wagner, of "Organization and Tactics"; and F. N. Maude wrote "Military Letters and Essays." Vol. III appeared of "The Mineral Industry," edited by Richard P. Rothwell; G. W. Woodford Lock prepared a practical handbook of "Handbook Mining"; J. T. Bearl wrote on "The Ventilation of Mines"; and John R. Hollibaugh on "The Lead and Zinc Mining Industry of Southwest Missouri and Southwest Kansas." Allen Hazen investigated "The Filtration of Public Water Supplies." George E. Waring, Jr.'s "How to Drain a House" went through a second edition, with annotations bringing the matter down to date; the latest approved devices and appliances used in "Practical Hot Water Heating Steam and Gas Fitting" were set forth by James J. Lawler; Rella C. Carpenter published an elementary treatise on "Heating and Ventilating Buildings." W. M. Patton was the author of a "Treatise on Civil Engineering"; F. Dye, of "Popular Engineering"; Charles H. Cochrane, of "The Wonders of Modern Mechanism"; P. G. Tait, of "Dynamics"; Reginald Bolton, of "Motive Power and their Practical Selection"; and John T. Usher, of "The Modern Machine." Albert W. Smith contributed "Elementary Machine Design"; John J. Plafner, "Rope Driving"; Henry T. Bovey, "A Treatise on Hydraulics"; William Kent, a "Mechan-

ical Engineer's Pocket-Book"; J. H. Kinsely, "An Elementary Text-book on the Steam Engine and Boilers," giving American practice; Frank Richards, "Compressed Air"; George W. Sutcliffe, "Steam-Power and Mill-Work"; Dr. Volney Wood explained the "Theory of Turbines"; Maurine Pittman wrote on "Plate-Girder Railway Bridges"; and "The Memphis Bridge" alone was the subject of a handsome volume by George S. Morison. Parts I to III of "Pumps and Pump-Motors," by Philip R. Bortling, were issued; E. Spen published a second edition, revised and brought up to date, of his first series of "Workshop Receipts"; G. J. Barnes prepared a "Glossary of Technical Terms used in Architecture and the Building Trades," by Gilbert Wilkes; and Norman Gardiner offered "Ready Help for Locomotive Engineers and Firemen," and in the "Engineering Series of Bulletins of Wisconsin University" appeared "Railway Signaling," by W. Mottingham; "Track," by L. F. Lorne; "The Steel Construction of Buildings," by C. T. Purdy; "Some Practical Hints in Dynamo Design," by Gilbert Wilkes; and "The Evolution of a Switchboard," by Arthur Vaughan Abbott. Henry V. Poor completed the twenty-eighth annual issue of "Poor's Manual of Railroads" for 1895, and Edward E. Higgins presented "Street Railway Investments: A Study in Values, 1895." I. I. Redwood wrote on "Theoretical and Practical Ammonia Refrigeration," and J. E. Siebel was the author of a "Compend of Mechanical Refrigeration." Ernest F. Schwab made a complete exposition of "The Secrets of Canning," Robert Johnson and Arthur Brunel Chatwood gave their attention to "Photography, Artistic and Scientific." Richard Marsden wrote on the development, principles, and practice of "Cotton Weaving"; a third edition of a "Practical Treatise on the Manufacture of Brick, Tiles, and Terra-Cotta," by Charles T. Davis, appeared, revised and rewritten, and a third edition, revised and enlarged, was also made of "Aluminium," by Joseph W. Richards; N. Johnson Rose illustrated his own work on "Window and Parlor Gardening." George W. Martin drew up "Investment and Average Tables for Averaging Mercantile Accounts"; James L. Howard prepared "Investment Tables," and Seymour Eaton, "Business Forms, Customs and Accounts for Schools," and "Woman in the Business World" was an anonymous collection of helps and hints to prosperity. Twenty-five lessons in good and bad advertising were published by Nathaniel C. Fowler, Jr., under the title of "Practical Publicity." "The Art Orator and Modern High Writer up to Date" appeared, and Gustav Larson published a "Handbook of Geometrical Wood-Carving." Rev. Josiah Strong contributed an introduction to "The Armenian Crisis in Turkey," by Frederick D. Grouse. D. Miller De Witt reviewed "The Judicial Murder of Mary K. Surratt." F. W. Wolf was the author of an "Agricultural Calendar" and a "Dairy Calendar" for 1895; and "Liberationism of Milk" contained the result of investigations made for the trustees of the Massachusetts Society for Promoting Agriculture. Henry C. Whitney wrote on "Marriage and Divorce" for popular and professional use, and "Vital Statistics of the New England States for 1894" were published in pamphlet form. Eugene Zieher was the author of a work upon "Boredom in America," and John Edgerlin of "A Brief History of the Labor Club." T. S. G. Kirkpatrick gave "Simple Rules for the Discrimination of Gems." Ten mental sciences looking "Mindfulness," by Horace Fletcher, and "God's Light as it comes to us," anonymous. James R. Cooke told of "Hypnotism," how it is done, its uses and dangers; "Old Diary Leaves," by Henry Steel Olcott, told the true story of the Theosophical Society; Loren Albert Sherman ex-

explored the "Science of the Soul"; and "The Secret of Mankind" was revealed through an unknown source, including some brief account of the planet Mercury and its institutions. "The Dividing of a Time; or, The Fullness of the Times analyzed" came from Charles A. L. Totten; and John Hamlin Dewey, M. D., suggested "The New Testament Occultism," or miracle-working power interpreted as the basis of an occult and mystic science. "The Philosophy of P. P. Quinby," by Annetta G. Dresser, and "Mollie Fancher, the Brooklyn Enigma," by Abram H. Dailley, may be classed together. James Means edited "The Aeronautical Annual, 1895"; Susan Darling Safford collected "Quaint Epitaphs"; N. T. Oliver compiled "Lee's Priceless Recipes," which met wants in every department of life; and C. M. Stevans, "Lee's Condensed Cyclopaedia." Important books which remain to be mentioned are Part II of "The Profession of Bookselling," by A. Growoll; the "Annual American Catalogue, 1894"; Part I of the "American Catalogue, 1890-1895," covering A-H; "Lists of Books for Girls and Women and their Clubs," edited by Augusta H. Leopoldt and George Hes; "The Publishers' Trade List Annual for 1895"; Vol. I of "American Book-Prices Current," compiled by Luther S. Livingston; the "Annual Literary Index, 1894," prepared by William I. Fletcher and R. R. Bowker; "The English Catalogue of Books for 1894"; a "List of Subject-Headings for Use in Dictionary Catalogues" drawn up by a committee of the American Library Association (Gardner M. Jones, George E. Wire, and Charles A. Cutter); a "Comprehensive Index of the Publications of the United States Government, 1859-1893," by John G. Ames; "A Bibliography of Texas," by C. W. Raines; William K. Balch's "Complete Compendium of Universal Knowledge"; and "Appleton's Annual Cyclopaedia and Register of Important Events of the Year 1894." "Harper's Book of Facts," compiled by Joseph H. Wilsey and edited by Charlton T. Lewis, embraces science, literature, and art, brought down to the close of the year 1894.

Voyages and Travels.—No less than three distinct works upon "Constantinople" were published during 1895. That of Prof. Edwin A. Grosvener, by far the most elaborate, was in two volumes, containing 250 illustrations and had an introduction by Gen. Lew Wallace. The fact that the author formerly held the professorship of history in Roberts College in the city of which he writes with enthusiasm fitted him peculiarly for the work which he undertook. F. Marion Crawford's "Constantinople" was illustrated by Edwin Lord Weeks, and gives us the city of to-day; while Mrs. Clara Erskine Clement (now Mrs. C. E. Waters) reviewed rather the history of "Constantinople, the City of the Sultans," in her volume uniform with those she has given us on Naples and Venice. Richard Harding Davis was interesting as ever "About Paris," Charles Dana Gibson supplying his illustrations, while Constance Fenimore Woolson's sketches of "Mentone, Cairo, and Corfu" were welcomed in this collected form. Isabel Florence Hapgood described her "Russian Rambles"; "Letters of a Baritone," by Francis Walker, told of Italy as well as art life, and Charles Godfrey Leland was charming as of old as "Hans Breatmann in Germany—Tyrol." Walter Cranston Larned dwelt upon "Churches and Castles of Mediæval France"; Caroline Earle White chronicled "A Holiday in Spain and Norway"; "In the Land of Lorna Doone and Other Pleasurable Excursions in England" came to us from William H. Rideing; "Brown Heath and Blue Bells" from William Winter; Noah Brooks outlined "The Mediterranean Trip." "Literary Landmarks of Jerusalem" were explored by Laurence Hutton. Two volumes contain "My Early Travels and Adventures in America and Asia," as told for our benefit by Henry M. Stanley; Frank Vincent reported a tour of exploration in "Actual Africa; or, The Coming Continent." John R. Spears in "The Gold-Diggings of Cape Horn" made a study of life

in Tierra del Fuego and Patagonia; H. C. Mercer visited the "Hill Caves of Yucatan"; and Charles A. Stoddard spent summer days in winter months "Cruising among the Caribbees." Julius A. Palmer, Jr., was heard from "Again in Hawaii," "Out of the East" was a volume of reveries and studies in new Japan, from the fascinating pen of Lafcadio Hearn, and Henry T. Finck was eloquent also over "Late Time in Japan"; Alfred Parsons illustrated his own "Notes on Japan," and Edward S. Wilson took "An Oriental Outing." "From the Black Sea through Persia and India" was a handsome volume, of which Edwin Lord Weeks was at once author and illustrator; Rev. Samuel Graham Wilson described "Persian Life and Customs" after a fifteen years' residence in that country as a missionary; and William Westvile Rockhill's "Diary of a Journey through Mongolia and Tibet in 1891 and 1892" was published by the Smithsonian Institution, under whose auspices, partly, he made the same. Chester Holcombe described for us "The Real Chinaman" after a residence of many years in that country as *chargé d'affaires*; a new edition was published of Dr. William Butler's "The Land of the Veda," first issued in 1871; "On India's Frontier; or, Nepal, the Gurkhas' Mysterious Land" was illustrated from photographs, often obtained at great risk by the author, Henry Ballantine, American consul to Bombay, and M. M. Shoemaker visited "Trans-Caspian," the sealed provinces of the Czar. "This Godly Frame the Earth," by Francis Tiffany, conveyed stray impressions of scenes, incidents, and persons in a journey touching Japan, China, Egypt, Palestine, and Greece; Bishop Charles B. Galloway made "A Circuit of the Globe," and Rev. Thomas H. Stacy went "In the Path of Light around the World." Hezekiah Butterworth continued the "Zig-Zag" Series with "Zig-Zag Journeys around the World." William T. Adams (Oliver Optic) carried his young people "Half Round the World," and "Across India," in the "All-Over-the-World Library." Other books of travel strung on a thread of fiction were Thomas W. Knox's "Hunters Three" and "In Wild Africa," the last in the "Travel Adventure Series." "Alaska" had its history, resources, gold fields, routes, and scenery described at length by Miner W. Bruce; Henry M. Field termed the same country "Our Western Archipelago"; and James T. Dennis also told of what he saw "On the Shores of an Inland Sea." V. Wilson prepared a "Guide to the Yukon Gold Fields." Returning to our own mainland we have, first, a superb volume on the "Canons of the Colorado," from Major J. W. Powell, who was the first to explore their wonders, and who has illustrated his work with photographs taken by himself. Charles and Lilian Westcott Eiekemeyer told and photographed what they saw "Among the Pueblo Indians," and "In the Heart of the Bitter-Root Mountains," by "Heclawa" (A. L. Artman Himmelwright), told the story of the Carlin hunting party September-December, 1893. "The Yellowstone National Park: Historical and Descriptive" we owe to Hiram M. Chittenden. A valuable old work was revived in a new edition in 3 volumes of the "Expeditions of Zebulon Montgomery Pike to Head-waters of the Mississippi River through Louisiana Territory, and to New Spain, during the Years 1805-6-7," now reprinted in full from the original of 1810, with a copious critical commentary, a memoir of Pike, and other interesting material from Prof. Elliott Coues, who went over the whole ground, and made a canoe voyage in order to give his remarks the weight of personal observation. Bishop O. P. Fitzgerald published "California Sketches, New and Old," and Julian Ralph described "Dixie," "New Orleans, the Place and the People," by Grace King, was illustrated by Frances E. Jones. Teresa Dean picked up "White City Chips"; Rev. P. C. Croll examined "Ancient and Historic Landmarks in the Lebanon Valley" of Central Pennsylvania; Gen. H. V. Boynton was the author of an historical guide to "The National Military Park, Chickamauga-Chattanooga." "The Canadian

"Golden Book" of Charles G. D. Roberts was issued; "Comment, Historic, Literary, and Picturesque," by George B. Bartlett, went through the fifteenth revised edition; Part I. of "Picturesque Worcester" in the "Picturesque Series" was written by Elbridge Kingsley and Frederick Kuhn, and was devoted to the "City and Environs"; Henry R. Blaney gave re-productions of etchings in half tone of "Old Boston," and "The Boston Picture Book" also appeared. A new edition was made of Theodore Roosevelt's "New York" in the series of "Historic Towns" with a postscript, 1890-'95; and John J. Post published an expanded "Abstract of Title to Kip's Bay Farm in the City of New York, with all Known Maps relating thereto, together with the Water Grants on the East River, adjoining 'Said Farm'." A Brief Descriptive Geography of the Empire State," was published for the use of schools, by C. W. Barden, and Appleton's handbooks of summer and winter resorts were issued as usual.

The following are the figures of book production in the United States in 1895, from the columns of the "Publishers' Weekly":

CLASSIFICATION.	1894.		1895.	
	New	Revised	New	Revised
General	573	156	1,059	64
Law	449	45	480	51

		3,837		5,101
		4,484		5,469

LITERATURE, BRITISH, IN 1895. The record of book production in England during the year showed a total of 6,516 volumes, against 6,485 in 1894, a difference of about 30 only; but of this number, it is to be noted, 5,581 were new books, and but 935 new editions, while of the books of the preceding year, 5,300 were new works, and new editions numbered 1,185. It is a little curious to note that in this increase of publication of new books there is a falling off of works of fiction (in which juvenile books are to be included). But 1,584 new novels and tales appeared, against 1,544 in 1894, and but 347 new editions, as compared with 366 the year previous. Less than half as many new works on law and jurisprudence were issued, and there were fewer new books of voyages and travels, while there was a remarkable gain in the departments of history and biography, of poetry and the drama, and of medicine and surgery, and there was also an increase in educational, classical, and philological works, in *belles-lettres*, and in works on theology and political and social science. In summing up the quality of the literature of the year, it may be said to be of unusual excellence.

Biography.—As usual, several works of leading value are to be found in this department, and glimpses of individualities worthy of note are afforded in two or three instances through the lens of all modern, personal correspondence. "Letters of Samuel Taylor Coleridge" were edited by Ernest Hartley Coleridge, filling 3 volumes; and again 2 volumes of "Letters of Matthew Arnold, 1844-1888," collected and arranged by George W. E. Russell, presented their writer in a twofold capacity of disengaged critic and charming man of family; "The Life and Letters of Edward A. Freeman," in 2 volumes, were by W. R. W. Stephens, Dean of Winchester, and for twenty years a near and dear friend of the historian; and "Dante Gabriel Rossetti, His Family Letters," were published in 2 volumes, with a memoir by William M. Rossetti. "Letters and Verses of Arthur Penrhyn Stanley, D. D., between the years 1829 and 1881," were edited by Rowland E. Prothero, supplementing the "Life and Correspondence," by the same author and Dean Bradley, published last year; and 2 volumes contained the correspondence addressed by Robert Louis Stevenson to Sidney Colvin, November, 1890-October, 1894, entitled "Valima Letters." "The Life and Adventures of George Augustus Sala, Written by Himself," and "Memoirs of an Author," by Percy Fitzgerald, both in 2 volumes, appeared simultaneously and were warmly received from those two of Dickens's "Young Men," and the latter also edited a new edition of the "Life, Letters, and Writings" of Charles Lamb, in 6 volumes. Anna M. Stoddard gave us a biography of "John Stuart Blackie," in 2 volumes; "The Letters of Edward Fitzgerald to Percy Keble," were collected and edited by William Ainslie Wright, and in some ways supplementary to the volume was the portrayal of "Two Suffolk Friends," by Francis Hinder Grooms, who pleasingly recalled his father, Archdeacon Grooms, and the charming and remarkable personality of Fitzgerald. John Charles Taverer made us acquainted with "Gustave Flaubert, as seen in his Works and Correspondence," and "The Life and Writings of Turgot" were edited for English readers by W. Walker Stephens. A remarkable and varied career is chronicled in Sir Joseph Croxall's "Reminiscences of Thirty-five Years of my Life," and yet another autobiography of intense interest was "Memories and Studies of War and Peace," by Archibald Forbes, the famous war correspondent. "Memories and Thoughts of a Life," by William O'Connor Morris, relate principally to the Irish question; "Memories" of W. J. Lister included many important events and famous people; Richard Leckham contributed "An Artist's Reminiscences"; Richard Le Gallienne, 2 volumes of "Retrospective Reviews," and W. F. A. Gauden, "Memories of a Short Life." Reminiscences of "Plutarch, Pico, Politics, and Play" came from T. H. S. Escott; "My Lifetime," from John Hollingshead; and Alexander James Stand wrote "The Life of General Sir E. Bruce Hamilton," in 2 volumes. Sir G. F. Dickett published "Accidental Reminiscences of an Old Nonconformist"; "Threescore Years and Ten" contained the reminiscences of the late Sophia Elizabeth De Morgan, edited by her daughter, Mary A. De Morgan; "Journals and Correspondence of Lady Eastlake," in 2 volumes, were edited by her nephew, Charles Eastlake; and "The Memorials of Mrs. Henry Wood" were compiled by her son, C. W. Wood. Two volumes were devoted by Maria C. Bishop to "A Memoir of Mrs. Augustus Crayon (Pauline de la Ferrière), Author of 'Le Bon d'un Saut'"; "Days of a Soldier's Life" was the title given to letters written by the late Gen. Sir C. P. Boscawen, written during active service; and yet another distinguished British officer, Gen. Sir John Acheson, published "Reminiscences of a Military Life." Thomas Henry Thomson was the author of "Col. Sir Robert Sandeman: His Life and Work on the Indian Frontier." "The Memoir of William Walsley, Admiral of the Red Squadron" was written by his granddaughter, Mary C. Jones, and Canon Church recalled the picturesque figure of

"Sir Richard Church," the fighting Quaker in the war of Greek Independence. "A Veteran of 1812" was the title of a life of James Fitzgibbon by Mary A. Fitzgibbon. T. Douglas Murray and A. Silva White collaborated on "Sir Samuel Baker: A Memoir," and 2 volumes contained "The Life and Correspondence of Sir Bartle Frere," by John Martineau. "The Life of Sir James Fitzjames Stephens" was written in the most admirable manner by his brother, Leslie Stephen, and Mrs. Salis Schwabe published a miscellaneous collection of documents, entitled "Reminiscences of Richard Cobden." "Papers and Addresses," political and miscellaneous, of Lord Brassey, covering the period of 1861-'94, were arranged and edited by Arthur H. Loring; and yet another volume of "Papers and Addresses: Imperial Federation and Colonization from 1880 to 1894," we owe to the same editor, assisted by R. J. Beadon. R. E. M. Peach wrote upon "The Life and Times of Ralph Allen." From S. Tytler we had a volume of "Tudor Queens and Princesses"; Millicent Garrett Fawcett wrote a "Life of Her Majesty Queen Victoria"; Mary Spencer Warren, a biographical sketch of "The Princess of Wales"; and Eliza F. Pollard, "The Story of Princess Alice," the last in the "Splendid Lives Series." Lectures delivered by James Anthony Froude upon "English Seamen in the Sixteenth Century" during the Easter terms 1893-'94 were collected into a volume, and a new edition was made of Southey's "English Seamen," edited, with an introduction, by David Hannay. "Heroes of the Victoria Cross," by T. E. Toomey, was supplemented by "For Valor; the 'V. C.," by J. E. Muddock. "The Decline and Fall of Napoleon" was the subject of a volume by Field-Marshal Viscount Wolsley, and "Napoleon's Last Voyages" was the title given to the diaries of Admiral Sir Thomas Ussher and John R. Glover, secretary to Rear-Admiral Cockburn, bound in one volume. "The Rise of Wellington" came from Field-Marshal Lord Roberts. In the "Heroes of the Nations Series" appeared "Louis XIV and the Zenith of the French Monarchy," by Arthur Hassall; "Prince Henry the Navigator," by Charles Raymond Beazley; and "Julian, Philosopher and Emperor," by Alice Gardner. "English Men of Action" included "Colin Campbell, Lord Clyde," by Archibald Forbes; "Wolfe," by A. G. Bradley; and "Nelson," by John Knox Laughton. The single addition to the "Rulers of India" was "John Russell Colvin, the last Lieutenant Governor of the Northwest under the Company," by Sir Auckland Colvin, while in the new series of "Public Men of To-day" there were four admirable issues, "Amcer Abdur Rahman," by S. Wheeler; "Li Hung Chang," by Prof. Robert K. Douglas; "M. Stambuloff," by A. Hulme Beaman; and "The German Emperor William II," by Charles Lowe, who also published "Prince Bismarck," a digest of his two-volume biography of the great statesman, which appeared in 1885, and "Bismarck's Table Talk." "Lord John Russell" was added by Stuart J. Reid to the "Prime Ministers of Queen Victoria Series." "The Right Honorable W. E. Gladstone," by the experienced and gifted journalist Henry W. Lucy was the initial volume of the "Statesmen Series." "English Leaders of Religion" were respectively "Augustine of Canterbury," by Dr. E. L. Cutts, and "William Laud," by William Holden Hutton. "Masters of Italian Music," by R. A. Streatfield, appeared in the series of "Masters of Contemporary Music." Kenyon West came forward with a timely volume upon "The Laureates of England," containing much useful information. "Hans Christian Andersen: A Biography" came from K. Nisbet Bain. G. G. Alexander wrote on "Lao-Tze: The Great Thinker," while after the lapse of more than a century the first formal "Life of Adam Smith" was written by John Rae. "A Memoir of George Higinbotham, an Australian Politician and Chief Justice of Victoria" was published by his son-in-law, Edward E. Morris, and Joseph Pope was the author of "Memoirs of the Right Hon. Sir John

Alexander Macdonald, First Prime Minister of the Dominion of Canada," in 2 volumes. Sir Robert Ball told the life-stories of "The Great Astronomers"; Sir Archibald Geikie contributed an excellent "Memoir of Sir Andrew Crombie Ramsay"; and Sir Henry E. Roscoe, "John Dalton and the Rise of Modern Chemistry." "The Life of Sir Henry Hallford, Bart., M. D.," known as "The Lord Chesterfield of all Medical Practitioners," was written by William Munk, M. D., at the request of the College of Physicians, and "Pioneer Work in opening the Medical Profession to Women" was a collection of autobiographical sketches by Elizabeth Blackwell, M. D. Alfred T. Story, the author of the "Life of John Linnell," gave us "James Holmes and John Varley," the miniature painter and his associate; "James Wolf, Animal Painter" was the theme of A. H. Palmer; and yet two other artists were "George Morland, Painter, London, 1768-1804," by K. Richardson, and "John Thomson of Duddington, Pastor and Painter," a memoir by W. Baird. F. E. Baines told of "Forty Years at the Post Office," "Letter Books of John Hervey, First Earl of Bristol," in 2 volumes, and "The Diary of John Hervey, First Earl of Bristol" contained records of great variety and interest, as they covered the reigns of no less than 6 English sovereigns, with 4 of whom Lord Bristol was personally acquainted, and the "Life of Sir Robert Dudley, Earl of Warwick and Duke of Northumberland," by J. Temple Leader, recalled a remarkable personality. "Memoirs of the Verney Family during the Commonwealth, 1650-1660" were compiled from letters and illustrated from portraits, in 3 volumes, which we owe to Margaret M. Verney, and Augustus J. C. Hare chronicled the philanthropic Quaker family known as "The Guernseys of Earham," in 2 volumes. "The First Whig" was an account of the parliamentary career of William Saecheverell, by Sir George Sitwell; Lord Edmond Fitzmaurice derived "The Life of Sir William Petty, 1623-1687" chiefly from private documents hitherto unpublished; and Dr. John Todhunter wrote a "Life of Patrick Sarsfield, Earl of Lucan." "Letters written by Sir Samuel Hood in 1781-'92" were edited by David Hannay. P. Hume Brown wrote "John Knox: A Biography," in 2 volumes, and Mrs. Florence A. Macneun added much that was supplementary in her smaller work bearing the name of the great reformer. Rev. Montague Fowler chronicled "Some Notable Archbishops of Canterbury," and to religious biography belong also "The Last Abbot of Glastonbury and his Companions," by Francis Aidan Gasquet, D. D.; "The Life and Times of James Ussher, Archbishop of Armagh," by J. A. Carr; "Edward Harold Browne, D. D., Lord Bishop of Winchester," by G. W. Kitchin, D. D., Dean of Durham; the "Life and Letters of John Cairns, D. D.," by Alexander R. Macneun; "The Recollections of the Very Rev. G. D. Boyle, Dean of Salisbury"; and "Fifty Years; or, Dead Leaves and Living Seeds," by Rev. Harry Jones. "The Personal Life of David Livingstone" was written by W. G. Blaikie, chiefly from his unpublished journals and correspondence in the possession of his family, "Bishop Heber, Poet and Chief Missionary to the East, Second Lord Bishop of Calcutta, 1783-1826" was from the pen of George Smith; "John Horden, Missionary Bishop," by Rev. A. R. Buckland, appeared in the "Splendid Lives Series"; and Rose E. Faulkner wrote of "Joseph Sidney Hill, First Bishop in Western Equatorial Africa." From Agnes Gibberne we had "A Lady of England: The Life and Letters of Charlotte Maria Tucker," so long known only as A. L. O. E. The "Life and Correspondence of T. V. French," by Rev. H. Birks, filled 2 volumes; a "Memoir of Richard Busby, D. D. (1606-1695)," by G. F. R. Barker, was accompanied with some account of Westminster School in the seventeenth century; and David Masson contributed a sketch of "James Melvin, Rector of the Grammar School at Aberdeen," known as the "supreme Latinist" and held

to the highest esteem as a man. "Benjamin Jowett, Master of Balliol" was the subject of a personal memoir by Lionel Tollemache, and R. A. Armstrong wrote the life of "Henry William Crosskey." A melancholy interest attaches to "The Love Letters of Mr. H. and Mrs. R.," edited by Gilbert Burgess; E. A. Vennity proposed to tell "The True Story of the Cavalier D'Eon," and Francis Gerard revived "Some Celebrated Irish Beauties of the Last Century." "The Diversions of a Prime Minister," by Hugh Thompson, relate to the misdoings of Hon. and Rev. Stanley Baker in the Tonga kingdom, and from Rev. Edwin Lloyd we had sketches of "Three Great African Chiefs." A new edition was issued of Horace Walpole's "Memoirs of the Reign of King George the Third," first published by Sir Denis Le Marchant, Bart., and now re-edited by G. F. Russell Barker in 4 volumes, with 16 portraits; H. Buxton Forman edited a complete revised edition of the "Letters of John Keats"; Vol. VI was sent out of H. B. Weyland's edition of Pepys's "Diary"; and Austin Dobson contributed an introduction to the "Memoirs of a Protestant condemned to the Gallies of France for his Religion," translated by Oliver Goldsmith, now printed in 2 volumes. Vol. IV also appeared of "A Literary and Biographical History, or Bibliographical Dictionary of the English Catholics, from the French with Rome in 1584 to the Present Time," by Joseph Gillow, and Vols. XLII, XLIII, and XLIV of the "Dictionary of National Biography," edited by Sidney Lee.

Essays.—"Anima Poeta" was the appropriate title given to the delightful extracts from the unpublished notebooks of Samuel Taylor Coleridge, edited by Ernest Hartley Coleridge, and Walter Pater was sadly recalled by 2 volumes of essays prepared for the press by Charles L. Shadwell, entitled respectively "Greek Studies," and "Miscellaneous Studies." "Aristotle's Theory of Poetry and Fine Art" was treated in a masterly manner by Prof. S. H. Butcher, and George C. W. Warr studied "The Greek Epic," "Lectures on Latin Poetry," delivered by Prof. R. Y. Tyrrell, of Dublin University, on the Percy Turnbull Memorial Foundation in the Johns Hopkins University in 1892, were collected into a volume of delightful literary flavor, while to a more recent period belong "Corrected Impressions," by George Edward Hartman Saintsbury, a collection of essays on Victorian writers. From the same author we have a second series of "Essays in English Literature, 1780-1800"; Edward Dowden contributed "New Studies in Literature"; and from Sir Herbert Maxwell we had "Post Meridiana," a volume of afternoon essays. John Charter Collings published "Essays and Studies"; James Ashcroft Noble, "Impressions and Memories"; F. W. Waltham, "Indolent Impressions"; E. B. Chancellor, "Literary Types," essays in criticism; while a second series of "Lectures and Essays" by the late Henry Nettleship was edited by F. Havergal. "The Root, the Root, and the Flower" was the title of poetic aphorisms in prose form, by Coventry Patmore; John Davidson offered "Sentences and Paragraphs"; and Ouida, "Views and Opinions." Henry Whitman gave us "Teuton Studies," "The Literature of the German Era," by William Minto, was edited with a biographical introduction by William Knight; and W. J. Courthorpe contributed "A History of English Poetry." "Studies in Early Victorian Literature" were made by Frederic Harrison, Hugh Walker devoted a volume to "The Greater Victorian Poets," and W. S. Lilly lectured on "Four English Homesteads of the Nineteenth Century." "The Early History of the Renaissance in England" was the subject of the Rede Lecture for 1893, by Bishop Creighton. J. Oates examined "The Teaching of Tolstoyism," and M. Trevelyan dwelt upon "The Land of Arthur." "The Arthurian Epic" was the subject of exhaustive study by S. H. Gorton. "The Story of Early Gaelic Literature," by Douglas Hyde, appeared in the "Irish Library," edited by Sir Charles Gavan Duffy. "The Influence of Dante on

Modern Thought" was traced by H. Oelander; and yet again we have "Dante; His Times and his Work," by Arthur J. Baker. Henry Thornton Wharton issued a third edition of his "Sappho," and Prof. Percy Wentworth Thompson prepared "A Glossary of Greek Birds." "Old World Japan" sustained legends of the "Land of the Gods," recited by Frank Kinder, with 20 illustrations, by T. H. Robinson. "Beeland; Dickens's Place and People" was, of course, by Percy Fitzgerald; "In a Walled Garden" was a pleasing collection of papers by Bonnie Rayner Bellie; and "The Table-talk of Shirley," by John Skelton (Shirley), contained reminiscences of, and letters from Keats, Thackeray, Disraeli, Browning, and others. Edward Gordon edited "Browning Studies," select papers by members of the Browning Society, with an introduction; R. Bridges contributed "John Keats; A Critical Essay"; and Adolphus Alfred Jack, "Thackeray; A Study." "Euripides, the Rationalist" purported to be a study in the history of art and religion, by Dr. A. W. Verrall; P. J. Cooke prepared "A Handbook of the Drama"; T. Fairman Orlich made a study of "Early London Theatres in the Fields." Henry Arthur Jones traced "The Evolution of the English Drama, 1550-1594" in a collection of essays and lectures. A. C. Calverley supplied "Fact and Fiction about Shakespeare"; John Corbin advanced an ingenious theory as to the madness of "The Elizabethan Hamlet" and its comic aspect; and Vol. I was issued of "Shakespeare and his Times Under James I.," in the series of "English Writers," carried almost to completion by Prof. Henry Morley, and finished, after his death, by W. Hall Griffin. The seventh series of "The Bookworm" appeared; W. Roberts, in "The Book-hunter in London," made historical and other studies of collectors and collecting; H. P. Horne wrote upon "The Binding of Books"; and W. Y. Fisher, upon "Bookbinding in France." "The History of 'Punch'" was written by M. H. Spielman, and "A Jargon of 'Punch'" with those who helped to brew it, being the early history of "The London Charivari," came from Athol Mayhew. The second volume of "The Ending Remains of Prehistoric Times," by J. F. Hewitt, completed that work; "The Legend of Perseus," in 2 volumes, by Edwin S. Hartland, was also a study of tradition in story, custom, and belief; while from Surgeon-Major L. Austine Waddell came an exhaustive work upon "The Buddhism of Tibet," written and illustrated in large part from original Tibetan sources. Evelyn Cecil traced the history of "Prison-governance" in various countries and the practical effects of its existence; Frederic Seebohm continued "The Tribal System in Wales"; and Hugh E. Seebohm was the author of an essay "On the Structure of Greek Tribal Society." H. Hammer investigated "The Political Institutions of the Ancient Greeks." From Albert D. Vandam came old chapters and sketches of "French Men and French Manners." Frances Elliot detailed "Roman Gods," while T. P. O'Connor read "Some Old Love Stories." Doctor Jackson and the Fair Sex" was, as claimed, a study in contrast, by W. H. Craig. W. Andrews concluded "The Doctor in History, Literature, Folklore, etc." Out-of-door life was the theme of several charming volumes. John Bickerdike detailed "Days of my Life on Waters Fresh and Salt"; W. Wende Fowler made "Summer Studies of Birds and Bees"; G. Scott was heard from "Among the Apple Crickets"; Duncan Fraser told of "Riverside Rambling"; Edward Steg, of "Wayside and Woodland Blossoms" and what he saw "By Vocal Woods and Waters"; Donald McDonald, of "Sweet Scented Flowers"; "Bird Notes," caught by Jane Mary Hayward, were edited by Emma Hubbard; "Birds, Bees, and Fishes of the Norfolk Broadland" were described by P. H. Emerson; and "Insects of my House and Garden," by Mrs. Eliza Brightwell. "The Annals of a Quiet Valley" were edited by John Warton from the reminiscences of "A Country Parson," and "Forth

in Field," by Hugh Haliburton (J. Logie Robertson), was a volume of essays on the life, language, and literature of old Scotland. Marian Boalfe Cox wrote "An Introduction to Folklore"; F. Edward Hulme, "Natural History Lore and Legend"; W. H. Mallock made "Studies of Contemporary Superstition"; E. T. Elworthy devoted 2 volumes to "The Evil Eye"; P. H. Ditchfield added "Books Fatal to their Authors" to the "Book-lovers' Library"; and T. F. Thielson Dyer collected "Strange Pages from Family Papers." "Ancient and Holy Wells of Cornwall" were described by M. and L. Quiller-Couch, and "Curious Church Customs and Cognate Subjects" were edited by William Andrews. "The Wonderful Wapentake" was the theme of J. S. Fletcher; "A Son of the Soil," "A Descriptive Catalogue of the Manuscripts in the Fitz-William Museum" was prepared by Montague Rhodes James, and the first series was issued of "Facsimiles of Royal, Historical, Literary, and other Autographs in the Department of Manuscripts, British Museum." Vols. IV, V, and VI completed Prof. Walter W. Skeat's monumental edition of "The Complete Works of Geoffrey Chaucer"; from William S. Sonnenschein came "A Reader's Guide to Contemporary Literature," being the first supplement to "The Best Books," and Vols. III and IV of "English Prose Selections" were published. Vol. I of "A Literary History of the English People" were welcomed from J. J. Jusserand, who also contributed "English Essays from a French Pen." "The Troubadours and Courts of Love," by John F. Rowbotham, appeared in the "Social England Series."

Fiction.—Several distinguished writers of fiction sent out novels which attracted much attention and comment, though none scored such a success as "Trilby" did the year previous. George Meredith published "The Amazing Marriage" and a volume containing three short stories, "The Tale of Chloe," "The House on the Beach," and "The Case of General Ople and Lady Camper." "Jude the Obscure," by Thomas Hardy, gave rise to much adverse criticism, although admitted a work of genius; "The Wood beyond the World" was another of William Morris's prose poems; Mrs. Humphrey Ward told "The Story of Bessie Costrell," while "The Days of Auld Lang Syne," by Ian Maclaren (Rev. John Maclaren Watson), kept up the acquaintance made with Drumtochty folk in "Beside the Bonnie Brier Bush." "Strangers at Lisconnell" was the title of a second series of "Irish Idylls," by Jane Barlow, who published also "Maureen's Fairing." Israel Zangwill, the author of "The Children of the Ghetto," won commendation by his story of "The Master," and Rudyard Kipling delighted old and young readers with "The Second Jungle Book." Sir Walter Besant wrote "Beyond the Dreams of Avarice" and "In Deacon's Orders, and Other Stories"; "When Valmond came to Pontiac" was a story of a lost Napoleon vividly told by Gilbert Parker, while Stanley J. Weyman was represented by two stirring French stories, "The Red Cockade" and "From the Memoirs of a Minister of France," and by the "King's Stratagem, and Other Stories"; W. Clark Russell, by "The Good Ship *Mohock*," "The Convict Ship," "Heart of Oak" and "The Phantom Death, and Other Stories"; George Moore, the author of "Esther Waters," made three studies of "Celibates" included in one volume; and a new writer of marked ability, Frances Frederica Montrésor, published "Into the Highways and Hedges" and "The One who looked on." Robert Buchanan wrote "Lady Kilpatrick" and "Diana's Hunting," and Douglas Sladen "A Japanese Marriage," "Tween Gloamin' and the Mirk" was, as its name betokens, a collection of Scotch stories, by Sir Hugh Gilzean Reid, and "Sunshine and Hoar," by Gabriel Setoun, gave some further glimpses of life at Barncraig. Joseph Hocking pronounced "All Men are Liars"; Lily Dougall added to the reputation gained by her "Beggars All," sending out "The Mermaid," "The Zeit-Geist,"

and "A Question of Faith"; S. R. Crockett showed he had lost none of his power in "Men of the Moss Hags," "A Galloway Lord," and "Bog-Myrtle and Peat"; and "Slain by the Doones, and Other Stories" suggest, of course, R. D. Blackmore. "My Lady Nobody" came from Maarten Maartens (J. M. W. van der P. Schwartz); "Billy Bellew," from W. E. Norris; "The Martyred Fool," from David Christie Murray; "Noëmi," from Sabine Baring-Gould; "A Woman of Impulse" and a "London Legend," from Justin H. McCarthy; and "The King of Andaman," from J. Maclaren Cobban. Mrs. Oliphant was prolific as ever, writing the "Story of a Governess" and that of "Two Strangers"; "The Way of a Maid" was described by Mrs. Katherine Tynan Hinkins; and Sara Jeannette Duncan (Mrs. Everard Cotes) was particularly happy in her tales of Indian life, "Vernon's Aunt" and "The Story of Sonny Sahib." "The Chronicles of Count Antonio" and "A Man of Mark," by Anthony Hope (A. H. Hawkins), "The Sowers," by Henry Seton Merriman, "An Arranged Marriage," by Dorothy Gerard, "The Impregnable City" and "The Little Huguenot," by Max Pemberton, "The Heart of Life," by W. H. Mallock, "Out of Due Season" and "The Mistress of Quest," by Adeline Sergeant, and "Fidelis," by Ada Cambridge, found readers, as did "Mrs. Musgrave—and Her Husband," by Richard Marsh; "In the Smoke of War" and, "Tryphena in Love," by Walter Raymond; "Not Counting the Cost," by Tasma (Mrs. Jessie Couvreur); "The Vengeance of James Vansittart," by Mrs. J. Horder Nedell; "Red Rowans," by Mrs. Flora Annie Steele; and Frank Frankfort Moore's 5 books, "The Sale of a Soul," "They call it Love," "The Secret of the Court," "One Fair Daughter," and "Two in the Bush and Others Elsewhere." "When Charles I was King" was a romance of Osgoldcross, 1633-1649, by J. S. Fletcher; and "In Taunton Town," a story of the rebellion of Monmouth, by Evelyn Everett Green. "The Watter's Mou," by Brain Steker, "A Son of Haggar," by Hall Caine; "The Honour of Savelli," by S. Levett Yeats; "Ia: A Love Story," by Thomas Quiller Couch (Q); "Lyre and Laurel," by F. Austey Guthrie; "The Crooked Stick," by Rolf Boldrewood; "The White Prior" and "The Gates of Dawn," by Fergus Hume; and "A Daughter of the Soil," by M. E. Francis, deserve mention, as do "Tom Chester's Sweetheart" and "The Banishment of Jessop Blythe," by Joseph Hatton; "At the First Corner," by H. B. Marriott Watson; "Scylla or Charybdis," by Rhoda Broughton; "In Mark's Overt," by James Payn; "In the Year of Jubilee" and "Eve's Ransom," by George Gissing; and "A Deal with the Devil," by Eden Phillpotts. "The Sorrows of Satan" were detailed by Marie Corelli (a daughter of Charles Mackay), whose previous works have given her a wide reputation. John Strange Winter (Mrs. H. E. V. Stannard) outlined "A Magnificent Young Man," while the "new woman" figured as the heroine of more than one novel, the titles of which are sufficiently suggestive in many cases. Grant Allen outraged all conventional ideas of morality in "The Woman who did" and "British Barbarians"; Violet Hunt portrayed "A Hard Woman"; "The Curse of Intellect" came from an anonymous pen; while the author of "A Superfluous Woman" published "Transition." Mrs. Eliza Lynn Linton was the author of "The New Woman"; Annie E. Holdsworth, of "The Years that the Locust hath eaten"; Menie Muriel Dowie (Mrs. Henry Norman), of "Gallia"; Mary L. Pendered, of "A Pastoral played out" and "Dust and Laurels." John Oliver Hobbes (Mrs. Craigie) wrote of "The Gods, Some Mortals, and Lord Wickenham"; Guy Boothby, of "The Marriage of Esther," "A Lost Edensor," and "A Bid for Fortune," the scene of all 3 books being laid in Australia; while "A Gender in Satin," by Rita (Mrs. E. M. J. G. Humphreys) and "A Comedy in Spasm," by Iota (Mrs. Manningham Caffyn), may be classed together. "Mrs. Tregaskie"

from Mrs. Campbell-Praed, and "The New Moon" from C. E. Raimond. H. D. Lowry dealt with "Woman's Tragedies"; G. S. Street supplied "Episodes," and also wrote "The Autobiography of a Boy"; Frederick Wedmore told "English Episodes"; and W. J. Dawson "London Idylls." Hubert Crackanthorpe made "Sentimental Studies"; Mrs. J. Thelwys Jebb described "Some Unconventional People"; and W. C. Scully told "Kafir Stories," as Arthur Morrison did "Tales of Mean Streets." "Neighbors of Ours" was the title of slim stories of London, by Henry W. Nevinson. "The Girl from the Farm" was a strong story with a purpose by Gertrude Dix. "Lilith" was the only novel from the pen of George MacDonald, wildly fantastic, but full of poetry and reflection. John Davidson gave "A Fall and True Account of the Wonderful Misal of Earl Loveland." H. Rider Haggard made a new departure in "Jan Haste," but returned to the marvelous in "The Heart of the World." A. Conan Doyle followed his "Memoirs of Sherlock Holmes" with "The Stark Munro Letters," somewhat in the same vein, and also solved "The Mystery of Cloombur." "Jacob Norland" was by R. H. Sherard; "The Reason of a Woman," by Richard Pryce; "Elizabeth's Pretenders," by Hamilton Aldé; "Red Earth," by Morley Roberts; "The Prince of Balkistan," by Alice Upward; "The Herons," by Miss Helen Shipman; "Colonel Norton," by Florence Montgomery; "The Drift of Fate" and "The Other Bond," by Dora Russell; "Susannah," by Mary K. Mann; "Mammoth," by Ella d'Arcy; "The Moving Finger," by Mary Gaunt; "Sins of Fire," by Miss M. E. Bradlan; "Corruption," by Percy White, the author of "Mr. Bailey Martin"; and "When Fortune Frowns," by Mrs. Henry Jenner. "A Monk of Pife," by Andrew Lang, purported to be a romance of the days of Joanna d'Arc, done into English from the manuscript in the Scots College of Ratisbon, and to historical romance belong "The Coming of Cuculain," by Kenneth O'Grady, and "A Duke of Britain," by Sir Herbert Maxwell. Frank Barrett told of the adventures of "A Set of Rogues"; Florence Warden (Mrs. George E. James) wrote "Kitty's Engagement"; John Strange Winter (Mrs. H. E. V. Stannard), "A Bluebell Woman" and "The Major's Favorite"; and The Duchess (Mrs. Margaret Hungerford), "The Three Graces," "The Professor's Experiment," "A Tag of War," and "Molly Darling, and Other Stories." "Sons of Belial" came from William Winstall; George Paston made "A Study in Prejudice" under the guise of fiction; and Victoria Cross wrote of "The Woman who did not." Rosa Bonachetta Carey wrote for young people only, sending out "Cousin Mona," a story for girls, and "My Little Bay Blue," and to Mary Stuart Wortley, Countess of Lovelace, the juveniles were indebted for "The Story of Zelmira and the Minister," or "Beauty and the Beast" retold after the old Italian version, and "done into pictures." "The Old Missionary," by Sir William W. Hunter, gave a vivid picture of life in India. For boys George A. Henty gave "A Knight of the White Cross," "Through Eastern Snows," and "The Tiger of Mysore"; and William Gordon Stables, M. D., "For Life and Liberty" and "How Jack Mackenzie won his Epaulmets." "The Jermans and the Asterisks" was a story in psychology, by Gerald Campbell, and "Dialogues and Scenes from the Novels of Jane Austen" were arranged and adapted for drawing-room performance by Emma Filippi (Mrs. Dawson). A 12-volume edition of "The Novels of Tobias Smollett" was edited by George Saintsbury, and S. R. Crockett contributed an introduction to a new 5-volume edition of the novels of Julian Galt, edited by D. Storrar Morrison, of which 4 were issued during the year, consisting "The Annals of the Parish," "The Ayrshire Lancers," and "Sir Andrew Wylie." "The Novels of Adventure by Charles Lever" were contained in a finely illustrated volume, uniform with his military novels, and a reprint of the "Waverley

Novels" from the edition of 1871 was begun in 45 volumes.

Fine Arts.—"The Cathedrals of England and Wales" were the subject of a handsome volume in the "Builder Series," the first collection ever published of plans of English cathedrals drawn to a large scale and thoroughly trustworthy, each plan being accompanied with a descriptive, critical, and historical account of each building from the pen of an architect or competent antiquary. "The Church of Santa Sophia, Constantinople," by W. B. Lethaby and Harold Swainson, was an important contribution to the history of Byzantine art, and "The Moslul Architecture of Fathpur-Sikri," long the delight of artists and architects, was also described and illustrated by Edmund W. Smith. Thomas Harris, in "Three Periods of English Architecture," made an appeal for the introduction of a new architecture based upon iron construction, and H. Heathcote Statham wrote a short treatise on "Architecture for General Readers." Richard G. Hutton offered hints for the student and designer upon the treatment of the human figure in "Figure Drawing and Composition." R. Muther published Vol. I of a "History of Modern Painting"; new illustrated editions were made of "Painting in France," "Contemporary French Painters," and "Imagination in Landscape Painting," by Philip Gilbert Hamerton, and of "Mrs. Jameson's Works on Art," the latter edited by Miss Estelle M. Hurli, finely printed from new plates, and with nearly 100 illustrations to each volume. R. A. M. Stevenson offered a critical study of "The Art of Velasquez," accompanied with 30 photographic plates and an appendix of about 30 full-page illustrations; F. G. Stephens edited "Selected Works of L. Alma-Tadema," and contributed a preface to "Sir Frederik Leighton, Bart., P. R. A.," by Ernest Rhys. Frederick Wedmore wrote, "Etching in England," and added an essay to the fine volume of reproductions of "Rembrandt." Karl Karoly offered "A Guide to the Paintings of Venice." "Modern Book Illustration," by Joseph Pennell, was one of the issues of the "Ex-Libris Series," other volumes in which were "Picture Posters," by Charles Hilt, and Part III of "Dated Book-Plates," by Walter Hamilton, covering those from 1800 to 1860. In this connection may be mentioned also "Venice: The Early Art of Printing," by Ferdinand Ognissia, and Part II of "Bookbindings and Bindings of Bindings in the National Art Library, South Kensington." One of the successful books of the year was Mrs. Copleston's "Makers of Modern Rome," and yet other attractive illustrated works were "Bits of Old China," a selection of 41 etchings by W. W. Bagnall, with introduction by Lionel Johnson and Richard Le Gallienne; "Old Chester," etchings and pen-and-ink sketches by Henry Havell Crickmore; "Pictures of British Landscapes," by Herbert Foster; 12 etchings of "Faintest Lost," by William Strong; and Walter Crane's illustrations of Spenser's "Faerie Queene" and "Two Comedians of Verona." "Studies in Book Art" was a collection of Kunkin's drawings and press pictures, and a reprint was also made of his "Bookmarks of England." C. F. Murray prepared a "Catalogue of Pictures belonging to the Duke of Portland at Wallbrook Abbey and in London." "A Book of Fairs," by M. A. Flory, had a chapter on the collecting by M. C. Jones. Henrietta Irving Bolton wrote a small volume upon "The Madonna of St. Luke" in the church of Santa Maria Maggiore, Rome, and Mrs. Nancy R. E. M. Bell selected "Masterpieces of the Great Artists, c. 1300-1500." R. Stuart Jones published "Select Passages from Ancient Western Illustrations of the History of Greek Sculpture"; P. Gardner and F. B. Johnson prepared "A Manual of Greek Antiquities"; and W. G. Wood Martin, in "Pagan Ireland: An Archaeological Sketch," furnished a handbook of Irish pre-Christian antiquities. "Cotton, Pictographs and Psephismata Scripta" were collected by Arthur J. Evans; W. H. St. John edited a work upon "The Corporative Plans and Designs of

Office of the Cities and Towns of England and Wales," by L. Jewitt; and "Numismata Londinensia" was the title given to a sumptuous volume containing photographic reproductions of 26 medals struck by the Corporation of London to commemorate the most important municipal events of the last sixty years. They were accompanied with notices by Charles Welch. "The Book of Public Arms" was compiled and edited by A. C. Fox-Davies and M. E. B. Crookes, while "The Record and Badges of Every Regiment and Corps in the British Army" were due to H. M. Chichester and G. B. Short. A. C. Haddon wrote of "The Decorative Art of British New Guinea"; W. G. Sutherland, of "Modern Wall Decorations"; J. Harrison, of "The Decoration of Metals"; while "A Manual of Marks on Pottery and Porcelain" came from W. H. Hooper and W. C. Phillips. Frances and Hugh Marshall studied the technique and symbolism of "Old English Embroidery," and T. F. Bell treated of "Jacquard Weaving and Designing." "Echoes of the Playhouse" contained reminiscences of some past glories of the English stage, by Edward Robins, Jr., and J. S. Shedlock wrote of the origin and development of "The Pianoforte Sonata." "Gluck and the Opera" was a study in musical history by E. Newman, and H. Davey wrote a "History of English Music." "Voice, Speech, and Gesture" was a handbook to the elocutionary art by Hugh Campbell, M. D., R. F. Brewer, and Henry Neville.

History.—In the "Oxford Manuals of English History" appeared "The Making of the English Nation," by C. G. Robertson, and "King and Baronage" (1135-1327), by W. H. Hutton. Two out of 3 volumes, by W. H. S. Aubrey, upon "The Rise and Growth of the English Nation," were issued, the first bringing us to the year 1399 and the second to 1658. Charles Oman wrote "A History of England" in one volume, and Cyril Ransome "An Advanced History of England." J. H. Round, in "Feudal England," made historical studies on the eleventh and twelfth centuries. Allen B. Hinds traced "The Making of the England of Elizabeth," and John Knox Laughton edited 2 volumes of "State Papers relating to the Defeat of the Spanish Armada." C. H. Firth edited 2 volumes also of "The Clarke Papers," selections from the papers of William Clarke, Secretary to the Council of the Army 1647-49, and to Gen. Monk and the commanders of the army in Scotland 1651-60, containing historical matter of much value. Arthur D. Innes wrote an account of "Britain and her Rivals in the Eighteenth Century, 1713-1789"; Henry W. Wolff gave his attention to "Odd Bits of History"; Sir J. R. Seeley published "The Growth of British Policy: An Historical Essay," in 2 volumes, while Hereford B. George enumerated "Battles of English History." William Howard Russell fought over again "The Great War with Russia," as Gen. Sir Daniel Lyons did "The Crimean War from First to Last"; and yet again we have "The Crimea in 1854 and 1894," by Sir Evelyn Wood, and "The Story of the Highland Brigade in the Crimea," founded on letters written during the years 1854, 1855, and 1856, by Lieut.-Col. Anthony Sterling. "Lucknow and Oude in the Mutiny" was at once a narrative and a study, by Lieut.-Gen. McLeod Innes; Sir Edward Braddon gave us "Thirty Years of Shikar"; and "Three Years in Cachar," by M. J. Wright, contained a short account of the Manipur massacre. H. C. Thomson outlined "The Chital Campaign"; Capt. G. J. and Frank E. Younghouse told of "The Relief of Chital"; and Capt. Crawford Metcal went "With the Zhoib Field Force, 1890." Col. Fyler wrote "The History of the Fiftieth (or the Queen's Own) Regiment"; Col. John Davis sent out Vols. II and III of "The History of the Second (Queen's) Royal Regiment, now the Queen's (Royal West Surrey) Regiment"; while "A History of the Ninety-third Sutherland Highlanders" was written by Lieut.-Col. Percy Groves. G. Lewis Dickinson traced "The Development of Parliament

during the Nineteenth Century," and "The Crusade against the Constitution," by Sir W. T. Charley, was an historical vindication of the House of Lords. W. Cunningham, D. D., and Ellen A. McArthur were joint authors of "Outlines of English Industrial History"; Vols. III and IV of "Social England," edited by Henry Duff Traill, covered the periods from the accession of Henry VIII to the death of Elizabeth, and from the accession of James I to the death of Anne; while to R. M. Garnier we are indebted for "Annals of the British Pensantry." "The Tragedy of Fotheringay" was retold by Hon. Mrs. Maxwell Scott; and William Douglas Hamilton edited the "Calendar of State Papers (Domestic)—Charles I. 1648-9." R. Ulric Burke wrote "A History of Spain from the Earliest Times to the Death of Ferdinand the Catholic"; and Joseph Jacobs made "An Inquiry into the Sources of the History of the Jews in Spain." Elizabeth M. Sewell's "Outline History of Italy" was supplemented by "The Age of the Condottieri," a short history of medieval Italy, from 1409 to 1530, by Oscar Browning, and Vols. V and VI of "Italy and her Invaders," by T. Hodgkin. "The Model Republic," by F. Grenfell Baker, was a history of the rise and progress of the Swiss people. Vol. II appeared of "Cassell's History of the War between France and Germany, 1870-71"; and William V. Herbert described as an eyewitness the "Defense of Plevna, 1877." "Cavalry in the Waterloo Campaign" was a critical study, by Sir Evelyn Wood; and "Waterloo," by E. L. S. Horsburgh, was at once a narrative and a criticism. Several books were devoted to Africa, among which are "The Land of the Nile Springs," by Col. Sir Henry Colville; "The Story of the Expansion of Africa," by Hon. A. Wilmot; Vol. IV of "The Story of Africa and its Explorers," by Dr. Robert Brown, concluding the work; "South Africa," a study in colonial administration and development, by W. Basil Worsfold; "Matabeleland, and How we got it," by C. L. N. Newman; "Chronicles of Uganda," by Rev. R. P. Ashe; and "The History of the English Church and People in South Africa," by A. T. Wigram. "The Story of Vedic India" was written by Zénaïde A. Ragozin in the "Story of the Nations Series"; W. M. Flinders Petrie published Vol. I of "A History of Egypt" from the earliest times to the sixteenth dynasty; and "Europe in China," by E. J. Eitel, contained the history of Hong-Kong from the beginning to the year 1852. E. H. Parker chronicled "A Thousand Years of the Tartars," and Vol. I of "The Cities and Bishoprics of Phrygia," by W. M. Ramsay, also saw the light. "A Lecture on the Study of History" was delivered at Cambridge, June 11, 1895, by Lord Acton, Regius Professor of Modern History, which was published in a small volume. Vol. III completed the exhaustive work of Reginald R. Sharpe upon "London and the Kingdom." E. T. Bradley (Mrs. A. Murray Smith) wrote "Annals of Westminster Abbey," and Arthur Irwin Dament "The History of St. James's Square and the Foundation of the West End of London." With a glimpse of Whitehall in the reign of Charles II, J. Reid threw "New Lights on Old Edinburgh," and Robert Miller, Lord Dean of Guild of that city, wrote, mainly from the original records, a sketch of the history of "The Municipal Buildings of Edinburgh" for seven hundred years. Vol. II appeared of Edward Bateson's "History of Northumberland," and again we have "The History of Northumberland," by Cadwallader J. Bates. W. Salt Brassington commemorated "Historic Worcestershire"; W. Andrews, "Bygone Cheshire"; Harry Speight wrote of "Nidderdale and the Garden of the Nidd"; and W. Lyon published "Chronicles of Finchampstead in Berkshire." Vol. II was also issued of "The Isle of Bute in the Olden Time," by J. K. Hewison; "A History of Newfoundland" was compiled by D. W. Prowse, Q. C., Judge of the District Court of that island, from the English, colonial, and foreign records. "Ironclads in Action," by H. W. Wilson, was a sketch of naval warfare from 1855

by 1895 in 2 illustrated volumes; Charles G. Harper illustrated from old prints and portraits his own book upon "The Dover Road: Annals of an Ancient Corridor"; E. H. Morris described "Chester in the Plantagenet and Tudor Reigns"; while "Oxford and her Colleges" were the theme of Goldwin Smith. Rev. R. B. Gardiner edited, with biographical notes, Part II of "The Registers of Wadham College," covering the period 1719-1871. A third revised edition was made of "The American Commonwealth," by James Bryce, M. P., with additional chapters.

Physical, Moral, and Intellectual Science.—J. V. Marquand reviewed the "Progress of Science," and Sir Douglas Hailey delivered an "Address to the British Association for the Advancement of Science" at Ipswich, Sept. 11, 1895, on his elevation to the office of its president, in which he contrasted the science of 1864 with that of the present day. Francis Galton issued "Finger-print Directories," and W. Dalton Holmequest exposed "Fallacies of Race Theories as applied to Race Characteristics." "Darwin and after Darwin" was an exposition of the Darwinian theory and a discussion of post-Darwinian questions by the late Prof. George J. Romanes, whose "Mind and Motion and Motion" was another posthumous volume of essays, and whose "Thoughts on Religion" were edited by Charles Gore. "Evolution and Art, as illustrated by the Life Histories of Designs" was contributed by Alfred C. Haddon to the "Contemporary Science Series"; "In the Guiana Forest" was the title of studies of Nature in relation to the struggle for life, by James Rodway, which had an introduction by Grant Allen; Edward Clodd published "A Primer of Evolution," and also wrote "The Story of Primitive Man" for the "Library of Useful Stories," other issues of which were "The Story of the Earth in Past Ages," by H. G. Seeley; "The Story of the Stars," by George F. Chambers; and "The Story of the Plasma," by Grant Allen. "A Handbook of Primates," in 2 volumes, by Dr. Henry O. Forbes, was added to "Allan's Naturalists' Library," edited by R. Bower Clark; and Vol. III of "The Cambridge Natural History" contained "Mollusks," by Rev. A. R. Cooke; "Brachiopods (Recent)," by A. E. Shipley; and "Brachiopods (Fossil)," by F. R. C. Reed. Charles Dixon wrote on "The Migration of British Birds," and also on "The Game Birds and Wild Fowl of the British Islands," the latter work being a handbook for the naturalist and sportsman, with colored illustrations; W. H. Hudson, the distinguished traveler and naturalist, published a popular volume on "British Birds," and R. Kearton was interesting on the habits of "British Birds' Nests." Part III was issued of the "Dictionary of Birds," for which Alfred Newton was largely responsible, carrying the work on from "Moss" to "Scaupbill"; F. W. Huxley wrote on "The Structure and Life of Birds"; and R. Bower Sharpe, the well-known ornithologist, published "A Chapter on Birds." "British and European Butterflies and Moths" were the subject of a handsome volume by A. W. Kappel and W. Egmont Kirby, and W. S. Furneaux also wrote on "Butterflies and Moths (British)." "The Natural History of Aquatic Insects" came from Prof. L. C. Miall. "The Natural History of Eristalis Tenax; or, The Drone Fly," from G. B. Rushton, while to Arthur Lister we owe "A Monograph of the Mycetozoa." Four volumes completed the splendid series of 60 which contain the "Report of the Scientific Results of the Voyage of H. M. S. Challenger," one on "Deep-sea Deposits," by Dr. John Murray and Rev. A. F. Nodder, while two contained the "Summary of the Scientific Results," by Dr. Murray alone. "An Introduction to the Study of Zoology" was written by Miss R. Lindzey, and Richard Lydekker edited "The Royal Natural History," to be complete in its numbers, of which Nos. 1-10 were issued during the year. "Notes on the Nebular Theory" were made by William Ford Stanley, and a full description of "The Moon," with a map of its principal physical features, was given by Thomas Gwyn Elger.

R. Bains and others examined "The Climate of the South of England." "The Origin of Plant Structures by Self-Adaptation to the Environment" was contributed by Rev. G. Henslow to the "International Scientific Series," and from the same author we have "The Plants of the Bible" in the series of "Present Day Primers." William Hatchinson prepared a "Handbook of Grasses," and George Munroe published the fourth volume of "British Fungus Flora," while M. C. Cooke was the author of "An Introduction to the Study of Fungi," as well as of several popular works on wild flowers. "Wild Flowers in Art and Nature," by J. C. L. Spenser, and F. W. H. Bridge, were illustrated with colored plates by H. G. Moon. "Color Vision" was the subject of the Tyndall Lectures, delivered in 1894 by W. de W. Abney, and Edmund Catchpole was the author of "A Text-book of Sound" in the "University Tutorial Series." "Charles Lyell and Modern Geology" was from the pen of Canon T. G. Bonney, and Dr. Joseph Frostwick published "Collected Papers on some Contradictory Questions of Geology," as well as a volume upon "The Traditions of the Flood." A third edition was also made of "The Great Ice Age and its Relation to the Antiquity of Man," by James Ussiekin. Charles Douglas made a study of the philosophy of "John Stuart Mill," and Henry Jones gave "A Critical Account of the Philosophy of Locke." "The Female Offender," by Conar Lamberton and W. Ferriss, opened the new "Criminology Series," edited by W. Douglas Morrison. St. George Mivart advocated "The Helpful Science," and Dr. G. S. Keith made "A Plea for Simpler Life." "Natural Rights," by D. G. Ritchie, purported to be a criticism of some political and ethical conceptions, and from the same author we had also "Darwinism and Politics," with two additional essays on human evolution.

Coming thus to questions of applied ethics, we have "Aspects of the Social Problem," by various writers, edited by Bernard Bosanquet, who was also responsible for "The Essentials of Logic." Prof. Robert Flint attacked "Socialism," while J. Richardson explained "How It can be done, or Constructive Socialism"; G. Morrison Davidson inspired "Let there be Light," and "Marine England," by R. Blatchford, was a plain exposition of socialism. "Socialism and Modern Thought" were considered by M. Kaufmann in the "Social Questions of the Day Series," and F. U. Lyle, in "Economics and Socialism," offered a demonstration of the cause and cure of trade depression and national poverty. Edwin R. A. Seligman published "Essays in Taxation"; G. H. Blunden wrote "Local Taxation and Finance" in the "Social Science Series," other issues of which were "Pitfalls to British Trade: How to avert them," by Edwin Rogers, and "Co-operative Labor upon the Land, and Other Papers," edited by J. A. Hobson. "The History of Currency, 1861-1894" was written by W. A. Shaw, and "Select Chapters and Passages from 'The Wealth of Nations'" were edited by W. J. Ashley in the series of "Economic Classics." "The History of the Foreign Policy of Great Britain" was traced by Montagu Burrows; "Apprentice: Pure Democracy and Pastoral Life in Inner-Rhoden" was a study, by Irving R. Richman, and Wordsworth Donisthorpe discussed of "Law in a Free State." "The Evolution of Industry" we owe to Henry Dyser, and "A History of Slavery and Serfdom" to Dr. John Kelle Ingram. Vols. V and VI of Charles Booth's study of "Life and Labor of the People of London" were given to "Population classified by Trade"; Gertrude Labouchere brought up "Some Poor Relief Questions," intended as a manual for workers, which had a preface by Sir John Lubbock; and "The Problem of the Age of Poets" was attacked by Geoffrey Drage. "The Rural Industries of England" were the subject of a work by J. L. Green, and a handsome volume reviewed the progress of "Scottish Home Industries." "State Education for the People in America, Europe, India, and Australia" was written upon by Sir Wil-

liam Wilson Hunter, Edward M. Hance, and others; 2 volumes were devoted to "Universities of Europe in the Middle Ages," by Hastings Rashdall; Henry E. and Emmie Felkin were joint authors of "An Introduction to Herbart's Science and Practice of Education"; and "Youthful Eccentricity, a Precursor of Crime" was by Forbes Winslow. The twenty-sixth volume of "Proceedings of the Royal Colonial Institute" was issued, and from T. H. S. Escott appeared a personal and political monograph on "Randolph Spencer-Churchill as a Product of his Age." "The King's Peace," by F. A. Inderwick, was a historical sketch of the English law courts, and from Sir F. Pollock and F. W. Maitland we had "The History of English Law before the Time of Edward I." in 2 volumes. "Chapters on the Principles of International Law" were also vouchsafed by John Westlake. One of the most significant books of the year was that of the Hon. Arthur James Balfour upon "The Foundations of Belief," which he also denominated "Notes Introductory to the Study of Theology," and from Dr. Henry Wace appeared "Christianity and Agnosticism," reviews of some recent attacks on the Christian faith. "The Philosophy of Theism" was the theme of the first series of Gifford Lectures before the University of Edinburgh in 1894-'95, by Prof. Alexander Campbell Fraser, and Dr. Alfred Barry delivered the Hulsean Lectures for the same year upon "The Ecclesiastical Expansion of England in the Growth of the Anglican Communion." The same lectures for 1893-'94, published during the year, were by the Right Rev. Mandell Creighton, upon "Persecution and Tolerance." "Via, Veritas, Vita" was the title of the Hibbert Lectures for 1894, by J. Drummond, and "Morality and Religion" that of the Kerr Lectures, by J. Kidd. "The Bible and the Monuments," by W. St. Chad. Boseawen, examined the primitive Hebrew records in the light of modern research; Prof. Allan Menzies wrote a "History of Religion"; "Lex Mosaica, or The Law of Moses and the Higher Criticism," by many authors, was edited by Richard Valpy French, and had an introduction by the late Right Rev. Lord Arthur Herve, Bishop of Bath and Wells; and John Urquhart also defended "The Inspiration and Accuracy of the Holy Scriptures." To the two different schools of biblical interpretation belong Dr. T. K. Cheyne's "Introduction to the Book of Isaiah," and "Isaiah One and his Book One," by Dr. George C. M. Douglas. A new work of value undertaken during the year was the "International Critical Commentary," issues of which were S. R. Driver's "Critical and Exegetical Commentary on Deuteronomy," a "Critical and Exegetical Commentary on Judges," by George Foot Moore, and a "Critical and Exegetical Commentary on the Epistle to the Romans," by William Sanday and Arthur C. Headlam. The "People's Bible" of Dr. Joseph Parker was completed during the year by the issue of the twenty-sixth and twenty-seventh volumes, and additions to the new eighth series of the "Expositor's Bible" were the "Book of Deuteronomy," by Andrew Harper; the "Book of Jeremiah," by W. H. Bennett; the "Book of Ezekiel," by Rev. John Skinner; the "Book of Daniel," by Dean Farrar; and the "Song of Solomon and The Lamentations of Jeremiah," by Walter F. Adeney. Dr. John Cunningham Geikie added 2 more volumes to his "New Testament Hours"; Canon Charles Gore published "Dissertations on Subjects connected with the Incarnation"; Hon. William E. Gladstone "The Psalter," with concordance and other auxiliary matter; and Dr. James Stalker, "The Two St. Johns of the New Testament." "The Proverbs" was the opening volume of the new "Modern Readers' Bible," edited by Richard G. Moulton, while E. J. Dillon pronounced Job, Koheleth, and Agur "The Skeptics of the Old Testament." "The New Life in Christ" was a study in personal religion by Dr. Joseph Agar Beet; R. F. Horton wrote upon "The Teaching of Jesus"; "The Brotherhood of Mankind" was a study toward a Christian philosophy of history by John Howard Crawford;

"Christ in Isaiah: Expositions of Isaiah XL-LX" came from F. B. Meyer; "The City of the Living God" was a note on Hebrews xii, 22-24," by Dr. Alexander R. Edgar. G. H. Pember dwelt upon "The Great Prophecies of the Centuries concerning Israel and the Gentiles," and Rev. A. H. Sayce described "The Egypt of the Hebrews and Herodotus." "Christus Imperator" was the title of a series of lecture sermons edited by Dr. Stubbs, now Dean of Ely, and from Bishop William Boyd Carpenter we had "The Great Charter of Christ," studies in the Sermon on the Mount, and "Some Thoughts on Christian Religion," as well as "Lectures on Preaching." "A Letter to London" was the title of a course of lectures on social subjects delivered under the auspices of the London Branch of the Christian Social Union, to which Canon Scott Holland contributed a preface, and a special series of Advent sermons, were also delivered under the same direction which were collected under the name of "The Gospel of the Kingdom." Archdeacon Sinclair addressed "Words to the Laity," and Canon Malcolm MacColl discussed "Life Here and Hereafter." "College Sermons" of Benjamin Jowett were edited by W. H. Fremantle and W. Robertson Nicoll delivered "Ten-Minute Sermons." From Rev. A. K. H. Boyd (Country Parson) we had "Occasional and Innumerable Days" and "St. Andrew's and Elsewhere"; "God and the Ant" was the title of a booklet by Coulson Kernahan; "The Soul-Winner" was a posthumous work by Charles Hadden Spurgeon; and "Union with God" was by James Rendel Harris. "Enigmas of the Spiritual Life" and "The Unknown God" were from the pen of Rev. Alexander H. G. Craufurd. "Philo and Holy Scripture" was a valuable work for students of the Greek text of the Old Testament, for which they were indebted to Dr. Herbert E. Ryle. A companion volume to the "Biblical Essays" of the late Bishop of Durham (Dr. Joseph Barber Lightfoot) was issued during the year, containing "Notes on the Epistles of St. Paul from Unpublished Commentaries," and his "Historical Essays" also saw the light. E. L. Cotes wrote a "History of the Church of England"; Mary H. Allies, a "History of the Church in England from the Accession of Henry VIII to the Death of Queen Elizabeth, A. D. 1509-1603"; and E. J. Newell, "A History of the Welsh Church to the Dissolution of the Monasteries." "Foundation Stones" was the title of fifteen lessons, with story illustrations, on the founding of the Church in England, by Austin Clem. "The Oxford Movement" was reviewed by G. Walsling. "Have Mercy upon me," by Rev. Andrew Murray, explained the fifty-first Psalm, and from the same author we had also "The Holiest of All," an exposition of the Epistle to the Hebrews.

Works of a general character which may as well be included here were: "The Key of the Past," the Nicaragua Canal, by Archibald Ross Colquhoun; "Lighthouses: Their History and Romance," by W. J. Hardy; the "Principles and Practice of Harbour Construction," by William Shield; and "The History of North Atlantic Steam Navigation," with some account of early ships and ship-owners, with over 50 illustrations, by H. Fry. A. Jamieson published Vol. I of "A Text-book on Applied Mechanics"; Oscar Guttman devoted 2 volumes to "The Manufacture of Explosives," with 147 illustrations; A. Sansome traced "Recent Progress in the Industries of Dyeing and Calico Printing," a supplementary volume to "The Printing of Cotton Fabrics" and "Dyeing"; Hon. Alicia Amherst wrote "A History of Gardening in England;" and T. W. Sanders, "An Encyclopedia of Gardening." H. Maerlet treated of "The Goldfish and its Culture for Profit"; "Grayling and How to catch them" and by F. M. Walbran; and John Bickerdyke contributed "Sea-Fishing" to the "Badminton Library," the volume being illustrated by C. Napier Henry and others. "Tobogganning on Crooked Run," by H. Gibson, also contained contributions by F. de B. Strickland, and Lady Tobogganer. J. Mason ex-

produced the "Art of Chess"; H. E. Bird offered "Chess Narratives"; and "Chess Sparks," or short and bright games of chess, were collected and arranged by J. H. Ellis. "Cartoons of the Campaign" was a little given a collection of political cartoons by F. C. Smith, made during the general election of the year.

Poetry.—The new laureate, Alfred Austin, published during the year "In Veronica's Garden," and "Madonna's Child" was also issued in book form as a poem complete in itself. Volumes which deserve special mention were: "The Father of the Forest, and Other Poems," by William Watson; "The Story of Gwynn," by Austin Dobson; "Poems," by Lionel Johnson; and "The Tenth Muse, and Other Poems," by Sir Edwin Arnold. W. B. Yeats gave us a volume of "Poems," and also selected "A Book of Irish Songs" from modern writers. "Birds of Passage; Songs of the Orient and Occident" came from Macquhar Elliot; "Lyrics," from Arthur Christopher Brown; "Fringilla; Some Tales in Verse," from E. D. Blackmore; "Robert Louis Stevenson, an Essay, and Other Poems," from Richard Le Gallienne. "Foster-songs" was an offering to two sisters, by Francis Thompson. Norman Gale published a second series of "A Country Muse," and Lord de Tabley a second series of "Poema Dramatic and Lyric." A companion volume to the "Songs, Poems, and Verses" of Lady Dufferin was "A Selection of Old Songs of Lady Dufferin (Countess of Gifford)" set to Music by herself and Others, edited by her son, the Marquis of Dufferin and Ava, and Lady Lindsay also contributed "The King's Last Vigil, and Other Poems." "Pansies" was the title of a book of poems by May Probyn. Mrs. Duffie Radford offered "Songs and Other Verses," while Ernest Radford was equally happy in "Old and New." "A Pioneer of Verse" came from E. Nesbit; "Poems," from Laurence Binyon; "A Koran of Love," from Arthur Lynch; "Here and There," from E. A. N.; "Riddle and Other Verse," from A. H. Beesly; and "The White Book of the Muses," from G. F. R. Anderson, while "Mother and Daughter" was an uncompleted sonnet sequence by the late Augusta Webster. Mrs. Rosamund Marriott Watson was the author of "Vesperalia and Other Verses"; A. E. J. Legge, of "Rhapsodies and Snippets"; Eric Mackay, of "A Song of the Sea, and Other Poems"; Percival H. W. Alden, of "Scintille Carminis"; May Brotherton, of "Essays for Remembrance"; A. L. Stevenson, of "Thoughts in a Garden, and Other Poems"; Edwin J. Ellis, of "Sonnets and Bard"; H. Newbolt, of "Mystic"; Herbert Halliwell, of "Verse and Foundation"; W. Wallace, of "The Divine Surrender"; Jane Barlow, of "The End of Elflintown"; and E. Pauline Johnson, of "The White Wampum." "The Vale of Arden, and Other Poems" came from Alfred Hayes; "Lyrics," from R. H. Fitzpatrick; while "North Austral Skies" was a volume of volitional verse by Edward Bath Loughran. "In a Garden, and Other Poems," by H. C. Beeching, contained much dainty and delicate work, and "Dumb-bell" was the title given to a selection from the poems of an old "Makar," adapted for modern readers by Hugh Halliwell (J. Laig Robertson). "Livingstone in Africa," by Hon. Roden Noel, was a specimen of striking and stately blank verse; and there yet remain for mention "A Harp from the Willows," by Rev. W. Moore; "Vignettes," by Aubrey N. St. John Milman; and "In Leisure Time," by William S. Mayne; "A Book of Words," by A. A. S.; "The Yod of Love, and Other Poems," by Charles Newton Robinson; "Poems of Paganism," by L. Cranmer-Byng (Paganini); "Flamma Vestalis," by Eugene Mayne; "My Only Child," by Edmund James Mills; "Epigrams," by John Arthur Comland; "The Two Thistles," by Dr. John A. Goodchild; "Songs of a House's Surrender," by Arthur L. Salmon; and "Poems and Sonnets," by H. E. Clarke, the author of "Songs in Exile" and "Storm-drift." Arthur J. Strauss published 2 volumes, "Watchers of Twilight" and "Pauline, and Other Poem"; M. W.

Findlater, but one, of "Sonnets and Songs." "My Lullaby, and Other Poems" came from Frederick George Hunt; "My Friend," from Quana; "Lays of the Dragon Slayers," from Maxwell Gray; and "The Suicide at Sea," from E. C. H. Three poets of promise now dead were recalled—David Buchanan, by "Man and the Years"; Lewis Morrison-Grant, by "Protestantism, and Other Poems"; and "Lewis Morrison-Grant: His Life, Letters, and Last Poems," edited by Jennie Annie Anderson; while "Robert F. Murray: His Poems" was furnished with a memoir by Andrew Lang. To the drama belong "The Road of Jhansi," by A. Rogers, with an introduction by Sir Edwin Arnold; "Kismet Enacted," a drama for the closet, by J. A. Parker; "The Play of Love," by Theodore Wrasidlaw; and "King Arthur," by Conyns Carr. Among selections apt to be mentioned "The Golden Pome," a procession of English lyrics from Surrey to Shilley, by Arthur T. Quiller-Couch; "The Golden Book of Coverdale," edited, with a critical introduction, by Rev. Stephen A. Brooks; "A Century of French Verse," translated into English, by W. J. Robertson; "English Pastorals" selected and with an introduction by Edmund K. Chambers; "The English Poets in Defense and Praise of their Own Art," edited by Ernest Rhys, a companion volume to which was "Poets on Poets," by Mrs. Richard Strenuous. "The Irish Song-book," with original Irish airs, was edited by Alfred Percival Graves, in the "New Irish Library"; Vol. II appeared of "Songs of the North," gathered from the Highlands and Lowlands of Scotland, edited by Harold Boulton; and Vol. VI completed the "Canadian Minstrel," a national collection of Welsh songs, edited by Joseph Parry and David Rowlands. "The Tale of Beowulf" was translated by William Morris and A. J. Wyatt, and the latter also edited the prologue to the new edition of "The Canterbury Tales," in the "University Tutorial Series," and "The Knight's Tale," S. J. Evans supplying a glossary. "The Poems of William Drummond of Hawthornden" were edited with a memoir and notes by W. C. Ward, and "The Friends of Shilley," Lord Roske, was represented in the "Elizabethan Library" by a volume of quotations from his prose and verse, edited by Dr. A. B. Grosart.

Voyages.—"Vacation Rambles," by Thomas Hughes (Vacua Vlatas), the well-known and now aged author of "Tom Brown's School-days," several poems of the ground of both sentiments, while other Englishmen who found pleasure and recreation abroad were numerous as usual. C. Hugo Laflamme proved himself "A Vagabond in Spain"; A. F. Marmory told of "My Climbs in the Alps and Caucasus"; "The Remains of the Woods," by F. J. Whitaker, consisted of ten studies of Russian and Finnish woodland life; and F. Sanderson wrote of "Austling Travels in Norway." "Northwestern France, Normandy, and Brittany" were treated in his customary delightful manner by Augustus J. C. Hare, and Margaret Stokes spent "Three Months in the Forests of France" on a pilgrimage in search of the victims of the Irish saints in that country. Katherine Tynan Hinkson was at home in "The Land of Mist and Moonshine." "The Buried Cities of Ypres" were described by Dr. John Fletcher Horne, and H. P. F. Marmory told "Facts about Pompeii." Sir C. Wilson edited a "Handbook for Travellers in Asia Minor," and Oswald H. Barry illustrated his own account of "Six Months in a Syrian Monastery." Rev. W. Wright, D. D. visited "Palmyra and Beelshazzar," and "A Visit to Babylon and Assur," was illustrated by Major-General Percy. "With the Yacht, Cannon, and Cycle in the Mediterranean" came from the Earl of Cavan, and H. M. B. C. E. R. and T. R. spent time "On Either Side of the Red Sea." "Algerian Memories," by Percy and William H. Workman, described a bicycle tour over the Atlas of the Sahara, and Henry Norman, the author of "The Red Japan," gave much time and thought to "The Purple and Pink of the Far East." Canon H. R. Tristram published

"Rambles in Japan," which were illustrated by Edward Whymper, and "Advance Japan" was pronounced a nation thoroughly in earnest by J. Morris. A. Henry Savage Lander left the hairy Ainos, whom he visited last year, for Corea, or Cho-sen, the Land of the Morning Calm, and the same country was again described by Louisa Jordan Miln as "Quaint Corea." "China Present and Past" was a supplementary volume by R. S. Gundry to his previous work on "China and its Neighbors." Dr. Henry Laisdell took a ride to Little Tibet through "Chinese Central Asia," which he described in 2 volumes, and G. E. Morrison was "An Australian in China." "Out of India" described things which Rudyard Kipling saw and failed to see in certain days and nights at Jeypore and elsewhere; Walter R. Lawrence devoted a handsome volume to "The Valley of Kashmir; Major C. S. Cumberland described "Sport on the Pamirs and Turkestan Steppes"; and R. Carstairs treated of "Human Nature in India." Frank Athelstane Swettenham vouchsafed "Malay Sketches"; "From Far Formosa," by Dr. George Leslie Mackay, was edited by Rev. J. A. Macdonald. "Seventeen Trips through Somaliland" was a record of exploration and big-game shooting, 1885-'93, by Capt. G. C. Swayne; Capt. C. J. Melliss wrote on "Lion Hunting in Somaliland"; and Col. Francis Cornwallis Maude outlined "Five Years in Madagascar," with notes on the military situation. "Twenty Years in Khama's Country, and Pioneering among the Batawana of Lake Ngami" were told in the letters of Rev. J. R. Hepburn, edited by C. H. Lyall; and "Rhodesia of To-day," by E. F. Knight, embraced Matabeleland, Mashonaland, and Manicaland. "In the Veldt," by Harley, was a collection of stories and sporting sketches of which South Africa was the scene, while 3 volumes contained C. S. Goldwin and J. Kitchin's information concerning "South African Mines." "In Stevenson's Samoa," by Marie Fraser, found a pleasing companion volume in "The Home and Early Haunts of Robert Louis Stevenson," by Margaret Armour. "The Story of Australian Exploration" was told by R. Thynne, and "Travels and Adventure in Northern Queensland" were narrated by Arthur C. Bicknell. "Letters and Sketches from the New Hebrides," by Mrs. John G. Paton, were edited by Rev. James Paton, and ably supplement the "Autobiography" of the famous missionary. Dean Hole described "A Little Tour in America"; "On the Cars and Off" was the journal of a pilgrimage along the Queen's highway to the East from Halifax, in Nova Scotia, to Victoria, in Vancouver's Island, kept by Douglas Sladen. George R. Parkin made studies of Canada, entitled "The Great Dominion," which was again described as "The Land of the Muskeg," by H. Somers Somerset. "Ice Bound on Kolguev" was a chapter in the exploration of Arctic Europe by Aubyn Trevor-Battye, and Arthur Montefiore edited from the journals of Frederick George Jackson "The Great Frozen Land (Bolshaia Zemelakija Tundra)," the narrative of a winter journey across the Tundra and a sojourn among the Samoyeds. Returning to the mother isle, we have a delightful volume upon "Westminster," by Sir Walter Besant; another upon "The New Forest," its traditions, inhabitants, and customs, by Rose C. de Crespigny and Horace Hutchinson; "Wild England of To-day," by C. J. Cornish; "Surrey Highways, Byways, and Waterways," by C. R. B. Barrett; "The Vale of Whittingham," by David Dippie Dixon, with illustrations; "The Mid-Lothian Eskis and their Associations from Source to Sea," illustrated by George Aikman, with notes by the late Thomas Chapinan and John Strathesk; "Some Ancient English Homes," by Elizabeth Hodges; and "The Carlyles' Chelsea Home," by Reginald Blunt. "Voyages and Travels" of Lord Brassey were edited by Capt. S. Eardley Wilmot, in 2 volumes.

The following are the figures of book production in England during the year, from the columns of the London "Publishers' Circular":

DIVISIONS.	1894.		1895.	
	New books.	New editions.	New books.	New editions.
Theology, sermons, biblical, etc.	476	80	501	79
Educational, classical, and philological.....	615	127	660	191
Novels, tales, and juvenile works	1,384	866	1,544	1,047
Law, jurisprudence, etc.....	126	23	67	68
Political and social economy, trade, and commerce.....	141	21	163	98
Arts, sciences, and illustrated works.....	98	30	96	16
Voyages, travels, geographical research.....	232	68	263	70
History, biography, etc.....	276	58	378	108
Poetry and the drama.....	160	21	231	16
Yearbooks and serials in vols....	328	2	311	
Medicine, surgery, etc.....	97	59	153	13
Belles-lettres, essays, monographs, etc.....	370	115	400	42
Miscellaneous, including pamphlets, not sermons.....	767	215	740	191
	5,300	1,185	5,581	998
		5,800		2,501
		6,485		6,516

LITERATURE, CONTINENTAL, IN 1895.

Although the immense amount of matter issued annually naturally imposes restrictions on this list, it will be found to include, as usual, the most representative and interesting publications of each given land, movement, or author.

Belgium.—National history, always assiduously cultivated in Belgium, is represented by L. Gilliodts-van-Severen's important "Bruges Port de Mer"; "Quatre Ans d'Evolution: Relation des principaux faits politiques et sociaux accomplis en Belgique de 1890 à 1894," by Ladislas van Hoorebeke; Ch. Woeste's "A travers dix Années (1885-'94): Etudes politiques, sociales, etc."; Th. Juste's "Histoire de Belgique"; and "Le vieil Anvers," by M. Rooses. J. P. Waltzing's "Etude historique sur les Corporations professionnelles chez les Romains" (novel in idea and treatment) and Franz Cumont's "Les Mystères de Mithra" are remarkable contributions to ancient history. In the division voyages and travels we have "A travers l'Afrique australe," by Jules Leclercq; "A travers l'Asie," by Constant de Deken; "L'Allemagne, sa Vie et ses Arts," by J. G. Fréon; similarly interesting "Notes de Voyage sur Kent, Oxford, Cambridge, et Northampton," by Paul Saintenoy; H. Hauteceur's description of San Marino; and J. Van den Heuvel's "Croquis américains." An important work on military matters is Gen. Brialmont's "La Défense des États et la Fortification à la Fin du XIX^e Siècle," while the Chevalier Ed. Descaamps has issued an equally noteworthy volume on "Les Offices internationaux et leur Avenir." It appears that the introduction of universal suffrage has given an impetus to the study of social questions. The large number of books on social and political science includes: Maurice Vauthier's "Le Gouvernement local de l'Angleterre"; Ernest Dubois's "Les Trades-Unions et les Associations professionnelles en Belgique"; Ernest van Elewycck's "Les Salaires et la Protection"; Hubert Langerock's "Le Socialisme agricole"; G. Legrand's "L'impôt sur le Capital et le Revenu en Prusse"; C. Scheyven's "Code électoral belge expliqué d'après les Travaux parlementaires"; "La Dépression économique et sociale et l'histoire des Prix," by Hector Denis, "the leader of the scientific socialists," and "L'Organisation de la Liberté et le Devoir social," by Ad. Prins (two remarkable works); Victor Brants's interesting "Les Théories économiques aux XIII^e et XIV^e Siècles"; and Guillaume de Greef's "Le Transformisme social" (discussing the development and degeneration of society

from a radical standpoint). Vol. II of the late *Émile de Laveleye's* "États et Études" has appeared, and the story of "Émile de Laveleye, sa Vie et son Œuvre" is sympathetically told by Count Goblet d'Alviella. Maurice de Wulf is the author of interesting "Études sur Henri de Gand" and a learned "Histoire de la Philosophie scolastique dans les Pays-Bas et la Principauté de Liège jusqu'à la Révolution française." In the department of literary history important works are: Prof. Thomsen's "Histoire de la Littérature latine jusqu'àux Antonins"; a learned "Étude sur l'Yggismon," by Leonard Willens; the interesting "Histoire poétique et littéraire du Mouvement flamand," by Paul Housens, an impartial account of the efforts to preserve the Flemish language in Belgium; the *Vlamingen de Spoorloosheid's* "Lundia d'un Chercheur" (interesting gossip about Balzac, Gautier, George Sand, and other French writers); and essays on and translations of Novalis and Emerson by Maurice Maeterlinck, who has also finished "Un Album de l'Époque." O. G. Destrée has written of "Les Prémisses," and L. Barwolf on the noted Flemish musician, the late Charles Louis Hanssens. New books have appeared by Georges Eekhoud ("Nouvelles Remontrances" and "Mes Communions"), Albert Leroy, Jean Casier, Emile Verhaeren, N. Degroué ("Le Drame noir"), A. Boschot ("Rêves blancs"), H. Krains ("Histoires lunatiques"), Samier Pierron, a journeyer, etc. A want of *esprit de corps* among men of letters appears to be indicated by reports of a controversy between "La Jeune Belgique," "Le Réveil," "L'Art moderne," "Le Coq rouge," and other real literary magazines of the same kind.

Of the Flemish literature of the year, monographs by F. de Potter, L. Mees, Edm. van der Straeten, and others, again attest to assiduous researches in local history. George Bergmann's "Gedenkschriften" shows a striking picture of Flemish-speaking Belgium before 1830. In literary criticism we have "Letterkundige Studien," by Max Rooses (essays on Julius Wirth, Jan van Beers, Prudens van Daele, etc.); H. Claeys's monograph on Jan van Ruusbroec, the noted Brabantine mystic of the fourteenth century; Arthur Cornette's "De Aesthetiek van het tyfisch Drama," discussing the combination of drama and music; and Paul Fredericq's "Onze historische Liederen van voor de Hervorming." Noteworthy additions to prose fiction are Van den Bergh's historical novel on the "Boerenkrijg" of the peasants of Flanders against the French Republic; Cyriel Hayens's "Suzann Corda" (one of the most notable successes of the year), "Mea Culpa" (considered rather free in tone), and "Wroeging"; Virginia Leving's "De Bruid des Heeren," a work of "much originality and power"; Gustaaf Seegers's sketches of life in the Campine district; and new works by three experienced writers Aug. Snijders and L. van Raikhaliges. In poetry there are Pol. de Mont's "Iris," the veteran Emmanuel Hell's "Symphonien en andere Gezangen," and Hilda Ram's "Nog een Karakteristiek uit Levens Akker." J. L. Haller has translated some lyrics from Theocritus. And one of the best plays of the year is Frans Gittens's "Palma's Dood."

Bohemia.—National history has been contributed to by Tomsch's "History of the City of Prague," Vol. XI; Benck's history of Bohemia during the reigns of Ferdinand III and Leopold I (completed); and Emier's "Bohema," Vol. IV. Political affairs and duties form the theme of T. G. Masaryk's "The Bohemian Question." A long-felt want has been filled by the founding of a "Historical Magazine," and the Bohemian Geographical Society has also begun the publication of a magazine. V. Kotyška has issued a gazetteer of Bohemia, Ant. Kotik writes of "Bohemian Family Names," Ondřík Zibrt tells the "History of Dancing in Bohemia, Moravia, and Silesia," the "Evolution of the Bohemian Miniature Painting in the Time of the Jagellons" is described by K. Chytil, and various important works are being continued, such as Z. Winkler's history of Bohemian costume, A. Sedláček's

"Castles of Bohemia," Otto's encyclopædia ("Slavisch naufn"), and Jar. Vítěk's "History of Bohemian Literature." The celebration of the hundredth birthday of Paul Joseph Safarik ("one of the founders of modern Bohemia") called forth some essays in the periodical press which form valuable contributions to Bohemian *Culturgeschichte*. The twenty-fifth anniversary of the death of the poet Vilémek Hlašek, who played an important part in the development of recent literature, occasioned few criticisms on his work (J. S. Machar being especially fair and frank), giving evidence of a growing spirit of honest self-criticism.

The life of the people again forms the well-treated theme of various novelists. The second part of M. Havel's "Mémoires of Philip Ketrusk, Student of Philology," like the first, excels in character drawing; Kistemann introduces us into the depths of the Bohemian forest in "From the World of Forest Solitudes," and depicts the life of Bohemians in Vienna in "In Search of Good Fortune." K. M. Capek's "In the Third Courtyard," Kukla's "From all the Corners of Prague," Hlašek's "From the Atmosphere of Prague" and "Third Love," and J. Benck's historical novel "Secrets of Prague" deal with various phases of life in the Bohemian capital. M. Koudelka's powerful "The Soul of the Factory" again describes factory life; Kolda Malinský pictures life "In a Village"; and J. L. Hrdina tells "Brotherhood Stories." K. V. Rais delineates "Forgotten Patriotic," and in "Toll" gives feeling pictures of peasant life. Further prose fiction to be noted: A. E. Muller's "Ruins of Life" (touching pictures of human misery); J. Arbois's "The Last Days of Humankind" and "For a Brother Socialist"; Iz. Hermann's humorous "Pell-Mell"; F. X. Synabek's "Stories of Different Frames of Mind"; Koudelka's "Little Life"; and Julius Zeyer's characteristically individual "Renovated Pictures" (clear stories in his familiar fanciful vein). Juvenile literature has been enriched by J. V. Sládek's "Great Belle and Small" and "Songs and Stories for Children," and Aug. Sedláček's "Historical Tales of the Bohemian People." Among the most noteworthy poetical publications of the year are "Here Roses ought to blow" and "Magdalena," by J. S. Machar, whose "warm sympathy with human we" finds truthful expression in his realistic and beautiful verse. Synabek's "Songs of a Slave" (2d edition), a passionate appeal for liberty, naturally has a political tendency that strikes a responsive chord in the hearts of his countrymen. Subjectivity and pessimism are becoming more noticeable characteristics in Jaroslav Vrchlický's latest volume of poems, "Windows in Storm," "Asters," "Before I become silent forever," and "New Fragments of an Epic." A Koudelka's smooth lyrics "Heart and Soul" and "Vale of the Night" (said to show too much superficial sentiment); Adolf Heyduk's "Wanderings" (characteristic rather than poetical impressions of Nature); G. Bězina's "Mysterious Distance"; J. Zeyer's "Kaminská Epopeje" (romantic lays regarding Carlsburg); Cervinka's "Landscapes and Tempers" and Čeněk's "Year of Solitude" both characterized as rather crude; J. Krambál's "Walking on Windows," a decadent production lacking in true feeling; and K. Mlahek's humorous "Four Groups" are further new poetical productions.

Denmark.—National history and biography have been contributed to by H. Holst's "Konger og Dannehof i det 13. og 14. Aarhundrede"; H. Motz's "Forskningsnoter over den danske Bøstater"; C. J. Anker's "Udsigt af diplomatiske Indskrænkninger om Unionsen Færdigheder og Tilhørsret 1814"; H. F. Rindom's "Pater Bonini" (biography of Hans Leventhøj og Breve); the "Efterladte Papirer fra 1815-14" of the "Gibbels Konference"; Breve, edited by T. Rasmussen; and "Efterladte Papirer fra den Reventowski Familie (1815-1816)"; Thomsen 1770-1807." P. A. Heiberg offers a "Billed til et psykologisk Billede af Søren Kierkegaard i Barmen og Ungdom." A "Grundriss af den kristelige Etik" has

been drawn up by F. C. Krarup. P. Weillbach has begun a "Nyt dansk Kunstner-Lexikon," and M. Galschiott is the author of "Thorvaldsens Museum." Literary history has been enriched by V. Andresen's able, though rather laudatory monograph on "Paul Møller: hans Liv og Skrifter"; that conspicuous psychological critic G. Brandes's "William Shakespeare"; V. Vedel's fine though somewhat unpolished book on Swedish romanticism of the first half of the nineteenth century; A. Olrik's "Saksæ Oldhistorie: Nornene Sagaer og danske Sagn"; and J. Clausen's "Jens Baggesen." Other books published at Copenhagen are: H. Clod-Hansen's "Mand og Kvinde"; N. Juel-Hansen's "Samfunds Livet"; H. Jensen's "Blodets Bånd"; I. Ring's "I Vaur"; and A. Ipsen's "Søster Helene."

Among the best novels of the year is "Hjarl: en Ungdoms Historie," by E. Christiansen (editor of "Illustreret Tidende," Denmark's illustrated magazine), in which the author, as usual, gives evidence of clever character study, especially in the delineation of young women. In "Vilhelm Vangs Studenteraar," S. Schandorph (author also of "Tre Appelsiner" shows a good eye for humorous situations. Here, as in other countries, the complaint is that views and theories succeed each other so rapidly that art, instead of being quickened, declines and decays. It appears also that the tendency to abandon the unvarnished realism, rampant yesterday, for vague symbolism and mysticism is present here as well. Even so uncompromising a realist as E. Brandes is said to have bowed to this changed taste by "transferring the scene of one of his latest comedies to a sort of dreamland, and of another to the ancient days of the North." "Bekendelse," by Johannes Jørgensen (author also of "Rejsébogen"), is a collection of poems of beauty, despite a certain monotony and emotionality, which characteristics, as well as a certain archaic imagery and an absence of ideas, are said to mark the work of the younger men in general. C. Föns depicts the beauties of Italian scenery in the melodious verse of "Angelina," and Alfred Ipsen has issued "Ekko" (poems, mainly sonnets). Finally, "Völund Smed," in which Holger Drachmann (hailed by some as the "foremost representative" of modern Danish literature) deals with a subject from the elder Edda, is criticised for "exuberant and somewhat sentimental sensuousness, strangely opposed to the rigorous chastity of the sagas and tradition of ancient Scandinavia."

France.—In this country's extensive literary production history as usual holds an important place. The publication of memoirs is rather overdone, want of critical discrimination resulting in an abuse of this literary fashion. The "Mémoires" of Chancellor Pasquier and Gen. Thiébault have been followed by those of Gens. Paulin ("Souvenirs, 1782-1876"), Fantin des Odoards ("Journal, 1800-30"), De Barante ("Souvenirs, 1782-1866"), Roch-Godard, and the spirited and plain-spoken Maréchal de Castellane ("Journal, 1804-62"). There have also appeared "Souvenirs du Comte de Montgaillard, Agent de la Diplomatie secrète pendant la Révolution, l'Empire et la Restauration"; "Souvenirs de la Vie militaire du Gén. Baron Lahure, 1787-1815"; "Mémoires du Comte de Paroy: Souvenirs d'un Défenseur de la Famille Royale pendant la Révolution, 1789-97"; "Mémoires du Général Rapp, 1772-1821"; "Le Maréchal de Sérur"; the "Mémoires" of Barras (which, with all their rancorous malevolence, throw much light on an interesting period), and those of Larevelière-Lapeux (said to contain little of interest on the Revolution). "Mémoires de François Lavaux, Sergeant au 103^{me} de Ligne, 1793-1814," edited by A. Darimon, an account of a typical soldier of the Napoleonic wars; "1792-1809: Aventures de Guerre, Souvenirs et Récits de Soldats," edited by F. Masson, and E. Simond's "Le Capitaine La Tour d'Auvergne, premier Grenadier de la République" illustrate an eventful period; "Une Idylle sous Napoléon I: le Roman du Prince Eugène" has been treated in a noteworthy manner by A. Pulitzer; and A. Dayot's

"Napoléon raconté par l'Image" and J. Grand-Carteret's "Napoléon en Images: Estampes anglaises" are iconographic histories of the great Corsican. M. de la Rochetiere and Le Marquis de Beaucourt have edited the "Lettres de Marie Antoinette"; M. de Manille sifts much documentary evidence in "Louis de Savoie et François I^{er}"; the "Vie militaire du Général Ducrot, d'après sa Correspondance, 1839-71" has been published by his children; the Duc de Broglie's "L'Alliance Autrichienne" is an interesting contribution to the diplomatic history of the reign of Louis XV; and the Marquis de Drenx-Brézé's "Notes et Souvenirs pour servir à l'Histoire du Parti Royaliste, 1872-83" has been energetically exploited by the royalists. The second empire has in recent years been receiving increasing attention. M. de La Gorce is the conscientious and generally impartial author of a "Histoire générale du Second Empire"; Gen. Lebrun's posthumous "Souvenirs militaires, 1866-70: Préliminaires de la Guerre. Missions en Belgique et à Vienne" contains interesting revelations regarding Napoleon III's policy toward Austria; Émile Ollivier's apologetic "L'Empire libéral" traces the political causes of 1866 which led to the military disaster of 1870; Comte Benedetti's "Essais diplomatiques" have appeared; and Alfred Duquet continues his patriotic but unprejudiced series of books on the Franco-German War, on which period works by Thoulas, A. Chuquet, X. Euvrard, Rousset, P. Lelautcourt, A. Burdeau, and A. Wachter have also been published. General historical works dealing with France are A. Franklin's "La Vie privée d'autrefois" (Vol. XVII); M. Loir's "Gloires et Souvenirs maritimes"; F. Aubert's "Histoire de Parlement de Paris, . . . 1250-1515"; C. Jullian's "Histoire de Bordeaux," published under the auspices of the municipality; and A. Touchemolin's "Strasbourg militaire." G. Maspero, a scholar of remarkable attainments, in "Histoire ancienne des Peuples de l'Orient classique" proves himself a writer of unusual ability, concise and nervous in style. J. J. Jusserand's "Le Roman d'un Roi d'Ecosse" is a little volume dealing with the son of Robert III; A. Rambaud writes of "Russes et Prussiens: Guerre de sept Ans"; and "La République d'Haïti: son Présent, son Avenir économique" is drawn by P. Vilbert. Guston Boissier's "L'Afrique romaine" gives the results of the careful archaeological investigations of the French in simple and charming language. Guston Routier has written "L'Histoire du Mexique." Affairs Oriental are treated of in L. E. Bertin's "Les Guerres Civiles du Japon, 1156-1392"; M. Courant's "Bibliographie Coréenne"; E. Foa's "Le Dahomey"; F. Benoit's "Madagascar"; L. Brunet's "La France à Madagascar, 1815-95"; L. Catat's "Voyage à Madagascar, 1890"; J. B. Piolet's "Madagascar et les Hova"; and J. L. de Lussan's "La Colonisation française en Indo-Chine," a frank recital of the author's four years' governorship. Pierre Loti recorded poetical impressions of "Jérusalem," "Le Désert," and "La Galilée," and Th. Bentzon wrote on "La Condition de la Femme aux États-Unis" for the "Revue des deux Mondes." T. de Wyzewa's "Chez les Allemands: L'Art et les Mœurs" tells little that is new. In political history and economics publications have been numerous. "Combats constitutionnels" and other posthumous works by J. J. Weiss (a journalist and historian "of singular sagacity and penetration") have appeared; "L'Expansion de France" is treated in an able and brilliant manner by the diplomatist René Millet; and Spuller has collected his discourses on the "New Spirit" and other subjects, the preface throwing some light on affairs during the presidency of Casimir-Périer. Democratic government is the theme, frankly and boldly treated, of "Souveraineté du Peuple et Gouvernement," by Eugène d'Eichthal; Yves Guyot continues ardently to combat the "Tyranie socialiste" in his pamphlets; and Clémenceau's "La Méele sociale" has been variously rated as "rant from beginning to end" and as a most original work of great importance.

Joseph Chailley-Bert and A. Fontaine have collected the "Laws socialistes" passed by the third republic; Emile Chevallier was awarded a prize by the Institute for his volume on the history of the poor laws; and L. Vacher has written an elaborate treatise on "Le Mouvement aux Etats-Unis" "Histoire économique de la Propriété, des Salaires, des Dénrées et de tous les Prix en général depuis l'An 1200 jusqu'en l'An 1800" is an important work by G. D'Arville, summarized by him in "La Fortune privée à travers les siècles." Louis Prad discusses "La Criminalité politique." A subject of importance is dealt with in E. Villier's "Le Socialisme contemporain"; R. Guichard's "La Superstition socialiste"; P. Bollée's "Les trois Socialismes: Anarchie—Collectivisme—Métaphysique"; Liechtenberg's "Le Socialisme au jour d'aujourd'hui"; A. Onclair's "Le Communisme dans l'Histoire et les Systèmes socialistes d'aujourd'hui"; E. Guérard, "L'Anarchie et la Répression"; and E. Rousselle's "Socialisme et Charité." Beaunis and Buisson's "L'Année philosophique" realizes a promise of the idea, and is probably the most notable philosophical publication of the year. Brunetiere's article in the "Revue des deux Mondes" on the fallacy of science, which aroused so much discussion, has been issued in separate form, as has also Berthelot's reply. Jean Brette has published interesting "Notes d'un Étudiant français en Allemagne"; E. Lavisse speaks "A propos de nos Ecoles," and M. Leclercq of "Les Professions et la Société en Angleterre" and "L'Education des Classes moyennes et dirigeantes en Angleterre," upholding the superiority of English popular education; and the "Livre du Centenaire de l'Ecole Normale" recounts the history of that institution. Gabriel Seailles has written "Ernest Renan: essai de Biographie psychologique," R. Allier has studied "La Philosophie d'E. Renan," and Renan's "Maître Henriette" is a fine example of his style and a warm and tender tribute to his dead sister, who had such an influence on his life. J. Barthélemy Saint-Hilaire has issued "Victor Cousin, sa Vie et sa Correspondance." There are as usual numerous studies in literary history and criticism, among them being P. Marfais's "Montaigne," Bourdieu's "La Rochefoucauld," D'Haussonville's "Lacordaire," and E. Lehoucq's "Royer-Collard" (all four in the series "Les grands écrivains français"); the "Journal intime" of Benjamin Constant; Monod's successful and important studies of Michelet, Renan, and Taine; A. Collin's life of "Diderot"; A. Devaux's biography of "George Sand" (crowned by the Academy); Jeanne Paris's "La Poésie du Moyen Age" (Vol. II); Edmund Blé's excellent literary "Études et Portraits"; E. Scherer's "Études sur la Littérature contemporaine" (Vol. X); F. Brunetiere's "Nouveaux Essais sur la Littérature contemporaine"; A. Soulié's "La Comédie Française depuis l'Époque romantique, 1830-74"; J. Roussé's "La Poésie bretonne au XI^e siècle"; "Trois Années de Théâtre, 1883-85" by J. J. Weiss; T. de Wyzowa's "Nouveau Maitres" (collecting discussions of important literary and artistic questions); H. Borda's "Ames modernes" (thoughtful studies on very modern writers—Hugo, Gautier, Flaubert, etc.); G. Lanson's "Hommes et Livres: Études morales et littéraires"; G. Larroumet's "Études de Littérature et d'Art" (second and third series); G. Pichon's "Nouveaux Essais de Littérature contemporaine"; Pott's book on "Les 34 Situations dramatiques" of Goethe; and Paul Roussé's excellent "Poésie: Étude biographique et littéraire" (another proof that French scholars have begun to occupy themselves with a thorough study of German literature). Among the important works on art, which French publishers issue in such tasteful compact forms, are the third and last volume of Muntz's "Histoire de l'Art pendant la Renaissance italienne," an admirable guide to the study of that brilliant period; Adolphe Bouché's "Description raisonnée du Musée de Saint Germain" (Vol. II); Collignon's sympathetically written "Histoire de la Sculpture grecque"; and "La Sculpture française, du 14^e au 19^e

siècle"; Robert de la Vignette's very readable essays upon "La Peinture anglaise contemporaine"; and Emile Michel's "Études sur l'Histoire de l'Art," dealing with Velasquez, Lorrain, landscape of the Flemish school, and art at the court of Frederick II. M. Vacher describes "Les Arts et les Industries du Papier en France" and H. Bernadé "La Sculpture du 19^e siècle."

The crop of novels is, as always, a heavy one. One of the most brilliant of the year is Anatole France's "Le Lys rouge," flawlessly beautiful in style (although some passages are "extraneously florid"), and containing exquisite word pictures of Florence. The same author has published also "Le Poète de Sainte-Claire" (tales) and "Le Jardin d'Épiphane" (philosophical novellas). "Les Deux Vierges" by M. Prevost (author also of "Notre Compagnie") is a dark picture of feminine depravity. P. Hervieu, in "L'Armature," skillfully analyzes the weakness of money. In A. Daudet's "La petite Fausse" some of his finest qualities are found, with little diminution of strength; Léon Daudet makes a violent attack upon the medical profession in "Les Mortelles," and has also published "Les Kautskias" ("a new series, cleverly satirized, of such"). Edmond Rostand's "Le Silence" and "Les Reches bleues" and Abel Hermant's "Eddy et Paddy" are interesting psychological studies. Worth of note are also Jules Lemaitre's "Myrrha" (a charming story); M. Donnay's "L'Éducation de Prince"; H. Lavandus's "Mariamonne"; "Le vicar Marcheur"; "Leur Cœur," and "Leur beau Physique"; "Amour d'Avanture," by A. Capus; "Rochas, Avar," by the late Paul Verlaine, the sad "Contes tout simples" and the third series of "Mon Franco-Parler," by F. Coppée; Paul Margueritte's "Fure l'Honneur"; "Palermid," a wonderful story, and "Flavin," by A. Tardieu; the village sketches "Mon Ami Gaudard" and "Tailleur" (a singularly charming story), by F. Fabre; "Domestic" and "Les Démocraties de Liré," tales of country Provence, by its laureate Paul Arène; and Hergot in Roux's volume of graceful tales "Le Portefeuille." Further new fiction includes: A. Housmans's "Les Larmes de Mathilde"; J. Renard's "L'Amant immortel"; R. Maury's "Journal d'une Étrangère" and "L'Ange"; J. Verne's "L'Île à l'Enfer" and "Médiques Aventures de Maître André"; P. Vailly's "La Malouine" and "La Fée du Galles"; Art Bœuf's "Racheté" and "Sous l'Éclaircie"; P. Mauf's "Celle qui savait aimer" and "Toujours à toi"; Gyp's "Le Cœur d'Ariane"; "Les Gens chers"; "Ces bons Normands!" and "Leurs Amis"; J. K. Haymon's "En Route" (tenth edition); J. H. Roussé's "L'Amour Femme" and "Réurrection"; Mme. E. Caré's "Les Lendemain"; M. Paléologue's "Fyde de France"; Catulle Mendès's "Rue des Filles-Dieu"; A. Chénier's "Honneur de France" (awarded a prize by the Academy) and "Quatre Femmes"; J. Renard's "Éternelle Éclaircie"; Armand Charpentier's "Le Roman d'un Singe"; and F. Bernay's "Grande et Décadence de Mison-Mondie." Poetry has also been abundant, as always. Henri Barbusse's "Fragments" achieved immediate recognition by its good qualities, simple form, and sharp diction; "Ardennes" is a little volume of verse by Henri de Magnieu, a rising genius, inclining to classicism; "Nuit" is a charming production by Maurice Bouchor; Catulle Mendès's "La Grive des Vignes" is, as we are told, somewhat affected; the naturalistic song writer Aristide Bruant and the American Parisian Francis Villat-Giffin (son of Gen. Robert Viller) are also named with approval; "Dernière Poésie," by Laurent de Laide, has appeared. Coppée's tragedy "Pour la Couronne" has had an enthusiastic reception. Paul Hervieu's "Les Tentations" is a study of a tragedy of mutual incompatibility; has also been successful. The same theme is treated in Théodore "La Vie," of greater dramatic value than the preceding but weaker psychologically. Other plays of the season were Maurice Rostand's "Comte de Noll" (a charming sort of fairy dream in one act), in verse; Pierre

Wolff's "Fidèle" (one act); Lefèvre's "Le Faune" (one act); Jacques Normand's "L'Amiral" (a two-act comedy); Henri Lavedan's "Viveurs," a satire aimed at the rich middle classes (as his "Prince d'Aurec" was directed against the nobility); Maurice Donnay's "Amants"; Henri de Bornier's romantic "Le Fils de l'Arctique"; Emile Fabre's "Argent," a poor play, not without promise, by a new man; Meilhac and St. Albain's spectacular "Panurge"; "Messire du Guesclin," a rather bombastic production by the chaucianist Paul Deroulède; Berre de Turique's "Crise conjugale"; young Edmond Rostand's drama "La Princesse Lointaine," produced by Sarah Bernhardt, and praised for its "smooth, melodious verse" and "pure tone and sentiment"; Lemaître's "L'Age difficile"; and "La Peur des Coups," by G. Courteline, "one of the few real humorists in France." Vol. XX of Noël and Stoullig's "Annales du Théâtre" has appeared. Antony Réal fils has issued a brochure on "Le Théâtre antique d'Orange et ses Représentations modernes," that noble Roman stage restored through the efforts of Auguste Carestie and Michel père. And this calls attention to the poets of Provence, the "Félibres"—with their journal "L'Aioli" and their two Parisian societies, the "Félibrige" and the "Cigaliers"—men like Frédéric Mistral, Antony Réal fils (son of Fernand Michel), Alexis Mouzin, Baptiste Bonnet (who found a translator for his autobiography in A. Daudet), the late Anselme Mathieu ("lou Fèlibre di Poutoun") Count Folco de Baroncelli, etc., whose work, full of local color, gives force to the Provencal renaissance of today, the genesis of which is told in the Félibre Paul Mariéton's "Histoire d'une Renaissance."

Germany.—In the well-cultivated field of history, local history receives a very generous share of attention. Individual works like O. Bähr's "Das frühere Kurhessen," F. Münschier's "Geschichte von Hessen," G. Wustmann's "Quellen zur Geschichte Leipzigs," R. Holtzapfel's "Das Königreich Westfalen," Richard Graf du Moulin Eckart's noteworthy "Bayern und das Ministerium Montgelas, 1799-1817," Jos. v. Zahn's "Steiermark im Kartenbilde der Zeiten," W. Heyd's "Bibliographie der württembergischen Geschichte," and Von Scharfenort's "Die Pagen am brandenburgisch-preussischen Hofe, 1415-1895," and serial publications, such as "Forschungen zur deutschen Landes- und Volkskunde"; "Die Chroniken der deutschen Städte"; "Forschungen zur brandenburgischen und preussischen Geschichte" (Verein für Geschichte der Mark Brandenburg); "Bau- und Kunstdenkmäler der Provinz Westpreussen"; "Abhandlungen zur Landeskunde der Provinz Westpreussen"; "Mecklenburgisches Urkundenbuch," hrg. von dem Verein für mecklenburgische Geschichte und Alterthumskunde"; "Dortmunder Urkundenbuch"; P. Clemens's "Die Kunstdenkmäler der Rheinprovinz"; "Publikationen der Gesellschaft für rheinische Geschichtskunde"; "Regesten der Pfalzgrafen am Rhein"; "Regesten der Markgrafen von Baden und Hachberg, 1050-1515," "Oberbadiisches Geschlechterbuch," and Alb. Krieger's "Topographisches Wörterbuch des Grossherzogthums Baden," all four issued by the Badische Historische Kommission; "Die westfälischen Siegel des Mittelalters," and "Westfälisches Urkundenbuch," both issued by the Verein für Geschichte und Alterthumskunde Westfalens; "Statistik des Hamburgischen Staates"; "Hansische Geschichtsquellen," hrg. vom Verein für hansische Geschichte"; "Wirtembergisches Urkundenbuch"; "Urkunden und Akten der Stadt Strassburg"; "Regesta diplomata neonon Epistolaria Historie Thuringie" (Verein für thüringische Geschichte und Alterthumskunde); "Bau- und Kunstdenkmäler Thüringens"; "Thüringisch-sächsische Geschichtsbibliothek"; "Codex diplomaticus Saxonie Regie"; "Beiträge zur sächsischen Kirchengeschichte"; "Beschreibende Darstellung der älteren Bau- und Kunstdenkmäler der Provinz Sachsen und angrenzender Gebiete," hrg. von der historischen Kommission der Provinz Sachsen;

"Die Kunstdenkmale des Königreichs Bayern, 11.-18. Jahrh."; "Forschungen zur Kultur- und Literaturgeschichte Bayerns," hrg. von K. v. Reinhardstötter"; "Quellenschriften und Abhandlungen zur Staats-, Kultur- und Kunstgeschichte der Reichsstadt Nürnberg"; and "Quellen zur Geschichte der Stadt Hof"—all, apart from their merits or demerits, attest to the active spirit of historical research in various parts of the empire. Nor are family histories wanting. Austrian history is contributed to in H. v. Zeissberg's life of "Erzherzog Carl von Oesterreich," whose "Aphorismen" have been followed by his "Ausgewählte Schriften" ("remarkable for their stern self-criticism"); the voluminous "Österreichische Statistik"; "Fontes Rerum austriacarum"; G. Strakosch-Grasemann's "Geschichte der Deutschen in Oesterreich-Ungarn" (good, but somewhat prolix); "Quellen zur Geschichte der Stadt Wien" (Vol. I.); and W. Porth's "Denkwürdigkeiten aus dem Leben des k. und k. Feldmarschall-Lieutenant Ludwig Freiherr v. Kudrinský." Vol. VII of F. Dahn's "Kämpfe der Germanen" has appeared, as has also the third and last volume of "Kulturgeschichte der Deutschen im Mittelalter," by the late Franz v. Löher, who, in his learned and thorough "Das Kanarienvuch," also supports his theory that the aboriginal inhabitants of the Canary Islands were of Germanic extraction. There have been numerous additions to the voluminous literature on the Franco-German War, to which the celebrations of the twenty-fifth anniversary of that event have given a special increase. Much of a popular character has seen the light—H. v. Selb's "Aus grosser Zeit; kleine Erinnerungen," Kunst's "Die deutsche Reiterei," Th. Lindner's "Der Krieg gegen Frankreich," etc. In the deluge of personal reminiscences, such as those of Gen. Verdy du Vernois (published in the "Deutsche Rundschau" called forth by this renewed interest in the war, various generally accepted historical accounts were considerably modified. The "Einsiedler vom Sachsenwald" holds an important place in the literature of the year, there having been a swarm of additions to Bismarck literature. H. v. Poschinger has published the ex-Chancellor's "Ansprachen" and "Neue Tischgespräche und Interviews"; Horst Kohl, having issued his "Politische Reden" in 12 volumes, has begun a "Bismarck Jahrbuch." "Bismarck-Literatur," by P. Schulze and O. Koller, is a bibliography of 70 pages; and "Unser Bismarck" is a collection of drawings by the well-known C. W. Allers (whose biography—"Freund Allers"—has been written by A. Ohlwald). Bismarck naturally forms also an important figure in Vols. VI and VII of the late Heinrich von Sybel's "Die Begründung des deutschen Reiches durch Wilhelm I." Among the very large number of biographies monographs are Ernst Haflter's life of Georg J. S. Moltke, general of the Grisons; E. zu Putlitz's "Gustav zu Putlitz"; R. Koser's "König Friedrich der Grosse"; "Erinnerungen aus dem Leben von Kaiser Viktor v. Unruh, 1806-'86," hrg. von H. v. Poschinger, an "opportune and instructive biography"; Rudolf Thiele's "Ernst Moritz Arndt: sein Leben und Arbeiten für Deutschlands Freiheit, Ehre, Einheit und Grösse"; and "Aus dem Leben des Königs Carl von Rumänien: Aufzeichnungen eines Augenzeugen." Other historical works are C. Wachsmuth's "Einleitung in das Studium der alten Geschichte"; G. Diercks's fair "Geschichte Spaniens"; M. Philippon's "Ein Ministerium unter Philipp II: Karlinal Granvella am spanischen Hofe, 1579-'86"; and Alfred Stern's "Geschichte Europas seit den Verträgen von 1815 bis . . . 1871" (criticised as too detailed and too sketchy). The late Rud. v. Ihering's "Vorgeschichte der Indoeuropäer" is a noteworthy effort of a specialist in another field to deal with the problems of *Culturgeschichte*. The art writer I. Thode's charming "Der Ring des Frangipani" (fact or fiction?) is a bit of theorizing to prove that the ring in question is the one that was given by Apollonia Lang to her husband, Christopher, Count Frangipani, in 1513. Among the additions to the ever

Increasing number of books chronicling German explorations and colonization, especially in Africa, are E. Schmidt's "Deutschlands Kolonien," Karl Peters's "Das Deutsch-Ostafrikanische Schutzgebiet," Eug. Zangwille's "Nord Kamerun," Cr. Weidman's "Deutsch-afrikanische Missionen," Lexikon der hervorragenden deutschen Afrika-Forscher, Missionäre, etc., and Alfred Zimmermann's "Kolonialgeschichtliche Studien." Ernst v. Hesse-Wartegg describes a circum-navigatory tour in "Korea." Two interesting contributions to scientific biography are Max Laue's "Christian Gottfried Ehrenberg, ein Vertreter deutscher Naturforschung im 19. Jahrh., 1795-1874," and the late Jakob Moleschott's "Für meine Freunde; Lebenserinnerungen." W. Ills, the famous anatomist, in "Johann Sebastian Bach: Forschungen über dessen Lebensstätte, Gehirns und Antlitz," pronounces the recently discovered skull of the musician authentic. After various phases is treated in Jakob v. Falke's "Das Alter und neuer Zeit; neue Studien zur Kultur und Kunst"; Gust. Kib's "Abriss der Kunstgeschichte des Alterthums"; Jul. Allgeyer's "Anselm Feuerbach"; and Johannes Volkelt's excellent "Ästhetische Forderungen" (combating "the excesses of modern art"). Laurens Müller, author of "Literatur- und sprachkritische Studien," is described as "a rare example of a combination of extensive knowledge and independent judgment with religious warmth and earnest orthodoxy." The enthusiastic idealism of the youngest aesthetist Moritz Carrière again finds vent in his posthumous works "Christus," "Das Wachsthum der Energie," and "Fichte's Geistesentwicklung," and a kindred spirit breathes throughout Heine v. Arneth's "Das klassische Heidenthum und die christliche Religion" (with its conception of "human nature free from all sectarian coloring"). In the interesting "Schoepgenhauser: ein Beitrag zur Psychologie der Metaphysik" Rud. Lehmann strives to trace the postulate's philosophy psychologically and historically, while Ludw. Schumann has edited "Karl Kuhn's Gespräche und Briefwechsel mit Arthur Schoepgenhauser." The personal note in Friedr. Nietzsche's philosophy is so predominant that his biography, by his sister, Frau Elisabeth Förster-Nietzsche, will be greeted with interest. Hieronymus Lorn has given the views concerning Nietzsche in "Der grundlose Optimismus." Richard Wahle, with keen but somewhat unimpassioned criticism, deals in an agnostic spirit with "Die Gänge der Philosophie bis zur Erde," and Paul Deussen traces the "Allgemeine Geschichte der Philosophie, mit besonderer Berücksichtigung der Religionen." In literary history, monographs of more or less interest are H. Düntzer's "Goethe's Stammbaum"; Richard Mayr's essays on Goethe; R. Welsch's "Goethe im Sturm und Drang"; Karl Heine's "Goethe"; J. Wyßgrann's "Schiller, dem deutschen Volke dargestellt" (profusely illustrated); H. Voss's "Goethe und Schiller im persönlichen Verhältnisse"; Louis P. Betz's "Heine in Frankreich"; E. Köhnemann's thorough "Heine's Leben" (fully annotated, despite some faults of execution); E. Wulf's "Goethe's Stellung im deutschen Bildungsbewußt"; G. Kerner's "E. T. A. Hoffmann"; H. E. v. Berlepsch's "Gottfried Keller als Maler"; and A. Köhnemann's "Fritz Reuter in seinem Leben und Schaffen." Gustav Knepper has issued a "Bilderatlas zur Geschichte der deutschen Nationalliteratur," and Mich. Bernays "Schreiben zur Kritik und Literaturgeschichte." R. Wolke's "Geschichte der deutschen Literatur in Bayern bis zum Ausbruch des 19. Jahrhunderts" is the work of an authority; and Adolf Stern deals with 12 contemporary writers of various nationalities in "Studien zur Literatur der Gegenwart." Bernhard Litzmann has studied the influence of the new political situation on literature, and comes to the rather depressing conclusion: "The literature of United Germany is neither hot nor cold, but dreadfully commonplace and destitute of individuality." The elevation of public taste is the aim of a new and critically presented periodical, "Pan," issued by the "Gesamtschenschaft Pan," which publishes also

the editor, O. J. Bierbaum's, "Lobetanz; ein Königsspiel."

Novels and stories by noted older authors are: F. Spielhagen's "Stimmen des Illmoochs" (directed against aristocratic pretensions) and "End", A. Wilbrandt's "Die Osterinsel" and "Die Rothensinger" (best in its descriptive passages), both "below his usual level"; G. Elmer's "Im Schmiedehammer; Roman aus dem alten Nürnberg" and "Im blauen Hocht"; O. Roquette's "Kunderlinge" (short stories); W. Jensen's "Die Katzen" and "Jenseits der Alpen; Novellen"; and Paul Heyse's "In der Göttergunde" (effective short stories). The subject of Rud. v. Gutschall's "Im Bann des schwarzen Adlers" is taken from Prussian history, as is also that of "Wider dem Kurfürsten," by Hans Hofmann, whose "Novellen aus Hinterjannern" form excellent pictures of the life of his native land, while a breath of living mountain air flows through Ludwig Ganghofer's "Die Martinaklanen." A. Schüttler's "Sturien" describes the cruel sufferings of a consumptive with extreme modern realism. Leopold Andrian's "Garten der Erkenntnis" has been named as impressionistic. Grouping the women by themselves, we have Ilse Frapan's "Old Hamburg" and "Zu Wasser und zu Lande"; S. Jungmann's "Geschichten"; "Die Todtenwacht" and "Das Schallische" (short stories); and "Margarete," by M. v. Elmer-Eichenbach; Ida Boy-Ed's "Die Schwwestern"; Marie von Benzon's Berlin stories (such as "Der Mann" and "Udo in England," published in the "Deutsche Rundschau"); N. v. Emden's "Johannsfrauen" (short stories); and W. Heiberg's "Um fremde Schuld." Further titles in the lengthy list of prose fiction are: E. Köhnemann's "Familie Hartwig" and "Nora; Novellen"; H. Heiberg's "Zwischen drei Frauen," "Graf Jari," and "Fieberndes Blut"; E. v. Wolzogen's novellas "Die Erbschlicherinnen"; W. Knecht's "Gesammelte Erzählungen"; E. Wichard's "Runde Liebe" and "Die verlorne Tochter"; H. Heiberg's "Im Schlaf geschenkt"; M. Kretzer's "Im Kissen"; H. v. Zabelitz's "Die Krimprinsessinnen"; Sch. Skawronnek's "Mein Vetter Josef"; Emil Dersmann's "Casimirovka"; Arthur Zapp's "Der tolle Schmettwitz"; "Martha und Marie"; "Madame Frauen," and "Der neue Don Quixote." F. v. Zabelitz's "Die Holländerin" and "Ein in die Wüste"; and Felix Hoffmann's sensational "Sturmwind im Westen; ein Berliner Roman" (a minutely accurate account of a notorious Berlin scandal). The epic does not flourish in this age, but a noteworthy example of this form of poetry is "Kolum-pierre," by the young Hungarian Mária Eszterik de la Grazie, impressive and effective, although marred at times, we are told, by unpleasantly extreme symbolism. Hermann Hange's "Faust und Prometheus," marked by deep thought, is a "dramatic and scientific poem," dealing with the science of today, and opposing the attendant lawlessness and pessimism. These two works quite overshadow the other narrative poems of the year, such as Heide's strongly erotic "Tanzkammer-Räuberin" and Johannes Trojan's humorous "Das Wundtwer Künigschloßchen" (a fragment of the last-ern). Young Hans Falke, who, like that other Austrian, E. Marxist, writes so understandingly of the spiritual life of the priesthood, has followed up the success of his tragicomic play "Der Süßmeis von Kremsmünster" and "Taver Bernemann" in a new one, "Flut Lax." Numerous collections of lyrical poetry have again won the light—works by individual authors such as the elegant Albert v. Pothmann ("Offenbarungen") and the celebrated Viennese Fritz Pauli (posthumous poems, smooth in style, marked by deep and warm feeling), and anthologies, such as the "Oesterreich. Museumsmusik." Albrecht Graf Wickenburg, sings with warm feeling and kindly humor of "Mein Wien." The note of protest in Carl Busse's poems is accorded to crown in the cycle "Neurotica" of Felix Hoffmann (a strong and moderately nervous genius), and even more so in Paul Fleck's "Hallucinationen." The poems of

Johanna Ambrosius (Frau Voigt), a simple peasant woman of East Prussia, ran through 4 editions within three months. Written in poverty and illness, these verses, tinged with sadness, are noteworthy examples of popular poetry. On the stage, the social drama, dealing with social and sexual problems, presented with crass, sometimes strained realism and studied commonplace, is having its day. A. Wilbrandt's "Viola"; Fulda's comedy "Die Kameraden"; F. Philippi's "Der Dornenweg"; Max Dreyer's "Drei" (a piece of psychological analysis artistically presented by a new man); H. Sudermann's "Glück im Winkel" (skillfully constructed, but not without faults and weaknesses); Robert Misch's comedy "Nachruhm" and his drama "Liebe von Heut" (conventional in action, but marked by a striving for naturalness); "Ohne Gelaut," the promising maiden effort of F. v. Zobeltitz; "Der Hexenkessel," the first play of Georg Engel, known as the author of some pronouncedly realistic novels; the *Kulturdrama* "Des Sonnenreiches Untergang" (dealing with the conquest of the land of the Incas) and "Gordion Pascha," a 5-act drama, by Wolfg. Kirchbach; the farcical "Zwei Wappen," by Blumenthal and Kadelburg; Moser and Trotha's comedy "Der Militärstaat" (G. v. Moser's one hundredth play); the farce "Der grosse Komet," by Laufs and Jacoby; "Die Ueberzähligen," by Richard Nordmann (Frau Agnes Langhammer), have all been produced with success. Other new plays are Arthur Schnitzler's "Das Märchen" (the old problem of the fallen woman) and Max Nordau's "Die Kugel" (which has not the tragic effect intended by the author). Paul Lindau has issued dramatic essays, "Vorspiele auf dem Theater"; and 2 books by actors are Ad. Matkowsky's "Eigenes, Fremdes" and Emil Thomas's "40 Jahre Schauspieler."

Greece.—Valuable and interesting historical publications are Paul Calligas's important "Studies of Byzantine History from the First to the Final Conquest of Constantinople"; the posthumous "History of the Despots of Epirus," by J. Romanos, "the best Corfiote historian"; a readable compendium on the history of Corfu by A. Hidromenos; F. Albana's valuable pamphlet on "The Titles of Nobility in Corfu and the Feudal System"; and a "History of the Old Asiatic Peoples," by P. Carolides. E. Stamatiades has written the first biography of Jacob Basiliscus, a Samian adventurer who sat on the throne of Moldavia during 1561-'63, and "Demetrius Phalereus and Athens" is the subject of a monograph by C. Papazis. Archeological publications include pamphlets by A. Skias ("Contributions to the Topography of Athens") and C. Lambros ("The Cupping Glasses and Cuppers of the Ancients") and the lists, by P. Castriotis and B. Leonardos, of the antiquities in the museum of the Acropolis and at Olympia, respectively. N. Politis writes with knowledge of "Popular Cosmographic Myths"; M. Geleoun, of "Education and Poverty in the Last Ten Years"; and J. Mesoloras, of the "Confessions of Faith" of the Greek Catholic Church. Sp. Lambros has compiled a "Catalogue of the Greek Manuscripts on Mount Athos." An admirable, learned treatise on "Greek Meters," by D. Semitelos, the "Philological Adversaria" of C. Contos, and a "History of Greek Literature," by G. Mistriotis contribute to our knowledge of ancient Greece. In the domain of *belles-lettres*, less than ever of the material appearing in periodicals has found its way into book form. Prominent new books in this field are "Island Stories," by A. Ephtaliotis, "a master of the popular dialect"; the "First Fairy Tales," also written in the popular tongue, of C. Passajannis (a new man, of much promise despite his idiosyncrasies); and D. Bernardakis's successful tragedy, "Fausta."

Holland.—There is again much activity to report in the department of history, and the serial "Oud-Holland" is the medium through which many important researches are brought before the public. The late Prof. Jorissen's valuable historical studies have been reprinted; Van Arkel and Weissmann have written an illustrated description of the an-

tiquities of the northwestern part of Holland; Dr. Knuttel is issuing an elaborate study of "De Treestand der Nederlândsche Katholicken ten Tijde der Republiek"; and Dr. van Deventer proceeds with his history of the Dutch in Java. Books dealing with the Dutch East Indies are: "Encyclopedie van Nederlândsch-Indië," by P. A. van der Lith and A. J. Spaan; P. J. F. Louw's "De Java-Oorlog van 1825-'30"; A. Hartmann's "Repertorium op de literatuur betreffende de nederlândsche Koloniën, voor zoover zij verspreid is in Tijdschriften en Meningswerken"; J. E. van Bemmelen's "Uit Indië: Herindrukken en Herinneringen uit onzen Archipel"; and W. F. H. Wunderlich's "Insulinde: Land en Volk van Nederlândsch-Indië." S. Kalff's "Japanische Schetsen," H. C. M. van Wickevoort Cronmelles' "Een herlevend Volk: Schets van de Japanners en hun Land," and G. O. Van Wijk's "Naar Atjeh en terug" also describe Eastern lands. Vol. II of C. Snouk Hurgronje's "De Atjehers" has been published after all. L. Legrand is the author of a "Geschiedenis der Bataafsche Republiek." L. van Duynel (K. J. L. Alberdingk Thijm) has issued a "Verzamelde Opstellen." Works of note in literary history are: W. G. C. Byvanck's learned "Hooftstukken onzer Geschiedenis. De Jeugd van Isaïe de Costa"; S. A. Naber's brochure "Vier Tijdgenooten," dealing with Cd. Busken Huet, E. J. Kiehl, J. T. Buyt, and C. G. Cobet, the essays being described as personal recollections rather than scholarly monographs; H. J. A. M. Schepman's "Menschen en Boeken," interesting reminiscences and literary opinions; W. G. van Nieuhuys's "Walt Whitman"; the interesting letters of the wife of Multatuli (the late E. Douwes Dekker), edited by Julius Pée, one of the most important of the many books dealing with that writer; and the finely illustrated "Geschiedenis der Nederlândsche Letterkunde" Jan Ten Brink.

We are told that although less prose fiction has appeared, the proportion of promising works is greater. However, the turbulent movement of the young element, which began about fifteen years ago, has not been so very extraordinary in results. Mrs. Zwagemaker-Vischer's "Sterk in Leed," a novel on the old lines, is praised as a serious work, careful in characterization. Mrs. Hamaker-Brooshooft's "De Van Esperens" has been commended as a "homely and really Dutch" product. More modern in tone are "Om het Geluk," by Mrs. Knuttel-Fabius, and the work of Van Nieuvelt, while a link between old and new has been found in Mrs. Therese Hoven (a pseudonym), who is becoming more modern in taste and style and who has published two short novels ("Het vrije Beweeging" and "Zonder Illusie") and a volume of tales. A. Werumeus Buning, author of "Binnen en buiten Boord," has earned a well-deserved reputation as an artistic writer of sea stories, while Mrs. Cath. Alberdingk Thijm, who has written "Gouden Ketenen" and "Boven den Afgrond," appears, like Louise Stratenus ("Tegengift"), to have a propensity for utilizing sensational occurrences in high life as topics for her novels. Marcellus Emants, perhaps the oldest of the moderns, is a careful artist, but his "Een nagelaten Bekenenis" is described as too thrilling in its minute analysis of agonizing mental processes; Louis Couperus (whose "Wereldvrede" continues "Majesteit") has not enjoyed his usual success with his impressions of a tour through Italy; and "My Lady Nobody" (New York), by Maarten Maartens, though not, perhaps, offering the same opportunity for a display of thrilling power and a deft use of the uncanny and unusual as his former works, depicts social life in Holland as cleverly as these, albeit with a touch of pessimism. Two promising young writers deserve mention: the author of "Bertha," a light military story, and J. Morgan de Groot (Karl Ridout), who made a stir with "Dal," which he surpassed in "Bouton de Rose." The latter author's fault seems to lie in an undue straining after new expressions and an overconcise style. C. Huygens's "Zomer," Johanna van Woude's "Van de Muziek des Levens,"

P. A. Buis's "Binnenkamers en Buitenhuil," and L. H. J. Lamberts Hurrelbrink's "In Limburg en darrum" also appear on the year's lists. Some of the latest poets are being revised in reprints; the younger generation is doing little. Dr. A. Worp is issuing an important edition of Constantyn Huygens's complete works, while J. N. van Hall, in "Dichters van onzen tijd," has collected the best and most characteristic examples of the art of *les jeunes*. Books by men of the new school are "De Gebroeders," by Frederik van Velen (a psychological analysis of the human mind as agitated by good and evil), and "Verzen," by W. Kien ("the most boisterous of our young writers"), of which "scarcely any word is fit for reproduction in good company." Louis Couperus has issued "Willewade's zoon nieuwe Bundel Gedichten," 10 dramatic works there is little to say. Justus van Maurick's "Anarchisten" is loosely constructed and poor in characterization. There are excellent actors in Holland, but hard times close up the theaters, with a consequent reaction upon playwrights.

Hungary.—The publication of a grand and voluminous "Millennial National History of Hungary" (written by Marelli and other eminent historians, well edited by K. Szilagyi, and finely illustrated) has been begun in anticipation of the millennial celebration of 1900, by the Hungarian Athenæum Society, which lately issued also a biographical "Illustrated History of Literature," a similarly monumental product of literary co-operation. G. Sebestyén has written a "History of the Arpads"; J. Ferenczy, a "Life of Ferencz Palatiny," the politician; G. Balas, "Austro-Prussian War of 1866"; P. Hunfalvy, a "History of the Wallachians"; and A. Vambéry, "Origin and Growth of the Hungarian State." The celebrated István Széchenyi's voluminous "Journalistic Articles," edited by A. Zolty under the auspices of the Academy, form valuable material for the history of Hungarian politics and culture. Adolf Agai gives delightful sketches of travel "On Water and Land." Alexander Matkovsky's valuable "History of the Hungarian Budget, 1847-76," Vol. II of Fildes's "Social Economy," and David Kohut's "History of the Italian Currency" (which won an Academy prize) are important new works in political economy. The publication of a "Zemskitski für ungarisches öffentliches und Privatrecht," was begun in January, 1895, and attention has been called also to the "Budapesti Szemle" ("Budapest Review"), edited by Paul Gyulai, the main object of which is "to acquaint the Hungarian public with the ruling ideas of the civilized world." Béla Tóth's useful "From Mouth to Mouth" is the first Hungarian collection of quotations. V. Kecské's "Mythological Monuments of Ancient Pannonia" and G. Zolnai's "Hungarian Linguistic Monuments to the Queen of the Art of Printing" are of national interest. "Origines of Hungarian Literature, Zoelt Bodthy (author also of "Nights at the Play"), traces and analyzes the development of the nation's literature.

It appears that in *belles-lettres* less than usual has been published; however, there are some works of note. In the unedited edition, in 12 volumes, of Sándor Bodhy's novels and stories, as well as in his novel "Snow-white" ("Hófehérke"), this gifted decadent's predilection for strange and morbid subjects, analyzing, disdaining plots, and subjectivity are made apparent. Robert Taler's "The Key of the Temple" (a story of religious politics in the time of Martin Luther) again shows this prolific writer's strength to be in pure and simple narration, interesting and thrilling, without any admixture of psychology or "problems." In his prize novel "Katalin," Miksa Markus, usually so satirical, tells a refreshingly pleasant and heartfelt story, and Géza Gárdonyi, a young young author, has written a captivating peasant story, "The Life of the Póhlyás." Zoltan Andrássy, who now critics place at the head of contemporary Hungarian prose writers, and who is noted for his pure and rich language and delicate irony, has been very successful with "The Destruction of Nimrod, and Other Stories" and the novel "King Midas"

(published as a serial in a newspaper). Ferencz Herceg continues his success in the charming "Occidental Tales" (including the striking story "Sirius"); Tamás Kébor's "Frost" shows a preference for treating pathological conditions; István Bármay, the noted delineator of nature, is at his best in "In Private" (a collection of tales); Géza Malotay shows improvement in "Struggles" (novels), giving evidence of "an interesting, warm-hearted individuality"; and Lilla Agai, the young nephew of Adolf, began well with "Fossilized Novels." Another very young writer, Ignatius (Hugo Vágócsány), sustains his reputation in "Confessions" and "Verona," both marked by glowing and vigorous language. Odén Jakab's "Prince Argirus," a "fairy tale in four songs," has won an Academy prize; Bishop Gern Szász's new "Poesia" unite "spiritual pathos" with philosophic humor; "Parterre," by István Móra, a youthful poet, though not without faults, is promising; and Helen Békassy's new "Poesia," while faulty in versification, are noteworthy for their charmingly sweet simplicity. Finally, a complete collection of the revolutionary poetry of 1848-49 is offered in Lajos Hentall's interesting "Songs of the War for Liberty." Antal Várdy's important prize tragedy "Charitas," romantic in style, has found favor; József Bokor's "In Winter" (in prize *vaudeville*) shows close observation of character; and Béla Budai's "The King" (one-act comedy) is pleasant and harmless, though not strikingly meritorious. The publication of A. Silberstein's "Dramaturgische Werke" has been begun.

Italy.—Once more comes the complaint that although historical works have been published in abundance, there are hardly any of high literary merit or scientific import. Carlo Cipolla's "Per la Storia d'Italia e del suoi Conquistatori, nel Medio Evo più antico" is a noteworthy work of research; Ang. Vit. Vecchi has well told "La Storia generale della Marina militare"; and Raffaele Baglioni's "Il Sullotto della Contessa Clara Mazzi" presents a striking picture of both literary and political interest. In Cesare's "Vita della venerabile Maria Cristina di Savoia, Regina delle due Sicilie," E. Masi's "La Monarchia di Savoia," G. Andre's "Nizza, 1860-1864," C. Trevisani's "Storia di Roma nel Medio Evo," and L. Chiala's "Politica segreta di Napoleone III e di Cavour in Italia e in Ungheria (1859-61)" also illustrate various aspects of national history. French affairs are dealt with in U. Salvagni's "Napoleone Bonaparte e i suoi Tempi" and E. Bonacini's "Guerra franco-germanica del 1870-71," and A. Professione recounts "Storia moderna e contemporanea, dalla Pace d'Aquisgrana al Giorno nostri." Nor should R. Lanciani's "Forma urbis Romae consilio et auctoritate Regiae Academiæ Litterarum Romanensis et al. modulum 1:1000 delineavit" be omitted here. "Nuove Lettere inedite," of C. Cavour, have been edited by Edm. Mayer; a new, short "Vita di Vittorio Emanuele II," by O. Per, has appeared; and Col. Severino Zanelli's "Uomini di Guerra dei Tempi nostri: Moltke" is described as a sympathetic psychological study of the great strategist. E. Cora's "Storia del Passaggio di Nord-Est," G. Baglioni's "Viaggi di un Artista nell'America meridionale," and R. Fava's "Ricordi romani: Note di un Viaggio in Transilvania e Romania" swell the list headed voyages and travels. A great social question is discussed by P. Kocott's "Ideal del Socialismo," R. Garofalo ("La superstitio socialista"), and L. Fiorentini ("Socialismo ad Asinara"). G. Lombroso writes of "Gli Anarchi" and V. Bonai of "Anarchia," and A. Loria has collected his lectures on "Problemi sociali contemporanei." The "Riforma sociale," edited by F. S. Nitti, continues "to possess more vital energy and more actuality than any other Italian magazine." Biographical works of interest are G. Orzini and G. Fagnola's "Bibliografia bibliografica italiana," and G. and C. Salvemini's "Bibliografia universale del Teatro drammatico italiano." The tercentenary anniversary of Tasso's

death was celebrated by solemn and imposing public ceremonies, and unofficially by the publication of a number of books dealing with the poet. Angelo Solerti's 3-volume "Vita di Torquato Tasso," the result of conscientious and impartial research, strips the veil of romance from much in Tasso's life, such as his love for the sister of Duke Alfonso. We are told that some of the critics still find it difficult to believe in Tasso's madness, and give most unlikely reasons for his disgrace. Solerti is also issuing an edition of Tasso's minor works in 10 volumes. Further books concerned with Tasso are V. Prinzivalli's "Torquato Tasso a Roma" and "Torquato Tasso nella Vita e nelle Opere," ("fairly successful pieces of biography, but indifferently written"); F. Vismara's "L'Animo di Torquato Tasso rispecchiato nei suoi Scritti"; P. D. Pasolini's "I Genitori di Torquato Tasso"; Enrico Proto's "Rinaldo"; Belloni's "Epigoni della Gerusalemme liberata"; and books on "Aminta," by Guido Fortebracci and Charlotte Banti. Other contributions to literary history and criticism are: A. d'Ancona and O. Bacci's "Manuale della Letteratura italiana" (fifth and last volume); B. Zumbini's "Studi sul Petrarca"; Crescini's "Contributi agli Studi sul Boccaccio"; Fabbris's "Studi Alfieriani"; L. L. Boccimino's "La Poesia epicistica nei principali Poeti italiani"; G. H. Cesario's "La Poesia siciliana sotto gli Svevi"; Martini's "Il Teatro"; Novati Flamini's "Studi critici"; a volume of literary criticisms by Croce, which has aroused unusual interest and elicited some acrimonious replies; F. Flamini's "Studi di Storia letteraria italiana e straniera"; E. Portal's "Scritti vari di Letteratura provenzale"; P. Toldo's "Contributo allo Studio della Novella francese del XV. e XVI. Secolo"; Giac. Barzellotti's "Ippolito Taine"; A. Foà's "Studi di Letteratura tedesca"; and G. M. Seelinger's "Ibsen."

Novels are as usual exceedingly numerous, and noteworthy ones very much less so. Gabriele d'Annunzio, whose style one Italian critic finds labored and affected, is in vogue just now. His novel "Le Vergini delle Rocce" (first published in "Il Convito," the dainty organ of "Young Italy") is the first of the "Romanzi del Giglio." D'Annunzio appears to have a decided preference for French critics and readers, in which connection we are reminded that there is much imitating of the French among Italian novelists, and that French books are much read in Italy. Giuseppe Errico publishes four sad but cleverly written stories of poverty and sorrow under the title "Piccoli Schiavi bianchi." Further new fiction, named without comment: La Marchesa Colombi's "Cara Speranza"; E. Ruta's "Il Gusta d'amore"; A. G. Barrili's "Fior d'Oro"; E. Castelnovo's "L'onorevole Polo Leonforte"; and L. Arbib's "Catena." Of poetry, there is even less to say. Carducci's "Ode to the City of Ferrara," written in honor of the Tasso commemoration, is criticised as obscure, like much of his recent work. Giovanni Pascoli, hailed as a new poet, has issued "Myricæ" (third edition). His poetry, though somewhat labored and obscure in language, is chaste and simple in tone and thought, and shares the melancholy which, we are told, characterizes all modern Italian poetry. The drama "La Soltara," by G. Sinivoli, a schoolmaster, treating of the lamentable condition of the workmen in the sulphur pits of Sicily, enjoyed a triumphant success in that island—a success attributable to any but artistic causes, for in Italy the play was criticised for its awkward technique and clumsy dialogue.

Norway.—O. A. Overland has completed his scholarly history of Norway to 1814. D. Schnitler offers "Blade af Norges Krigshistorie," and A. C. Bang relates "Den Norske Kirkes Historie i det 16. Aarhundrede." An admirable monograph on the "father of Norwegian painting," "Professor [Johan Christian] Dahl; et Stykke af Aarhundredets Kunst- og Kulturhistorie," is by the art critic Andreas Aubert, and K. Dahle tells of "Rørns Kobberværk, 1044-1894." S. Bugge offers a "Bidrag til den ældste Skaldedigtningens Historie"; Erik Lie, a son of Jonas, has written

a volume on Balzac; and Carl Nærup, a newcomer among literary critics, has shown considerable power in his clever essays on contemporary writers. Chr. Collin, in "Kunsten og Moralen: Bidrag til Kritik af Realismens Digtere og Kritikere" (meritorious, though faulty in style), makes a plea for morality in art, attacking naturalism, and has aroused warm discussion. Hegelianism has again found a support in the well-written "Rummet og Sjelen" of the young philosopher H. C. Hansen.

It is perhaps in the field of *belles-lettres* that some of the most noteworthy publications have appeared. Jonas Lie has given rein to his fancy in "Told" two volumes of peculiar *eventyr*, some of which have been pronounced veritable masterpieces of sublime simplicity. Arne Garborg's qualities—mastery of language, both the literary tongue and dialects, brilliancy, introspection rather than creative ability—are apparent in "Fred" and "Haugtussa" (in verse, so naively gentle that his "morbidly reflective mind" seems hardly to have had part in its production). Knut Hamsun, noted for his captivating style and audacious, though somewhat superficial manner, has in "Pan: af Lejtnant Thomas Glahn's Papirer" given some daring love scenes and intensely enthusiastic and deeply poetical descriptions of Nature. This same deep love for Nature is felt in the pictures of coast life by Thomas P. Krag (author of "Mula"). Jens Tvedt, who has drawn such realistic and faithful pictures of Norwegian peasant life, appears to have adopted symbolism in "Velaug," a "hymn of love," rather stiff despite its gorgeousness. He writes in the popular dialect, as does also Rasmus Løland, the peasant poet, to whom some ascribe finer gifts, and who has promised much in "Skuld," "Skattegraveren," etc. Hans E. Kinck, who uses the local dialect in a masterly style, again deals with life on the beautiful Hardanger Fiord in his poetical "Flaggermus-Vinger." Hans Aanrud, Jacob Bildt, Hans Seland, and the sculptor Matthias Skeibrok also describe peasant life in various parts of the kingdom, in stories and sketches more or less humorous in character, while Rosenkrantz Johnsen's "Kaptein Appenes' Daughter" deals with the life of fishermen. Gloomy pictures of Bergen life are furnished in Theodor Madsen's graphic "I Drift" and in "Professor Hieronymus," by Mrs. Amalie Skram, an avowed naturalist. Joyless and gloomy themes are also preferred by the energetic and daring naturalist Gabriel Finne, who has published "Dr. Wanga Børn," "Unge Synder" (short stories), "To Damer," and the somewhat less unpleasant "Rachel"; and by Mona Lie (son of Jonas), discreet in method, in "Reiment" (novel) and "Streif" (collection of sketches). On the other hand, a joyful view of life is expressed in the works of Hans Angård and of Bernt Lie (cousin of Mons), whose richly colored word painting is again in evidence in "Justus Hjeltn." Ole Bang's "Indfald" is described as incoherent, yet having both merit and humor. Flirtation is again the theme of Hjalmar Christensen, in "Mat Blod"; the "new woman" is portrayed with some originality in Alvalde Prydz's "Mennesker" and "Drøm"; the rights of woman are advocated in Helene Dickmar's "Lid Livet" and "Ellen," and in the novels and plays of Anna Munch, whose keenly psychological "To Hustruer" is the work of a sympathetic artist. Further new fiction includes J. Vibe's "Om tusend Aar," O. Hansson's "Reisen hjem," and J. Paulsen's "Kunstnarnaturer." Lyrical poetry is being cultivated by a number of very talented young writers. Nils Collett Vogt (author of the romance "Familiens Sorg") sings the praise of a passionate delight in love and life; Sigbjørn Obstfelder, a "gentle visionary" of deep feeling, is perhaps not as intelligible to the general public in his tender and peculiarly individual poetry as in his melancholy novel "Liv"; and Vilhelm Krag (author of the prose poems "Nat") expresses the rich variety and color of his fancies in tender, melodious verse. Otto Sinding, the painter, has issued a collection of gloomy and strangely ro-

marble poems, and Sven Nilsson's "Skygger" (ghost poems) give proof of a vivid imagination and a brilliant style. Of dramatists, Gunnar Heiberg, whose great talent, we are told, is not yet fully appreciated in Norway, is as original, ingenious, unconventional as ever in "Det store Lørd." Fru Hilda Garberg's "Mødet" (a peasant subject) is gloomy in tone; Vilde Vialle's "Fru Gerde" is a sympathetic depiction of sorrow; T. Mathsen's "Marionetter" achieved a "socio-economic"; Jacob B. Bull, in "Elsken Alene" and "Alvorenstid," makes fanatical attacks on the naturalistic school, although, it is said, he is in his ardent gully of the same excesses which he condemns; V. Krag's charming "De Gamle Juleaften" affected one critic like "a blithe sonnet"; O. Finne handles complicated psychological problems well in "Uglen" and "Før Åfseken"; H. Christensen (author also of "Unge Nordmenn," a volume of three critical essays) analyzes the flirt in "En fortæller" and "Folkets Tjener," as in his novel; Jonas Lie's "Lystige Kæder," despite its sparkling dialogue, has not made a strong impression; Kent Mathsen's "Ved Rieets Port" is weak and rather commonplace; and Thomas P. Krag's peculiar "Kong Agnes" is likewise not faultless.

Poland.—National history has been contributed to by V. W. Burg's "Memoirs of Polish Conspiracies and Revolutions, 1811-84"; St. Popowski's "Revolt of Kosciuszko"; K. Gorski's "History of the Polish Country"; S. Kmiec's "A Page from the History of Christianity in Poland"; S. Komornicki's "Poland in the West in the Light of Figures and Events; Part I. The German Colonization"; Fr. Papke's "History of Lemberg"; Ig. Pradzyński's "Historico-critical Memoirs of the Polish-Russian War in 1812"; A. Kraszarski's "Frank and the Frankists, 1795-1818," an account of the "adventurous reformer of the Polish Jews"; Z. Kaszkowski's "Woman in Poland"; and L. Finkel's "Bibliography of Polish History." A Roman's "The Tatra Mountains: A Physical-geographical Study"; and M. E. Trepka's sympathetic "England and the English" are worthy of mention. "The Book of Polish Proverbs" is by S. Andberg. L. Finkel and S. Starzyński's "History of the University of Lemberg" is good, though somewhat nationalist in tone. J. B. Antoniewicz has issued an "Illustrated Catalogue of Polish Art from 1244 to 1846: Exhibition at Lemberg, 1894." W. Spizewicz has written of "Schiller and Goethe: Their Ten Years' Friendship," and in Polish literary history we have the fourth and last volume of the "Life of Adam Mickiewicz," by a son of the famous poet; S. L. Czerwinski's "Slavic and Polish Journalism" and "Periodical Literature and its Development"; and a second series of "Our Novelists," by the noted critic P. Chmielewski, who in "The Polish Poets of the Day" deals with younger men such as Z. Przesmycki, K. Tetmajer, J. Kasprzewicz, S. Rosowski, A. Upmann, and A. Niemirowski.

H. Stankiewicz's "The Polonicki Family" is the most important novel of the year. The veteran J. Zacharywicz sustains his reputation in "Bread" (dealing with the political situation in Prussian Poland); "Under Three Governments," and "Orion and Chrysanthemum" (a stinging satire on modern naturalism); B. Prus has published a collection of very good novellas; the Polish Jew is again portrayed in "The Dark Cat" and "Life and Death of Menahem Mendel Kalkberg," by C. Juncosa, author also of "Village Photographs"; "The Villa of the Republic," and T. T. Jez describes Galician affairs in his satirical romance "Elizabeth." The list of fiction includes also M. Gwalewicz's "Begun in the Morning"; "Parting Souls," and "A Strange Fellow"; "The Golden Chain," the first longer work by W. Gombulski, a noted poet and short-story writer; Ostrowski's "The Popul"; M. M. Radziwiler's "On the Path of the Swallows" and short stories, especially "The Soldier's Stock"; Mme. Hajtala's somewhat naturalistic "Her Son"; Mme. A. Krzyzanowski's even more drastic "For Others' Faults"; "Cotton,"

a description of life in a manufacturing town, by W. Kosciakiewicz; Abgar Holten's "From a Country House" (warm-hearted tales of the minor nobility); the prohibitive A. Kraszkowski's "The Lilies"; "Junka" and "Limbo," by M. G. Zepolek, a prominent exponent of naturalism and socialism; A. Kozar's "The Malinowski Sisters"; "High-life History"; "The Countess," "The Astron," (all three with subtitle "The Necessity of Life"), and "Nova Polana," by W. Led; Estaja's "Foggy Weather"; K. Siliński's "The Architects of Fortune"; S. Baryski's "Stories and Novellas"; T. I. Chodak's "Without Choice: Stories"; and Fr. Henick's "Solitude: Pictures and Stories." The poetry of the year includes a second volume of poems by K. Tynajew and "Love," a collection of lyrics by the gifted J. Kasprzewicz, both somewhat marked by doubt and skepticism. A more healthy tone is found in the poems of J. Wierzicki. Dedyka, a very talented woman, has attempted a heroic poem in "Polonia before Vienna," and K. Kaszarski has found a very satisfactory version of the tragedy of Aeschylus. There were no startling successes on the stage, but K. Zakowski's "The Woman Ghost"; Z. Baranicki's "Proud Souls," adapted from M. Gromski's novel "Bene Nati"; and M. Wolowski's "Two great Fancies," a historical comedy, were well received. "The Rich Widow," by M. Balucki, and "The Strangers," by S. Graybeez, have added nothing to the reputation of those popular writers of comedy.

Portugal.—The very infrequent appearance of Portugal in these annual summaries is in part explained by the published results of the census of 1890, which, it is reported, show that of the 5,000,000 inhabitants of the little country, 4,000,000 are emigrants.

Russia.—A "Russian History," by Belov, an old pedagogue; Evaristaki's "History of the Russian Cosacks" (Vol. II.); Philippoff's "History of the Cosacks, 1725-50"; and Bruckner's "The Romanovs Family" (Vol. V of his collection, illustrating various phases and periods of Russian history, as do also Count Leliva's "Russo-Polish Relations"; N. Novitsch's "L'Empereur Nicolas II et la Politique russe" (Paris); V. Vereshchagin's "In War in Asia and Europe"; and M. G. Volkovski's "Russian History in Biography: Nineteenth Century." Discussion of "the economical aspect of the social programme" has been continued, as always. The "Markites"—such as N. Belov (pseudonym), in "On the Question of the Development of the Material View of History: A Reply to Messrs. Mikhalovskii, Kozlov & Co.," and P. Struve, author of "Critical Notes on the Question of the Economic Development of Russia," who receives support from Skvortsov (in "Economic Studies") and Golenin—are dogmatically attacking the doctrines of the "Populists," as well as of the influential circle of writers on the staff of the "Russkoye Bogatstvo" ("Russian Treasury"), who take an intermediate position in the dispute. The subjective method in sociology upon which this latter critical school was founded, is again put forward in Karvets' "Juridico-Philosophical and Sociological Studies." However, we are told that the reply to Struve's book, by Mikhalovskii, the "Populist," Verentsov (whose "Outline of Theoretical Political Economy" (has appeared), the economist Kapshchik, Krivenski, N. von (Danzelmann, author of "Outline of Agriculture after the Reform"), Yelakof, and others less notable, only serve to show that a more thorough and unbiased study of the economic condition of Russia is necessary before a final settlement of the question can be thought of. Interesting problems in political and social science are dealt with in M. Kovalevskii's great work on "The Origins of Contemporary Democracies"; Mandelstam's thorough study of "The Irish Land System"; L. Yanke's "Commercial and Industrial Syndicates," material for which he collected in America; and A. Mikhalovskii's "Money: An Attempt to Study the Fundamental Principles of the Theory of the Commercial School in Connection with the History of the Mono-

tary Question." The Franco-Russian J. Novicov, in "Les Gaspillages de la Société moderne" (Paris), reduces to figures the time and money lost through militarism, bureaucratic red tape, lawsuits, tariffs, etc. I. Ivanov has made interesting researches concerning "The Political Role of the French Theater in Connection with the Philosophy of the Eighteenth Century," and the Psychological Society of Moscow assiduously pursues the study of its specialty. The growing interest in reading and self-culture is voiced by Prigavin's "On the Demands of the People and the Duties of the Intellectual Classes with Reference to Education and Culture" (second edition) and Rubakin's "Study of the Russian Reading Public," and finds expression in the activity of the "Committees of Education" of Moscow and St. Petersburg and the Moscow Commission for the Organization of Home Reading, whose traveling lectures are furthering the cause of university extension. The importance of this movement is pointed out by a Russian writer, who states tersely that misrule and ignorance "are the principal plagues of contemporary Russia." In this connection we note the increase in popular scientific works, many of them translations. V. S. Baskin, in "Russian Composers," deals with P. I. Tchaikovski. In literary history, the most important publications are Vengerof's "Russian Poetry" (works of poets of the eighteenth and early nineteenth centuries); I. Zhdanof's "The Russian Heroic Epos," the work of an authority on ancient Russian literature; and V. Goltzef's "Literary Sketches."

No especially important work of fiction has seen the light. D. Mamin-Sibirski describes life in the Ural territory in "Sibirian Tales," gives a sympathetic and humorous picture of literary Bohemianism in St. Petersburg in "Sketches from the Life of Pepko," and unfolds "an entire epos of local life at the time of the economic revolution" following the emancipation of the peasantry in "Broad." Boborukin, though always showing literary skill, is, we are told, more successful when he can seize upon some momentary social fad as a subject for his novels than when he is compelled to draw upon his imagination. Thus he has had alternately success and failure with "On the Wane," "Basil Terkin," "Crossing the Top," and "The Pleader." Garin continues his "Childhood of Tema" and "Gymnasiata" in a truthful picture of the life of "The Students"; Count Leo Tolstoi's "Master and Workman" met with great success; Staniukovich has written "New Naval Stories"; Korolenko's visits to England and America have inspired "A Free Fight in the House"—i. e., the House of Commons—and "Without a Tongue" (relating a touching experience of some Russian emigrants in New York); and Mme. Lukhmanof, a new writer, has published "recollections of her school days and a picture of Siberian life." It was reported that Count Leo Tolstoi's 5-act play "The Might of Darkness," hitherto prohibited by the censor, had been performed with immense success.

Spain.—Historical works are, as ever, plentiful; and if, as one American critic has written, "the new spirit in historiography is but slowly penetrating the intellectual gloom," yet Spanish critics hopefully see improvement. Spanish historians are industrious, and Rafael Altamira, author of "La Enseñanza de la Historia," is doing much to prepare the way for new methods. Of the voluminous "Historia general de España, escrita por Individuos de Número de la Real Academia de la Historia bajo la Dirección de Ant. Cánovas del Castillo," Cuad. 1-229 have been issued, one of the newest volumes being C. Fernández Duro's "La Marina de Castillo"; and "España: sus Monumentos y Artes, su Naturaleza é Historia," reached Cuad. 268 in 1894. C. de Casa Valencia has issued "Estudios históricos." Many contributions to local history have again appeared, though but few give evidence of original research, among such being F. Candau y Pizarro's "Prehistoria de la Provincia de Sevilla"; C. Casal's "Yacimientos prehistóricos de la Provincia de Sevilla"; E. J. de Labayru y Goicoe-

chea's "Historia general del Señorío de Bizcaya"; Saneho's "Mallorca en 1612 y los Libros de la Tabla numularia"; R. Alvarez de la Braña's "Galicia, León y Asturias"; "Tarragona antigua y moderna"; "Apuntes históricos sobre la Villa de Torrijos"; and M. Bonet's "Rebellión de Menorca en 1463." Much attention is also paid to Spanish-American history, to the study of which the Columbus quarter-century gave a decided impetus. Vol. XIII of Father Cappa's "Estudios críticos acerca de la Dominación española en América" and Vol. XI of the collection of "Libros raros que tratan de América" have appeared; J. Coroleu died when two volumes of his "América: Historia de su Colonización, Dominación, é Independencia" had been issued; J. T. Medina has edited "Descubrimiento del Río de las Amazonas, según la Relación hasta ahora inédita de Fr. Gaspar de Carvajal." Cuban affairs have inspired numerous pamphlets and books, dealing mainly with politics and the question of home rule, among them being "La Guerra de Cuba," by E. A. Flores. The Philippine Islands form the topic of Montero y Vidal's "Historia general de las Islas Filipinas"; Belloc's "Misiones de Filipinas"; "Biblioteca histórica Filipina" (Vol. IV); R. Comenge's "Cuestiones filipinas; 1ª Parte: Los Chinos"; and L. Comenge's "Recuerdos de Filipinas." The "Historia general de las Islas Canarias," by A. Millares, is completed with Vol. X. The diplomatist E. Dupuy de Lôme, in "Estudios sobre el Japón," gives the fruit of experience in Yokohama, and explains why Spanish influence in the East has declined. C. Gimeno de Flaquer's "Madres de Hombres célebres" is marked by "magic of style, profundity of thought." In the broad division geography we have "Pericia geográfica," a series of lectures on colonization in the East; R. Torres Campos's "Estudios geográficos"; and Soriano y Rodrigo's "Moros y Cristianos," notes of a journey to Melilla. The taste for archaeological studies appears to have greatly increased, resulting in the publication of new works on the art and antiquities of Spain, among which are Cano y Cuestaa's "Prehistoria y Tradiciones de Sevilla"; Vives's "Sepulcros prehistóricos de Cienpuzuelos"; Saralegui y Medina's "Estudios sobre la Época celta en Galicia"; "Viaje á Asturias pasando por León"; La Braña's "Galicia y Asturias"; and Perez Galdos's "Cuarenta Leguas por Cantabria." Several books on bull fighting have appeared, including one by Candela, a self-styled adept in "Tauromaquia." Eduardo Verdagay y Fiscowich's "Historia del Corrido" has been praised. An important bibliographical work is the catalogue of the library of the collegiate church of Xerez de la Frontera. The voluminous literature on Cervantes has been added to in Julian Apráiz y Sainz del Burgo's learned "Cervantes vascello," a Cervantes vindicated of Antivizcanismo. F. Marti-nez Ruiz writes of "Anarquistas literarios: Notas sobre la Literatura española."

Novels are numerous as ever, the successful ones including José Maria Pereda's "Peñas arriba"; Juan Valera's "La buena Fama"; Enrique Sepúlveda's "Cuentos"; Altamira's "Cuentos de Levante"; "Narraciones vulgares," by Juan Guillen y Sotelo, a young writer of promise; and the prolific Perez Galdos's "Torquemada y San Pedro" and "Torquemada en el Purgatorio." Father Coloma, S. J., has again caused a stir with "Retratos de Antaño," aimed, like his "Pequeñeces," against the vices attributed to the upper classes, and dealing with historical characters. Further prose fiction includes J. K. Mclida's "Don Juan decadente"; "Viages, Hazañas y Aventuras de un Héroe del Siglo XIII," a historical novel of merit by A. M. del Valle y Serrano, Marqués de Villa Huerta; and M. Hernandez Villaseca's "Jurar en vano." "Poetry, both lyrical and dramatic, is," we are told, "visibly on the wane," although there are numerous young versifiers "still adhering either to the semiclassical school of Cienfuegos, Melendez Valdés, and Quintana . . . , or to the romantic of Espronceda and Zorrilla," and Menendez y Pelayo

continue to issue his "Antología de Poetas líricos gallegos" (Vol. V). Among those who have issued volumes of poetry during the year are N. Díaz de Escalazar, J. Pérez Zugliaga, R. de los Reyes, J. Guerra Irujo, M. Rivas, A. Sánchez Pérez, and Manuel del Palacio, who ranks with Camposamor and Nufiez de Arce. Jesus Rodriguez Lopez ("Cantos das Mallemas") is prominent among these Gallegan poets who write in the local idiom, which, "both as to prosody and orthography, is in an anarchical state." Il. Pérez Fuentetaja ("Cantos da Terra") (No. 33 of the "Biblioteca Gallega") is praised for interesting local color. We are likewise informed that "the classical comedy is being ground and being replaced by short pieces in verse or two acts, frequently in prose." The number of plays performed and published every year is very large. Balaguer's "La Monja descalza" and "Mancha que mora" have been well received, while "Terresa," by Leopoldo Alas (*Utrius*), and Perez Galdós's dramatization of his popular novel "Torquemada y San Pedro" were failures. Bustamante's "El Nido ageno" (recently in prose); "El Duque de Gandia"; Gonzalez de Albornoz; "El Malen de San Francisco" and "La Gaceta"; "Nala," by Muñoz; Ferrer y Codina's "El Comendador de Bofecinas"; and "Miel de la Alcarria" were produced with more or less success. J. Jackson Veyas, A. J. Afan de Kibera, M. Echegaray, J. Alas, C. Arriech, J. Dicenta, Luciano, C. Guna, C. Navarro, J. de Vellia, F. Milgares, F. Perez y Gonzalez, J. Salcedo, and E. Navarro Gonzalvo have written plays, many of which are one-act comedies.

Sweden.—New contributions to national history are: O. Lundström's "Anteckningar om Gotlands Medeltid" (Vol. II); a new and in part rewritten edition of C. G. Malmström's excellent "Sveriges politiska Historien från Carl XII's Död till Statsvälföringen, 1773"; and a continuation of Il. Hildebrand's interesting and full "Kulturhistoriska Teckning af Sveriges Medeltid." The commemoration of Gustavus Adolphus, celebrated with great enthusiasm, occasioned much new writing in honor of the great hero king. "Tal vid Skönlitets Tillfällen" is by Oscar Fredrik (King Oscar II.), whose speeches are praised as specimens of powerfully national literature. O. Il. Dumnath has written of "Furst Otto von Bismarck, Tyiska Rikets Grundläggare i hans Ångranden, Bref och Samtal." The Swedish Academy has begun the publication of a voluminous "Ordbok öfver Svenska Språket." B. Lundahl's romantic history of "Sveriges periodiska Litteratur"; O. Lervén deals with "Gustaf III som dramatisk Författare"; P. G. Lyth makes a study of "Tegner och Fritidsägnar"; G. Ljungren continues his "Svenska Vitterhetens Hållter efter Gustaf III's Död," a work of extensive research; and J. F. Stenbom has written "Skålebarnerna: Bidrag till Stockholms Färdshistoria." The centenary of the death of Karl Mikael Bellman, the famous poet and humorist, gave rise to a quite extensive literature dealing with this most popular poet of Sweden, who created types of universal interest. V. Rytberg (author also of "Söndagsalla") attacks modern materialism with youthful enthusiasm in "Varia: Tankar och Bilder."

Here, as elsewhere, realism is being succeeded by romanticism and symbolism. A "subdued romantic interior" pervades "Purpur," a series of sketches by P. Hallström, whose "Vildna Faglar" had proved him to be a poet of merit and a keen and sympathetic observer of human nature. "En Roman om Förste Konsten" (published anonymously by Fru Mallinck, ne Ström), which enjoyed a great success, gives excellent portraits of numerous historic characters—Napoleon himself, however, being treated too romantically. New contributions to prose fiction by G. Nordström, Tordens Merula ("En Roman på Landsbygden"), A. Norén ("Språkliga Studier"), O. Schröder ("Guldä Minnen"), and Sigurd ("Pårens Jämnas Monstrer") have also appeared. The essentially lyric character of the Swedish poetical temperament is again exemplified in noteworthy verse by well-known poets such as W. V. Hildebrand, G. Fröding, and O. Lervén, as well as younger men—among these

marked individualities like A.-V. Kinnestveden, who has treated themes in Scandinavian mythology.

Some interesting books have been published in Helsingfors. The first work "Finland in the Nineteenth Century," described by Finnish authors and artists, an excellent picture of the astonishing material and intellectual development of Finland, was issued in Swedish, Finnish, German, Russian, French, and English editions during 1890-'92. Edv. Röngh tells the story of "Finland under det finska & svenska Kung Alexander III's Regering" and Gust. Ginterfeldt has compiled "Katalog der Bibliothek der Finnischen Literaturgesellschaft. Literatur über finnische Sprachen und Völker." "George Elkt och den svenska naturalistiska Romansen" is the theme of Il. Westermarck. Reference should be made to the "Finsk Talarkonferens" an admirably conducted congress, the "Kongress i ämnet Svenska Litteratursällskapet i Finland," and the "Acta Societatis Scientiarum Fennicarum."

Switzerland (see also report for 1893).—Although all books in German are grouped under Germany (p. 41), an exception is again made in favor of Swiss works which have a distinctly national or local interest. Important serials and periodicals are "Bibliographie der schweizerischen Landeskunde," published by the "Centralkommission für schweizerische Landeskunde," "Schweizerische Statistik" (to which belong the "Zeitschrift für schweizerische Statistik" and the "Statistisches Jahrbuch der Schweiz" are also devoted); "Schweizerische Bauernschaft," "Jahrbuch für schweizerische Geschichte," "Anzeiger für schweizerische Geschichte," "Anzeiger für schweizerische Alterthumskunde," "Mittheilungen der Antiquarischen Gesellschaft in Zürich," and "Quellen zur Schweizer Geschichte," published by the "Allgemeine geschichtsforschende Gesellschaft der Schweiz," as is also G. v. Wye's "Geschichte der Historiographie in der Schweiz." New biographical monographs are Karl Stuchlik's noteworthy "Hendrich Zwingli" and W. Kayser's "Pestalozzi." Jacob Baschold has edited "Schweizerische Schenkenscheide des 16. Jahrhunderts"; and a "Schweizer Dictionnaire" contains contributions by the late Gustav Keller, Karl Hirsckel, Josef Joachim, Mathias Schwann, Friedr. Wubel, Elm Tomarkin, Leopold Jacoby, Adolf Frey, etc. P. Gader's "Histoire littéraire de la Suisse française," crowned by the French Academy, has appeared at Paris in a second edition. The publication of a "Bulletin bibliographique de la Suisse française" was begun in November, 1894.

LOUISIANA, a Southern State, admitted to the Union April 30, 1812; area, 48,720 square miles. The population, according to each decennial census since admission, was 132,923 in 1820; 215,730 in 1830; 352,411 in 1840; 317,736 in 1850; 708,802 in 1860; 726,915 in 1870; 939,946 in 1880; and 1,118,287 in 1890. Capital, Baton Rouge.

Government.—The following were the State officers during the year: Governor, Murphy J. Foster; there was a vacancy in the office of Lieutenant Governor; Hiram R. Lott, who had been Acting Lieutenant Governor, resigned to become consul at Managua, and died there, June 6; Secretary of State, T. S. Adams; Treasurer, John Pickett; Auditor, W. W. Beaud; Adjutant General, T. P. Bell; Superintendent of Education, A. D. Lafargue; Commissioner of Agriculture, A. V. Carter; Commissioner of Insurance, Simon Toby; Attorney-General, Milton J. Cunningham; Chief Justice of the Supreme Court, Francis T. Nicholls; Associates, S. D. McEnery, Lynn B. Watkins, Joseph A. Breau, Henry C. Miller—all Democrats.

Finances.—The State bonds have risen in value since the decision to begin buying them up with the surplus of the interest funds in the treasury. The Board of Liquidation advertised

for bids on them, and when the bids were opened, in November, it was found that bonds aggregating \$1,122,000 were offered, more than half at par and above. The Board of Liquidation purchased \$200,300 at an average price of 99½.

The levee bonds are also in favor, as shown by the fact that the Pontchartrain Levee Board redeemed \$22,000 of its first issue at par, in June.

Judicial Decision.—A case that had been in the courts for years was settled in August. The First National Bank of Shreveport refused to pay its taxes of 1890, on the ground that the assessment was illegal and excessive; that the police jury sitting as a board of reviewers had assessed the stock of the bank, which was in United States bonds, exempt from taxation; and that the assessing of the stock of the bank at a higher rate than the tax of individuals was in violation of the Constitution of the United States. A rule to compel the bank to settle or produce its stock for seizure and sale was tried and sustained and made absolute.

Education.—The latest report of the public schools available is that for 1894, made to the State Board of Education, Oct. 31, 1895, by the State Superintendent. The enrollment was 155,926, and the average attendance 109,435. The total number of public schools was 2,746, an increase of 101 over 1893. The white schools numbered 1,921, and the colored 825; 3,421 teachers were employed, of whom 2,506 were white and 915 colored, one third of the force of white teachers being men.

The average annual expenditure for a pupil is \$4.89 for tuition; including the whole cost of the system, it is \$6.91. The average length of school sessions in months is: White, 5.69; colored, 4.66. The total receipts of the year 1894 amounted to \$1,166,995.01, against \$982,119.71 in 1893 and \$1,114,915.52 in 1892.

The most prominent increases in revenue are noticeable in the gains of current school funds accruing from the State tax, amounting in 1894 to \$213,549.62; but there was a slight decrease of revenue from the poll tax, which yielded \$95,038.25. The amount realized from jury taxes has gained steadily, showing in 1894 a gain of 4 per cent., being \$143,364.58.

Another large source of revenue for 1894 was the corporation or municipal tax, though most of the \$343,681.01 reported was levied by the city of New Orleans. The interest from the sales of sixteenth sections has increased perceptibly. The amount paid to the school boards in 1894 was \$44,273.88. Other receipts are from rent of school lands and such miscellaneous sources as fines, donations, sale of ferries, etc., and in a few cases loans. The aggregate of these in 1894 was \$281,349.38.

The expenditures amounted to \$732,388.37, and the total for the last five years, 1890-'94 inclusive, \$3,134,267.75. The late Legislature appropriated \$1,500 to aid the work of teachers' institutes, of which 14 of one week each were held in 1894-'95.

The State Normal School in ten years has sent out 167 graduates.

Louisiana has a Chautauqua—at Ruston, on the Vicksburg, Shreveport and Pacific Railroad. The grounds occupy 15 acres and the auditorium seats 2,000. There is a large hotel, a natatorium,

and a bath house supplied from the mineral springs. It has been in operation four years, and had 103 pupils enrolled in 1895.

Products.—A new process for mining sulphur, the Frasch method, has been put in operation in Calcasieu Parish, at Sulphur City. This is the first time that sulphur has been liquefied in the earth and removed in a molten state, and as an engineering feat it is one of the most novel. The peculiarity of the sulphur deposits here, on account of the quicksands overlying them, and the enormous quantities of *contamin* in the sulphur-bearing rock itself, made all attempts at mining this sulphur by ordinary means impossible. A bore hole was sunk, such as is used in pumping oil. Superheated water was introduced under pressure, and the sulphur liquefied and removed by pumps, like oil.

The cotton crop for the year ending Aug. 31 showed a large increase over that of the preceding year, the Gulf States showing a gain of 784,587 bales; but the prices were lower, the average at New Orleans being 5.92 cents. The crop of Louisiana alone was placed at 600,000 bales.

The consumption in all the mills in the South was 144,323 bales more than in the previous year; in Louisiana the gain was 3,123 bales.

The Cotton Growers' Convention, held at Shreveport in January, strongly advised reduction of the cotton acreage, diversification of crops, and establishment of mills and factories, and resolved further "that it is the sense of this convention that the legislatures of the cotton-growing States make appropriations with a view of creating a fund to be paid to the successful inventor of a plantation cotton-seed-oil mill." The Cotton Bale Convention adopted measures looking to uniform and improved baling.

The outcome of the rice crop this year was discouraging. The extreme high rate of freight which the Southern Pacific Railway is charging on rough rice is eating up from 25 to 50 per cent. of the value of rice. It appears that the Calcasieu rice is greatly injured in the sale by the presence of red grains in large numbers, which is due to failure to renew the seed.

According to the annual sugar book of Mr. Bouchereau, which is the recognized authority on the sugar crop of the State, the yield of 1894-'95 was 355,384 short tons, which is by far the largest sugar production in the history of the State. Last season's crop was made in 449 sugar houses, as against 906 houses in operation ten years ago. Each of the sugar houses in operation last season, however, averaged a production of 220 long tons.

The sugar-planters have been kept in suspense this year by the varying prospects for payment of the bounty on the crop of 1894. First, in January came the decision in the Miles Planting Company's case adverse to their claim; the Court of Appeals of the District of Columbia decided not only that the law authorizing the payment of a bounty on sugar has been wholly repealed, but that, in addition, the paying of bounties and subsidies by act of Congress is not only wrong in principle, but finds no warrant in the Constitution. In March the amendment to the sundry civil appropriation bill, appropriating \$5,000,000 for payment for the unpaid bounty claims of 1893 and eight tenths of a cent

per pound on the crop of 1894, finally passed Congress, and it seemed that the matter was settled satisfactorily to the planters, though, as the claims somewhat exceeded the appropriation, it was inferred that a *pro rata* distribution would be made and the claimants would be obliged to wait for a further appropriation. Then came the decision of the Comptroller of the Treasury, July 17, not to pay the bounty until he should be convinced of the constitutionality of the act, or till it should have been established in the courts. His decision, given two months after the date, July 1, at which it was expected that the appropriation would be available, was adverse to its constitutionality, and he directed, Sept. 5, that the papers in the case before him be sent to the Court of Claims for the establishment of a precedent. Secretary Carlisle granted an appeal from the Comptroller's decision, Sept. 10. In November suits were filed as test cases in the United States Circuit Court by the Realty Company, Andrew H. Gay, and others to compel the payment. The answer of the Government, Dec. 13, asked that the bounty law be declared unconstitutional. Judge Pardee held the bounty act constitutional, and that it must be enforced; that an act of Congress for the expenditure of money can not be revised by court or official. The District Attorney was instructed, Dec. 30, to take an appeal to the United States Supreme Court.

Public Lands.—The report of the register and receiver for the New Orleans land district, which comprises 52 parishes, shows that 870 homestead entries were allowed by the Land Office, covering 97,723-53 acres; 582 final certificates and receiver's receipts were passed, covering 74,604-54 acres. There were 12 timber-culture entries passed, covering 1,563-97 acres. Of the 401 homestead entries canceled, 46,016 acres were thrown open to the public. During the fiscal year 20,746 acres were relinquished.

Water Ways.—The beginning of work on the locks of Plaquemine Bayou was celebrated at Plaquemine Sept. 3, and was attended by more than 4,000 persons from adjoining parishes. This work, which can be completed, it is estimated, in five years, if Congress keeps up the appropriations, is to connect the waters of the western part of the State with the Mississippi.

Changes in the Land Level.—Major Quinn, in charge of the lighthouse district, has recently made a close inspection of the alleged increase in the height of the tides. He placed tide gauges in deep water, and from the "continuous record kept on these tide observations discovered that since 1875, when the levels were made, the delta had subsided exactly 1 foot. These gauges and tide levels were placed in position in 1875 and verified in 1877. Between that date and 1889 the level went down 1 foot, but within the past five years the tides have been stationary or nearly so." The city of New Orleans is about 14 feet above the level of the Gulf.

Prize Fighting.—In a suit brought by the State against the Olympic Club, for an injunction to restrain it from giving prize fights, a verdict in favor of the club was given by a jury in the district court, March 11. The State appealed to the Supreme Court, which remanded the case to the district court on the ground that expert testi-

mony should not have been admitted. On this trial the jury was waived and the judge gave judgment for the club. He said the statute forbids prize fighting and permits glove contests without defining them; he found that a prize fight is a glove contest and a glove contest is a prize fight, and that the act is "a piece of legislative fraud and mendacity," neither defining the crime of prize fighting nor providing "any penalty which can not be evaded by the mockery of covering with gloves the hands of the gladiators"; therefore, he found that "prize fighting is now what it never was before the enactment of statute No. 25 of 1890, a legitimate business and domestic industry, under the special protection of the law, while before the passage of that statute it would constitute the crime of assault and battery, and in some cases of manslaughter." A second appeal was taken by the State, and the Supreme Court reversed the decision and granted the injunction defining the meaning of glove contests in the law: "We conclude that the glove contests in athletic clubs, or elsewhere, when the object is only for a display of the art of boxing, as generally understood and practiced, without the prerequisites of challenge and training and the attendant circumstances of a prize fight, are not what is commonly known as prize fights, and therefore the proviso has no relation to, or connection with the offense denounced by the statute."

Aid for Nebraska.—In response to a call from the Governor, 20 cars were loaded with supplies for the destitute people of Nebraska and sent off Jan. 6. Among other goods they contained 586 barrels of molasses and 99 barrels of sugar, 145 barrels of corn, and 100 barrels and sacks of rice; flour, cornmeal and grits, potatoes, beans, coffee, tea, and many other articles of food, besides dry goods, clothing, and other necessities; also a car load of soil from the mines of Avery's Island, and a car load of dressed lumber of great value.

Labor Troubles.—The trouble on the wharves between white and colored laborers which began in October, 1894 (see "Annual Cyclopædia" for 1894, page 445, continued) and broke out in a riot March 11 and 12. Four men were killed, and 8 were badly wounded.

The business of loading cotton has been monopolized by the white crew, who screw or load the cotton bales into the holds of vessels. They constitute one of the strongest labor unions in the country. They have an annual income of \$50,000, and have \$160,000 in bank. They have dictated terms on the levee, commanding wages of \$5 or \$6 a day. At the beginning of the last season, the white laborers, considering that there was not enough business for them and the negroes, concluded to drive the latter from their work. The ship agents, under orders from the shipowners abroad, who are mainly English, stuck to the negroes, and the result was a running warfare, in which a number of levees were sacrificed and some property destroyed. The war began with incendiary fires, which destroyed the wharves of the West Indian Steamship Company, with \$250,000 loss; the wharves of the Texas and Pacific, with 25,000 bales of cotton; loss, \$500,000.

Gov. Foster issued a proclamation calling out

the militia, and the negroes resumed work the afternoon of March 14 under protection.

The State Legislature passed an act in 1880 declaring that "no sailor or portion of the crew of any foreign seagoing vessel shall engage in working on the wharves or levee of the city of New Orleans, beyond the end of the vessel's tackle" under penalty of imprisonment for ten days. Recently the Cuban Steamship Company, during a period of trouble on the levee, when men could not be got to work, attempted to use their own sailors to load one of their ships lying in this port. The men were arrested under the State law and operations were stopped in the handling of cargo. The agents of the ship applied to the United States Court for relief, and Judge Parlange, in the circuit court, issued an order prohibiting the Mayor and other authorities from interfering with the foreign sailors.

Care of Lepers.—A home for lepers has been secured in Iberville parish, according to an act of the last Legislature. An old plantation was bought, and cottages were fitted up for the use of the patients. The board will receive applications for admission, and if the whereabouts of other lepers not applying are learned, the services of the law will be used to bring them in. Hereafter they will be in charge of the Sisters of Charity. It is believed that the disease can be wiped out within fifty years.

Political.—A largely attended Free-silver Convention was held in New Orleans, June 10, and resolutions calling for the free coinage of silver were adopted.

The Ballot Reform League called a convention to meet at New Orleans, July 20, and another at Shreveport, Dec. 17, with the object of influencing the Democratic State Convention to pass a resolution in favor of the proposed amendment to the Constitution limiting the suffrage to citizens who are able to read the Constitution in the mother tongue or are owners of taxable property to the amount of \$200; "and also to commit the party to a thorough revision of our laws for the registration of voters and the enactment of an Australian ballot law, so as to prevent false and fraudulent registration and to secure a free ballot and an honest count of the votes of voters legally qualified under the amended Constitution as actually cast."

The Democratic State Convention met at Shreveport, Dec. 18. The ticket nominated was: For Governor, Murphy J. Foster; Lieutenant Governor, Robert H. Snyder, Jr.; Auditor, W. W. Heard; Treasurer, A. V. Fournet; Secretary of State, John T. Michel; Attorney-General, Milton J. Cunningham; Superintendent of Education, J. V. Calhoun.

LUTHERANS. The reported statistics (not always complete) of the Lutheran Church in the United States and Canada for the year 1895 are as follow: There are 4 general bodies, 61 district synods, 5,725 ministers, 9,573 congregations, and 1,402,189 communicant members, with a total population of about 6,000,000. There are 3,103 parochial schools, 3,026 teachers, and 188,529 pupils; 4,058 Sunday schools, 49,329 officers and teachers, and 424,188 pupils. The benevolent contributions for the year 1894-'95 (7 synods not reporting) amounted to \$906,240.50. This does not include the contributions for edu-

cational work by individuals and congregations, nor the contributions from similar sources toward benevolent operations not under synodical control, nor the large sums sent directly to missionary and other benevolent societies in Europe.

The educational institutions of the Church number 122, of which 26 are theological seminaries, 42 colleges, 41 academies, and 13 ladies' seminaries, aggregating property valued at \$4,530,350 and endowment amounting to \$1,373,157, having 257,462 volumes in their libraries, employing 679 professors and instructors, and having 11,821 students, 2,833 of whom have the ministry in view. There are 92 benevolent institutions, which report property valued at \$2,643,620, endowment amounting to \$196,874, and 32,164 inmates.

Of the four general bodies, three held conventions during the year.

General Synod.—The thirty-seventh biennial convention of this general body, which is composed chiefly of English synods, was held in Hagerstown, Md., June 5-13, 1895. Delegates were present from the 25 district synods. The following officers were elected: The Rev. Prof. H. Louis Baugher, D. D., Gettysburg, Pa., president; the Rev. William S. Freas, D. D., York, Pa., secretary; and Louis Manss, Cincinnati, Ohio, treasurer.

The Committee on Common Service reported an abridged form of the service, which was adopted for the use of such congregations as are averse to the use of the full service. The report of the Hymn-book Publishing Committee set forth its work in the publication of an approved edition of the catechism and of a larger German hymn book with the common service and psalms. The committee appointed to revise the hymns of the Book of Worship reported that they had selected 170 hymns to be inserted, and proposed to omit about the same number. The Committee on the Revision of Tunes of the same book proposed numerous changes. The reports of both committees were adopted, and instruction was given for immediate publication of the revised book.

The Woman's Home and Foreign Missionary society of the General Synod reported 686 local societies, with 18,352 members and contributions amounting to \$42,456.34. About \$8,000 of this amount was contributed for purchase or erection of church buildings and the medical missionaries' home in India. The society supported 8 home missions. In India the society supports 4 missionaries, of whom were sent out in the autumn of 1894, and 2 more are preparing to go out during this year. It supports 22 schools and 35 teachers, with 1,092 pupils.

The report of the statistical secretary presents the following summary: 1,476 churches, 173,408 communicant members; estimated value of church property, \$10,377,387.33; local expenses for all objects, \$1,228,229.36; Sunday schools, 1,425; officers and teachers, 22,350; pupils, 178,201; contributions for local objects, \$104,981.08; for benevolence, \$56,391.01; contributions for benevolence, for the General Synod, \$91,765.94; synodical treasury, \$7,355.51; home missions \$42,639.08; foreign missions, \$37,699.38; church extension, \$34,304.08; board of education, \$7,960.27, beneficiary education, \$22,531.86; Wom-

an's Home and Foreign Missionary Society, \$25,407.74; pastors' fund, \$5,385.55; orphans' home, \$16,302.02; Deacons' Board, \$501.89; external objects, \$110,779.94; total benevolence, \$281,958.97; grand total, \$1,533,448.53.

The twenty-eighth biennial report of the Board of Foreign Missions was presented by the secretary of the board, the Rev. George Schell, D. D., of Baltimore, Md. The receipts for the last two years were \$99,655.22, and the expenditures \$97,104.82. During the same period 3 of the woman missionaries returned from India, and 4 new missionaries were sent thither, while another has been called for the work in Africa. The status of the mission in India, with headquarters at Guntur, is 8 missionaries, 1 native pastor, 5 subpastors, 18 catechists, 109 schoolteachers, 4 colporteurs, 42 helpers, 427 villages containing Christians, 322 organized congregations, 132 prayer houses or chapels, 6 mission bungalows, a printing press and book-binding, a reading room and book depot, and a dispensary, 10 mission stations, and 14,265 baptized members. The educational department contains 170 elementary schools and 3,357 pupils; 1 boarding school, with 106 pupils; 1 college, with 36 teachers and 664 students, receipts amounting to \$6,331.02, and expenditures amounting to \$15,587.29. The sanaria department contains 6 woman missionaries, with 65 assistants, 166 home pupils, 18 schools, and 900 pupils. The medical department had nearly 300 patients. The work in Africa has its headquarters at Monrovia, Liberia, the Rev. David A. Day, D. D., being the senior missionary in charge. Following are the statistics of this mission: 2 ordained missionaries, 1 native pastor, and 107 communicant members; 14 Sunday schools, with 500 pupils; 3 teachers in the mission schools and 126 pupils. The industrial department contains buildings, machinery, 30,000 coffee trees, and 360 acres, valued at \$73,045.

The thirtieth biennial report of the Board of Home Missions was presented by the general secretary, the Rev. A. Stewart Hartman, D. D., of Baltimore, Md. The board employs two secretaries and carries on all the missionary operations of the district synods, with the aid of auxiliary missionary committees in the district synods. The balance in the hands of the board was \$3,902.12. To this was added during the two years by contributions of the churches \$85,203.21. The expenditures of the board were \$84,446.11. During the same period 163 missions were sustained, cared for by 192 missionaries, serving 205 congregations, and having a communicant membership of 13,392. The missions are distributed as follow: California, 7; Colorado, 3; Connecticut, 1; District of Columbia, 3; Illinois, 9; Indiana, 9; Iowa, 7; Kansas, 10; Kentucky, 2; Maryland, 11; Michigan and Missouri, each 1; Nebraska, 18; New Jersey, 1; New Mexico, 2; New York, 12; Ohio, 10; Pennsylvania, 42; Tennessee and West Virginia, each 1; Wisconsin, 2; and Wyoming, 1. Of these, 148 are English, 11 German, 3 English-German, and 2 Scandinavian. The thirtieth biennial report on Church extension was presented by the secretary of the board, the Rev. Harry H. Weber, of York, Pa. This board, besides the

whose location is in the West and whose work is that of exploring new territory, securing lots for the building of churches and parsonages, and aiding in the organization of new missions. The receipts for two years, including a balance on hand of \$10,636.70, amounted to \$100,291.28. Loans, donations, and special appropriations were made to 127 congregations, amounting to \$89,741.54. The assets of the board amount to \$228,316.26, besides 311 unimproved lots.

Midland College, at Atchison, Kan., has assets amounting to \$85,146.16, employs 13 professors and instructors, and has 100 students, of whom 6 are in the theological department. This department has been enlarged and reorganized as the Western Theological Seminary. Carthage College, Carthage, Ill., has property and endowment valued at \$55,803.47, 10 professors and instructors, and 156 students. Hartwick Seminary, Hartwick, N. Y., received aid from the board during the past two years. It has real estate valued at \$41,635, a productive endowment of \$41,000, 64 students, and 9 instructors. The whole number of educational institutions under the control of this general body is 6 theological seminaries, 5 colleges, and 1 academy.

The third biennial report of the Deacons' Board was presented by the Rev. George U. Wenner, D. D., of New York city, president of the board. This is a comparatively new work for this general body. The institution in Baltimore is intended as a training school. The duties include the care of the sick and dependent in hospitals and institutions of public charity, ministering in the local church, looking after the neglected and dependent, teaching in Sunday and sewing schools, and managing young people's associations. The treasurer's report shows receipts amounting to \$1,253.80, and expenditures aggregating \$2,218.76.

The Publication Society reported assets amounting to \$73,039.06. The copies of periodicals issued monthly numbered 773,390; new books, pamphlets, and tracts, 12; and 9 new editions of books. The parent Education Society aided 17 young men in preparing for the ministry, with \$1,374.

General Council.—This general body is composed of English, German, English-German, and Swedish synods. Its twenty-fifth convention was held in Easton, Pa., Oct. 8-13, 1885. All the synods were represented by large delegations. The following officers were elected: The Rev. Edward P. Mohlenke, D. D., New York city, president; the Rev. Prof. William K. Fryck, Milwaukee, Wis., English secretary; the Rev. Prof. John Nicum, D. D., Rochester, N. Y., German secretary; the Rev. Prof. L. H. Beck, Pa. D., Brooklyn, N. Y., Swedish secretary; and William H. Staake, Esq., Philadelphia, Pa., treasurer.

The convention represented 630,000 communicant members of the Lutheran Church in North America, or nearly one half of the membership of the Church in this country. The synod of Icelanders in America was organized June 24, 1855, at Winnipeg, Manitoba, two pastors participating in the organization, together with lay delegates from 12 congregations. Since then a number of pastors have been secured directly from Iceland, and a few have been educated in this country for work among the widely scat-

tered Icelanders, of whom there are 20,000 in this country, all Lutherans.

The report of the Board of English Home Missions showed 22 missions under its care, located in Massachusetts, New York, New Jersey, Ohio, Illinois, Indiana, Wisconsin, Minnesota, North Dakota, Oregon, Washington, and Utah. The amount expended during the last two years was \$29,500. The board asked for \$20,000 for each of the next two years, and this amount was apportioned among the district synods. The report of the Board of German Home Missions showed 34 missions cared for by 8 missionaries, located as follows: 1 in Kentucky, 1 in Utah, 2 in Manitoba, 2 in Assiniboia, and 2 in Alberta. The communicant membership numbers 5,000. The treasurer's report showed an income of \$8,355.54, and expenditures amounting to \$8,029.20. The report of the Swedish board, which embraces the missionary operations of the Augustana Synod, showed 155 missions, the expenditures for the two years amounting to \$52,599.20. The missionary operations of the district synods of this body, together with those of the general boards, embraces 321 missions, and the expenditures for the last two years amounted to \$135,241.44. The complete report on Church extension for 1895 has not yet appeared, but that of the previous year shows that the society has assets of over \$10,000, with which missions and needy congregations are aided. All the larger district synods have their own Church extension funds. The foreign missionary operations of the Council are carried on in East India, with headquarters at Rajahmundry, whence the missionaries have gone out to hundreds of villages and have planted numerous stations. A seminary has been established at the central station for the training of Christian teachers and ministers. Three zenana sisters teach the women in the districts, under the care of the missionaries. A new church building is in course of erection at Bhimawaram, and the senior missionary has recently received a gift of \$8,000, with instruction to build another new church. The income for the last two years was \$40,783.61, and the expenditures \$37,333.99. The present status of the mission is as follows: 8 missionaries, with their wives, 3 zenana sisters, 2 native pastors, 4 evangelists, 2 catechists, and 137 teachers, a total of 164 mission workers. There are 7 principal stations, 102 villages where schools have been established, 191 villages where the Gospel is preached, 1,763 communicants, 4,484 Christians, and 1,893 children in the schools. Three monthly periodicals are published, with a combined circulation of 30,000.

The report of the Immigrant Mission in New York city shows that during the past two years 20,000 immigrants were cared for in the Emigrant House. The Augustana Synod has established a Swedish emigrant house in the same city.

For the work of the deaconesses there are now 7 mother houses, with 143 sisters, having property valued at \$700,000, and an annual expenditure of \$70,000. These institutions are in Philadelphia, Omaha, Neb., Milwaukee, Wis., Minneapolis, Minn., Brooklyn, N. Y., and Baltimore, Md. According to language, these may be classified as English, German, Swedish, Norwegian, and German-English.

The report of the Church Book Committee showed that the new edition of the Church Book had been favorably received. It also showed that, according to the action of the body at its last convention, a new edition of the Sunday-school Book would be issued early in 1896, containing about 300 additional hymns, and being supplied with ample liturgical formulas for the opening and closing of the sessions of the schools. It stated that the revision of the translation of Luther's Catechism under the labors of the joint committee of the English-speaking Lutheran bodies would soon be finished. Resolutions were adopted declaring that the General Council is ready to co-operate with all Lutheran bodies that may be willing to enter into the movement for the preparation of one common book of worship for congregations using the English language, on the conditions according to which the common service was prepared; and that the General Council requests other Lutheran bodies in which the English language is used to co-operate in the movement for the attainment of uniformity in the churches. The Committee on Sunday-school Work reported that a twenty-years' course of Bible studies had been completed, and recommended that in future the work should be put on the basis of a graded course of Bible studies. It was decided to adopt a graded system. The committee was instructed to prepare and the Board of Publication to publish a full series of pictures illustrating Old and New Testament history, and in chart form the Ten Commandments, the Apostles' Creed, and the Lord's Prayer for the primary department. This was followed by courses of study outlined for the other departments of the schools, to be published in book or quarterly form, beginning with Advent, 1896.

The Committee on Statistics reported the following summary for 1895: 8 synods, 1,091 ministers, 1,786 congregations, and 323,649 communicant members; 329 parochial schools, 574 teachers, and 24,188 pupils; 1,453 Sunday schools, 19,715 officers and teachers, and 180,183 pupils; benevolent contributions for missions and other charitable purposes, \$252,033.04; 3 theological seminaries, 8 colleges, 4 academies, and 25 orphanages, hospitals, deaconess institutions, and other charitable institutions, with property valued at \$2,500,000 and endowment amounting to \$500,000, the educational institutions employing 147 professors and instructors, and having 2,340 students, of whom 480 have the ministry in view.

United Synod, South.—The fifth convention of this general body, composed chiefly of English synods and congregations, was held in Staunton, Va., Sept. 18-21, 1895. Fifty-six clerical and lay delegates were present, to represent 7 district synods, the Mississippi Synod not being represented. The following officers were elected: The Rev. Prof. George W. Holland, D. D., of Newberry College, Newberry, S. C., president, since deceased; the Rev. Lewis G. M. Miller, D. D., of Roanoke, Va., vice-president; the Rev. Melancthon G. G. Scherer, of Concord, N. C., secretary; and Mr. C. H. Duls, of Charlotte, N. C., treasurer.

The business of the convention centered on the 3 subjects of fraternal relations with other

Lutheran bodies, Christian education, and the synod's missionary operations. Action was taken with reference to the overture of the General synod bearing upon the matter of practical co-operation of the several bodies in carrying on church operations. The action of this body was favorable to such co-operation, and a resolution was adopted in accord with the action previously taken by other bodies. This led to consideration of the common Book of Worship for all the English-speaking churches. The common service as adopted by several of the general bodies was declared to be not only the "common service of the Lutheran Church of the Reformation period, but essentially the form of worship of apostolic times." The United Synod has adopted this service as it came from the hands of the joint committee. The following resolution was adopted:

That our Committee on Common Service be instructed to confer with similar committees of our other general bodies, or in any other way which may be proper, concerning the securing of a common book of service throughout, including liturgy, ministerial acts, hymns, or, in other words, a book identically the same, and that our committee be instructed to use all urgent and pressing and prompt as the circumstances will admit, believing, as we do, that such action would greatly promote the common welfare of the whole Church.

The report of the Committee on Literary Institutions showed that the synod has 1 theological seminary; 5 colleges for young men, with property valued at \$193,500, endowment amounting to \$91,000, employing 39 professors, and having 506 students, 110 of whom are preparing for the ministry; and 5 colleges for young women, having property valued at \$164,000, with 40 instructors and 389 pupils. This report does not embrace the educational work of the entire Church in the South. There are within the bounds of the synod 24 educational institutions, having property valued at \$697,300, endowment amounting to \$122,500, employing 157 professors and instructors, having 2,376 students. The report of the directors of the theological seminary emphasized the need of an increased faculty, enlarged facilities, and better equipment.

The report of the Board of Home Missions showed that the synod is carrying on mission work at Knoxville, Bristol, Greenville, Johnson City, and Morristown, Tenn.; Augusta and Atlanta, Ga.; Asheville and Winston, N. C.; and Richmond and Norfolk, Va. With the exception of the one at Atlanta, all these missions were

begun within the past five years. They now represent 12 congregations, 793 members, 669 Sunday-school pupils, and church property valued at \$59,000. The annual expenditures amount to \$2,000.

The report of the Board of Foreign Missions presents the following: The United Synod since 1891 has carried on mission work in Japan, with headquarters at Saga, in which the synod's missionaries are the only resident Christian missionaries. There are 6 stations, one of which is entirely supported by the native Church. The communicant membership numbers 31, 11 of whom were added in 1894, and the total membership is 100. Three Sunday schools are maintained, having 60 pupils. Three are studying theology and 6 attend a class for special Bible study. Luther's Catechism has been translated into Japanese, and is largely used. The common service and the orders of ministerial acts have also been translated and are used. The annual expenses of the board amount to \$1,800.

Following is a summary of the statistics of this body: 8 synods, 188 ministers, 861 congregations, and 35,910 communicant members; 297 Sunday schools, 2,778 officers and teachers, and 22,334 pupils; and benevolent contributions amounting to \$24,453.89.

The Synodical Conference, composed of 1 English and 4 German district synods, held no convention during the year. This body is composed of 1,608 ministers, 2,365 congregations, and 479,221 communicant members; it reports 1,732 parochial schools, 803 teachers, and 37,344 pupils; 188 Sunday schools, 215 officers and teachers, and 18,000 pupils. The benevolent contributions for the last year amounted to \$268,406.40. Of the 15 independent synods, the Joint Synod of Ohio, with its 78,000 members, the old Norwegian Synod, with its 38,000, the German Iowa Synod, with 56,000, and the United Norwegian Church, with 105,000 members, carry on their own educational, missionary, and benevolent operations. These synods embrace 1,636 ministers, 5,592 congregations, and 892,917 communicant members; 917 parochial schools, 1,423 teachers, and 65,090 pupils; 1,323 Sunday schools, 5,319 officers and teachers, and 27,118 pupils; and the benevolent contributions of the churches amounted to \$121,600.12.

The reports of the missionary operations of the Lutheran Church in North America include also work among the freedmen of the South and the Indians in various parts of the country. No statistics can be given of this work.

M

MADAGASCAR, a kingdom occupying the island of Madagascar, in the Indian Ocean, east of Africa, recognized as a French protectorate in a convention concluded between France and Great Britain on Aug. 5, 1890. The reigning sovereign is Queen Ranavalona Manjaka III, born in 1862, who succeeded her aunt in 1882 and married the Prince Consort and Prime Minister, Rainilaiarivony. The treaty concluded by the Queen with the French Republic in 1885,

at the conclusion of military operations lasting three years, acknowledged the right of France to control the foreign policy of the Government. This was the thirty-second war with France since the first occupation of a part of the island by the French in 1643. The treaty recognized the sovereignty of the Hova Queen over all the tribes of the island, and permitted the French Government to maintain a resident general with a guard at the capital. Subsequently the

Queen's Government, encouraged by the English and American consuls, denied the French protectorate, and refused to grant *exequaturs* through the French resident. The friction continued after the English receded from their position in consideration of the abandonment by France of her right of joint protection over Zanzibar. Rainilairivony, the real ruler of the Hovas, made grants of land and mining and forest rights freely to Englishmen or Americans, but refused all concessions to French applicants. Notice was given in July, 1894, that any concession that is not approved by the French resident general and registered at the residence general will be considered null and void. The natives committed many hostile acts against the French and the attitude of the Hova Government became distinctly unfriendly. The French resident general, Le Myre de Vilers, presented a new treaty, defining the French protectorate more clearly, and when the Hova minister refused to sign it he left the capital on Oct. 27, 1894. The French Parliament voted 65,000,000 francs for an expedition of 15,000 troops, and the Hova Government imported arms and prepared for a new war under the military direction of Col. Charles St. Leger Shervinton and other English officers who volunteered to organize the defense.

The area of Madagascar is about 228,500 square miles. The population may be 3,500,000. The most numerous tribes are the Sakalavas and the Hovas. The French formerly protected the former in their resistance to the Hovas, who have exercised dominion over the other inhabitants for two hundred and fifty years. The Hovas, numbering about 1,700,000, are a mixed race of Malay origin, with some Polynesian characteristics. Antananarivo, the capital, has about 128,000 inhabitants. There are some foreign planters and traders in the coast districts, mostly creoles from Mauritius and Réunion. In Tamatave, the chief port, in 1894 the white population consisted of 200 French and about an equal number of British, Germans, Americans, and Italians.

The Government derives its revenue from customs and a poll tax. The French Government has a lien on the customs, securing a loan of 15,000,000 francs made after the war of 1883-'85. The imports in 1890 were valued at 5,597,260 francs, of which 2,725,780 francs were for textile goods, mostly American cotton sheeting to make the white robes worn by the Hovas. The value of the exports, consisting of rubber, hides, wax, cattle, gums, silk, and raffa fiber, was 3,741,355 francs.

The French Expedition.—A state of hostilities was formally announced by the French Government on Nov. 13, 1894, in a proclamation reciting violations of treaties by the Hovas and affirming the French protectorate. The Hovas assembled in the market place at Antananarivo, and swore to fight for their independence to the death. The French residents retired to Tamatave, where the French troops, of whom there were on the island about 1,000, strengthened the fortifications. The Hovas threw up earthworks behind Tamatave, but whenever they approached the town they were shelled by the French ships in the harbor. They surrounded in like manner

the French position at Diego Suarez, and from their stronghold at Ambahimarina intercepted all communication and trade. On Jan. 19 Capt. Jacquemin captured the Hova position at Antananikarana, where he secured some English arms. On Jan. 21 the French artillery began to play upon the Hova positions around Tamatave. The fighting lasted four days, at the end of which the Hovas, having been twice repelled, retired from the neighborhood.

A great military assembly was held at the capital on Feb. 20. The Queen addressed over 100,000 men of the military class, promising to prosecute the war to the utmost, while they pledged themselves to serve the fatherland wherever she should send them. The chiefs swore that they would provide funds to carry on the war, even if they had to sell their wives and children into slavery. The veterans of the last war were sent to the front, and 20,000 of new levies went into training at Antananarivo. Some white adventurers were enlisted in Natal and Cape Colony to fight for the Hovas. Several French traders and planters, and one who was a British subject, were killed by the Hovas.

In one of the battles the Hova commander in chief, Gen. Rainandriamampandry, was killed. Early in April the Hova strategic positions on the coast near Tamatave were bombarded. In the middle of April the town of Ambodivohivo was captured without the loss of a French soldier. The French officials collected the customs duty of 10 per cent. on all goods landed, not only at Tamatave, but at other ports. They were paid by the European merchants on the understanding that the ports would not be blockaded. After three Englishmen who had been expelled from Tamatave landed at Vatomandry and proceeded to the capital, the French kept a vigilant watch on English shipping.

The French, on Jan. 16, 1895, occupied the port of Majunga, on the west coast, in the country of the Sakalavas, and prepared it for the reception of the expedition that was to set out thence against the Hova capital. The Hovas gradually withdrew their forces from the eastern and southern parts of the island toward the center in order to make ready to resist the advance of the French into Imerina, their own country. Notwithstanding the bold and eloquent speeches of defiance, the Hovas were not generally willing to go to the war. Besides the English instructors there were a number of native officers who had received a military education in France. To check desertions an old law was revived, which condemns any deserter to be burned at the stake. The regular army consisted of six brigades, each numbering 2,000 soldiers, all armed with Remington or Snider rifles, besides auxiliary forces raised among the other tribes, 10,000 strong and equipped with spears and shields. The Hova force was increased to 30,000 men ready for the field, and 20,000 new levies relieved the garrison at Antananarivo.

The French expeditionary force, which began to embark at Lyons in the beginning of April 1895, consisted of a mixed regiment of the French line, 2,700 strong, 1 of marine infantry, 2 squadrons of mounted chasseurs, 1 Algerian regiment of zouaves and tirailleurs, 3 battalions of native tirailleurs, 1 of French tirailleurs, 6 batteries, and

a squadron of train, making altogether about 15,000 men. The French Government found it cheaper and more expeditious to charter English steamers to transport the troops to Majunga, provoking thereby angry criticism in the Chamber, while the British Government was called to account in the House of Commons for allowing British vessels to be used. French contractors laid a cable from Majunga to Mozambique to connect with the cable of the Eastern and South African Company. At Port Dauphin the Hovas expelled the French and for a time maintained communications with their English supporters; but later the inhabitants of the whole southern part of the island drove out their Hova officials, attacked and plundered all Europeans, and rebelled against their hereditary Arab rulers and formed petty republics. There was a considerable French party in Antananarivo, headed by relatives of the Queen and the Prime Minister, who expected to supplant them when the French became masters of the Government. When the Hovas knew that the French expedition would certainly be sent, their loyalty and discipline weakened and the revolutionary party increased and grew bold. The Hovas generally were indifferent. A force of 3,000 men was dispatched to Majunga from the capital to aid the Hova garrison of 1,000 men in resisting the landing of the troops, but the majority of the troops deserted. Another force of 4,000 men was sent to oppose the French on the northwest coast. Before the arrival of the French expedition Col. Sheraton and the rest of the British and American officers resigned all at once, finding it impossible to make the Malagasy Government realize the dangers that it had to face or to agree to the preparations necessary to overcome them.

When the French troops began to arrive, in the beginning of April, at Majunga they had several encounters with the Hovas, who were easily put to flight, although much superior in numbers. The Sakalavas, on the northern bank of the river Betsiboka, fled with the Hovas, who carried off the relics from the graves, from which the people would not be separated. Learning of this custom, the French took care to guard the graves on the southern bank and soon made the natives their friends. The outposts were extended up the river 40 miles, as far as Ankaboka, the head of navigation for the larger steamers drawing 10 feet of water. The Hova fort at Mahaba, 8 miles above, was captured after a fight. On April 3 Gen. Metzinger stormed the intrenched camp of Miadano, killing 100 Hovas. The Hova fortress of Ambohimamas, near Diego Suarez, was beleaguered by the French, and at length captured after a vigorous attack. Fort Dauphin was occupied by a naval force. From the delta of the Betsiboka the Hovas were expelled and the villages of Lipoosoa and Betsiboka were occupied without the loss of a man. Sickness, however, decimated the French forces and filled the hospital ship "Shamrock" with patients suffering from fever and dysentery. The Hovas on the south coast killed 3 French civilians who fell into their hands. The town of Maravany, on a tributary of the Betsiboka, was attacked on April 27 by the Algerian troops and Sakalava auxiliaries, who were repelled by a heavy fire opened upon them by the

Hovas from behind their earthworks. The Algerian troops in the night of May 2 succeeded in creeping up unobserved and captured the place by a brilliant charge, in which only 1 Frenchman was killed, while the Hova losses were 300 killed. The Hovas, numbering 2,000, fled in disorder, leaving cannon, mitrailleuses, munitions, and provisions behind. On May 6 Gen. Duchesne, commander-in-chief of the French forces, arrived at Majunga. Sakalava chiefs, after going to Antananarivo to swear allegiance to the Queen, endeavored to stop the French. The advanced guard defeated a party of them, killing 60, and also captured the Hova camp at Amboudomonte. Sakalavas enlisted on the French side and did good service in the colonial regiment of tirailleurs. They drove in all the cattle of the neighboring country, for which the French paid good prices. The Hovas, reinforced by fresh troops from the capital, attempted to make a stand, but their position was turned and they were again routed, losing 500 killed. The Hovas were badly scared by the invisible death dealt by the machine-gun fire of the Algerian troops. The French advanced up the left bank of the Betsiboka toward Moratanana. A force of 6,000 picked men was sent out to help hold that place, but the Hovas had no organization or disposition for fighting. The commanders used their power only to practice extortion upon the men. The men, who had to feel themselves, returned to their homes for fresh supplies when their rice gave out, and seldom returned. Three quarters of the troops sent to the front deserted on the march. The general who was in command at Maravany was the first to run away. He was disposed for cowardice, but was reinstated because the general who was sent from Antananarivo to take his place turned back on hearing of fresh disasters and went off to his estate.

The Queen and the people of Antananarivo were deceived by false accounts of brilliant victories until the French drew near Moratanana. The Hovas had neglected to place obstructions in the river, and therefore the French gunboats and river transports reached Moratin, the head of navigation, without difficulty. Above that point a Decaeville road was laid. Hova deserters, as well as Sakalavas, came into the French camp in great numbers. The Hovas occupied a strong position on the Betsiboka which the French could not force until June 6, when by means of a flanking maneuver and mountain guns well posted they forced the Hovas to beat a retreat. On June 9 the French began to bombard Moratanana. The Hovas attempted to resist, but, finding themselves again outflanked, evacuated the place to avoid being invested. Suberbieville, where the works of a French gold-mining company were found uncompleted, was converted into a military post. Tanantamora, on the Ikopa, 17 miles above Moratanana, was occupied on June 21. There the French sat down, the transport material not arriving to allow them to accumulate sufficient commissariat stores at their advanced base of Suberbieville to continue the advance immediately. One of the English ships bringing gunboats in position had broken down in the Mediterranean, and afterward there were other delays. The health of the French

troops was not as bad as had been expected; the proportion of sick was 10 per cent. They were furnished with comforts by patriotic citizens at home. The volatile Hovas regained their spirit of confidence when the French ceased to advance, and were cheered by imaginative accounts of victories. On June 29 a force of 3,000 Hovas attacked the French outposts at Tsarasaotra, and were repelled. Gen. Metzinger then ordered an attack on their position, held by 10,000 men, on the Beritzoka. The French troops attacked them in front, mowing down their ranks with the fire of the Maxim guns and repeating rifles, and when they fled in terror before the pursuing cavalry on July 1, in the second battle, their retreat was cut off by a large body of black troops which had outflanked them and occupied the roads. Some escaped into the mountains, only to perish of starvation and exposure, for, according to their custom, they went into battle naked, leaving their white *lambas* in their tents, which, with all their guns, ammunition, and stores, fell into the hands of the victors. The French losses consisted of 2 killed and 15 wounded. The road was built ahead, and in August the French advanced column began its march. On Aug. 13 the French occupied Malatsy, which the Hovas evacuated at the approach of the enemy. Gen. Raimanjalay, the Hova commander-in-chief, complained that his men ran away whenever one or two were killed. They deserted to the French in ever-increasing numbers. The Hova army intrenched at Andriba was 12,000 strong. Gen. Voyron's brigade attacked Andriba on Aug. 21. The Hovas were so demoralized by the artillery fire that they abandoned their 6 fortified posts and numerous encampments without waiting to encounter the infantry. The French lost 1 Malagasy soldier. At Andriba, 150 miles from Majunga and half way to Antananarivo, Gen. Duchesne waited till he collected enough provisions and ammunition for a flying column, to be sent over the mountains to take the capital. On Sept. 15 a French column by a forced march surprised 6,000 Hovas in the Tsinaïondry defile and captured their position. The flying column found the pass in the Ambohimena mountains barred by the entire Hova force and 30 guns. Delivering his attack unexpectedly on Sept. 19, Gen. Voyron completely routed the Hovas and captured Antoby. The Hovas offered a feigned resistance only in the Ankaratra mountains, which the French crossed on Sept. 23. On Sept. 27 they easily dislodged the Hovas at Lavohitra by a reconnaissance. The road, 200 kilometres in length, terminating at the entrance of the plain of Imerina, was completed before the end of August. The flying column of 5,000 men carried only enough provisions to reach Antananarivo. The deaths up to this time had numbered about 2,000, nearly equally divided between Europeans and the native troops and coolies. Scarce 50 died in battle or of wounds. About 7,000 persons were treated in hospitals, and those who succumbed were mostly French soldiers under twenty-five years of age and coolies. The older men and the Algerian troops resisted the endemic diseases or recovered quickly.

From Ambatoarana the Hovas made several futile attempts to check the invaders, but the French artillery was so well served that they did

not stand, either behind earthworks or in the open. Their last and most spirited effort was the final defense of the capital city. The French captured the city by a brilliant attack, in which they lost only 7 killed and 54 wounded, on Sept. 30, the day that Gen. Duchesne had fixed several months before.

Terms of Peace.—The French commander entered into negotiations with the Hova Queen on Oct. 1. The terms agreed upon provisionally were that the Queen was to continue to reign under a rigorous French control. The Hova administrative organization throughout the island would be maintained under the supervision of French officials. The Prime Minister was exiled. Gen. Metzinger was nominated Governor of Antananarivo. The native army was disarmed and replaced by French garrisons. The French assumed charge of the police and collected the customs and the taxes. The Queen of Madagascar in the treaty accepted the French protectorate, and the French Republic accepted all the consequences of such protectorate. France reserved the right to maintain military forces on the island, and the French resident general is to control the internal government of the island. The Hova Government is not allowed to contract loans without the authorization of France. The French Government assumed the financial responsibilities that Madagascar had previously incurred and promised to assist in the conversion of the loan of 1886, and also agreed to fix without delay the limits of the French territory at Diego Suarez, the uncertainty of which had led to disputes and in part caused the war.

The Waller Case.—John Langston Waller, formerly United States consul at Tamatave, was arrested on March 6, 1895, for sending letters on of Tamatave without submitting them to the military authorities for examination according to the regulations, and for attempting to convey information to the enemy of the movements of French troops. He was tried by court-martial on March 18 and sentenced to twenty years' imprisonment for high treason in holding a clandestine correspondence with the enemy. Mr. Waller was sent to France and confined in Clairvaux prison. The United States ambassador at Paris requested the French authorities to furnish him with a copy of the proceedings of the court-martial. Mr. Waller is a colored citizen of the United States, formerly resident in Topeka Kan., who had obtained from the Hova Government in April, 1894, a grant of 250 square miles of rubber forest in the vicinity of Port Dauphin. The French resident contested at the time the validity of this concession. All his rights were abrogated by his sentence. The French Government declined to furnish a record of the proceedings of the trial as a matter of right, but was willing to do so as an act of courtesy to the United States Government. A full copy was not obtained till autumn, when it was transmitted to Washington. The proceedings were found to have been regular and the evidence sufficient according to French law.

The American gunboat "Castine," which arrived at Tamatave on June 5 for the purpose of inquiring into the Waller case, omitted to salute the French flag, on the ground that the United States had never recognized the French prote-

Corsets. As the United States treaty with Madagascar recognized the sovereignty of the Ilova Queen over the whole island, the naval regulations prescribed a salute to the Malagasy flag, and since that had been pulled down and the French flag was flying no salute was fired. When the officers and men attempted to land they were roughly ordered and pushed back by the French officials. The French naval authorities subsequently apologized for this discourtesy, explaining that the regulations required that the ship's papers should be examined before any one was permitted to come ashore.

MAINE, a New England State, admitted to the Union March 15, 1820; area, 33,040 square miles. The population, according to each decennial census since admission was 208,269 in 1820; 220,453 in 1830; 501,793 in 1840; 583,109 in 1850; 629,279 in 1860; 626,915 in 1870; 648,936 in 1880; and 661,086 in 1890. Capital, Augusta.

Government.—The following were the State officers during the year: Governor, Henry B. Chace; Secretary of State, Nicholas Fessenden; Treasurer, F. M. Simpson; Attorney-General, Frederick A. Powers; Superintendent of Common Schools, W. W. Stetson; Adjutant General, Sheldon Connor; Railroad Commissioners, Messrs. Peake, Chadbourne, and Danforth; Fish and Game Commissioners, T. H. Wentworth, H. O. Stanley, and C. E. Oak; Land Agent, Charles E. Oak; Liquor Commissioner, F. P. Gilmore; Superintendent of Public Buildings, R. F. Harris; Labor Commissioner, S. W. Matthews; Insurance Commissioner, S. W. Carr; Registrar of Vital Statistics, A. G. Young; Librarian, L. D. Carver; Factory Inspector, R. F. Chalk; State Assessors, Otis Hayford, George Peck, Hall C. Burleigh; Mr. Burleigh died in May, and was succeeded by W. C. Marshall; Chief Justice of the Supreme Court, John A. Peters; Associate Justices, Charles W. Walton, Andrew P. Wiswell, Lucilius A. Emery, Enoch Foster, W. P. Whitehouse, Thomas H. Haskell, and Sewall C. Strout—all Republicans except the last-named.

Finances.—The cash on hand at the beginning of 1895 was \$458,195.85, with receipts for the year of \$1,533,700.15, making a total of \$1,991,896. The expenditures amounted to \$1,704,653.30, leaving cash on hand Dec. 31, 1895, \$287,243.70.

The liabilities of the State are as follow: Bonded debt, \$2,253,000; trust funds held by the State in which no interest is paid, \$748,331.07. The bonded indebtedness has been reduced by \$20,000.

Charities.—About five years ago 100 acres of land were bought at Bangor as a site for a new hospital for the insane of the eastern part of the State. The last Legislature voted \$150,000 for buildings, and the Governor appointed a commission to visit other institutions and examine plans.

The expenditures for the insane in 1894 was \$64,978.07; for the deaf, dumb, and blind, \$11,123.97; and for the feeble minded, \$1,657.74. In 1895 the expenditures were respectively \$61,000, \$18,017, and \$2,081.

The Children's Aid Society of Maine has purchased a building and 40 acres at Belfast, and is fitting up a home for homeless girls.

Education.—Summer schools for teachers were held at Orono, Foxcroft, Fryeburg, Saco, Northport, and Turner Center. The attendance was 798. The course of study at Gorham and Castine Normal Schools has been extended to three years, and the buildings at all the normal schools have been improved.

New regulations have been made for examination of teachers. The State Superintendent will issue certificates after examination which will be probationary or for life, as warranted by the scholarship and skill of the candidate as shown in the schoolroom. Probationary certificates will be granted for three years, and may be renewed.

The sixty-fifth annual convention of the American Institute of Instruction was held in Portland, beginning July 8.

A class of 51 was graduated at Bowdoin in June. The Board of Trustees and Overseers voted to accept as a substitute for the Greek requirement any one of the following: 1, Three years of French; 2, three years of German; 3, two years of physics and one year of mathematics; 4, two years of chemistry and one year of mathematics.

Colby University celebrated its seventy-fifth anniversary, with an address by Prof. Nathaniel Butler, of Chicago University, and an ode by Rev. Samuel E. Smith. Large classes were graduated in both the men's and the women's colleges.

The State College, at Orono, opened its autumn term with 110 new students, 230 in all. About 20 were graduated in June. Advanced degrees were conferred on 6 students—mechanical engineer, 3; civil engineer, 2; master of science in chemistry, 1.

Railroads.—The Ashland branch of the Bangor and Aroostook road was ready for the beginning of regular train service Jan. 1, 1896. The system now comprises 206 miles, built during the past three years. The Ashland branch is 43 miles long, and gives access to the lumber region. The report for the year ending June 30, 1895, shows that the gross earnings were \$592,832.12, and the operating expenses \$291,540.63.

The report of the Maine Central for the same time, and compared with the preceding year, shows these items: Gross earnings and other items, \$4,829,761.38; operating expenses, \$2,003,172.23; total income, \$1,821,819.25; net income, \$420,880.38; surplus from operations, \$122,369.78; total surplus, June 30, \$612,609.54.

The annual report of the Portland and Rochester Falls Railroad gives the gross earnings of the road for the year as \$173,549, a gain of \$41,918. The total income was \$72,458, and the net income \$30,571, an increase of \$16,498.

The report of the Portland and Rochester road makes the gross earnings \$254,449, an increase of \$34,171. The operating expenses were \$193,201; total income, \$65,994; net income, \$58,569; a gain of \$12,794.

The Railroad Commissioners report that 117-6 additional miles of road have been built, and 7-50 discontinued.

The returns of the steam roads on June 30, 1894, showed a falling off in transportation earnings over those of 1893 of \$528,152.20. The returns to June 30, 1895, show an increase over those of 1894 of \$281,723.08.

The total mileage of street railroads is 93.89 miles. The total of transportation earnings was \$502,477.80, against \$440,026.58 in 1894.

Vital Statistics.—The second annual report for the year 1893 has these items: Births, 14,604; of these 63-17 per cent. were of native parents, 18-29 of foreign, 13-75 of mixed, remainder not stated; marriages, 5,795; divorces, 627; deaths, 11,134.

Insurance.—A new plan has been adopted for fixing insurance rates. There will be insurance boards in the various counties; and when owners think the rating of the agents too high appeal can be taken to the board; if the board agrees with the agent, the insurer can then apply to the exchange, with headquarters in Boston.

The Maine Committee of the Insurance Exchange made report in June, recommending reductions on specially rated risks in the State, from 5 to 15 per cent., according to class. Only Bangor and Portland are in the first class—that is, having approved water supply, fire alarm, and a paid fire department. They would be entitled to the 15 per cent. reduction. A reduction of 12½ per cent. on farm property was also recommended.

In 1894 the State taxes of the insurance companies amounted to \$32,683.34. Of this amount \$14,234.04 was for fire insurance; \$17,380.63 for life; \$1,063.67 for accident.

Farming.—The secretary of the Board of Agriculture sums up the general crop result as follows:

In 1895 Maine produced the largest potato crop known, which has proved in some cases a source of poverty in the midst of abundance. The abundant harvests of hay, grain, and corn have given our feeders plenty of food for their animals. Our dairy animals are increasing in numbers and in average productiveness; our young stock has increased in numbers and in average value. The sheep industry, although somewhat crippled by the low price of wool, has afforded a reasonable income on the capital and labor expended.

The number of farmers' institutes held during the year was 46; cost, \$1,784.89; total attendance, 6,210.

Two bills of importance to the dairy interest were passed by the Legislature: one regulating the sale of oleomargarine, and one requiring "the testing of all articles used in connection with the Babcock test in the butter factories."

Game and Fish Laws.—The secretary of the Fish and Game Association reports that excellent results have been obtained from the operation of the new law in regard to fish, the supply being on the increase. Sebago Lake has been stocked with trout. The change of the close time on partridges has also been beneficial. In reference to large game the report says:

We are confronted with difficulties which it was hoped the change in the law and the increased appropriation would in a large measure overcome. I have letters from guides and others which indicate that large game were in greater numbers in our forests at the first of October than ever before, and that we have now, at the close of the season, not lost the natural increase so far as relates to deer. Caribou are more plenty, and it is a mooted question whether the moose is in as large numbers as at the close of last season.

It is estimated that 5,000 head of large game were killed in the State during the year, and that these cost the hunters (including board bills, guides, etc.) an average of \$100 apiece.

Fisheries.—The Labor Commissioner says: "There are enrolled in the customs districts of the State 437 vessels, which are exclusively engaged in the fisheries, and in addition there are employed in the shore fisheries more than 6,000 fishing boats with a valuation of not less than \$500,000. The sea and shore fisheries of the State give employment to upward of 10,000 people, and involve an investment in apparatus and cash capital of \$3,000,000."

Cities and Towns.—Lewiston celebrated its centennial, July 4, with a procession 2½ miles long, athletic sports, a contest of fire companies, and a display of fireworks. Exercises in the park consisted of an address by the Mayor, an historical address by ex-Gov. Garcelon, an oration by Senator Frye, and a prophecy by Congressman Dingley.

New Sweden celebrated its twenty-fifth anniversary, June 25. In 1870 a colony of 51 Swedes, under the lead of Hon. W. W. Thomas, Jr., sailed from Gothenburg for northern Maine and settled in what is now known as New Sweden, then an unbroken wilderness. In New Sweden to-day there are 717 Swedes, while in the adjoining township are 735 more. The colonists have erected 686 buildings, built 71 miles of road, and own live stock to the value of \$72,045.

The new bridge connecting Calais and St. Stephen was formally opened, Jan. 19, with appropriate ceremonies. This is the first free bridge over the St. Croix. It consists of two steel trusses of the Pratt type. The bridge proper is 385 feet long, 36 feet wide over all, and has a head run over the floor of 16 feet.

Legislative Session.—This opened Jan. 2, and closed March 27. The Senate voted to adopt the Reed rules as the standard of procedure, but the measure met with opposition in the House and was tabled.

Acts to the number of 493 were passed, and 134 resolves. The appropriations for 1896 amounted to \$1,758,406.59, and for 1896 to \$1,624,107.53. Some of these are the following:

For pensions, \$140,000; Eastern Insane Hospital, \$150,000; General Hospital, \$15,000; Eye and Ear Infirmary, \$10,000; Bangor General Hospital, \$10,000; Central General Hospital (conditionally), \$20,000; Penobscot Indians, \$16,164; Passamaquoddy Indians, \$16,080; Cattle Commission, \$10,000; State Library, \$8,000; Maine Insane Hospital, \$14,000; State College, \$40,000; Farmington Normal School, \$20,000; Reform School, \$50,500; Military and Naval Orphan Asylum, \$19,500; State Prison, \$19,000; School for the Deaf, \$16,000; Industrial School, \$14,000; Children's Aid Society, Belfast, \$3,000.

A very long petition was sent in, asking for legislation in regard to fish and game, and the enactments on that subject were among the most important work of the session, beginning early and continuing till near the close, when the resolve appropriating \$25,000 became a law. Under the new general law the Governor appoints 3 commissioners of inland fisheries and game, 1 of whom shall be the land agent, and who shall hold the office so long as he remains land agent. The other 2 shall hold their office for three years and shall

receive a salary of \$1,000 and actual traveling expenses. They shall make no decisions contrary to existing laws, but after a hearing, of which due notice has been given, may entirely prohibit the taking of any kind of game or inland fish in any part of the State for a series of years not exceeding four. The wardens shall be allowed the same fees as sheriffs for like services, and bonds to the amount of \$2,000 shall be required of them. The guide of a party that violates the fish and game laws shall be held equally responsible with other members of the party. The hunting or taking of cow or calf moose in any manner is forbidden. All fishing through the ice for trout or landlocked salmon in any of the waters of Franklin and Oxford Counties is prohibited. No person shall now kill more than 1 bull moose, 1 caribou, and 2 deer between Oct. 1 and Jan. 1 of each year. The number of pounds of trout or salmon that may be taken is 25, and not 50 as heretofore.

In reference to seashore fisheries, acts were passed defining certain duties of wardens and commissioners, and regulating the packing of sardines. From July 10 to April 10 it will be unlawful to catch or deal in lobsters less than 104 inches long, under penalty of a fine of \$1 for each lobster.

Railroad legislation included the following measures:

Steam railroads are authorized to use electricity. When an owner of a building along the line of the railroad damaged by fire from a locomotive shall have an insurance on the building, that insurance, less premiums, etc., shall be deducted from damages to be collected from the railroad. One of the important amendments to existing legislation was that which requires the Railroad Commissioners to pass upon the question whether public convenience requires the construction of an electric railroad. The county of Washington is empowered to aid in the construction of the Washington County Railroad to an amount not exceeding \$200,000.

The laws regulating insurance are as follow:

The Insurance Commissioner may, with the consent of the court, wind up the affairs of fraternal beneficiary and assessment corporations. Investigation must now be made as to the causes of all fires by municipal officers within six days after such fires, and a copy of the clerk's record shall be transmitted to the Insurance Commissioner seasonally. The Insurance Commissioner may appoint brokers who, if unable to place certain kinds of insurance in any company authorized to do business in the State, may insure the same in companies not authorized to do business in Maine. The anticompetitive insurance law and the one prohibiting cominsurance have been repealed. The Insurance Commissioner has been authorized to compile and publish 2,000 copies of the insurance and fraternal beneficiary laws of the State. In towns or cities of more than 2,000 inhabitants the municipal officers shall appoint an inspector of buildings skilled in the construction of buildings, and shall define the limits of his jurisdiction over the construction of buildings to see that proper safeguards against fire are used.

By an amendment a lien to secure payment of tax upon real estate shall take precedence of all other claims. If such tax remains unpaid on the first Monday in December of the year succeeding that in which said tax was assessed the property shall be sold.

One of the important acts is that relating to the taxation of sailing-vessel property. The

new law provides for a valuation of \$20 on new vessels. The valuation is to be reduced \$1 a ton for each year of the vessel's age up to the seventeenth year, when the valuation shall be fixed at \$3 a ton.

Appeals from the assessors to the Supreme Court have been authorized.

A law has been passed requiring the State assessors to make lists of lands in unincorporated places.

Under the medical registration act, not more than 2 of the board of 6 shall be members of any one school of medicine; the section providing that unregistered practitioners could not collect their pay was stricken out.

Some defects in the collateral-inheritance law have been amended. Charitable bequests are now exempted from its provisions.

Thirty days' imprisonment or fine not exceeding \$100 are the penalties prescribed for selling stale eggs as fresh. Adulteration or imitation of maple sirup or sugar has been prohibited. A fine not more than \$100 and not less than \$50 is the penalty for the adulteration of candy or for the sale of brandy, whisky, rum, or wine drops. Oleomargarine may be sold if colored some other than yellow or butter color.

The law protecting innkeepers was made to apply to keepers of boarding houses, and the penalty for defrauding them was doubled.

A general law was passed for the organization of telegraph and telephone companies, under which they are to have the right of eminent domain. Corporations by majority vote of stock may diminish their capital stock, giving notice within ten days to the Secretary of State. The game of policy is made subject to the same prohibition as lotteries.

Veterans of the late war not on the quota of Maine, but who were residents of the State at date of enlistment and at time of application had been residents for five years, and are in need, shall receive State pensions.

The law relating to real-estate titles has been so amended as to include a provision whereby one who has been in uninterrupted possession of real property for ten years may file a petition in the Supreme Court, setting forth the estate, stating the source of the title, describing the premises, and averring that apprehension exists that certain persons, named or unknown, claim a title conflicting with his, and praying that such persons be summoned to show cause why they should not bring action to establish their title.

Three new towns were set off—Wester Harbor from Gouldsboro, Serrano from Madison, and South Portland from Cape Elizabeth. City charters were granted to Dexter and South Portland.

The new law gives absolute ownership to widow or widower in one third the real estate, excepting wild lands. Mothers are to have joint custody of minor children.

Cities or towns with more than 10,000 inhabitants may receive State stipend on \$1,000 appropriated for free public libraries, instead of on \$500 as formerly, and the State stipend is 10 per cent. of the amount expended by the town "for the use and benefit of such public library and for the running expenses thereof."

Among the commissions to be appointed by the Governor is that for securing uniformity of legislation with other States in respect to divorce, insolvency, and probate laws, also those relating to descent and distribution of property. The law relating to recognizances for debt was repealed.

An attachment of real estate expires in five years after date of filing, unless brought forward at the request of the plaintiff or his attorney.

A law affecting installment sales provides that no agreement whereby the property shall become that of the buyer till it is paid for shall be valid unless recorded in the city clerk's office.

Vessels of 5 tons or less on inland waters are now exempt from fees for inspection or license.

The State has allowed savings banks to require ninety days' notice for the withdrawal of deposits, and in turn has provided that these banks shall not invest in street railways, excepting those already built in Maine, unless there is paid in on the stock $33\frac{1}{3}$ per cent. of the amount of bonds.

The laws on liens were amended; the claimant has forty instead of thirty days in which to file his statement.

Changes were made in the law governing the sale of liquors. Among the important features added is the requirement for an assay of the liquors.

MANITOBA, a western province of the Dominion of Canada.

Legislation.—The third session of the eighth Legislature was opened at Winnipeg on Feb. 14, 1895, by the Lieutenant Governor, Sir John Christian Schultz, with a speech from the throne, which contained these passages:

It appears that during the past year unusually large shipments of stock have been made out of the province—an encouraging indication that our farmers are no longer wholly relying upon the production of wheat.

A substantial increase in the provincial subsidy has been obtained from the Dominion authorities.

By the judgment of the Judicial Committee of the Privy Council, recently pronounced on an appeal from the Supreme Court of Canada, it has been held that an appeal lies to the Governor General in Council in behalf of the minority of this province, inasmuch as certain rights or privileges given by prior provincial legislation to the minority in educational matters had been affected by the public-schools act of 1890, and that therefore the Governor General in Council has power to make remedial orders in respect thereto. It is not the intention of my Government in any way to recede from its determination to uphold the present public-school system.

It has been determined by the Department of Education to introduce a carefully prepared course of study in agriculture into the public schools, and during the past year a considerable amount of preparatory work has been accomplished.

Finlay M. Young was elected Speaker. The principal bills passed were the following:

Respecting corporations incorporated outside of Manitoba.

Respecting humane societies.

To amend the public-schools act.

To make further provision respecting mortgages of real estate.

To amend the Manitoba insurance act.

To amend the act respecting life assurance for the benefit of wives and children.

For prevention of fraudulent statements by companies and others.

Respecting aid to creameries and cheese factories.
To incorporate the Red River Valley Colonization Land Company.

A special meeting of the Legislature was called on May 9, primarily to deal with the school question. It was prorogued on June 28, after passing the following measures, among others:

To amend the municipal boundaries act.

Respecting municipal hail insurance.

To make further provision respecting the liens of laborers and mechanics.

To incorporate the Canadian Live Stock and Fire Insurance Company.

To enable the Government of Manitoba to loan a limited amount of money to the rural municipality of Gimlin.

The most important subject of discussion during the two sessions of the Legislature in 1895 was the school question. The Manitoba legislative acts of May, 1890, with reference to the public schools of the province, abolished the system which permitted separate Protestant and Catholic sections of the School Board, and ordered the arrangement of all the school districts, both Protestant and Catholic, under one scheme of free and nonsectarian schools, to be sustained by the collection of a public-school rate. Any school refusing or neglecting to work under the new law was not to be allowed the privilege of enjoying a share of the grants or allotments. The Imperial Privy Council having decided that, while the Manitoba act of 1890 was constitutional, it yet remained with the Dominion Government to see that the rights of the Roman Catholic minority were respected and guarded, the question at once became a Federal one. The Ottawa ministry, sitting as a court of final appeal, heard the complaints and the defense, and finally issued a remedial order or instruction to the Manitoba Government to restore the privileges taken from the Catholics by the abolition of their separate schools in 1890. This decision was made by the Governor General in Council, on March 18, declaring that the rights and privileges enjoyed by the Catholic minority in Manitoba prior to the provincial acts of 1890 were prejudicially affected by those acts, and requesting legislation that should repeal the existing law, in order that the wrongs complained of by the Catholics might be removed. This the provincial Government flatly refused to do, and were supported in their opposition by a large majority of the Assembly, and apparently of the people of Manitoba. It was pointed out that the difficulty of maintaining separate schools in a large and scattered country like Manitoba practically amounted to an impossibility. The decision of the Government created two distinct issues—one between Catholics and Protestants, the other between the provincial and Dominion Legislatures. The situation was awkward. The Minister of Justice for the Dominion, Sir C. H. Tupper, considered the emergency so serious that he resigned in order to bring about a dissolution, this, in his view, being the only constitutional course open to him. His resignation was tendered on March 26, but three days later he was prevailed upon to remain in office. Matters now await the legislation that is

judged by the Dominion Government at the January session of the Federal Parliament.

On March 3 Attorney-General Sifton carried a resolution abolishing the provincial expenditure upon the maintenance of a residence for the Lieutenant Governor. This leaves that official dependent upon the \$10,000 salary paid to the lieutenant governor of each province by the Federal authorities under the terms of the act of union. A few months later, the Hon. J. C. Patterson, formerly Minister of Militia at Ottawa, succeeded Sir John Schultz as Lieutenant Governor.

On April 8 a judgment was rendered in the Supreme Court of Manitoba which sustained in a local case the contention that provincial legislatures have not the power to prohibit, either directly or through the municipalities, the sale of intoxicating liquors. This decision did away with local-option laws in 10 municipalities.

Finances.—For the year ending Dec. 31, 1894, the chief items of receipts were as follow: Annual subsidy from Dominion, \$418,267.31; interest on school lands, \$10,465.21; county court fees, \$10,205.85; law stamps, \$11,926.50; land titles, \$42,402.19; liquor licenses, \$26,111.60; interest, \$40,895.71; support of lunatics, \$26,664.19; insurance act fees, \$7,891; official administration, \$10,958.61; municipal sinking fund, \$15,544.79; central judicial district, \$31,390.40; municipal debentures (1890), \$9,588.84; loans to municipalities (1894), \$8,934.91; Manitoba and Northwestern Railway Company debenture account, \$14,647.43; Manitoba Southwestern Colonization Railway debt and interest account, \$49,492.31; provincial debentures, \$302,619.83; Court of Queen's Bench, \$26,539.17; balance brought forward from 1893, \$574,458.06; miscellaneous, \$47,809.34; total, \$1,584,443.45. The chief expenditures were as follow: Legislation, \$40,400.43; Treasury Department, chiefly interest on debentures, \$152,065.33; provincial Secretary's department, \$7,911.84; public schools, \$119,397.12; Manitoba University, \$3,500; agriculture and immigration, \$74,680.72; Attorney-General's department, \$127,580.13; Railway Commissioner's department, \$6,887.70; public works, \$177,373.08; treasury loans, etc., \$107,030.19; interest on railway bonds, \$101,263.00; miscellaneous, \$56,633.98; cash on hand, \$608,929.84; total, \$1,584,443.45. The outstanding debentures of the province at the end of 1894 included \$797,426 issued in 1885 for aiding the Manitoba and Northwestern Railway Company; \$809,846 in 1885 for aid to the Manitoba Southwestern Colonization Railway Company; \$255,986 in 1886 to aid the Hudson's Bay Railway and Steamship Company; \$1,498,923 in 1885 for general purposes; and \$997,066 issued in 1893, also for purposes of public expenditure.

Agricultural.—The crops of 1895 were unprecedented. The comparative areas in acres may be seen from the following table:

CROPS.	1894.	1895.
Wheat	1,010,196	1,140,974
Oats	418,094	492,000
Barley	119,504	138,000
Flax	20,500	32,000
Potatoes	78,500	14,714
Beets	7,800	6,000

The estimated production for 1895, from reports received from all parts of the province, includes 23,843,392 bushels of wheat, or 29.66 bushels to the acre; 5,993,567 bushels of barley, or 28.96 to the acre; 25,855,989 bushels of oats, or 28.96 to the acre.

The development of the dairy interest has been noticeable, more than 20 new cheese and butter factories having been established during the season. According to the statements contained in bulletin that was issued by the Department of Agriculture in June, 1895, 6,842 men were employed as farm help, at wages averaging \$16.50 for the summer months and \$10.50 for those hired by the year.

Education.—The school population in 1894 was 36,459, compared with 14,129 in 1884. The number of pupils was 32,990, and the average attendance 16,560. The teachers numbered 1,047; the schools in operation were 684; the average salary of teachers was \$410, as against \$433.50 ten years before. The legislative grant to the schools was \$101,012.46, and the school taxes, raised from the municipalities, amounted to \$354,963. Before the abolition of separate schools (or their Government maintenance) in 1890, there were 91 Catholic and French school districts. For various reasons 54 of these have since disbanded and 27 have accepted the public-school system. Nine newly formed districts, where the French and English populations are about equal in numbers, have also accepted what is called the "national" system. Convent schools are still in operation in 9 centers, and 38 other schools in various parts of the province are conducted as separate schools and maintained by voluntary subscriptions.

Industries and Trade.—At the time of the last census (1891) there were 1,601 industrial establishments in the province, with a working capital of \$2,561,836, employing 4,403 persons at wages aggregating \$1,900,981. The yearly product was valued at \$10,155,182. The imports of the province in 1894 amounted to \$2,232,722, and the duty collected to \$602,466. Up to June, 1895, the export of cattle for the year was valued at 30,000 head; the export of hogs, at 10,000; and the export of sheep, at 4,000; while the total value of the dairy products exported was estimated at \$500,000.

Keewatin.—This large district, of 292,000 square miles, is still under the jurisdiction of the Lieutenant Governor of Manitoba. The principal occupation of its scattered inhabitants—who are mainly Indians—is hunting and fishing. In his annual report for 1894, Sir John Schultz urges the Dominion Government to take steps for the protection of the rich whaling grounds to the north, and suggests restrictive measures against the use of the bomb, lance, and swivel guns by foreign whalers. He also protests vigorously against American vessels which have "traded with the Eskimos on our arctic coast carrying on a barter with the articles upon which no duties have been paid, and furnishing as masters of trade or reward for inland trading expeditions magazine rifles, fixed ammunition and instruments thus violating the laws of Canada and defrauding her revenue." He then refers to the value of the trade thus controlled from San Francisco,

MANUFACTURES IN THE UNITED STATES. Under the general heading UNITED STATES in the last issue of the "Annual" is included a tabular exhibit of census results concerning manufactures. The table gives many important facts relating to the development of industries in 165 cities, showing, opposite each name, for 1880 and 1890, the aggregate number of manufacturing establishments, total amount of capital invested, total number of hands employed, and aggregate of wages paid. The last two columns contain the total cost of material used in each city, 1890, and value of products or goods manufactured in the same year.

The following exhibit shows in detail, alphabetically, by industries, the capital invested, cost of materials used, and value of products (goods manufactured), 1890, including receipts from custom work and repairing, in 165 cities, whenever the amount used in any city for any given industry exceeds \$200,000.

The total given for each city under the heading "Capital" includes both hired property and direct investment, because the aggregate thus made represents truly "all the property strictly pertaining to a manufacturing business."

The industries included in the compendium report for 1890, but not in any previous census returns, were bottling; cars and general shop construction and repairs by steam railroad companies; china, decorating; clothing, women's, dressmaking; coffins and burial cases, trimming and finishing; cotton, cleaning and rehandling; cotton ginning; cotton waste; drug grinding; druggists' preparations, not including prescriptions; gas, illuminating and heating; hay and straw, baling; millinery, custom work; petroleum, refining.

Some of these industries do not reach \$200,000, and will not therefore be found in the tables.

Each industry having 3 or more establishments in any city is given a separate heading. Those industries in which less than 3 establishments were engaged are grouped under, "All Other Industries," in order that the operations of individual establishments may not be disclosed. Industrial operations of the municipal governments of cities, also the manufacturing operations of penal, reformatory, and charitable institutions, are not included in the Compendium, because such enterprises are conducted under conditions "essentially different from those which prevail in the case of individual or private corporations."

Summary.—This statement is intended to exhibit briefly, for rapid reference, the cities most prominent in the matter of capital invested and goods manufactured at the taking of the eleventh census, in 1890, under some of the most important headings. Attention is directed to the explanatory remarks at the beginning of this article.

Agricultural Implements.—In 1890, Chicago, Springfield, Ohio, Auburn, N. Y., Akron, Ohio, and Racine, Wis., were, in the matter of capital, much in advance of the 18 other cities mentioned under this heading. In value of products or goods manufactured, it will be noted that Chicago, Springfield, and Auburn take leading rank, followed by South Bend, Akron, and Canton, Ohio. Twelve cities have more than \$1,000,000 invested, and the product in 10 cities exceeds that amount.

Boots and Shoes; Factory Product.—In 1890, Lynn, Mass., Haverhill, Mass., Philadelphia, Pa., and St. Louis, Mo., took the lead. In value of goods manufactured, the most important cities were Lynn, Haverhill, Chicago, Philadelphia, and Cincinnati. Of 28 cities mentioned, 13 have a capital exceeding \$1,000,000, and in 20 cities the value of products exceeds that amount.

Carriages and Wagons.—The 5 leading cities in capital invested were South Bend, Ind., Cincinnati, Chicago, New York, and St. Louis. The largest amounts under value of products or goods manufactured were shown for Cincinnati, Chicago, New York, St. Louis, and Columbus, Ohio. Of 28 cities given, the capital in 16 is beyond \$1,000,000, and in 15 cities the value of products exceeds that amount.

Clothing, Men's.—New York, Chicago, Boston, Cincinnati, and Baltimore were millions ahead of other cities in the amount of capital invested under this heading, the same cities also leading in value of products. Thirty-one cities are mentioned, and of these the capital invested in 15 cities (1890) exceeds \$1,000,000. In value of

products, 18 cities report amounts aggregating more than that sum.

Clothing, Women's.—New York is reported as having by far the largest amount of capital invested in this industry. The other cities nearest in rank are Chicago, Philadelphia, Cincinnati, and San Francisco. The first 4 named are also highest in value of products, Cleveland being the fifth. Of the 14 cities reported, the capital in 7 cities (1890) is more than \$1,000,000, and the value of products in 8 cities exceeds that amount.

Cotton Goods.—Fall River, Mass., is the most conspicuous in the matter of capital invested, those cities coming nearest being Lowell, Mass., New Bedford, Mass., Manchester, N. H., and Philadelphia. In value of products the cities rank as follows: Fall River, Lowell, Philadelphia, Manchester, N. H., and New Bedford, Mass. Among 27 cities in the list 21 employed (1890) more than \$1,000,000 capital, and the value of products in 20 cities exceeded that amount.

Grain-Mill Products.—Minneapolis, St. Louis, New York, Akron, Ohio, and Milwaukee, Wis., take the lead in capital invested. Minneapolis, St. Louis, New York, Chicago, and Rochester, N. Y., take rank in the order named as to value of products. Of the 48 cities given under this industry, the capital in 9 cities is more than \$1,000,000, and in 33 cities the value of products exceeds this amount.

Foundry and Machine-shop Products.—The 5 cities leading in capital invested were Philadelphia, Chicago, New York, Brooklyn, and St. Louis. The ranking in value of products for the same year was as follows: Chicago, Philadelphia, New York, Brooklyn, and St. Louis. The number of cities given under this heading is 128. Of these, the amount of capital in 61 cities exceeds \$1,000,000, and in 59 cities the value of products or goods manufactured exceeds that amount.

Iron and Steel.—Pittsburg, Chicago, Cleveland, Ohio, Scranton, Pa., and Youngstown, Ohio, hold the highest rank in amount of capital invested and value of products. Out of 19 cities given, the capital invested and value of products in 18 exceeds \$1,000,000.

Leather.—The 5 leading cities in capital invested under this heading are Milwaukee, Wis., Chicago, Cincinnati, Louisville, Ky., and Allegheny, Pa. Those highest in rank in value of products are Milwaukee, Chicago, Cincinnati, Allegheny, and Louisville. Ten cities of the 20 included in the list have more than \$1,000,000 capital invested, and in 19 cities the value of products exceeds that amount.

Liquors, Malt.—In amount of capital invested in the manufacture of malt liquors, New York holds first place. Next in order of rank are Philadelphia, Chicago, St. Louis, and Milwaukee. In value of products the cities rank thus: New York, St. Louis, Brooklyn, Milwaukee, and Philadelphia. There are 54 cities mentioned. Of these, the capital invested in 28 is more than \$1,000,000; the value of products in 24 cities exceeds that amount.

Lumber and Similar Products.—The principal cities in the matter of capital were Minneapolis, Minn., Muskegon, Mich., Williamsport, Pa., Bay

City, Mich., and Saginaw, Mich. In value of products, Minneapolis, Bay City, Muskegon, Oshkosh, Wis., and Williamsport are most conspicuous. Thirty-nine cities are shown, and of this total 22 had (1890) more than \$1,000,000 capital invested, and the value of products in 19 cities exceeded that amount.

Printing and Publishing, Book and Job.—In this industry New York, Philadelphia, and Chicago are far ahead of any other cities. The 2 next in capital invested are St. Louis and Cincinnati. In value of products the cities rank as follows: New York, Chicago, Philadelphia, Cincinnati, and Washington, D. C. Of the 45 cities given under this heading, the amount of capital invested and value of products in 10 is more than \$1,000,000.

Other Industries.—The same method of comparison can readily be adopted with reference to the other industries given by cities in detail. Among the most important not included above, but well worthy of examination, are bookbinding, brick and tile, chemicals, furniture, jewelry, shipbuilding, silk and silk goods, slaughtering and meat packing, woolen goods, and worsted goods. As a matter of fact, the cities in many instances do not hold the same rank in the several industries to-day that they held when the eleventh census was taken; but the scope of the investigation was so broad, and the ground to be covered so extensive, that the figures given have but recently been made available in corrected form. State statistics of more recent date will, in many instances, be found under the State name in each year's issue of the "Annual Cyclopædia." The figures given in this article are the latest Federal statistics, and will remain so until the taking of the twelfth census, in 1901.

MARYLAND, a Middle Atlantic State, one of the original thirteen, ratified the Constitution April 28, 1788; area, 12,210 square miles. The population, according to each decennial census, was 317,728 in 1790; 341,348 in 1800; 380,546 in 1810; 407,350 in 1820; 447,069 in 1830; 470,019 in 1840; 568,024 in 1850; 687,049 in 1860; 780,894 in 1870; 934,945 in 1880; and 1,042,390 in 1890. Capital, Annapolis.

Government.—The following were the State officers during the year: Governor, Frank Brown, Democrat; Secretary of State, Edwin Gott; Comptroller, Marion de Kalb Smith; Treasurer, Spencer C. Jones; Insurance Commissioner, Thomas J. Keating; Superintendent of Public Instruction, E. R. Frytman; Adjutant General, Henry Kyd Douglas; Attorney-General, John P. How; Chief Justice, J. M. Robinson; Clerk of the Supreme Court, J. Frank Ford.

Finances.—The balance in the treasury at the close of the fiscal year, Sept. 30, 1894, was \$550,074.47, the receipts during the year were \$2,600,244.09; total, \$3,150,318.56. The amount of disbursements during the year was \$2,679,750.57. This is less than the sum of disbursements during the previous fiscal year by \$170,329.41, and the balance in the treasury Sept. 30, 1893, was \$704,368.12.

The amount remaining to the credit of the Free School fund at the close of the fiscal year 1894 was \$3,843.50. The receipts during the last fiscal year on account of the same fund were

\$73,300.65. The disbursements from this fund for the same period amounted to \$77,144.15, leaving a balance Sept. 30, 1895, of \$2,000.

The receipts on account of the several sinking funds during the fiscal year were as follow: general fund, \$24,216.70; for defence redemption loan, \$346,200.17; for the exchange loan, 1889, \$6,641.38; for the exchange loan, 1886, \$10,115; total, \$387,173.25.

The funded debt of the State at the close of the fiscal year 1895 was \$8,684,986.24. The productive assets and the investments to the credit of the sinking funds aggregate \$5,679,733.11. No allowance is here made for the amounts overdue from incorporated institutions, collectors of taxes and other accounting officers, aggregating \$684,812.69, nor for the difference between par value and market value of the assets. If these were treated at the market value, the net debt of the State would be practically extinguished.

Taxation and Valuation.—The assessment of real and personal property for the fiscal year 1895 was \$534,930,476, being greater by \$5,792,393 than that of 1894.

The levy for State taxes for 1895 on real and personal property, at 17½ cents on each \$100, amounted to \$949,501.59. From collectors was received during the fiscal year \$908,411.18, an increase of \$33,252.29 over the receipts of 1894.

From railroads and other corporations was received, as a tax on gross receipts during the year, \$131,788.71, being \$4,471.59 less than was received in 1894. From the tax on the capital stock of incorporated institutions the receipts were \$77,495.30, a decrease of \$8,730.58. For licenses and from tax on premiums paid to insurance companies \$124,401.48 was collected, an increase of \$3,398.58 over receipts from the same source during 1894. Registers of wills paid in \$141,599.82, \$23,875.84 more than the preceding year, and clerks of court \$896,100.83.

The levy for public schools, at 10½ cents on each \$100, amounted to \$561,677; the receipts from all sources during 1895 were \$608,629.74; the balance from 1894, was \$264,826.71; the total disbursements during the fiscal year 1895 were \$601,088.04, leaving a balance of public-school money applicable to school year beginning Oct. 1, 1895, of \$272,368.41, on which date \$102,625 was distributed to white schools and \$25,000 to colored schools.

Under the provisions of the oyster act of 1894 the revenue of the oyster fund has increased, while there has been a decrease in expenditures. The receipts for 1895 were \$64,994.09, being greater than the receipts for the previous year by \$20,345.40. The disbursements for the same period were \$61,410.42, leaving a balance for 1895 of \$3,583.67. Included in these disbursements is \$4,306.99 balance due on 1894 and other sums aggregating \$10,457.27, so that the actual disbursement on account of maintenance of the oyster police fishery force for the fiscal year was \$50,953.15, and the revenue above this amount \$14,040.94.

Education.—In the year ended July 31, 1895, the number of persons in the counties of Maryland between the ages of five and twenty years was 230,876; in Baltimore city, 140,016. The colored school population in the counties num-

bered 62,091; in Baltimore, 20,594. For the support of the schools the counties receive from the State \$441,587.95, and from local taxation \$537,454.67. Baltimore received from the State \$214,726.14, and from local taxation \$793,658.49. The total of disbursements for schools in the counties was \$1,263,487.71; for Baltimore city, \$1,125,759.91.

State Institutions.—Under an act of the last Legislature \$75,000 was appropriated to the purchase of a site and buildings for a second hospital for the insane, and \$25,000 as a maintenance fund. In September \$50,000 was paid for 530 acres in Carroll County, near Sykesville, on which are the historic Patterson manor and other buildings, now in process of preparation for patients. A resident physician was selected whose salary was fixed at \$2,500.

At the Maryland Blind Asylum a new building, 82 feet long and 3 stories high, was completed this year. In this institution at the end of the fiscal year there were 23 pupils.

For its hospitals, asylums, and reformatory the State paid out, during 1895 more than a quarter of a million dollars.

Savings Banks.—An act of 1894 provides that in October, 1895, and every second year thereafter, there shall be sent to the Comptroller by the treasurer of every savings institution in the State, a sworn statement giving the name of every depositor not known to said treasurer to be living, who has not added to or decreased his deposit during the preceding twenty years, with the amount standing to his credit. Seven banks in the city of Baltimore this year complied with this provision. The number of depositors in the savings banks during 1895 was 148,342, who had to their credit \$45,490,279.

Chesapeake and Ohio Canal.—From two acts passed at the session of 1894, making provision for payment of certain obligations against this canal, the Governor withheld his signature with the desire to have all particulars of the indebtedness determined. Without interest, the obligations are found to amount to \$176,324. Within the year the Board of Public Works offered for sale the State's interest in the canal, and the two bids submitted, the higher bid of \$526,000 with certain conditions, were rejected, and other bids were invited. As little affecting the State's interest had not been determined in December, the board then adopted resolutions that any bids that might thereafter be tendered to the board be returned to the bidders unopened, and advising that the property be sold at auction to the highest bidder.

Mineral Production.—The Bureau of Mines and Mining, of the Geological Survey, in its reports of 1895 states that for 1894 the coal output was 3,501,428 short tons, valued at \$2,682,270; the value of the marble output was \$17,000; of the limestone, \$672,786; the granite was worth \$308,966; and the slate, \$69,138.

Industrial Statistics.—The third annual report of the Bureau of Industrial Statistics states that in the sweat shops of Baltimore during 1894 wages were reduced 50 per cent., compensation for female labor was brought starvation figures; while in none of the shops did the employees make more than half tin As to the value of personal estates, the follow-

figures are given: During the period, from 1888 to 1892, inclusive, 5,914 estates were probated, the value of which was \$59,035,568. Of these, 12, or 1.5 per cent., were over \$100,000, and aggregated \$25,890,140, or 44 per cent. of the total value. The estates under \$10,000, to the number of 5,045, aggregated \$9,941,531, while the 869 estates over \$10,000 aggregated \$49,114,397.

Soldiers' Monument.—Congress in February appropriated \$40,000 for a monument in Baltimore to Gen. William Smallwood and other

has had for thirty-five years, and enables us to exult in the accomplished fact that under its practical operation we have come to the full enjoyment of the blessings of restored confidence and renewed prosperity in all branches of industry, while at the same time the national Treasury will be supplied with revenues sufficient to meet all obligations of the Government and maintain unimpaired its high credit at home and abroad." The administration of Gov. Brown was commended, and the following resolution was adopted:

Regarding uniform and equal taxation as a matter of controlling and paramount obligation, we call especial attention to the necessity of reascessment, and pledging the party, through its delegates in convention assembled, to an unqualified fulfillment of this pledge, we further recommend and appeal to the Democratic voters of the State to elect their representatives on the Democratic tickets a solemn promise to carry out the wishes of the people for a fair and equitable assessment of the entire property of the State.

John E. Hurst was nominated for Governor, Marion de Kalb Smith for Comptroller, and Charles C. Crothers for Attorney-General.

The State Convention of Prohibitionists met in Glyndon, Aug. 1. The platform declared anew for absolute suppression of the sale of liquor as a beverage; favored an income tax; declared that import duties should be levied primarily upon luxuries; desired a currency of gold, silver, and paper, all of equal value, and to be secured by the Government; declared that United States Senators should be elected by direct vote of the people, and that immigration should be restricted; favored the system of legislation known as initiative and referendum, observance of the Sunday law, restriction of child labor and working hours for women in factories, and general weekly payment of wages; laws for reascessment of the property of the State; placing public roads under State supervision; and woman suffrage. Joshua Levering was nominated for Governor; J. L. Nicholson, for Comptroller; and W. Frank Tucker, for Attorney-General.

The Republican State Convention met in Baltimore, Aug. 15. Its platform declared that a Republican victory in the State would mean to the people the prompt passage of a reascessment law so framed that every person holding property in the State should contribute his proportion of public taxes for the support of the Government, according to his actual worth in real or personal property; urged the necessity for the adoption of an amendment of the State Constitution, effectually limiting the debt-incurring capacity of cities and counties; promised that a free and fair expression of the public will at the polls should be made possible, and control of the machinery of their election be restored to the people of the several counties; that registration should be made annual in Baltimore, and quadrennial, with annual revision, in the counties; that the supervisory powers of the courts over the action of the registers should be made effective and not illusory, and that the right to place on the official ballot should be secured to the nominees of independent citizens, as well as to those of the regular party organizations; promised to secure such amendments of

Maryland heroes of the Revolutionary War. The money is to be expended under the direction of the Maryland Society, Sons of American Revolution.

Electric Railways.—The Maryland and Columbia Electric Railway Company this year began the construction of an electric railway between Baltimore and Washington, which is said to be the American pioneer of electric trunk-line railroads and the beginning of a great system that will connect New York and New Orleans. The company received its charter in 1892. The line now under construction extends from Baltimore to Washington, 37 miles. It will be laid with double tracks of 85-pound "T" rails, standard gauge. The tool will be similar to that of the Pennsylvania system, and the design is that its passenger coaches shall correspond to those now running on steam railways. The authorized capital stock is \$4,000,000, and it has been raised for \$5,000,000.

The Baltimore and Ohio Railroad has in operation a 96-ton electric locomotive, which handles freight traffic through the belt-line tunnel at Baltimore. Other engines of the same type will soon be in service, whose duty it will be to haul every day about 100 trains, weighing from 500 to 1,200 tons, 3 miles through the tunnel.

Political.—The election in November was to fill the offices of Governor, Comptroller, and Attorney-General, and members of the Legislature.

The Democratic State Convention met in Baltimore, July 21, and framed a platform which declared its "unabated confidence in the wisdom, patriotism, and fidelity of President Cleveland," denounced the McKinley tariff law, and said: In the stead we have a law which, while not obtaining all that the advanced advocates of tariff reform hoped would be secured, gives us, nevertheless, the best tariff which the country

the school laws as should exclude politics from school management and secure free schoolbooks to the pupils, and to submit to popular vote the question whether appointments to the police, fire, and all other departments of public service should be in accordance with the principles of the merit system; and condemned the partisan management of the oyster police force, and denounced every effort to deprive the people of their independent rights to the public oyster beds and the leasing and selling of them. Lloyd Lowndes was nominated for Governor; Robert P. Graham, for Comptroller; and Harry M. Clabough, for Attorney-General.

At the election in November the Republican ticket was successful, the vote cast being as follows: Lloyd Lowndes, Republican, 124,936; John E. Hurst, Democrat, 106,169; Joshua Levering, Prohibitionist, 7,719; and for Henry F. Andrews, candidate of the Populist and Labor parties, 1,381. The Governor's plurality was 18,767. The Republican candidates for Comptroller and Attorney-General also were elected. The composition of the Legislature of 1896 is: In the Senate, 12 Republicans and 14 Democrats; in the House, 70 Republicans and 21 Democrats.

MASSACHUSETTS, a New England State, one of the original thirteen; ratified the Constitution Feb. 6, 1788; area, 8,315 square miles. The population, according to each decennial census, was 378,787 in 1790; 422,845 in 1800; 472,040 in 1810; 523,159 in 1820; 610,408 in 1830; 737,699 in 1840; 994,514 in 1850; 1,231,066 in 1860; 1,457,351 in 1870; 1,783,085 in 1880; and 2,238,943 in 1890. By the State census of 1895 it was 2,500,183. Capital, Boston.

Government.—The following were the State officers during the year: Governor, Frederick T. Greenhalge; Lieutenant Governor, Roger Wolcott; Secretary of State, William M. Olin; Treasurer, Henry M. Phillips till April, when he resigned and was succeeded by Edward P. Shaw; Auditor, John W. Kimball; Attorney-General, Hosea M. Knowlton; Adjutant General, Samuel Dalton, all Republicans; Chief Justice of the Supreme Court, Walbridge A. Field; Associate Justices, Charles Allen, Oliver W. Holmes, Marcus P. Knowlton, James M. Morton, John Lathrop, and James M. Barker.

State Census.—This was taken during the year, giving a total of 2,500,183 for the population of the State and 560,802 for the number of legal voters. By counties the population was as follows: Barnstable, 27,654; Berkshire, 86,292; Bristol, 219,019; Dukes, 4,238; Essex, 330,393; Franklin, 40,145; Hampden, 152,938; Hampshire, 54,710; Middlesex, 499,217; Nantucket, 3,016; Norfolk, 134,819; Plymouth, 101,498; Suffolk, 539,799; Worcester, 306,445. The population of Boston is 496,920; Worcester, 98,767; Fall River, 89,203; Lowell, 84,367; Cambridge, 81,643; Lynn, 62,354; New Bedford, 55,251; Somerville, 52,200; Lawrence, 52,164; Springfield, 51,522; Holyoke, 40,322; Salem, 34,473; Brockton, 33,165; Chelsea, 31,264; Haverhill, 30,209; Malden, 29,708; Gloucester, 28,211; Newton, 27,590; Taunton, 27,115; Fitchburg, 26,409.

Valuations.—The total valuation of assessed estate, May 1, 1895, was \$2,542,348,993, the real

estate being valued at \$1,964,834,106 and the personal property at \$577,514,887. Of the real estate, the value of land, excluding buildings, was \$973,660,883. Of the personal estate, \$38,355,674 was resident bank stock. The number of persons assessed was 922,850, of whom 422,386 were for poll tax only. The number of residents assessed was 81,058. The tax for State county, and city or town purposes, including overlays, was \$38,084,609. The number of dwellings was 404,388; of horses, 195,483; of cows, 175,016; of sheep, 39,843; of swine, 37,294; of neat cattle other than cows, 36,817; of foal, 536,244. The number of residents assessed of property in Boston was 47,566; of nonresidents, 4,701; the number assessed for poll tax only was 124,207. The value of assessed real estate in Boston was \$744,751,050; and of personal estate, \$206,616,878.

Charities.—The total number of inmates under supervision of the State Board of Lunacy and Charity was: In hospitals and asylums, 5,763; in town almshouses, 803; in private families, 202. The total receipts at the 6 State hospitals were \$811,503.47; the expenditure \$819,217.95. The weekly cost of patients was \$3.29. There were 327 recoveries and 446 deaths. The asylum at Medfield is nearly finished.

The State Primary School, at Monson, was closed July 1. It has been maintained twenty-nine years as a place of maintenance and education for boys and girls who must otherwise have been in the almshouse, during which time it has received over 6,000 inmates. The plan of boarding pupils out was adopted in part in 1882 and extended from time to time. There were 11 inmates at the time of closing, most of them juvenile offenders. The current expenses of the school during its last nine months were \$24,012.92, giving a *per capita* cost of \$7.06, this high rate being due to the sudden changes of place in reference to carrying on the school.

The Lyman School, at Westborough, for re-forming boy offenders is in its forty-ninth year. The aggregate number in the school within the year was 436, and the average was 240. Besides the 264 boys in the school at the close of the year there were 635 others who had left the school either on probation or by transfer to other institutions. The total appropriation was \$51,160. The expenditures from Oct. 1, 1894, to Sept. 30, 1895, were \$57,237.53; the gross *per capita* was \$4.46.

In the State Industrial School for Girls, at Lancaster, there were 367 in custody in the school and out on probation at the beginning of the year. During the year 65 who had been placed out were recalled and 72 were committed; the average number at the school was 116. The cost of the school from Sept. 30, 1894 to Sept. 30, 1895, was \$28,801, a *per capita* of \$4.62. A new house was opened in June, and the girls are now divided into 5 families.

At the State Hospital for Dipsoniatics and Inebriates, at Foxborough, there were 110 inmates at the beginning of the year, 212 admitted and 129 remaining Sept. 30, 1895. The State appropriation was \$20,000; the whole expense \$52,838.64. This institution is reported in a unsatisfactory condition. Patients continue to escape in large numbers.

The School for the Feeble-minded, at Waltham, had 424 inmates at the end of the year. The average *per capita* cost is \$3.15 weekly. The admissions are fewer than the applications, on account of lack of room and funds.

In the Hospital Cottages for Children, at Bablwickville, there were 109 patients at the beginning of the year and 105 at the end. The expenses were \$27,767.68.

The Legislature of 1885 passed an act to establish a hospital for epileptics at Monson, on the premises occupied by the State Primary School. Building will be begun in the spring.

The report of the Perkins Institution and Massachusetts School for the Blind gives the number of pupils in the institution as 153, and in the kindergarten 64. A class of 4 was graduated in June, the exercises being held in the Boston Theater before an audience of more than 2,500 persons.

The number admitted to the State Almshouse, at Tewksbury, was 3,071. The average number was 1,167. The expenditures were \$138,802.70, and the weekly *per capita* cost \$2.29.

The whole number of poor receiving relief in the State for the year ending Sept. 30, 1895, was 74,006, and the cost was \$2,631,221.

Prisons.—In the year ending Sept. 30, 1895, the State Prison received 172 prisoners and discharged 141, leaving 700, the highest number since 1880, and 34 more than at the end of the previous year. The cost of support was \$128,475.02, and the labor of the prisoners yielded a profit to the State of \$28,903.29, making the cost to the State \$109,571.73.

The Reformatory Prison for Women received 224 prisoners, and at the close of the year there were 236 remaining, 13 more than in the preceding year and the highest number since 1879. The expenditures were \$58,430, and the net cost of support \$49,181.06, the labor having amounted to \$16,755.96 and sales making up the balance. The net cost for each prisoner was \$128.89.

At the Massachusetts Reformatory 815 prisoners were received, and the number remaining at the close of the year was 1,011. The average age of those committed was twenty-one years. There was expended for maintenance for the year \$209,211.73. The net cost was \$162,743.63; the average population was 1,036, making the *gross per capita per diem* cost \$0.553.

The average number of prisoners in the county prison was 8,190, and the expenditures were \$470,411.82. The gross cost for each prisoner varied from \$69.22 at the Springfield Jail and House of Correction to \$304.91 at the Edgartown Jail, where the average number of prisoners was only 2. The net cost varied from \$76.96, at the Salem House of Correction, with an average of 143, to \$304.91, at Edgartown. The largest number was at the Boston House of Correction, where the *per capita* cost was \$116.82 net.

The Boston House of Industry had an average of 1,491 prisoners; the expenditures were \$157,491.83, and the receipts \$48,223.78.

The State farm had an average number of 1,002, of whom 329 were convicts, the remainder paupers and lunatics. The expenditures were \$125,002, and the receipts \$3,808.

The whole number of prisoners in all the prisons within the year was 44,376, of whom 26,748

were discharged or otherwise withdrawn during the year, leaving 7,628 in custody Sept. 30, 1895.

Civil Service.—The annual report of the commission, made in October, shows that the present classified service, ever increasing and varying, includes, outside of the labor service, about 5,500 public servants, drawing from the public treasuries of the Commonwealth and her cities an aggregate annual compensation of over \$4,000,000. The expense of the commission in classifying, examining, and verifying applicants for these offices is less than half of 1 per cent. of their compensation. Of those examined, 1,331 passed and 765 were appointed, of whom 108 were women. The number of veterans appointed under the Veterans Exemption law passed by the last Legislature was 154, against 59 in 1894.

Against Prize Fighting.—The jury, in a trial in the Superior Criminal Court for prize fighting, having decided that the defendants had not engaged in a fight, but only a boxing match, the movement against this sort of exhibition has been spreading with great rapidity. Protests were heard all over the State, and Sept. 30 a meeting called by the Christian Endeavor Union was held in the People's Temple, Boston, at which resolutions were adopted expressing sympathy with the Governor of Texas in his efforts to prevent prize fighting in his State, and commending the police commissioners in Boston for their action in making the arrests.

Good Roads.—The State Highway Commission had constructed 89 miles of first-class roads before the end of the year. The plan is to join the centers of trade and commerce with through roads in adjoining States by means of these highways. They will be of varying width, some 18 feet wide, some 15, while in more thinly settled districts they may be not more than 9 feet, with wider portions at intervals.

Strikes.—Haverhill was the scene of labor trouble throughout the year on account of disagreements as to wages in the shoe factories. There was a strike at Waltham in August involving over 300 employees, mostly spinners. At Fall River there was trouble between the Spinners' and the Weavers' Union, and at Amesbury 400 weavers struck in June. There was a strike of spinners at Andover in May.

Celebrations.—Manchester, in Essex County, celebrated the two hundred and fifteenth anniversary of its settlement, July 18, with an historical entertainment representing the "Arabella" bringing Gov. Winthrop and his meeting with the Naumkeags and Massachusetts, and with other festivities. A collection of antiquities of the town was exhibited. In connection with the anniversary a history of Manchester has been published by the town.

The Nantucket Historical Society held July 9-11 a celebration of the one hundredth anniversary of the change of name of the town from Smeeth to Nantucket, with boat races, a banquet, and literary exercises.

The Pilgrim Society celebrated Dec. 21 the two hundred and seventy-fifth anniversary of the landing of the Pilgrims at Plymouth. Rev. George F. Hoar was the orator of the day, and Richard H. Stoddard the poet.

Lawrence celebrated the sesquicentennial of the

founding of the city Sept. 16 and 17 with literary exercises, athletic exhibitions, a regatta, a parade, and a banquet.

The Third Army Corps held a reunion at Hadley May 7 and placed a tablet on the house where Gen. Joseph Hooker was born, in 1814. Gen. Sickles addressed 3,000 people in a tent on the green in front of the house.

Fisheries.—A controversy arose in February over a cargo of herring which were bought in Newfoundland by United States fishermen. Free entry was claimed for the herring and sustained by the collector at Gloucester, where the vessel touched; but at Boston, where it entered, the collector assessed a duty. A reference to the Board of General Appraisers brought out the decision that the fish, having been taken by Newfoundland fishermen and delivered salted, were subject to duty.

Interest in whaling in Hudson Bay has revived in New Bedford, and more vessels went to that locality during the year, some with the intention of wintering there.

The halibut fishing in Greenland waters was reported a failure this year. Ice, fog, and rain interfered with operations. Large receipts from the Grand Bank, however, were reported, where it is said a new fishing ground has been found and halibut have been taken in great abundance.

Legislative Session.—This began Jan. 3 and ended June 5. Hon. George F. Hoar was re-elected to the United States Senate by a vote of 180 in the House and 34 in the Senate, against 39 and 4 for John E. Russell.

During the session the Governor signed 504 acts and 127 resolves, vetoed 16 bills, and allowed 2 to become laws by statutory limitation, withholding his signature. The most important among the measures passed was the act to provide for a metropolitan water supply. It creates a water board, who are to construct, maintain, and operate a system of metropolitan water works and provide thereby a sufficient supply of pure water for the cities of Boston, Chelsea, Everett, Malden, Medford, Newton, and Somerville, and the towns of Belmont, Hyde Park, Melrose, Revere, Watertown, and Winthrop, which cities and towns shall constitute the Metropolitan Water District. Bonds may be issued on the request of the board to an amount not exceeding \$27,000,000.

An act to revise the charter of Boston provides that the mayor shall be elected for the term of two years. The election department, the fire department, the water department, and the institutions department are created as departments of the city, and officers are designated to have them in charge. The offices of registrars of voters and the board are abolished, and their duties devolve upon the Boston Ballot-law Commission, made up of 4 election commissioners, 2 of the party that cast the highest vote at the election next preceding their appointment, and the other 2 of the party casting the next highest vote. There is to be 1 fire commissioner, 1 water commissioner, and 1 institutions commissioner, the corresponding boards being abolished. The offices of inspectors of milk, vinegar, provisions, and animals intended for slaughter are abolished, and their

duties devolve on health inspectors appointed by the city board of health. Other departments and offices abolished are the surveying department and office of surveyor, the architect department and office of city architect, and the board of survey, their work being given to the city engineer, the superintendent of public buildings, and the street commissioners.

The charters of several other cities were amended.

An act to be known as "the Caucus act of 1895" provides strict rules for the control of political committees and caucuses. Some changes were made in the registration law.

Provision was made for establishing textile schools for instruction in the theory and practical art of textile and kindred industries in cities having 450,000 or more spindles.

Other acts of the session were:

Appropriating \$50,000 for expenses in connection with the extermination of contagious diseases among animals.

Appropriating \$125,000 for taking the decennial census, in addition to the \$25,000 appropriated in 1894.

Requiring specifications of the character of work required and rate of compensation to be furnished to persons employed in cotton, worsted, and woollen factories.

Incorporating the city of North Adams.

Authorizing savings banks to invest in and loan upon bonds of the States of Missouri and Minnesota and such cities thereof as have a population of 50,000 or more and whose net indebtedness does not exceed 5 per cent. of their assessed valuation.

Requiring school committees to furnish public schools with national flags.

Providing for the seizure and disposition of property found where opium is smoked or sold or given away to be smoked, and for punishment of persons there found present.

Exempting disabled soldiers and sailors from taxation upon \$2,000 worth of property, provided the whole estate does not exceed \$5,000, exclusive of property otherwise exempted.

To prevent fraudulent transfer of property by insolvent debtors.

Providing that tenement houses in Boston shall have adequate open spaces.

Providing for the teaching of illiterate prisoners.

Providing that any political party which at the five annual State elections next preceding shall have cast for any office voted for at a State election as large a number of votes as equals the number of petitioners required to nominate for that office by nomination papers, may nominate candidates for any such office, and shall be entitled to have the names of its candidates printed on the official ballot, subject only to such restrictions as apply to a party that casts 2 per cent. of the vote for governor.

Prohibiting the sale of intoxicating liquors on Feb. 22 and July 4.

Making certain army nurses eligible to receive State aid.

Authorizing the appointment of a registrar of labor by the civil-service commissioners, at a salary of \$2,000.

Imposing fine or imprisonment for feeding feed animals with garbage refuse or offal.

To regulate the observance of Sunday, providing that no entertainment shall be given on that day for which a fee is charged, unless the proceeds are to be exclusively devoted to charitable or religious purposes, and imposing a fine of \$5 on any person attending such a performance, and \$50 on any one who gives or takes part in it, and \$500 on the owner of any hall where this law is violated. The \$50

tax is imposed also on any one who on the Lord's Day keeps open his shop, warehouse, or workhouse, or does any manual labor, business, or work, except works of necessity and charity.

Exempting veteran soldiers and sailors from the payment of fine for auctioneers' licenses.

Incorporating the Massachusetts Ship Canal Company.

Granting preference to veterans for employment in the public service.

Providing that any person or corporation engaged in manufacturing, which requires from persons in his or its employ, under penalty of forfeiture of a part of the wages earned by them, a waiver of intention to leave such employ, shall be liable to the payment of a like forfeiture if he or it discharges without similar notice a person in such employ.

Amendments to the Constitution were proposed by which State elections are to be held biennially and State officers and members of the General Court are to be chosen for terms of two years. A person shall be eligible as Treasurer and Receiver General for three successive terms, and no more. If the amendments are agreed to by the General Court next to be chosen they will be submitted to the people, and if they are ratified the first election to which the change will apply will be that of November, 1896.

Other resolves were:

Relative to national legislation for the suppression of the lottery traffic.

In favor of uniform hours of labor throughout the country.

To provide for the preservation of the Bullfinch Bandstand on Beacon Hill.

To provide for printing and distributing the "Massachusetts Military and Naval History," by Thomas W. Higginson, State historian.

Providing the payment of a sum not exceeding \$100,000 to be expended under the direction of the State Board of Agriculture, for continuing the work of exterminating the gypsy moth.

For surveying and mapping the line between Massachusetts and New Hampshire.

The Committee on Mercantile Affairs spent ten days in the South, investigating the conditions of cotton manufacture with a view of determining what resources should be taken to prevent New England mills from being removed to the South. The experience of manufacturers seems to have led them to the conclusion that, while the South has several natural advantages over the North in this respect, such as the nearness of the cotton fields, an equable climate, daylight all the year to work by, and abundant water power, and has now, in addition, cheaper coal and cheaper labor, one great source of advantage is the result of labor legislation in Massachusetts by which the hours are shortened and employers are harassed by such bills as the Employers' Liability bill and the Weavers' Classification bill; sixty-six hours' work against sixty-eight makes a great difference. Moreover, the offers from the Southern States include exemption from taxation for ten years.

In a report of the Commission on the Unemployed, made to the Legislature, several propositions for relief are discussed. The conclusion is that neither State factories nor State farms are practicable. After considering the suggestion that public works should be constructed directly by the public authorities, and that no work

should be done by contract, the commission concludes that it is only in exceptional instances that a city can do its work as cheaply as a private employer of labor; and that "a rate of wages fixed in certain public departments higher than that earned by the average laborer elsewhere is an evil in several ways." The committee do not, therefore, recommend legislation restricting the rights of cities to let work by contract. They find that the evil of unemployment is greatly aggravated by the influx of non-residents and sometimes aliens, and that it should be the policy of municipalities and public bodies making contracts to secure the employment of residents as far as possible, and to prevent the introduction of large gangs of non-residents, and to prevent also the sending of work out of the State, even though at a reduction of expense.

Political.—The Democratic State Convention met at Worcester, Oct. 2, and nominated the following: For Governor, George F. Williams; Lieutenant Governor, James S. Grinnell; Secretary of State, Edward J. Flynn; Treasurer, Ellen S. Stevens; Auditor, Alfred C. Whitney; Attorney-General, Henry P. Harbord. A platform was adopted commending the national Administration "for its dignified, energetic, and patriotic management of our foreign affairs, for the economies and reforms effected in all branches of the Federal service and many appointments in civil service, particularly the recent order affecting the consular service," congratulating the manufacturing interests of the State on the successful operation of the present tariff, declaring that the increase of exports under the reduced duties will furnish sufficient revenue for the Government, and denouncing the efforts of the Republican party to reopen the tariff question; it demanded the maintenance of the existing gold standard, opposed free coinage of silver and any further purchase of silver bullion by the Government, declared that the Government should not "carry on a banking business," "that the untaxed notes of State or national banks shall be the only credit currency, and that the Government shall, with the development of a banking system adequate to the demands of trade, retire as rapidly as possible all United States paper money."

Home rule for cities was favored, and the Republican party was denounced for its efforts "to centralize the police power of cities in the Governor of the State."

The Republican Convention was held in Boston Oct. 3. There were two candidates for the gubernatorial nomination—Oscar Greenhalge and Elijah A. Morse. The vote stood: Greenhalge, 1,363; Morse, 291. The other nominations were: For Lieutenant Governor, Roger Wolcott; Secretary of State, William M. Olin; Treasurer, K. P. Shaw; Auditor, J. W. Kimball; Attorney-General, Moses M. Knowlton. The platform condemned the tariff policy of the Democratic party, and said that "the Republican party is not pledged to any schedule, but offers to such American industry such protection as shall equalize differences in price of labor," and that "the farmer and the miner are as much entitled to it as the manufacturer," and that "if Republicans were liberal in appropriations they furnished revenue to meet them, and steadily re-

duced the public debt. The last Congress provided a revenue shamefully inadequate, and by the issue of bonds shifted to the succeeding administrations the burden of their outlay." On the currency question the platform declared that the Government should maintain each dollar which it issues on a par with its standard gold dollar, and should not permit the free coinage of silver at any ratio not established by international agreement; expressed regret that the Democratic majority in Congress has forced the national Treasury to a humiliating dependency on private bankers, and believed that there should be legislation to protect the metallic reserve from concerted attacks of speculators; declared in favor of the Monroe doctrine, civil-service reform, restricted immigration, and increasingly rigid liquor laws.

On State issues, the resolutions urged that Representatives in Congress endeavor to secure improvements in Boston harbor, that the laws for regulating State corporations be extended to those of other States doing business in Massachusetts, and that additional laws be passed for promoting road improvement and for suppressing prize fights.

Tickets were also placed in the field by the People's, the Prohibition, and the Socialist-Labor parties.

At the election, Nov. 5, the Republican ticket was successful. Following is the vote for Governor: Greenhalge, Republican, 186,280; Williams, Democrat, 121,599; Kendall, Prohibitionist, 9,170; Brown, Populist, 7,786; Ruther, Socialist-Labor, 3,249.

On the question of granting municipal suffrage to women the vote stood: Male vote—yes 86,970, no 186,976; female vote—yes 22,204, no 861.

The State Legislature for 1896 stands: Senate, 33 Republicans and 7 Democrats; House, 180 Republicans and 59 Democrats.

The Supreme Court handed down a decision in October that the Australian ballot law is constitutional.

At the municipal elections in December Democratic mayors were elected in Boston, Newburyport, and Lowell, while in Beverly, Lynn, Salem, Chelsea, and Cambridge Republican mayors were chosen. In Everett and Worcester, Citizens' tickets were successful. On the vote for license, Boston, Lowell, Worcester, and Newburyport gave majorities in favor, and Beverly, Cambridge, Chelsea, Everett, Lynn, Medford, and Salem majorities against license.

MENNONITES. The 12 branches of the Mennonite Church report for 1895, according to the tables given in the "Independent," New York, 950 ministers, 600 churches, and 47,669 communicant members. The largest of these branches are the Mennonites, 18,378 members, and the Amish, 10,700 members. These two branches, between which a close affiliation has been developed, report, together, a gain during the year of more than 2,000 members. A committee representing the several State and district conferences is engaged in arranging for the holding of a general conference of the two branches. If it is successful in bringing this meeting about in 1896, the event will mark the two hundredth anniversary of the division of the Mennonite Church, which took place in 1696. The year's

contributions of these two branches for mission and other purposes amounted to a little less than \$9,000. A home for orphans has been provided near Orville, Ohio, and a commodious school building has been erected at Elkhart, Ind. Several young men are preparing themselves for medical foreign missionary work.

The Mennonite Brethren in Christ (40 ministers, 54 churches, and 4,000 members) report about 500 accessions to church membership and contributions of \$28,629 for mission and charitable purposes. Eight new home-mission stations were founded during the year; an orphan home has been established at Berlin, Ontario; and a foreign mission has been begun at Wuhu, China, with 1 missionary, to whom others are to be added.

The General Conference of Mennonites (100 ministers, 50 churches, and 6,000 members) returns an increase during the year of nearly 1,000 members. It has an Indian mission station at Cantonment, Oklahoma, has opened another among the Cheyenne Indians, and is about to open an orphans' home at Bluffton, Ohio.

The Bundes Conference of Mennonites (47 ministers, 12 churches, and 2,000 members) has made an appropriation for a mission school among the Comanche Indians, and has sent its first foreign missionary to Africa.

The Light and Hope Society, of which Elder J. A. Sprenger, of the Swiss Mennonite Church, is president, sustains deaconesses' homes in Chicago, Ill., and Cleveland, Ohio, and an orphans' home at Berne, Ind.

METALLURGY. Iron and Steel.—The nature and properties of malleable cast iron have not been studied with sufficient thoroughness. Now that larger uses have been found for it in railroad-car couplers, etc., than the smaller articles to which it had been applied, its qualities have become a subject of more importance. Mr. H. R. Stanford supplements an account he gives of the process of manufacture with a few general conclusions. Next to iron, the most important element in malleable cast iron is carbon. A high percentage of this substance is necessary for fluidity—a quality of prime importance. For strength and malleability, the unannealed castings must have too graphitic carbon, but the total percentage must be in the combined state. Variations in these qualities and in the fracture are described as connected with the larger or smaller section of the mold. The chemical action in the furnace seems to be primarily the combining of the graphitic carbon of the charge with the iron, a combination made possible in the fused mass by the temperature, and a small burning out of carbon and slagging out of silicon and manganese. The secret of mixing is in using material containing combined and graphitic carbon in such proportions that at the temperature best adapted for pouring the graphitic carbon shall all have combined with the iron. The definition might be given for malleable cast iron that it is essentially a mixture of malleable iron and graphitic carbon, the carbon being in finely divided or atomic particles, and the iron being the matrix for those particles. Gray iron differs from malleable cast iron in that the carbon, instead of being in atomic particles, is in crystals.

and these crystals cut the iron structure and make it discontinuous. In malleable cast iron the strength of the product depends on the continuous cellular iron structure, and its malleability and ductility are limited by the non-deformable particles of graphite that occupy the cells. The process of making malleable cast iron is then, first, to make the hard, brittle carbide of iron, which is a stable compound at ordinary temperature; and, second, to change the carbon to the graphitic state by annealing. After carbon, sulphur is the most important element in malleable cast iron. It tends to hold the carbon in combination with the iron, and gives a stronger product in consequence of the semisolid which it produces; but it is undesirable because of the hindrance it offers to annealing. General conclusions are not yet warranted regarding the effect of manganese and phosphorus, farther than that phosphorus seems to be a very noxious element.

A secondary or subcrystallization of iron has been observed by Thomas Andrews in the course of a research with high microscope powers on the intercrystalline structure of large masses of wrought iron. The normal primary crystals of the iron, or those which have hitherto been regarded as constituting the ultimate structure of the metal, were found to inclose a formation consisting of very minute and much smaller crystals of pure iron, also belonging to the regular order of crystallization. These crystals sometimes manifested the hexagonal form, the predominant angle being about 120° , and often they assumed the form of simple cubes. They were contained within the area of the larger primary crystals. The markings of their intercrystalline shapes or junctions were very clearly defined, but they were exceedingly minute. The author estimates that there were approximately 1,000,000,000 of the secondary crystals within a cubic inch of the metallic iron. In further experiments the author found, with still higher powers, that the secondary crystals sometimes inclosed a still more minute form of crystals of pure iron, of the cubical form, which may hence be regarded as constituting a tertiary system of crystallization. All these crystalline modifications appear to be connected with the regular system of crystallization.

An allowance of $\frac{1}{4}$ inch per foot of the dimension of the casting is usually made by iron makers and foundries for contraction or cooling; but, according to Thomas D. West, experience teaches that there may be a difference in the contraction on any two forms that differ in their proportions, even when poured with the same iron. The form of the mold and the manner in which it is made and the casting is cooled also have much to do with the size of the casting, as compared with the pattern. When this difference in contraction is observed it is found that a heavy casting or parts will contract less than a light one when conditions permit free contraction to take place. It also appears, according to Mr. West, that the length of time occupied in cooling a casting after the molten metal has solidified may often be more effective in causing different degrees of contraction and hardness than any varying percentages of sulphur, silicon, etc., which exist in ordinary foundry iron.

The author further finds that a reverse condition occasionally prevails, and the castings prove to be larger than the patterns from which they were made, or the iron "stretches." This expansion or stretching takes place at the moment of solidification, and is supposed to be due to artificial influences exerted by conditions in casting, cooling, and forms of patterns, to overcome or retard free contraction. The subject is further and more fully discussed in a paper read by Mr. West at the meeting of the Western Foundrymen's Association, in Chicago, Nov. 30, 1902.

The mean results of experiments by De Vries Wood to determine the effect of subjecting iron to stress while hot indicate that a slight diminution of strength is caused by stretching the metal while in that condition, but if the stress does not exceed one quarter of the ultimate strength, the loss of strength is scarcely more than 14 per cent.

The results of certain experiments by M. Moissan, in which carbon in molten cast iron was displaced by boron and by silicon, go to show that cast iron when fused is subject to precipitations and replacements quite analogous to those which occur in aqueous solutions. When the displacement of carbon is not complete there exists a position of chemical equilibrium between silicide and carbide of iron, which varies with the temperature and with the impurities in the bath.

Seeking to obtain, with aluminum as a reagent, a pure iron, Mr. E. A. Hatfield formed an alloy of iron and 36 per cent. of aluminum which was hard enough—without a trace of carbon in it—to scratch glass. Proceeding with his experiments and working with ferrous oxide and granulated aluminum, a sample of iron 90-75 per cent. pure was obtained at a cost of about 36 cents per pound.

The results of investigations by T. Wrightson with iron and steel at welding temperatures lead to the conclusion that wrought iron at a welding temperature possesses the same property of cooling under pressure which was proved by Lord Kelvin to exist in freezing water, on which demonstration the generally received theory of regelation depends. The author distinguishes the process of melting together of metals from that of welding. Either process forms a junction, but the latter takes place at a temperature considerably below the melting point. The property of welding in iron appears, therefore, to depend, as in the case of regelation in ice upon the critical condition that exists over a limited range of temperature between the molten and the plastic state.

Some observations described by M. C. Charpy had reference to the questions of the relation between the physico-chemical phenomena known as recalcination and the change in the mechanical properties of steel by hardening, and of the importance of the escapes of heat called by Osmond "critical points α , β ," which take place in iron at temperatures of about 745°C . and 860°C . respectively. The results indicated that the change in the mechanical properties is always caused, to an almost complete extent, at an approximate temperature within a very narrow limit of 700°C . In all the specimens tested the

process of hardening resulted in similar modifications—increase in breaking load, decrease in elongation, and increase in the resistance to bending and impact. The extent of these modifications varies notably with the chemical composition of the metal and with the nature of the hardening bath. A further conclusion is that, generally speaking, if a metal is heated to a temperature higher than 700°C ., there is a risk of its not being hardened, while if it is heated to a temperature of more than 750° or 800°C . there is no longer any great advantage to be gained. The result is regarded as showing that the elementary phenomenon of hardening is very simple, and that the only difficulties to be overcome are concerned with the equal heating and complete transformation of large pieces of material.

By a strict observance of the rule that a steel casting should, as far as possible, be of uniform thickness foundries have been able to make within the past few years castings 20 feet long by 10 feet wide, which would have previously been considered almost impossible. Yet, while perfectly satisfactory large steel castings can be obtained, good small ones are much less easily produced. Mr. H. L. Gantt says that this is because in the necessarily large meltings of the open-hearth furnaces, where most of this work is done, the metal becomes cooled during the many pourings required for the smaller castings. The difficulty is overcome by the use of a small Bessemer converter, "from which we may get 2 or 3 tons of metal as hot as we may wish it. Add to this the fact that we can get from the converter that quantity of metal of any composition we may desire every half hour throughout the day, and we realize the advantage of the Bessemer process for making small and medium weight castings." Among the other advances recently made in casting steel Mr. Gantt mentions a method for making a casting having one or more faces of a steel much harder than the body of the casting. The process consists in lining such faces of the mold as will be adjacent to the parts of the casting it is desired to harden with a metallic alloy in a crushed or powdered state, capable of being melted and absorbed by the molten steel in contact with it, and of such a nature as to impart to the steel a hard face or a face of such composition as may be readily hardened. If it is desired that the casting have a permanently hard face and be used for stamp shoes, crusher jaws, hammer dies, etc., ferro-manganese gives the best results. If it is desired to do machine work on the face, and make it extremely hard afterward, ferro-chrome is most suitable. The fact that it is possible to produce a soft-steel casting having a face that can be hardened without causing the remainder of the casting to become brittle will make it practicable to use steel castings in place of chilled iron in many places with great advantage.

Nickel steel containing about $3\frac{1}{4}$ per cent. of nickel is now produced. Mr. Henry A. Wiggin says, with the same elongation as wrought iron, a tensile strength fully 30 per cent. higher than ordinary steel, and an elastic limit at least 75 per cent. higher. The material possesses great uniformity, the nickel being evenly distributed

throughout the ingot, and not liable to segregation like other of the ingredients of the steel. Its greater strength, and particularly its high elastic limit, make it far more advantageous than ordinary steel. It is the elastic limit that governs the section in this material. Beyond this there is in nickel steel a considerable range of ultimate strength, with a large elongation. The use of nickel steel in beams, channels, π angles, etc., is likely to lead to a change in the form of section similar to that which was made when steel superseded wrought iron—greater strength being obtainable with a saving of weight. Experiments and use in propellers indicate that nickel steel possesses a marked advantage in being less corrodible than other steel.

Besides the application to which nickel steel is put in armor plate, gun forgings, and marine shafting, Mr. F. L. Sperry finds a still wider field open to its use for structural steel, heavy castings, car couplers, car wheels, boiler plates, small pinions and knuckles, shear knives, bicycle spokes, gears for motors, and all varieties of work demanding hardness, toughness, and malleability. Plates of iron or steel and nickel when laid together and heated to welding temperature, may be rolled into thin plates with a continuous nickel surface on both sides, or iron or steel on one side and nickel on the other. The union of the two metals is not merely a welding, but is of the nature of cementation, an actual alloy being formed to some depth below the surface of contact. The additional cost incurred by the use of the nickel is regarded as more than made up for by the advantages that are gained.

The nickel-steel plates on the new armor vessels of the United States, being hardened by the Harvey process, are proof against the hardest steel drill, and it has been found necessary to anneal them locally in order to make it possible to insert rivets and bolts in them in building. In the first attempts it proved impracticable to confine the effects of the annealing to the exact spot where the drill was to be applied, or to prevent their spreading around it. An electrical application was finally made, and the work is now done satisfactorily.

The observations of J. E. Stead on the effect of arsenic on steel lead to the conclusions that between 0.10 and 0.15 it has no material effect on the mechanical properties for structural purposes; that with 0.20 per cent. slight effects were noticed in an acid open-hearth steel in the bending properties of pieces cut across the direction of rolling after they have been tempered. With 1 per cent. the tenacity is increased, the elongation is slightly reduced, and the contraction materially reduced; the bending properties of the steel are, however, fairly good. When the arsenic amounts to about $1\frac{1}{2}$ per cent. the tenacity is still further increased and the elongation and contraction of area are still further reduced, while the bending properties are poor. With 4 per cent. of arsenic the tenacity is increased, and the elongation and contraction become nil. These tests were made on small bars not as well worked as larger ones would have been. The effect of quenching the steel when arsenic was present in large quantities, after heating to a red heat, was to improve the bending property. Ar

scale showed no tendency to produce red-shortness, corrosion is not increased, but oxidation is retarded by the presence of small quantities of arsenic, welding is made more difficult, and electrical conductivity is materially reduced.

The formation of blowholes in the manufacture of steel is prevented by J. L. Lebenius by bringing the liquid directly at the close of the casting under the influence of centrifugal force. As the steel gradually solidifies the gases, which heretofore have been dissolved in it, are liberated. Other advantages of the process are the even distribution of the carbon which is obtained, the reduction of the piping by about 60 per cent., and a lessening of the amount of fuel and waste possible by the avoidance of the necessity of maintaining a welding heat.

It has been shown by the experiments of Mr. Thomas Andrews, that when immersed in sea water steel corrodes more rapidly than wrought iron; that the rapidity of corrosion increases with the carbon content; that on account of the difference in potential between steel and wrought iron their contact, when they are immersed in sea water, very greatly increases the total amount of corrosion; that the difference in concentration of sea water due to tidal flow and like causes increases its corrosive action on iron and steel; and that any distortion of the metal, as by bending it while cold, cold rolling, etc., changes its potential sufficiently to influence very considerably the rapidity with which the metal corrodes when immersed in sea water. Steel thus distorted when cold, or "strained steel," is electro-negative to unstrained steel; whence the contact of the two in sea water again increases the corrosion. Distortion of steel when cold also decreases its strength, for which reason structural plates of different kinds are drilled rather than punched; and when they are punched, sheared, or subjected to other distorting process are afterward annealed or have their homogeneity otherwise restored. The inference is made from these facts by Henry M. Howe that boiler plates which have been punched will corrode more rapidly than those which have not been so treated.

Aluminum.—The following method of producing alumina from clay is proposed by Joseph Harding: Suppose a clay of a known strength in alumina. For each molecule of alumina we incorporate with the clay 3 molecules of ammonium sulphate and an almost equal weight of neutral potassium sulphate; 1 molecule of potassium sulphate is theoretically sufficient. The whole is well worked up and made into hollow bricks. These bricks are baked at 270°-280°. The ammonium sulphate is then decomposed into acid ammonium sulphate and ammoniacal gas, which may be collected in a condenser. The acid of the acid ammonium sulphate is first thrown upon the neutral potassium sulphate, which becomes acid sulphate. The latter, at this temperature, in presence of alumina and clay, is neutralized by the alumina, forming double aluminum and potassium sulphate, i. e., alum. The bricks are then extracted by methodic lixiviation. The silica may be used for cement. The alum is freed from iron by recrystallization, and the solution may be treated for the precipitation of the alumina

by means of the ammonia which has been distilled off. To obtain the alumina in a granulated state it is spread out upon slabs in a tower traversed from bottom to top by the hot moist ammonia obtained on baking the bricks. The alum is thus transformed into a mixture of ammonium and potassium sulphates and of granular alumina.

An important experiment in the use of aluminum for the construction of vessels was made in the building of a second-class torpedo boat by the Messrs. Yarrow. As the result of numerous experiments the builders determined to use for the hull aluminum plates of 30 per cent. greater thickness than they would have adopted had steel been employed. Even then the weight of the hull was reduced by one half. Plates of pure aluminum seem to be very deficient in strength, and although they may be greatly strengthened by being rolled cold and used unannealed, such treatment did not give all that was required. An alloy was used of aluminum with 6 per cent. of copper, the strength of which could be considerably varied during the rolling. A medium degree of hardness was adopted, giving from 14 to 16 tons per square inch tensile strength, combined with a toughness that enabled the plates to be hammered into shape cold and to be bent to a sharp angle without showing signs of cracking. From a series of experiments extending over twelve months to determine the conversion from sea water, it was found that, provided there is no galvanic action due to other metals being in contact with the aluminum, the corrosion may be taken at under 4 per cent. per annum for plates about $\frac{1}{2}$ inch thick, unpainted. But the boat should always be painted with pigments that exert no chemical action on the aluminum. The great enemies to the use of aluminum are heat and the alkalis. Aluminum corrodes at a comparatively low temperature, and thus loses strength, while alkalis act very rapidly upon it. Aluminum plates were used above the water line on the American yacht "Defender," which was built to compete for the "America's" cup. They were 12 feet long, $\frac{1}{4}$ of an inch thick, and from 22 to 30 inches wide, and were said to have an alloy of 10 per cent. of copper. The plates below the water line were of manganese bronze. Tests of aluminum boats constructed under the supervision of the Navy Department of the United States gave very satisfactory results as to buoyancy and capacity to get rid of water shipped aboard.

The qualities desired in an aluminum solder are thus named by Mr. Joseph Richards: It must wet the aluminum and adhere firmly; it must not disintegrate after exposure to the air; it must be as malleable and strong as aluminum; it must have a low melting point, so as to be easily worked with a soldering iron; it must have the same color as aluminum, and not change color; and it must be cheap enough for general use. None of the solders in use possessed all these qualifications. After experimenting about two years, Mr. Richards obtained an alloy of zinc and tin containing a little aluminum and some phosphorus, that realized nearly every qualification. On remelting this solder, a more fusible alloy liquidated from it, which

soldered better than the original mixture. It is now obtained by using the ingredients in a little different proportion from those used in the first solder, and has a percentage composition—aluminum, 2.38; zinc, 26.19; tin, 71.19; phosphorus, 0.24. This solder has come largely into use in Germany, Switzerland, England, and the United States.

A method has been devised for imparting hardness to aluminum by the addition of chromium. Care has to be taken in the process to secure a true alloy, which is difficult on account of the difference in the melting points of the two metals. The aluminum is said to be made as hard as steel by this method. F. Allard, of Quebec, is credited with the discovery of a method of tempering aluminum, so as to give it the consistency of iron.

To cover aluminum with other metals, Herr Neesen, of Berlin, plunges it into caustic potash or soda, or into hydrochloric acid till bubbles of gas appear; then into a solution of corrosive sublimate, by which an amalgam is produced on the surface. The first immersion is then repeated, after which the aluminum is plunged into a solution of a salt of the metal of which a coating is desired. A closely adherent layer of this substance is rapidly formed. So perfect is the adhesion of silver, gold, and copper that a plate covered with either of these metals can be hammered or polished.

Gold.—Concerning the relative cheapness of the cyanide and the chlorination processes for extracting gold, Mr. E. A. Schneider publishes the conclusions, in the "Engineering and Mining Journal," that under exceptionally favorable conditions cyaniding is cheaper than chlorination, but under all circumstances it is safer to operate chlorination works. Chlorination can be successfully applied to almost any ore, while cyaniding gives satisfactory results only with a certain class of ores. The cyaniding process labors under the disadvantage of requiring, in most instances, an extremely skilled chemical supervision. The chemical part of the chlorination process is, on the other hand, very simple.

In the Hayeraft process of gold extraction the ore is passed through a fine crusher and conveyed to an iron pan having a capacity of one ton ore. Beneath the pan is a furnace. Water is mixed with the ore to bring it to the consistency of thick pea soup. A vertical shaft, having revolving arms attached to keep the contents of the pan constantly stirred, works in the caldron. The arms are fitted with carbon shoes, which form the anode through which the electric current passes through the saline liquor to the bottom of the pan, which, with a dish of quicksilver in the middle, forms the cathode. Common salt or other chloride is added to the water: the salt being decomposed by the electric current, the sodium passes to the mercury, and the chlorine rising through the mass of pulp dissolves the fine gold it meets with and forms a chloride of gold. As the pulp circulates in the pan this chloride comes under the operation of the electric current and is decomposed in turn, the chlorine being liberated to seek more gold, while the gold passes to the mercury cathode, thus producing amalgam. In the meantime any coarser particles of gold that are too large to be

dissolved by the chlorine gravitate to the bottom and are also taken hold of by the mercury. In the process of Dr. Gaze, of New Zealand, in which chloride of bromine is adopted as the solvent for gold, caustic soda is used to recover the chlorine and bromine, and the gold is recovered from the solution by electrolysis instead of by chemical precipitants; an important part is the method employed for making the solvent. The process is a continual splitting up and re-forming of the salts used.

Remarkable results in the percentage of gold extracted have been obtained by the Sulman process, in which a mixture of potassium cyanide and cyanogen bromide is used as the solvent. It is indicated by some experiments by Mr. J. S. C. Wells that in certain cases the new solvent is more powerful than cyanide alone. In a process by C. A. Mulholland, free bromine is used in place of cyanogen bromide.

Mr. J. J. Christinas, of Australia, claims to have overcome the difficulty of using lead as an amalgamating metal and a means of obtaining gold from ores. In his method the oxidation of the lead is prevented by passing the finely ground ore, previously mixed with a small quantity of kerosene or similar compound of carbon and hydrogen, through a bath of the molten metal. The lead alloys with the gold and silver, while the dry, powdered ore, being much lighter than the lead, rises to the surface of that metal, and is carried away as tailings. In the antimony process the native ore, or sulphide of antimony, is melted in large crucibles, and when on the point of cooling a quantity of molten lead is poured into the ore, stirred with an iron rod and poured into molds to cool. When the ingot is turned out of the mold it is found that the lead, which has a greater affinity for gold than for antimony, robs the latter metal of its gold contents, and, having a greater specific gravity, settles to the bottom of the mold, from which it is easily removed and the gold recovered.

Copper and Nickel.—The process of Albert E. Lytle for producing hard copper castings, now in use in Chicago, consists in treating the molten copper with a chemical compound whose ingredients are not disclosed, but which the inventor states is not an alloy, and is introduced for its effect in rearranging the molecules of the metal. Fractures of the treated metal exhibit no indication of an alloy, but show all the characteristics of pure copper. The castings are very smooth and free from blowholes. Remarkable specimens are shown of tough castings. Cast bars of the treated metal have been drawn into wire of high quality, and rolled cold into thin strips of great tenacity and perfect surface.

By means of a new sclerometer of very delicate construction and exact action, invented by M. Paul Jannetaz, an interesting fact concerning the relative hardness of zinc and copper has been brought to light. Most authors regard zinc as harder than copper. If, however, the metals are examined in a sufficiently pure state, copper appears to be the harder of the two. This removes an exception to the rule that the harder the body the less its atomic volume.

In its ordinary commercial form nickel, as described by Mr. A. G. Charleton, contains 98 or 99 per cent. of metal, consisting of a spongelike

mass of reduced and artificially agglomerated particles. It is not appreciably affected by atmospheric action or salt water, but oxidizes rapidly at a red heat; and its oxide dissolved in a bath of metal makes it brittle. When nickel is to be rolled, a small quantity of some reducing, easily oxidized metal is added to the crucible a few minutes before casting; without this the metal is porous and irregular, and has a yellowish-gray fracture. Obtained in this way, the pure metal is easily forged, and possesses similar physical properties to those of iron and copper. It is less malleable and ductile than iron, and less malleable and more ductile than copper, and is harder than either iron or copper. Its tenacity is intermediate between that of iron and of steel. Its electric conductivity is almost exactly that of iron. The impurities it is most liable to contain are iron, copper, silica, sulphur, arsenic, carbon, and in some cases a kernel of unreduced oxide. It is not difficult to cast if proper precautions are taken, but is often cold-short. Besides its applications in plating and in nickel steel, it is, in leaves and threads, entering more and more into common use. The threads are employed very largely in passementerie. Lyons, in France, is the center of a special industry of gold and silver laces on nickel, which do not tarnish through use, like those plated on white metal or brass. Nickel will alloy with most of the useful metals, adding to their hardness, toughness, and ductility. The color of its alloys with copper, which are formed in all proportions, increases in lightness with the increased proportion of nickel up to 25 per cent., when a perfectly white alloy is formed, susceptible of taking a beautiful polish. The addition of a small proportion of cobalt gives the perfectly white alloy, even though the nickel be in the proportion of only 16 per cent. Silverine or argentan has a composition based on this fact. Great confusion exists as to the names and composition of binary, ternary, and multiple alloys of nickel, known under the general designation of white metals. Maillechut is an alloy of nickel, copper, and zinc, containing a maximum of 15 per cent. of nickel, with twice as much copper as nickel. Silverine, argentan, and packfong contain other metals—tin, bismuth, or antimony—as well, which impart fusibility and a fine color, generally at the expense of ductility.

Alloys.—The third report of the Alloys Research Committee, by Prof. W. C. Roberts-Austen, begins with a review of the experiments of Prof. E. Warburg and Herr F. Tegetmeier on molecular porosity, in which, when a receptacle was divided by a partition of glass with sodium amalgam on one side and pure mercury on the other, when electric action was set up the sodium from the glass and from the amalgam would pass into the mercury, showing that sodium atoms could be made to go through glass. A similar result was observed when lithium was used in the amalgam. When a metal of superior atomic weight and volume was substituted for sodium—as potassium—no transference was made. The atoms of potassium were too large to pass through the spaces occupied by sodium atoms, and which they could traverse. "We are thus confronted," the report says, "with a molecular porosity which can in a sense be gauged,

and the mechanical influence of the volume of the atom is thus made evident. It will also be evident that there is a direct connection between the properties of a mass and the volume of its atoms." The investigation was pursued by the committee for the purpose of ascertaining how far the mechanical properties of metals are in accordance with the periodic law of Newlands and Mendeleef. Copper formed the main subject of the investigation, but the evidence obtained in connection with it was conflicting. Bismuth, potassium, and tellurium—all of which have large atomic volumes—lower its tenacity, while arsenic, with a larger atomic volume than copper, confers strength upon it. It appeared, however, that the limit of elasticity and the ductility of metals generally are greatly influenced by the presence of such of the elements—which have thus far been studied—as have large atomic volumes. Tests were further made on iron, aluminum, copper nickel, copper zinc, and other alloys. It was found that the method of investigation adopted rendered it possible to obtain information as to what is happening in the midst of a mass of metal from the moment it begins to cool until it is solid, and even after it is solid. Although no iron-aluminum alloy of industrial importance was discovered, much insight was afforded as to the general behavior of aluminum when alloyed with other metals. As the amount of iron in the alloy is increased the temperature of the melting point rises.

In one of his lectures on alloys at Mason Science College, Birmingham, England, Mr. McMillan considered the losses and difficulties met with in melting them. The cupola, he said, is unsuited to the production of most alloys; the reverberatory furnace can be used for heavy work only; and the crucible is hence usually employed for small or general castings. The chief difficulties to be contended with were divided into 4 classes: The action of the metals on the material has to be considered; the volatility of a few metals, especially zinc, causes loss by vaporization—in view of which there are advantages in working at low temperatures and with a protected surface upon the metal; a third class of difficulties arises from oxidation; and a fourth from absorption of gases. Alloys probably dissolve gases while in the furnaces which they can not retain on solidifying, so that a spongy metal, full of blowholes, may be obtained. Action upon the material of the crucible is strongly exemplified in melting aluminum, which is liable to take up some of the silica in the vessel, with deleterious results to itself. One of the commonest remedies for oxidation is the use of phosphorus, manganese, or aluminum in small quantities. Silica and alumina probably help increase the solubility of dissolved gases, so that they are not given off on solidification, and tougher and sounder castings are produced.

Aluminum and copper form two series of valuable alloys—aluminum bronzes, containing from 2 to 12 per cent. of copper, and copper-hardened aluminums, containing from 2 to 15 per cent. of copper. The 2-to-12-per-cent. aluminum bronzes are, according to the "Aluminum World," among the densest, finest-grained, and strongest alloys known. The alloy of between 10 and 11 per cent. of aluminum with copper is

the "true aluminum bronze," and from it the lower bronzes are made by dilution of 10 per cent. bronze with more copper. The 5-to-74-per-cent. aluminum bronzes have the characteristics that will probably cause them to be most used, especially in bronze wire and for marine work; and the fact that with proper and easily taken precautions they can be rolled or hammered at a red heat will add greatly to their value. Aluminum in bronzes lowers the melting point of the copper at least 100° or 200°. The melting point of the 10-per-cent. bronze is somewhere in the neighborhood of 1,700° F. This substance is among the hardest of the bronzes, and hardens considerably upon cold working, while the hardness can be lowered by annealing at a red heat and plunging into cold water. Aluminum bronze can be worked in a lathe, giving chips that cut smooth and long and do not clog the tool; it is a remarkably rigid metal under transverse strain; is peculiarly safe under compression strain, and much stronger than any of the other bronzes; and has special antifriction qualities.

A new alloy mentioned in the "Journal de l'Horlogerie" as a substitute for gold consists of 94 parts of copper to 6 parts of antimony. The copper is melted, and the antimony is added. The metals having been sufficiently fused together, magnesium and carbonate of lime are added to increase the density of the material. The product can be drawn, wrought, and soldered like gold, which it resembles on being polished. It preserves its color against the action of ammoniacal salts and of nitrous vapors.

The principal conclusions drawn from the experiments of Herr C. Heusler, of Bonn, on the strength of manganese bronze having different proportions of manganese at varying temperatures up to 400° C., are that (a) a bronze with 5 to 6 per cent. of manganese is most useful for machine parts in which tenacity is of importance; (b) on the addition of manganese to copper the tenacity of the bronze increases with the percentage of manganese up to a certain limit, then decreases, and with a still further increase of manganese the strength of the bronze again increases.

The experiments of Prof. Goodman in connection with the work of the British Alloys Research Committee have brought out the fact that antifriction alloys must always contain a metal with a high atomic volume. There seems, moreover, to be a direct connection between the efficiency of the antifriction alloy and the atomic volume of one of its constituents.

An alloy of aluminum with tungsten has been recently introduced into the market. It is made in France, Germany, and England.

New Processes.—The process for electroplating ships' hulls which has been used with success at the Communipaw Basin, Jersey City, consists in applying to the sides of the vessel tanks or baths about 5 feet square, scribed out on the edges to conform with the curvature of the ship's sides, firmly braced and shrouded in position, and calked around the edges till they are water-tight. The first bath applied by means of these tanks is of strong acid solution, which cleans the iron plates of the vessel's sides and leaves them ready for the next process. The cleaned spot having been

washed, the bath is next filled with a solution of cyanide of copper and the electric current is turned on. The cyanide solution completes more perfectly the cleansing of the side of the vessel, and in addition acts as a sort of flux, causing the film of copper next to be deposited to be more firmly adherent. The cyanide solution having been drawn off, a solution of sulphate of copper takes its place. Large plates of copper are suspended in the bath and are connected with the positive pole of the dynamo, while the negative pole is attached to the side of the ship. The deposition of copper begins immediately. At the end of the process the entire side of the vessel within the limits of the bath is found thoroughly and evenly coated with copper about $\frac{1}{16}$ inch thick, with a closely adherent coating that can not be removed except with a cold chisel, when a part of the iron comes off with it. Each new position of the bath is so arranged that it shall lap a little over the edges of the section already done, whereby when the work is finished the vessel is copper plated all over, with a coating $\frac{1}{16}$ inch thick, without crack, seams, or joints, or exposure of any kind through which galvanic action can set in.

In C. Hoepfner's electrolytic process for the production of nickel, solutions of nickel are purified from cobalt and other metals more electro-negative than nickel. Then they are electrolyzed in a neutral state or acidulated by weak acids of small electrolytical conductivity. The electrolysis takes place by means of insoluble anodes immersed in a solution of metal or metals more electro-positive than nickel and separated from the cathodes by a membrane strong enough to resist chemical and mechanical actions. At the anodes chlorine is produced, which may be made use of in any known way. On the cathodes nickel is deposited; it is most useful to keep the cathodes in motion. Anodes of zinc may be used, or other metal more electro-positive than that to be deposited. In the same way cobalt can be produced from cobalt solutions, zinc from solution of zinc, lead from solution of lead, tin and copper from their protochloride solutions.

G. W. Burton has discovered in electric smelting, where the ore is of a rebellious character, that by placing the proper flux in the solution the metals will separate and run from the ore according to the different degrees of heat required to melt them severally. In treating ores containing lead, copper, gold, and silver, the lead will separate first and be found in the bottom of the tank in globules. As the heat increases the silver will follow, then the copper, and then the gold, the rock being finally consumed or reduced to an ash. Each metal thus separated will be found in the bottom of the tank in separate particles of its own kind. Mr. Burton's invariable experience has been that the chemical properties contained in the ore have much to do with its rapid heating, and that the more rebellious the ore the less current required to treat it, the rebellious substance itself tending to increase or create the heat necessary. Remarkable success has been achieved in Canada in the treatment of nickel ores by this system.

The method of silvering mirrors recently patented by Hans Boas, of Kiel, is based upon the fact that when one of the heavy metals forms the

cathode of a vacuum tube containing a trace of hydrogen the metal is volatilized by the current, and is deposited as a firmly adherent and highly polished layer on the walls of the tube. The mirror thus produced is said to be of much greater brilliancy than can be obtained by ordinary methods.

Ruthenium is, along with osmium, one of the most refractory metals of the platinum group. Besides the intensely high temperature required for melting it, the operator is incumbered by the oxidizability of the substance, which tends to be transformed into the volatile oxide, RuO_4 . By raising the temperature of the metal in the electric arc suddenly much above its melting point A. Joly found that the fusion was effected in a few moments, while the loss by volatilization was barely sensible, and the characteristic odor of the peroxide was hardly perceived; but while cooling the metal became covered with the blue dioxide. When laid bare it by its gray color approximates to iron rather than platinum. Its structure is crystalline, and hence it is brittle in the cold. If heated to redness in the oxyhydrogen blowpipe, it may be flattened out and then broke. The metal spurts strongly at the moment of solidification, and the globules are almost always full of cavities. In the same apparatus and under the same conditions of temperature the fusion of ruthenium is more difficult than that of rhodium, which, in turn, is melted with rather more difficulty than platinum. It is much harder to melt than iridium. In the conditions at which it melts osmium is merely agglomerated and fretted. Iridium oxide, which can not be melted with the oxyhydrogen blowpipe, is melted with great difficulty in the electric furnace into a white crystalline mass, which the best-tempered tools do not cut. The exact melting point of ruthenium is under investigation by M. Violle.

The objectionable impurities in copper prepared from "white metal"—such as iron, tin, bismuth, arsenic, antimony, tellurium, nickel, etc.—are not thoroughly removed by the blistering process, but enough of them remain in the metal to injure its properties. They may be removed, according to Mr. E. D. Peters, Jr., by taking advantage of the fact that they have a greater affinity for metallic copper than for the white metal in which they are dissolved. They are therefore removed from the white metal by melting it together with a certain proportion of metallic copper. As the amount of sulphur present in the white metal, Mr. Peters says, is already the least possible quantity that can hold the copper in chemical combination, it follows that for each pound of sulphur that is thus burned out of the white metal 4 pounds of copper are set free in a metallic condition (copper and sulphur combining as a subsulphide in about the ratio of 4 to 1, by weight) and that when a sufficient amount of metallic copper has thus been liberated and the entire contents of the furnace are tapped into molds, certain of the pigs nearest the tap-hole will be underlain by slabs of the heavy metallic copper containing most of the impurities that were in the charge, and incidentally, about all the gold and quite a portion of the silver. The process is less used in America than in England, on account of differences in the ores.

Studying the best conditions for the preparation of lithium M. Guetz has found that the yield of metal is so much the higher as the temperature of the electrolysis is lower. An impure salt, containing potassium and sodium chlorides, gives, when electrolyzed at its melting point, much better results than pure lithium chloride. The melting point of the lithium chloride was therefore lowered by the addition of potassium chloride. Chloride of lithium melting at about 600°C ., a mixture of chloride of lithium and chloride of potassium in equal weights melts at about 450° , and is the most favorable mixture for the electrolysis. To obtain large quantities of lithium the mixture is melted, and then exposed to the electric current. The metal obtained in this way is free from iron and silicon, but contains 1 per cent. of potassium by weight, which corresponds with 1 atom of potassium to 273 atoms of lithium. For most uses the metal is sufficiently pure.

Miscellaneous.—With his electric furnace, by means of which he has obtained sufficiently high temperatures to produce the diamond, crystalline metallic oxides, reduce those which have hitherto been refractory, melt metals heretofore infusible, distill lime, silica, zirconia, and carbon, cause an abundant volatilization of such metals as platinum, copper, gold, iron, manganese, aluminum, and uranium, and convert magnesia, uranium, tungsten, and molybdenum into the gaseous state, M. Moissan has been able to approach the study of a whole series of simple bodies which have till now been mere laboratory curiosities on account of the want of adequate means of producing them. Among these are many of the "rarer" metals, the nature and properties of which were almost unknown. Chromium, thus prepared by reducing the sesquioxide, can be filed like iron, take a fine polish, and, more infusible than carbon, is available for preparing alloys without the need of the intervention of ferro-chromium, which has the disadvantage of containing up to 10 per cent. of carbon. This preparation opens the way for the effective study of the alloys of chromium, which M. Moissan has begun with the aluminum and copper alloys.

Molybdenum, previously unsoft, produced from a mixture of the oxide and charcoal and melted has a fine grain and a brilliant surface. Solid, it can be filed and forged at a red heat on the anvil; and with iron it furnishes a steel that can be tempered. These are all new properties.

Tungsten has been heretofore known to chemists only as a powder. Under the action of the electric arc its oxide is reduced by means of carbon, and gives in a few minutes a well-melted button, covered with a fine layer of the blue oxide of tungsten. It is more infusible than chromium and molybdenum, but can be liquefied here with great facility. It does not seem to have a strong affinity for carbon, and is obtained without special precautions as one of the purest metals the author has prepared.

Uranium, reduced from a mixture of the sesquioxide and carbon, when cooled possesses a brilliant fracture and great hardness. When slightly carbonized it presents the property of striking fire in contact with flint. The particles thrown off burn with an intensity and an energy

far superior to those exhibited by a piece of iron.

Vanadium, previously known only as a gray powder including hydrogen, oxygen, and a little of some alkali metal as impurities, has been cast into pieces having a crystalline and brilliant fracture, and is very difficult to melt.

Titanium, produced with currents of from 100 to 300 horse power from a mixture of charcoal and titanite acid, first as a crystallized carbide, and then as the real metal, exhibits different properties from those formerly attributed to the gray powders that bore its name. It takes fire in fluorine; decomposes water only at a bright-red heat; burns in nitrogen at a high temperature, yielding nitride of titanium; and readily combines with carbon and silicon, but does not unite with argon. It resembles carbon in having a very high melting point, but differs from it in the fact that while carbon under the ordinary pressure and at a great elevation of temperature passes from a solid to a gas without becoming liquid, titanium can, in the electric furnace, be liquefied and then volatilized. "Most of these simple bodies furnish, with carbon, well-defined combinations, crystallized and stable at a high temperature, which are destined to furnish a new chapter to mineral chemistry. All these simple bodies which we have obtained in the electric furnace form also borides and silicides finely crystallized, and so hard that some of them easily cut the diamond. What part they are to have in the manufacture of steel, and whether they are destined, like chromium, to give new properties to iron are questions for the future to answer. But a new chemistry of high temperatures is forming from which industry will most likely draw numerous applications."

It has been pointed out by Spring that many metals exhibit properties characteristic of the liquid state, even when at temperatures much below their melting points. In his experiments, the metals were in the form of cylinders with perfectly plane ends, placed end to end in an iron holder, and forced together by means of a screw while heated in an air bath or in a bath of an indifferent gas. The metals used were aluminum, bismuth, cadmium, copper, tin, gold, lead, zinc, antimony, and platinum. In the earlier experiments both cylinders were of the same metal, and the temperature was kept at from 200° to 400° for from four to eight hours. It was then found that, with the exception of the platinum and antimony, the cylinders were welded so perfectly that when one end was fixed in a lathe the entire cylinder could be turned, and when broken in a vise the fracture was not through the line of separation. When different metals were employed, as copper or lead with certain others, an alloy of considerable thickness was produced, 18 millimetres in the case of zinc and copper, and 15 millimetres in that of cadmium and copper. When lead and tin were used a cavity was made at one end of the cylinder and when filled with mica, in order that contact should take place only at the edge, the alloy formed had a thickness of 15 millimetres, 9 millimetres being in the tin and 6 in the lead. With cylinders of copper and zinc having a central cavity at the ends in contact, the surface of the

copper next to the cavity was colored yellow, resembling the alloy formed when copper is exposed to zinc vapor. These results are explained on the assumption that the molecules of solids, like those of fluids, have not all the same velocity.

In a lecture describing rusts, Prof. Skidmore, of Philadelphia, observed that it is not possible to define exactly what a metal is, yet there is little liability to mistake in identifying one. The metallic properties of luster, toughness, fusibility, opaqueness, conductivity, and rust may be possessed separately by nonmetals, but they are not associated as they are in metals. Most metals may be bent, twisted, drawn, and hammered to an extent far beyond what any mineral not a metal can endure. Sodium, potassium, lithium, and, in a lesser degree, calcium, strontium, and barium, rust instantly when exposed to moist air, and their white rusts quickly dissolve in water and form alkalies. Another group—including zinc, lead, magnesium, and antimony—have white rusts that are not soluble in water, but form a thin adherent coating, which only half conceals the metal, and gives it a dull, tarnished appearance. At higher temperature than the ordinary, and especially if the metals are finely divided, the chemical energy of rusting is so great that the metals burn with a vivid light and emit a dense white smoke. The permanency of these rusts and their protective character are utilized in paints. A third group of metals—among which are copper, iron, and silver—have dark or colored rusts. A fourth group, including gold and platinum, never rust; they are found as metals in the earth, and not as ores from which the metal must be manufactured. It is an advantage in the case of the other metals that they are found in the rust or ore condition, for they can be manufactured more easily than they could be cut from ledges of the pure metal.

M. Henri Moissan has found, in his studies of the solubility of carbon in different metals, or in the same metal at temperatures more and more elevated, that boron and silicon distinctly displace carbon in cast iron and in melted iron carbide. These substances, when maintained at a sufficient temperature, behave exactly like aqueous solutions of certain compounds in which we can precipitate or displace this or that substance present in solution or combination.

Writing, in the "Iron Age," of the fatigue of metals, P. Kreuzpointner mentions the factor of the ability of a beam, axle, tire, or stamp stem to conduct vibrations speedily away from the point of impact and distribute the motion; thus caused uniformly and uninterruptedly from point to point—a very important element in the strength and durability of a structure—as too often ignored or passed over hastily. Given a metal a known good conductor of heat, we know that, other things being equal, its conductivity can be impaired in various ways by flaws, impurities, hollow spaces, irregularities in outline, want of uniform density, and others. The heat impinging against the metal not being readily conducted away on account of one of these impediments, the metal at or near the point of contact with the fire becomes hotter than it would if conductivity was unimpaired. The

greater the impairment, the greater the over-heating at one point, and the more frequently the heating is repeated, the sooner the metal thus abused will fail. On the other hand, supposing a metal to be an ideal conductor, "in the course of time a period will ensue when the particles are not as responsive, as ready for work as they used to be." The metal is worn out, and liable to break at its weakest point. The same effects and changes are produced when the metal is attacked by vibrations from other sources. When that point of deterioration in a piece of metal subjected to repeated vibrations is reached, when, even in the soundest piece of metal, the motion wave is not carried along as freely from particle to particle as originally, then, we may conceive the metal to be what is called fatigued. What the actual condition and nature of a piece of metal is when it is fatigued, probably no metallurgist is able to describe or know. We may, however, attempt an explanation of its structural condition by assuming that fracture of a metal in ordinary service must be preceded by an initial separation of the particles and their points of contact, and this initial separation must be preceded likewise by a loosening of the particles—a relaxation of the force of cohesion, as it were.

METEOROLOGY. Temperature.—The following general propositions are put forward in a paper by Prof. von Bezold on the thermal exchanges of the atmosphere: 1. The total radiant heat received by the whole earth in a year is equal to the total amount given off by radiation in the same period. 2. The total heat received by any portion of the earth or the atmosphere is on the average equal to that given off by the same portion. 3. The total heat received and given off in the course of a year is not the same for different portions of the earth or atmosphere; in some parts the amount received is greater than that given off, and vice versa. 4. The heat received by given portions of the earth or atmosphere during any given period of the year is in general not equal to that passed off during the same period. 5. The total amount of heat taken in at the surface of the whole atmosphere during a given portion of the year is not necessarily equal to that given out at the same surface during the same period.

From observations made at Ekaterinburg during three winters at every hour on the temperatures of different layers of snow, from the surface to the ground, M. Abels has found that the conductivity of snow is proportional to the square of its density. The conducting power of snow having a mean specific gravity of 0.2 is 20 times less than that of ice or frozen ground. But the transmission of variations of the temperature of the air through snow and frozen ground depends also on the calorific capacity of those bodies. The heat of the sun penetrates porous soft snow, both because of its conductivity and directly. Its rays traverse the snow layer as they do the glass of a window. It is necessary, in determining the conductivity of snow or of any other pulverized body, to take account of its density.

In his experiments on the influence of the covering of the soil on its temperature, Prof. E. Ebermayer considered and observed lands the cover-

ings of which consisted, 1, of touch-tree plants eight years old; 2, of plants of *Spirea* eight years old; 3, of a layer 5 or 6 centimetres thick of dead moss; and 4, of meadow grass; and as a basis of comparison, he also observed the bare ground. He found that, 1, in the bare ground the absolute maxima and minima and the oscillations of temperature are larger than in a covered soil. At the surface of bare soils the absolute maxima reach nearly the same height as in the air, while the absolute minima are very notably attenuated for the soil. 2. A soil covered with moss most nearly approaches a bare field in its aptitude for being heated. The absolute maxima are nearly as high as in the bare ground. On the other hand, in winter the moss covering impedes the radiation of heat, and the higher layers of soil beneath it do not cool so rapidly as in fallow lands. 3. Meadow grasses in summer admit almost as much heat to the ground as the covering of moss, while in winter they assure a much inferior protection against radiation; and consequently a soil under grass cools much more rapidly than under a covering of moss. 4. Forest plants of dense growth and thick foliage in summer hinder the heating of the ground in a much higher degree than all other coverings. In a compact mass, particularly the *Spirea*, they protect the ground against great losses of heat in as satisfactory a way as the covering of moss.

5. The most considerable oscillations of temperature corresponding to the absolute extremes reach much higher values in the exterior air than in the interior of the surface layer of soil. These differences diminish in going deeper into the arable layer, and are less in a covered than in an uncovered soil. 6. The most considerable oscillations of temperature are determined in the higher layers of the soil. They become more feeble in the deeper layers. The influence of covering of the soil on the attenuation of the extremes of temperature and on its oscillations are felt chiefly in the upper beds to about 50 centimetres of depth. The properties of the soil being the same, a grassy surface, in its behavior toward heat, is very much like a bare surface. The earth under grass is in summer 1° C. cooler, and in winter only a few tenths of a degree warmer than an uncovered ground. Forest plants diminish the activity of the roots and the reactions of the soil during the summer. They render the heating of the soil more difficult from April till September; in the fall and winter they contribute to preserve its heat. The covering of dead moss, on the other hand, augments the activity of the roots and the reactions of the soil in consequence of a more considerable heating of the soil at all times of the year. Further, this covering keeps the soil fresher and preserves it from hardening and from baking at the surface. Consequently, in the cultivation of gardens, it should be of considerable advantage to cover the surface moderately with moss, leaves, peat, or other suitable substances.

H. H. Clayton, who has studied the subject of periodicities for several years, has found a striking regularity between the intervals of many of the temperature maxima of the Blue Hill (Mass.) observations, and that almost all the maxima could be arranged in such a way that they follow each other at intervals of six or seven days.

He thinks that for a large part of the year forecasts of temperature, on the assumption of regular rhythmic oscillations and a knowledge of the time of their beginning and ending, may be made for a week or two in advance with nearly as much accuracy as they are now made by the Weather Bureau for thirty-six hours.

In the discussion of a table of mean monthly and annual temperatures for London and vicinity for one hundred and thirty years, 1763-1892, Dr. A. Buchan says that much labor has been spent in searching for evidence of cycles, but it can not be said that the results show more than highly interesting resemblances and contrasts among the months, and that in whatever way the periods are viewed they suggest no appearance of cycles. But a tendency is shown of types of high and low temperature to prolong themselves during months, seasons, and years.

Some interesting results have been obtained in Berlin by means of meteorographs set up in the "Urania" pillars. Each pillar contained a thermograph, a barograph, and a hygrograph, placed side by side in a metal case through which a rapid current of air was kept up. The observations showed that the temperatures recorded on 2 closely adjacent pillars may differ by one degree or more both on a warm summer day and in the coldest weather. In one case the air was found to be warmed by the adjacent row of houses exposed to direct sunlight. In another the radiation was observed to be greater opposite a gateway than in the street. The very considerable local differences of air temperature recorded on closely neighboring pillars could hardly have been expected *a priori*.

For determining temperature and humidity near a surface of snow Dr. Süring placed a thermometer on the snow and another at the usual height above the surface, either exposed or protected, while an aspiration thermometer, placed 1 centimetre above the snow, recorded the temperature of the air. The temperature recorded by the thermometer proved to be considerably influenced by its size, shape, and position, as well as by the condition of the snow surface, etc. The observations were therefore restricted to the determination of the difference between the temperature of the snow and that of the air above it, as related to clouds and the motion and temperature of the atmosphere. The difference was lessened as the sky became more clouded, and when the clouding was complete, during a fall of snow, the temperature of the snow's surface was higher than that of the air. The difference became greater as the temperature fell, but was lessened as the motion of the air became more rapid. As to the influence of the snow surface on the humidity of the air, the author has arrived at the result that evaporation from the snow is much more frequent than condensation from the air, but that they are about equal in amount.

The thermophone, an instrument for measuring temperatures at distant or inaccessible places, was devised by H. E. Warren and G. C. Whipple for the purpose of obtaining the temperature of the water at the bottom of a pond. It is also suitable for obtaining the temperature of the soil at various depths. The apparatus resembles Siemens's resistance thermometer; advantage

is taken of the fact that different metals have different electrical temperature coefficients.

Having compared the beet-root crops in the provinces of Saxony and Silesia with the temperatures, rainfall, and intensity of rain during fifteen years, Dr. Kassner found that the curves of temperature corresponded with those of the crops in both provinces except in 1887, when the curves of rainfall showed no such correspondence in Silesia, although they were in somewhat greater harmony in Saxony. The curves of intensity of rain were in somewhat closer accordance with those of the crops than were those of rainfall. The author's final conclusion is that the relationship of weather to crops requires a much more thorough investigation than is possible with the scanty data as yet available.

Clouds.—Discussing the question whether clouds are composed of hollow vesicles or fall globules, M. Van der Mensbrugghe cites an experiment performed by Joseph Plateau in 1852, in which a column of water nearly three quarters of an inch in diameter was supported in a glass tube closed at the top but open at the bottom. Beneath the open surface of the liquid was a vessel of boiling water, from which a current of visible vapor rose continually. The suspended liquid never lost its complete transparency under these conditions, notwithstanding the number of spherules of vapor that rose, provided the outside of the tube was kept dry. This seemed to prove that the vapor was not composed of spherules filled with air, but of fall globules, and constitutes a strong argument against the theory that the clouds are constituted of vesicles. Other considerations bearing in the same direction are theoretical. If the spherules are very small, they will be more easily sustained in the air if they are surrounded by a very thin layer, the density of which diminishes toward the exterior, and which, according to Lord Kelvin's principle, they will evaporate the more rapidly the more minute they are. If, on the other hand, the globules of the cloud are relatively large, they will obey their weight; but in falling will traverse strata of air, becoming constantly warmer, and will consequently evaporate more and more rapidly, till their diameter is reduced to a measure at which their further fall is opposed by the resistance of the air. It is therefore not necessary to suppose larger or smaller spherules filled with air to explain the suspension of clouds in the atmosphere; further more, this suspension is only relative, for the clouds are almost constantly changing form—a fact which proves either that evaporation is going on, or that some of the parts of which they are constituted are falling.

In a lecture on the "Physical Phenomena of the Upper Regions of the Atmosphere," Prof. Alfred Cornu compared the atmosphere to an immovable thermo-dynamic engine, in which the sun is the source of heat and interplanetary space is the condenser. The most interesting phenomena take place in the more inaccessible parts of the atmosphere, and though the difficulties of getting information about these elevated regions are great, the physicist is beginning to know much of the real explanation of natural phenomena, and is even able to reproduce them in his laboratory. Among the unexpected stati-

phenomena discovered in ballooning and in mountain observations are the facts that many clouds which have been generally regarded as consisting of vapor are composed of minute crystals of ice; that the direction of the wind is different at different heights; and that the temperature does not steadily fall as the earth becomes more distant, but alternate layers of hot and cold air are encountered. The first and last of these facts might have been ascertained by indirect means from consideration of certain optical phenomena; the presence of ice crystals in storm clouds might have been inferred from the solar halo; and the alternations of heat and cold in the atmosphere from the various forms of mirage, which depend on the reflection of light from the surface of the different layers. The solar energy was described by M. Cornu as being of three kinds—mechanical energy, appearing as winds, cyclones, etc.; calorific energy, shown by the change of the state of matter, as water into vapor; and electrical energy. The wind is the most simple mechanical manifestation, and has its origin in the differences of atmospheric pressure in two distant places. It never blows in the direction of the line joining the points of greatest and least pressure, but always obliquely to the isobarometric lines, and usually with a circular movement round the points of highest and lowest pressure. When from any cause the equilibrium of the atmosphere is broken down, circular movements of enormous force, such as tornadoes and cyclones, are set up.

The careful determinations of Profs. A. Barchin and E. Stracciati go to show that cirrus clouds, which are composed of particles of ice, are capable of intercepting 30 per cent. of the solar rays, while from 58 per cent. to 92 per cent. of these rays may be absorbed by a fog of uniform density in all directions.

Discussing the question how far the apparent motion of a cloud is a satisfactory indication of the motion of the air in which the cloud is formed, Mr. W. N. Shaw cited the mountain cloud cap as an instance of a stationary cloud occurring in air moving sometimes very rapidly. Clouds are formed by the mixing of masses of air at different temperatures, or by the dynamical cooling of air through the reduction of its pressure without supplying heat from outside. Clouds formed by the mixing of air may be carried along with the air after they are formed, while when a cloud is formed by expansion circumstances connected with the formation of drops of water on the nuclei to be found in the air, and the maintenance of the particles in a state of suspension make it probable that the apparent motion of such a cloud is a bad indicator of the motion of the air.

Precipitation.—An experimental contribution to the study of dew has been made by Herr Welfley, who used plants in glazed pots with earth of varying moisture, some of the plants being allowed to radiate freely on favorable nights, while others were screened. The author concludes that dew depends partly on evaporation from the ground, partly on transpiration. It is at present doubtful whether precipitation from the air share in it or not. A cloudy sky weakens the cooling process without stopping it wholly.

With copious radiation, the temperature minimum is at the surface of the plant covering (of the ground), and here the aqueous vapor rising from the ground is partly precipitated. With increase of the ground heat downward there is increase of the water brought up by the plants, which is given up as vapor and condensed. The more moisture there is in the ground, the more water is evaporated from the ground and the plants. Dew formation is usually favored by the larger number of stomata on the under surface of leaves than on the upper. On a given surface of ground the dew is more plentiful the stronger the plant organs above ground, and the closer the plant growth. The temperature of still air increases from the surface to a certain limit (at about 5 feet over grass it was sometimes 4° or 5° C. warmer than at the ground). In experiments with blotting paper, cotton wool, feathers, and asbestos, the first was much moistened, while the others showed dew in drops. Bodies of organic origin attract more moisture than those of mineral (in case of hygroscopic absorption). For vegetation the author considers the benefit of dew but trifling.

From his observations of the conditions of atmospheric humidity on the summit of the Sonnblick mountain, Dr. J. Hann finds that the yearly range of humidity there is the reverse of what it is on the plains: the minimum, or greatest dryness, occurs in winter and the maximum in spring and summer. This much was known from observations at alpine stations, but there were circumstances that cast doubt on their accuracy. Temperature and vapor pressure on Sonnblick run in nearly parallel curves, and each degree of difference in temperature corresponds to a change of tension of vapor in the same direction. The daily range visible in all except the three winter months a low relative humidity in the morning, and a great humidity during the evening and night. But in winter the relative humidity remains below the mean from 6 p. m. to 7 a. m., and above it from 9 a. m. to 5 p. m. The daily range of absolute humidity (vapor tension) is nearly the same in all seasons of the year. The minimum occurs early in the morning, and the maximum in the afternoon. The most remarkable feature in the daily range of relative humidity is that on very clear and warm days long before the rise of the sun has any effect the humidity falls below the mean value on the Sonnblick, and by about six o'clock in the morning it has fallen nearly 7 per cent. below the daily mean. This important fact seems to show that the relative dryness of the forenoon on mountains is due to a descending movement of the atmosphere, caused by the winds blowing from the mountains to the valleys during nighttime, and thus cooling the sides of the mountains.

Following a suggestion of the French Government, M. J. R. Fremat, of the Meteorological Observatory of the Puy de Dôme, instituted an inquiry throughout the department of that name with regard to the influence of forests and archbends of the surface—mountains and valleys—on the formation and propagation of hailstorms. A large proportion of the answers received attributed influence to these features, but the greatest disagreement was revealed as to the

character of the influence. In many places forests, mountains, or valleys were supposed to favor the outburst of severe storms, while in a smaller number of places they were thought to diminish the liability to them. The author could only conclude for the circle under observation that they have no direct influence on the propagation of hailstorms. The prevalence of belief in such influence is attributed to the production by local features of minor phenomena of dark and imposing-looking clouds which, while having no real connection with it, are associated with whatever storm may occur at the time. It can not be denied, however, that the production and progress of storms are affected by the features of the earth's surface, but the influence such features exert is only indirect, and consists essentially in changes that are caused in the atmosphere. Thus the differences in the temperature and moisture between the Alps and the Lombard plains south of them lead to the production of vast atmospheric eddies and depressions which have considerable effect on the climate of southern Europe and Africa. Similar disturbances, but differing in intensity according to the proportions, may be produced by other lesser accidents. The course of the storm, when it has arisen, likewise does not appear to be governed to any great extent by the mountain ranges, valleys, and forests, but rather by the ordinary laws of the direction of atmospheric currents. If the pressure is even in a large area, the storm will follow the usual course, from southwest to northeast; if the pressure is uneven, the storm will follow the general direction of the wind as determined by that circumstance.

Attempts of Mr. Keuchler, of Indianola, Texas, to ascertain whether there was a connection between the extent of the year's growth of trees as shown by the formation of rings and the season's rainfall showed that while there were very great variations in the annual growth of the trees, they did not correspond with the seasonal rainfall. The conclusion is drawn from the observations that not rainfall alone or any single factor governs the amount of the growth of the tree during the season, but a combination of factors, including, besides the amount of the supply of moisture, evaporation, insolation, temperature, and the character of the rainfall, whether it comes in showers or continuously.

It has been shown by long-continued observations made by J. E. Codman that the size of rain gauges (automatic) makes no practical difference in the depth of rainfall collected by them. The largest gauge experimented with was 22 inches, and the smallest one 2 inches in diameter. When the gauges were placed at different heights, up to 50 feet, the same amounts were collected by the higher ones as those on the ground, provided no counter-currents of air came in to affect the result. This result agrees with that found by Prof. Wellmann in his experiments in Berlin.

The following generalized results as to the distribution of rainfall in the United States are deduced by W. Köppen from an investigation of the rainfall charts published by the Government. These are: 1, a district of continental summer rains, inclosed on both sides by littoral rains, which, corresponding to the contrast of

the yearly oscillation of temperature, are much more marked in the West than in the East; 2, a district of isobaric rains in the Southeast, with equatorial sea winds in summer and with anticyclonic weather in winter; 3, transition districts, in which both rainfall maxima occur near each other, while the minima occur in spring and autumn. Maxima after the equinoxes are nowhere very well marked, but the April and May rains of Colorado and Kansas and the autumn rains on Lake Superior are indications of them. With regard to the seasonal distribution in the tropical zone, the differences in temperature play only a small part compared with that played in extra-tropical regions; this result naturally follows from the small variation of temperature in the tropics.

Winds.—From the studies of the relation of the diurnal rise and fall of the wind in the United States, by Mr. Frank Waldo, the general results are derived that for January the rise of the wind toward the midday maximum is followed by a more rapid fall over nearly the whole of the United States. For July the same law holds, except in the Western States, where the morning rise is more rapid. The rise in the Mississippi valley continues during about seven hours. On the Atlantic coast the duration decreases from ten hours in the North to five hours on the coast of Florida. The rate of increase during the rise varies from 0.4 mile to 0.6 mile per hour.

A peculiar climatic feature of the region of the United States between the ninety-fifth and one hundred and second meridians is the occurrence in summer of hot winds, or currents of air with higher temperature than that of the general winds. They attracted notice in ten out of the twenty-three years ending in 1894, and caused considerable damage to crops in three or four of those years. Even when severe, their destructiveness, according to Mr. Isaac Monroe Cline, is confined to narrow limits. They are likely to occur between the middle of May and the middle of September, but are most frequent during July and August. The length of time during which they are likely to prevail varies from a few hours to three days. They are extremely dry. Their direction is usually that of the atmospheric movement near the earth's surface prevailing at the time over the district to which they occur, and their velocity varies considerably. It is noticed as one of their most striking features that, while the atmosphere is heated generally and shows an excess of temperature over the territory affected, abnormally heated narrow currents are often observed, between which the air is much cooler. While these winds are always noted as causing vegetation to wilt and droop, the more intense hot ones burn tender vegetation to a crisp in a few minutes, without reference to the amount of moisture present in the soil or the general atmosphere; and some of the most destructive of them have been known to occur when both were saturated with moisture. In studying the distribution of pressure in connection with these winds, it is found, Mr. Cline says, that they occur mostly with low-pressure areas which have moved slowly from the north of Montana southeasterly along the eastern slope for three or four

days before they take up a decided movement outward. The opinion that they are of the same generic character as the warm wave or heated term of the Eastern States, and the belief that their dryness and heat are caused by drought and limitation of the earth's surface, and that they simply bring northward the heat of the climate in which they are supposed to have their origin, are not supported by the evidence, but are contradicted by some of the circumstances; while the opinion that they are a special class and their heat and dryness are of dynamic origin like that of the *foehn* and chinook is, in Mr. Chase's view, confirmed by the present study of all the observations and correlated facts that can be found relating to the subject. Such origin seems to be found when the southeasterly winds of Oregon and Washington cross the great continental divide, where they rise to a height of from 10,000 to 15,000 feet, and are deprived of their moisture. Then, descending rapidly, they gain warmth, and reach the surface with their initial dryness. These winds are a permanent feature of the climate of the region where they occur, and the only palliative against them that Mr. Chase suggests is by the plantation of tracts of timber, which will furnish them moisture and tend to reduce their temperature, thereby serving as a partial protection to the farms beyond the woods.

In speaking in the Meteorological Society of that city on this, as yet, uninvestigated velocity of the wind in Berlin, Prof. Hellmann based his remarks on the indications during ten years of a self-registering anemometer placed at a height of 32.2 metres above the ground in the tower of a house which was originally quite isolated. In later years this house was surrounded by others, but this fact did not affect the working of the anemometer. Taking a year as a whole, the maximum rate was observed in March and the minimum in September, and during these months the variations were least. The average for the year was 5.1 metres per second. The same periods of maximum and minimum have been observed at other stations, as Paris, Munich, Prague, Vienna, and Cracow. Winds with a velocity less than the average are more frequent than those with more than the average velocity. The frequency of storms as measured in hours is greatest in January and March; it increases in October and sinks rapidly in April. The daily period of greatest velocity lies between 1 and 2 o'clock p. m.

The movements of the air at all heights, in cyclones and anticyclones, as shown by cloud observations, have been investigated at Blue Hill Observatory, Massachusetts. A record was made of the kind of each cloud visible, the direction of its motion, and its relative velocity, and the observations were plotted and classified into 5 levels. The increased velocity of the wind near the center of the cyclone and the decreased velocity near the center of the anticyclone are distinctly shown. The arrows of the plot also show that the inclination of the wind to the centers of the two is not the same on all sides. In the cyclone the winds blow most nearly tangential southeast of the center and most nearly inward north or northeast of the center, while in the anticyclone the winds are

most tangential northwest of the center and most nearly outward south or southeast of the center. In the cumulus region the cyclonic and anticyclonic circulation are still visible, but the general westward drift has become much stronger, while above that region the circulation is entirely marked by the drift. The diagrams also show that the currents do not all turn to the right as one ascends into the atmosphere, as is usually represented. When the winds have a northerly component they show that the currents turn to the left as one ascends. The circulation of the air is shown to be much more rapid in the higher regions than near the earth's surface in both cyclones and anticyclones.

Having plotted in tabular form, as deduced from the Signal-service charts for about three years, the number of storm centers passing over each quadrangular degree between latitudes 30° and 40° north, and longitudes 90° and 82° west, Prof. Cleveland Abbe finds it clearly indicated that the storm tracks, which move from Alberta and Assiniboine southeastward over the United States and then northeastward toward the Gulf of St. Lawrence, describe a system of parabolic curves, the tendency of which is to have a common point of intersection, and therefore a region of maximum storm frequency, in or near the northwest of Nebraska.

The suggestion was made in a discussion in the French Meteorological Society on anemometers and vertical currents of the atmosphere, which have sometimes been recorded by the clino-anemometer, that the vertical currents may have been due to deviations of the atmospheric currents by obstacles, such as the tower on which the recording instruments were placed, which divides the current laterally and reflects it upwardly. These vertical currents, according to Prof. Angot, do not rise very high, as papers thrown into them on the P^{te} du Midi ascend only a few yards, and then fall down at the feet of the observer. These experiments seem to throw doubt on the value of observations of ascending currents made under the conditions described.

In a discussion of the upper currents of air over the Arabian Sea, W. L. Duffin, of the Indian Meteorological Office, shows that a regular arrangement exists in the vertical succession of the upper currents, and that the Doldrums region, and not the geographical equator, is really the dividing line between the currents of the northern and southern hemispheres.

Two theories of the cause of cyclones in the temperate latitudes have found support, viz., the convectional theory, known as Ferrel's, that they are caused by the convectional ascent of a current of warm air in the central parts, the heat necessary to sustain the current being supplied, at least in part, by the latent heat set free by the condensation of aqueous vapor; and the theory proposed by Dr. Haas, that the storms are eddies formed in the general easterly drift of the atmosphere in temperate latitudes, just as small whirls are formed in rivers. Dr. Haas found that the temperature at high mountain stations in the Alps is higher during anticyclonic conditions than during the passage of storms. Mr. W. H. Dines, who has reviewed the subject in the *American Meteorological Journal*,

thinks that the evidence is in favor of Ferrell's theory. Mathematical laws show that it is a possible one, and that the latent heat set free by the condensation of moisture will, if it take the form of kinetic energy, be sufficient to produce a very violent storm.

Experiments reported by Mr. G. Symons as having been made in England in December, 1894, show that the wind in storms is capable of carrying sea spray to a distance of about 65 miles from the coast.

Thunderstorms.—In his studies of the annual distribution of thunderstorms over the surface of the globe, Mr. A. Klossersky, Director of the Meteorological Service of Southwestern Russia, mentions a high temperature, a certain degree of moisture, and a considerable quantity of atmospheric precipitation as the factors most favorable to the development of electrical activity, and which combined contribute to the production of the maximum of storms; so that we could, by comparing the maps of precipitation and temperature, obtain *a priori* a chart of the general distribution of thunderstorms. Such a chart would, however, only be of a relative character, because we are not able to estimate the comparative influence of the several factors. A zone of electrical activity of great intensity extends on both sides of the equator. In its general repartition this area expands from the northwest to the southeast over each continent which it traverses—America, Africa, and Asia with Oceanica, forming thus three electrical foci. The first equatorial zone—that of Asia and Oceanica—extends from the beginning of the Himalayas and across Indo-China and the Sunda Islands to New Guinea. The whole number of storms annually is from 90 to 100 and more. It may be remarked that all points in it are within the area of abundant precipitations. The second continental zone of great intensity passes across equatorial Africa, with an average number of storms varying from nearly 200 a year at Bismarcksborg to 46 at Zanzibar. On both sides of the continent the southern coasts are much richer in thunderstorms than the northern. The third continental center of atmospheric electricity is in the tropical regions of America. The yearly average of thunderstorms is 100, or more between 20° and 22° north. This zone, with a few considerable diversions, extends southeastwardly, including the West India islands, to 25° south. In the higher southern latitudes a marked difference is observed in the amount of precipitation and the distribution of electrical activity between the eastern and western coasts; and a minimum is reached in the warm region of the western coast, as at Lima, where the annual average of thunderstorms is null. North of this electrical equator the activity of thunderstorms may be said to decrease. We enter the region of continental deserts, extending in the Old World from southwest to northeast, and marked by inferior precipitations and weaker electrical activity. North of this zone of deserts electrical activity rises again, though it appears to be easily affected by temperature and local conditions. The average of thunderstorms in Europe between the Atlantic coast and the Ural mountains is from 15 to 20 a year.

Miscellaneous.—Urging that more attention be given to instruction in general meteorology as a university course, Robert Dele Ward advises the consideration of the various subjects in the following order: Evolution, composition, and offices of the atmosphere and its relations to plants and animals; relations of earth and sun, the variations of the seasons and the distribution of temperature over the earth's surface for the year, January and July, together with a study of isanomalous and of equal annual range charts; the distribution of pressure for the year, January and July, and the resulting winds; classification of the winds; moisture of the atmosphere and precipitation; storms, including cyclones, thunderstorms, and tornadoes; distribution of rainfall over the world, by seasons and for the year; weather; climate, including sanitary climatology, secular changes in climate, and the relation of climate to history. As lines of work for persons who have completed such a course, the author suggests the study of the climates of the different States, the effects of their topography on their rainfall, their winds, and the courses of their local storms; the local effects of forests and of cultivation on rainfall; the distribution of rainfall by seasons, months, and districts; its bearing upon the times of planting and harvesting; and changes in the depth of the level of the ground water, and its variations with the weather and the season.

It has been long known that cascades communicate a negative electrical charge to the air around them. The subject has been specially studied by Herr Lenard at the waterfalls of Switzerland and in laboratory experiments. It is found that even cataracts only a few feet high send into the air considerable charges of electricity, provided they bring down a large amount of rapidly dashing water. The intensity of the phenomenon is, however, reduced by very slight amounts of impurity in the water. Herr Lenard's experiments accord with the demonstration by Lord Kelvin and Messrs. Maclean and Goto that air even absolutely dust free can be electrified by a jet of water. As a general principle Herr Lenard concludes that drops of water falling on the surface of water or on a moist body disengage electricity, the water being charged positively, and the air passing away negatively charged. When the experiment is tried in a closed chamber the difference in potential may be so great as to provoke sparks. The negative electrization of the air has also been observed by Herren Elster and Geitel to be produced by subterranean cascades. Jets of water that drip down the rock sides, and roaring streamlets have a like effect. Prince Kropotkin remarks of the importance of the results of this property, that by it "the supply of electricity in the air is constantly renewed. The waterfalls in the valley, the splashing of the waves on the shores of lakes and rivers, and the splash of drops of rain on the ground send masses of negative electricity into the air; even the watering of our streets and of our plants in the orchards has the same effect on a limited scale. On the other side, the waves of the sea, as they break against the rocks and fall back in millions of droplets on the beach, supply the

air, with masses of electricity, the amount of which rapidly increases after each storm."

Mr. A. Lawrence Roche mentions, in a paper on "High Level Meteorological Stations," as one of the greatest drawbacks to a full understanding of meteorological phenomena from observations made near the general level of the ground the modifications and interference which aerial movements suffer at the surface, under the operation of which they are made to differ from the movements in the higher state and are caused to represent incorrectly what is going on in the atmosphere at large. The more strongly agitated upper strata react on the lower in many ways, and a knowledge of the moderately high atmospheric layers is of great importance for the theory of the general circulation of the atmosphere, and practically for our weather forecasts. Hence observations, to be complete, should be made from elevated points, lifted up above the influence of surrounding lands. Such points are on isolated mountain summits, and a number of meteorological observatories have been established on these in America and Europe. Mr. Roche begins his account of the principal mountain observatories by mentioning that which was established in 1870 on Mount Washington, the first summit station in the world, but which is now disused. "Probably nowhere else in the world has such severe weather been experienced, the lowest temperature being here often accompanied by the highest winds, unlike the calms which prevail with intense cold at low levels." The Government meteorological station on Pike's Peak, at an elevation of 14,134 feet, was for many years the highest in the world. This station also is now closed, so that there seem at present to be only two summit stations in the United States where meteorological observations are made throughout the year—the Lick Observatory, Mount Hamilton, California, and the Blue Hill Meteorological Observatory in Massachusetts, situated at a very moderate elevation. Prof. S. P. Langley conducted his researches on solar heat in 1881 on Mount Whitney, the summit of which is 14,500 feet above the sea. Harvard College Observatory has, however, established the highest station in the world on the summit of the volcano El Misti, in Peru, 19,650 feet above the sea. As observers has not remain here, the station is supplied with self-recording instruments, and visits are made in it periodically. France has the stations of the Puy de Dôme, 4,800 feet high; Pic du Midi, 8,446 feet high; Mount Ventoux, 6,250 feet high; and the Alagnol, 5,150 feet high. Stations were established on and near Mont Blanc in 1890, of which the one at the Rocher des Fuses (14,539 feet) is supplied with self-recording instruments, and is looked after every two weeks. Mr. Janssen has recently successfully established a station in the snow of the summit of the mountain, 15,780 feet above the sea. Instruments have been placed on the Eiffel Tower, Paris, at 980 feet above the ground, which give more nearly the conditions prevailing in the lower than do any others fixed permanently at this elevation. The observations are taken in connection with those at the Central Meteorological Office near the ground. The observatory of the Sonnblick, Austrian Alps, 10,170 feet,

has furnished very valuable results. The Swiss observatory on the Sania, 9,500 feet, is one of the best located and equipped summit stations in the world. In Italy an observatory has recently been completed on Mount Cimone. At Ben Nevis, Scotland, the highest mountain in Great Britain, an unbroken series of hourly observations has been carried on for ten years. In association with the observations at the base station, or sea level, these have been very useful. As among the results gained from high-level observations, Mr. Roche enumerates determination of normal decrease of temperature and humidity with elevation; abnormal changes with elevation in cyclones (or areas of low pressure near the ground) and in anticyclones (or areas of high pressure near the ground); height to which these cyclones and anticyclones persist; and the circulation of the air around each at various levels.

The chief features of the climate of Colorado are summarized by Dr. C. T. Williams, President of the Royal Meteorological Society, as being: Diminished barometric pressure, owing to altitude, which, throughout the greater part of the State, does not fall much below 5,000 feet; great atmospheric dryness, especially in winter and autumn, as shown by the small rainfall and low percentage of relative humidity; clearness of atmosphere and absence of fog and cloudy abundant sunshine all the year round, but especially in winter and autumn; marked diathermancy of atmosphere, producing a difference between sun and shade temperatures, varying with the elevation in the proportion of 1° for every rise of 225 feet; considerable air movement, even in the middle of summer, promoting evaporation and tempering the solar heat; and the presence of a large amount of atmospheric electricity. Thus the climate is dry and sunny, with bracing and energizing qualities, permitting outdoor exercise all the year round, the favorable results of which may be seen in the large number of consumptives whom it has rescued from a life of invalidism and converted into healthy, active workers.

The studies of H. A. Hagen, based on observations regularly made since 1859 and extending back in an irregular and fragmentary way to 1832, show that Lake Michigan has a great influence on the climate of Chicago. Of the winds a maximum prevails from the southwest, and a secondary maximum from the northwest. Land winds predominate during the cold months, and lake winds to a little less degree during the warm. The mean temperature deduced from twenty years' observations is 49° F., and occurs about the third week in April and October. The highest temperature occurs about the middle of July, and the lowest about the third week in January; the temperature is rising for one hundred and seventy-four days and falling during one hundred and ninety-one days. The cold spell about the middle of May is well marked in the five-day means. The highest temperature observed was 99° F., on July 17, 1897, and the lowest —29°, on Dec. 24, 1872. The maximum temperature was 36° at snow on one hundred and twenty-one days during twenty years, and a minimum temperature of —15° was reached only 16 times. The annual rain-

fall, since accurate observations were begun in 1867, is 34.4 inches, and is fairly well spread over each month. A fall of 2.5 inches in a day occurred only 15 times in twenty years.

In the "Annales" of the French Meteorological Office for 1890 M. Angot discusses the observations taken simultaneously during that year at the Central Meteorological Office and on the Eiffel Tower for the study of the variation with height of the several meteorological elements. The reduced barometric pressure was lower every month on the tower than on the ground, the probable cause being the great difference in the velocity of the wind at the two stations. The observations made at the three stations on the tower allow the variations of temperature with altitude to be studied with great detail, and it was found that the rate of diminution was far from being proportional to the height above the ground. In all months, at the middle of the nighttime, the temperature increased with altitude, the maximum difference occurring at a mean height of about 500 feet; it then decreased, at first slowly, and afterward more rapidly. At about 1,000 feet the mean rate of decrease amounted to 1.4° C. per 100 metres (328 feet). During the middle of the daytime the decrease of temperature with height above 500 feet is nearly uniform in all months, being about 1.6° C. for each 100 metres. Between 500 feet and the ground, however, the decrease showed a marked annual variation. During the cold season the difference was less than that observed at the higher level, while in the hot season it was much greater. The diurnal variation of vapor tension at the summit of the tower exhibited entirely different characteristics from those near the ground. Generally speaking, there was only one maximum near noon, and one minimum between the evening and midnight. During all months the vapor tension was less at the top of the tower than near the ground. The diurnal variation of the wind exhibited a marked minimum at the top of the tower during the daytime and a maximum at night, being the reverse of what is observed at ground stations.

METHODISTS. The summarized statistics for 1895 of the several branches of the Methodist Church in the United States are as follow:

CHURCHES.	Ministers.	Churches.	Communi- cants.
1. Methodist Episcopal	16,079	24,665	2,629,985
2. Union American Meth. Epis.	115	115	7,031
3. African Methodist Episcopal	4,865	4,575	594,476
4. African Union Meth. Prot.	89	70	7,000
5. African Meth. Epis. Zion ..	2,473	1,612	409,441
6. Methodist Protestant.....	1,566	2,042	166,082
7. Wesleyan Methodist	600	565	18,344
8. Methodist Episcopal, South.	5,757	13,502	1,379,928
9. Congregational Methodist ..	204	238	12,500
10. Congregational Meth. (col.)	5	5	819
11. New Congregational Meth..	20	85	1,200
12. Zion Union Apostolic.....	30	32	2,346
13. Colored Methodist Episcopal	1,297	4,004	170,718
14. Primitive Methodist.	70	100	6,840
15. Free Methodist.....	655	708	26,140
16. Independent Methodist.....	8	15	2,569
17. Evangelist Missionary.....	87	13	4,640
Total Methodist.....	33,601	52,286	5,438,969

I. Methodist Episcopal Church.—The statistics of this Church, published in the "Methodist Yearbook" for 1896, give the following to-

tals: Number of annual conferences, mission conferences, and missions, 140; of itinerant ministers in full connection and on trial, 17,026; of local preachers, 14,896; of members in full, 2,454,645; of probationers (for membership), 312,011; total of members and probationers, 2,766,656; of Sunday schools, 30,264, with 347,844 officers and teachers and 2,580,973 pupils; of churches, 35,383, valued at \$107,960,374; of parsonages, 9,811, valued at \$16,649,302; of baptisms during the year, 98,121 of children and 139,256 of adults. Of the ministers, 12,024 are recorded as "effective," 1,044 as "supernumerary," 2,057 as "superannuated," and 1,901 as on trial. The increase of members and probationers during the year was 76,596. The benevolent contributions were: For the parent Missionary Society (including legacies and sundries), \$1,174,554; for Church Extension, \$130,781; for the Sunday school, \$23,065; for the Tract Society, \$20,350; for the Freedmen's Aid and Southern Education Society, \$98,104; for education, \$166,384; for the American Bible Society, \$29,937; for the Woman's Foreign Missionary Society, \$240,489; for the Woman's Home Missionary Society, \$221,356. Total benevolent contributions, as reported from the conferences, \$2,105,020. Amount of contributions for ministerial support (including bishops and presiding elders), \$10,385,948; for conference claimants, \$278,158; for building and improvements, \$4,379,307; for old indebtedness on church property, \$1,243,093, leaving, as the present indebtedness, \$10,894,156; for current expenses, \$3,680,698.

The Tract Society returned its receipts for the year, including the balance from the previous year, as having been \$20,554, and its expenditures as \$19,022. The society furnishes the various missions of the Church with funds for printing religious literature, supplies tracts to the Annual Conferences for use in the home missions, and distributes them to immigrants, inmates of hospitals, prisons, and asylums, to soldiers and sailors, and to pastors for their regular work. One million forty-four thousand two hundred English and 200,000 German tracts were printed during the year.

The year's receipts of the Sunday-school Union, as returned in its last published report, were \$22,543; and its disbursements, \$24,400. The number of Sunday schools under its care was 29,523—of which, besides those in the United States, 899 were in Europe, 2,358 in Asia, 36 in Africa, 120 in Mexico and South America, and 1,287 among immigrants—with 348,365 officers and teachers, and 2,510,539 pupils.

The receipts of the Board of Education for the year ending Nov. 30, 1895, were \$89,061. The amount of loans made for the fiscal year ending in July, 1895, was \$70,597. The total amount loaned from the beginning in July, 1873, to July, 1895, was \$603,580; average amount loaned each beneficiary, \$91.54. Six thousand five hundred and ninety-three students were aided from the beginning in 1873 to the close of the school year in 1895; the whole number of students aided during the last school year was 1,540, of 24 different nationalities, in 134 different schools.

The 57 colleges and universities, 7 colleges and seminaries for young women, 56 classical seminaries, 76 foreign mission schools, 4 missionary

institutes and Bible training schools, and 19 theological institutions return 2,657 professors and teachers, 42,249 students, grounds and buildings valued at \$14,644,553, \$13,621,894 of endowment funds, and indebtedness of \$1,699,266.

The annual meeting of the Church Extension Committee was held in Chicago, Ill., Nov. 7. The receipts for the year on the general fund, available for donations, had been \$171,237; on the loan fund, for loans only, \$74,501. Three hundred and two churches had been aided, making the whole number from the beginning of the work of the society 3,797. Applications for aid from 85 churches asking for donations of \$22,230, and loans of \$35,379 had been declined on account of lack of funds or of other financial considerations. The board began the new year with conditional grants to 141 churches amounting to \$40,350 in donations and \$15,900 in loans; and had applications on file from 9 other churches, for \$2,700 in donations and \$3,700 in loans. The amount needed for work on hand was \$63,550. Apportionments were made among the several conferences for 1896 of \$315,250, and the same amount was asked for in contributions.

The annual meeting of the Freedmen's Aid and Southern Education Society was held in Chicago, Ill., Nov. 11 and 12. The society had closed during the year ending June 30, \$367,809, and had expended \$358,500. Reports were made of its work, of which the following is a summary: Number of schools among colored people, 22; including 1 theological seminary, 11 schools of collegiate grade, and 10 academies, with 223 teachers, 4,845 students, and property valued at \$1,351,000. Schools among whites, 22. Of these, colleges, 3; academies, 19. Total value of the 23 schools, \$648,800; teachers, 144; students, 2,580. Grand total of teachers (including 51 "practice teachers" in colored schools, and 25 in white schools), 473; students, 8,425. Of these, preparing for ministry, 219; in medical course, 283; in dental course, 12; in pharmaceutical course, 12; law students, 6; in manual training and trade schools, 1,549 colored students.

The annual meeting of the General Missionary Committee was held in Denver, Col., Nov. 14 to 19. The receipts of the society for the year ending Oct. 31 had been \$1,174,554, and the treasury was in debt \$306,243. The reports from the mission fields were not yet completed for 1895. The reports for 1894 give, in the foreign missions, 220 foreign missionaries and 221 assistants; 148 missionaries and 853 native workers of the Woman's Foreign Missionary Society; 42 foreign teachers; 576 native ordained preachers; 1,019 native unordained preachers; 1,153 native teachers; 1,353 local preachers and other helpers; 76,415 members; 59,418 probationers; 178,799 adherents; 13,710 adults and 9,338 children baptized during the year; 159,824 children in Sunday schools; 220 theological students; 5,833 pupils in high schools; and 34,590 pupils in day schools. In the domestic missions, 723 ministers; 367 local preachers; 39,523 members; 1,143 probationers; 533 adults and 2,525 children baptized during the year; and 44,876 pupils in Sunday schools.

Appropriations were made for 1896 as follows: *For Foreign Missions*. In Africa, \$5,601; South

America, \$53,475; China, \$113,761; Germany, \$25,229; Switzerland, \$7,812; Norway, \$13,376; Sweden, \$17,420; Denmark, \$7,966; Finland and St. Petersburg, \$4,230; India, \$130,000; Malaya, \$9,370; Bulgaria, \$15,485; Italy, \$40,866; Mexico, \$49,642; Japan, \$50,000; Korea, \$14,880; total, \$663,629. *For Domestic Missions*, including those to Welsh, Swedish, Norwegian and Danish, German, French, Spanish, Chinese, Japanese, Bohemian and Hungarian, Italian, Portuguese, and Hebrew populations in the United States, for each class of which specific appropriations were made, American Indians, and English-speaking populations, \$456,329; miscellaneous appropriations, \$112,000; for the debt of the society, \$259,663; total appropriations, \$1,578,012.

The total receipts of the Woman's Home Missionary Society for the year ending in July, 1895, including \$113,216 as the estimated value of "supplies" contributed, were \$239,457. The receipts for the fifteen years of the society's existence, from July, 1880, to July, 1895, were \$1,601,490, of which \$637,840 were in the form of supplies. The society has 55 distinct missions, including missions for the Indians in Oklahoma, California, New Mexico, Washington, Utah, and Alaska; missions in behalf of immigrants in Boston, New York, Philadelphia, and New Orleans; city missions in Cincinnati and Chicago; 16 industrial homes and schools in the South, in which more than 1,300 girls are annually instructed in industries and morals; 3 industrial schools for Spanish Americans in New Mexico; the Mothers' Jewels' Home at York, Neb.; the Watts de Peyster Home at Trent, N. Y.; and 11 deaconesses' homes. It has 87 missionaries in the field, besides deaconesses and city missionaries and helpers. For the accommodation of its various missions it has invested the sum of \$450,000, of which \$225,000 is in city missions and deaconesses' homes. Seventy-five annual conference organizations, with 2,600 auxiliary societies, numbering 68,000 members, co-operate with it.

The Woman's Foreign Missionary Society received for the year ending Oct. 1, 1895, \$208,227, of which \$18,000 were by bequest, and \$271,227 by collections of "2 cents a week" contributed by the several members. One hundred and fifty-two missionaries are supported by the society, 14 of whom are medical missionaries, with 750 Bible readers; and 400 day schools, 48 boarding schools, 11 orphanages, 10 training schools, 13 hospitals and dispensaries, 3 homes for homeless women are maintained, 14,000 pupils are taught and cared for, and 66,000 patients receive medical attention annually. Representatives of the society are laboring in Japan, Korea, China, Malaya, India, Burma, Bulgaria, Italy, South America, Mexico, and Peru. Twenty missionaries were sent out during the year, 9 of whom went to India, 19 to China, 1 to Japan, and 1 to South America. Six of the number were graduates in medicine. One was a Chinese woman who had been prepared in the United States for medical missionary work, and was the only Chinese woman in the empire bearing a Western world degree. Three periodicals—one for adults, one for children, and a German magazine—are published by the society. It has 6500

auxiliaries, 780 young women's societies, and 771 children's bands, with, in all, 151,163 members. The Wesleyan Home for children and missionaries is sustained at Newton, Mass.

II. Methodist Episcopal Church, South.—The Church Extension Board reported at its meeting in May that the collections for the year had amounted to \$53,503, and that \$2,795 had been received from legacies and special donations. Two hundred and eighty-four churches had been aided, or, including those which had been assisted by the Conference Board, 348 in all. The whole number aided since 1882 was 2,986. Since the organization of the Church Extension Society, \$839,566 had been raised for its purposes, nearly 3,000 churches aided, and more than \$3,500,000 in church property added.

The Board of Missions met in Louisville, Ky., May 3 and 4, and made appropriations of \$214,543 for sustaining the work during the ensuing year. Of this amount \$31,400 were appropriated to the missions in Brazil, \$31,947 to those in China, \$30,251 to the Japanese missions, \$26,660 to the Central Mexican, \$15,307 to those on the Mexican border, \$12,393 to those of North-west Mexico, \$17,500 to the Indian missions, and the rest to the conference missions. The conferences were asked to contribute \$350,000 to the support of the next year's work. Salaries were fixed at \$1,000 a year for married and \$550 for single missionaries in China, Japan, and Mexico, and \$1,100 and \$650 in Brazil; and it was provided that after ten years of service, \$100 should be added to the salary of married and \$50 to that of single missionaries, and that the allowance of \$100 for each child should be increased to \$150 when the child is five years old. An effort was determined upon to establish a new mission sanitary station in North China, where missionaries in the South may resort for rest and recuperation.

The seventeenth annual meeting of the Woman's Board of Missions was held in Meridian, Miss., May 10. The receipts of the society for the year had been \$143,677, and the expenditures \$96,923, leaving a credit balance of \$46,754, against which there were drafts, etc., payable, reducing the actual balance to \$22,360. Thirty-eight missionaries were supported in the foreign field, 15 of whom were working in China, 14 in Mexico, 8 in Brazil, and 1 in the Indian Mission. Nine missionary candidates had been accepted, and were awaiting appointments. The missions further returned 109 teachers and helpers, 12 boarding schools, 40 day schools, 1 hospital, 11 Bible women, and 4,379 women and children under instruction. A new center of work had been opened in Guadalajara, Mexico, and Centenary College, Rio de Janeiro, was to be removed to Petropolis, where a large estate had been bought.

The Woman's Parsonage and Home Mission Board reported as its most important single act during the year the determination to establish a school in the mountains of Kentucky. The people of London had offered a site and \$15,000 on condition that \$20,000 additional be raised as an endowment; and the affiliated society of the Kentucky conference had \$5,000 in hand for the building fund. An agent was appointed to canvass for the endowment.

The separate existence of this Church having begun May 1, 1845, in the city of Louisville, Ky., a jubilee celebration of the event was held during the first week in May, 1895, under the auspices of the Church Extension Board in the same place; and the College of Bishops and Board of Missions were invited to hold their meetings there and participate. The opening address of the jubilee was made by Bishop Hendrix, and related largely to the history of the organization of the Church and of the men most instrumental in effecting it. Addresses were delivered on "Woman's Work in the Church," by Bishop Hargrove; "Missions," by Dr. H. C. Morrison, Missionary Secretary; "The Church Press," by Dr. E. E. Hoss, editor of the "Christian Advocate" (Nashville); "Education in the Church," by Dr. W. W. Smith, Secretary of Education; "Sunday Schools," by Dr. W. D. Kirkland; "The Epworth League," by Prof. Collins Denny; and "Church Extension," by Dr. Morton, Secretary of the Board, Bishop Granberry, and Bishop Galloway. The sum of \$18,768 was subscribed during the meetings for Church Extension.

III. Colored Methodist Episcopal Church.—A congress representing this Church was held in Atlanta, Ga., Nov. 14 and 15, at which papers were read by the bishops and others, discussing the interests of the Church and various questions relative to the welfare of the colored race. Among the subjects of the papers were "The Relations of Methodism to Society, its Influence on the Moral and Civil Status of the Negro Race"; "The Papacy and the Negro Race"; "The Debt of Methodism to Woman"; "The Cause of the Origin and Growth of the Colored Methodist Episcopal Church in America"; "Methodism as a Factor in Education and the Influence of its Literature"; "The Itinerant System"; "The Relation the Colored Church should sustain to the Temperance Cause"; "The Character and Influence of the Negro Pulpit"; "Africa as a Missionary Field for the Colored Church"; "Religious Proclivities and Possibilities of the Negro Race"; "What the Bible has wrought for the Negro Race"; "The Moral, Social, Material, and Intellectual Development of the Negro Race," and others more general.

IV. American Wesleyan Church.—The fourteenth quadrennial session of the General Conference of the American Wesleyan Church was held at Fairmount, Ind., beginning Oct. 16. The Rev. N. Warder presided. Nineteen annual conferences were represented by delegates. The Pacific Conference had become defunct, but a new conference had been organized on the Pacific coast, known as the Willamette Conference; its delegates, however, were not present. An overture was sent down to the annual conferences, making it unlawful to receive into the Church persons who used tobacco. A paper favoring such a change in the Book of Discipline as, modifying the prohibition against membership in secret societies, would admit members of "minor" bodies of that class to communion in the Church, was pronounced unfavorably upon by the committee to which it was referred; but there being a general desire in the conference that it should commit itself again on the subject, the paper was reported, whereupon it was rejected, and the conference expressed its

determination that the prohibition should stand. A report was made concerning the introduction of the work of the Church into the State of South Carolina and its progress there.

V. Methodist Church of Canada.—This Church embraces eleven annual conferences, viz., the Toronto, London, Hamilton, Bay of Quinte, Montreal, Nova Scotia, New Brunswick and Prince Edward Island, Newfoundland, Manitoba and Northwest, British Columbia, and Japan Mission Conferences. They return in all 1,334 ordained ministers, 470 ministers on trial, 3,346 local preachers, 1,171 exhorters, 7,753 class leaders, 354,374 members, 13,166 members on trial (or probationers), 3,312 Sunday schools, with 23,039 officers and teachers and 253,887 pupils, and 66,774 members of young people's societies. The number of members of the Church and probationers (267,740) shows a gain of 6,787 during the year.

Three thousand three hundred and twelve Sunday schools are returned, with 23,039 officers and teachers, 253,887 pupils, and an average attendance of 174,107.

VI. The Wesleyan Connection (British).—The following is the general summary of the statistics of the British and affiliated conferences of this denomination:

FOUR.	Mem- bers.	On trial.	Minis- ters.	On trial.	Super- numeraries.
Great Britain.....	637,722	30,050	1,648	150	205
Irish and Irish missions.....	28,445	792	176	72	33
French Conference.....	1,469	87	27	6	9
Spain and Africa.....	41,250	11,142	126	26	30
West Indian Conference.....	48,445	2,745	77	25	8
Foreign Missions.....	46,979	9,099	297	97	14
Total.....	804,731	59,958	2,848	371	298

These returns do not include the ministers and members of the Australasian Wesleyan Methodist Church or the Methodist Church of Canada, which are not under the jurisdiction of the British Conference.

The fifty-fifth report of the Committee on Education showed while the educational work was usually maintained with an expenditure of £25,000 a year raised by voluntary contributions, the special requirements of the department in the past year in the way of structural alterations and improvements had necessitated the expenditure of £63,656. The official returns showed that the number of day-school departments under the direction of the committee was 909, the whole number of pupils 173,176, and the income of the schools £253,150.

The Committee of the Fund for the Extension of Methodism in Great Britain reported that grants and loans to the extent of £4,706 had been made during the year, and that it had received from various sources £1,970. The fund was formed to promote the building of 1,000 chapels. This number has been exceeded.

The annual meeting of the Wesleyan Missionary Society was held in London, April 29. The total income of the society amounted to £128,806, while the debt—accumulated during several years—stood at £20,478, toward the recovery of which £1,346 had been received. An increase was reported of 2,000 members in the

mission fields, with 9,105 persons on trial for membership.

The receipts for home missions were returned as having been £36,585. Encouraging reports were presented from the missions in London, Birmingham, Manchester and Salford, Liverpool, Hull, Leeds, etc.

The Wesleyan Conference met at Plymouth, July 23. The Rev. David J. Waller, D. D., was chosen president. A revised Covenant Service, submitted by the committee which had been appointed to consider that subject, was remitted to the district synods at their meeting in May for consideration. On the question of the extension of the term for which a minister can be appointed to the same station, the conference declared its adhesion to the three years' limit as a general rule, but recognized that there were cases when an extension of the term of service, "under careful regulations and restrictions," might be advisable. It found, however, that the present method of extending the time was very inconvenient. It therefore appointed a special committee to consider whether a satisfactory solution of the difficulty can be reached without an appeal to Parliament; and, secondly, if such an appeal to Parliament be deemed necessary or desirable, to suggest the form in which it should be made, and prepare, for the information of the people of the Church, a statement of the nature of the proposed change and the reasons why it was proposed. A report of a committee favoring the admission of women representatives to the conference was laid upon the table after considerable debate. The following minute was adopted as expressing the sentiment of the conference concerning educational policy:

1. The conference repeats its declaration that the primary object of Methodist policy is the matter of elementary education in the establishment of school boards every where, acting in districts of sufficient area, and the placing of a Christian domestic school within reasonable distance of every family. This is of special importance in the rural districts, where our people have no alternatives to the compulsory attendance of their children at Anglican schools.

2. There should be no increased grants of public funds, either from the local rates or from the imperial taxes, to denominational schools, unless that increased grant is accompanied by adequate and representative public management.

3. That no national system of education which shall exclude from the day schools the Bible and religious instruction thereby by the teachers vested in the capacities of children will meet the necessities of the country.

4. Our Connexional training colleges should be maintained in full vigor and efficiency.

5. With respect to our Connexional day schools the conference repeats its often declared avowal of the great services they have rendered to Methodism and to the general cause of national Christian education, and it emphasizes their special importance in those localities where it is impossible to establish school boards acting in districts of sufficient area and having under their control Christian educational schools.

The Educational Committee were authorized, if they should think fit, to co-operate with representatives of other nonconformist churches in giving effect to the policy of the conference, and to such resolutions as might be agreed upon by the special committee. To resolutions respecting church membership submitted by the South

African Conference the conference replied adversely to recognition in relation to church membership of any diversity of administration as between persons of different races or color.

A committee appointed by the conference of 1894 to consider the steps that should be taken in order to retain larger numbers of youths in the Church recommended a scheme for the formation of the "Wesley Guild." The report was referred to the district synods. The Privileges Committee reporting that they had waited without result upon the Prime Minister and the leaders of the House of Commons in the previous Parliament with representations of the inconveniences nonconformists were suffering with respect to burials, marriages, and other matters, another deputation was appointed to continue and press the representations. A report on concerted action among the Methodist churches of Great Britain affirmed its desirability, and recommended for submission to the several conferences—

That a united committee be annually constituted by the appointment of representatives by the several conferences for the purposes of mutual defense in the following proportions, viz.: Wesleyan Methodists, 16; Primitive Methodists, 8; United Methodist Free Churches, 6; Methodist New Connection, 4; Bible Christians, 4; Wesleyan Reform Union, 1; Independent Methodists, 1. That it is desirable that a Methodist yearbook be regularly published, and it is referred to the united committee to consider if this be practicable; that wherever practicable a united meeting of the ministers and an equal number of the representative members of the various Methodist churches be held once a year for devotion, fellowship, and counsel; that wherever practicable a united Methodist love feast be held annually on a Sunday afternoon; and that Whitsunday, when other arrangements will allow, be chosen for the purpose as commemorative of the Pentecostal descent of the Holy Ghost. The committee express the belief and hope that the better understanding which now prevails between the different Methodist churches will issue in the avoidance of the unnecessary multiplication of chapels, especially in small places, and recommends the several conferences to direct their respective chapel committees to correspond with one another to promote this result in the case of local difficulty and disagreement that may arise.

A resolution was adopted favoring union of all parties and denomination to promote new, unpolitical legislation relative to the drink traffic.

VII. Colonial Wesleyan Methodist Churches.—The statistical reports of the South African Conference give it 200 traveling preachers, 2,394 local preachers, 58,897 members, 428 Sunday schools, with 2,169 teachers and 28,500 pupils, 562 churches, and 1,611 other preaching places.

The West Indian Conference returns 111 traveling preachers and 51,125 members.

The Australasian Wesleyan Methodist Church returns 630 traveling preachers and 94,407 members.

VIII. Primitive Methodist Church.—The statistical reports of this Church, presented to the conference in June, showed that the present number of members was 196,324, an increase for the year of 593; of class leaders, 10,595; of local preachers, 16,728; of connectional chapels, 4,622; of adherents, 604,100; value of connectional

property, £3,708,143, against which stood an indebtedness of £1,077,826.

The Sunday schools numbered 4,379, with 62,066 teachers and 462,856 pupils, or 6,525 more than in 1894.

The annual meeting of the Primitive Methodist Missionary Society was held in London, May 28. Mr. Edwin Robson, of Hull, presided. The total revenue for missionary work had been £32,778, the total ordinary receipts having been £16,383; the receipts on account of the African fund, £3,731; money raised by the home missions and appropriated locally, £10,953; and money raised by the African missions and appropriated locally, £1,710. Nine home mission stations had become independent stations, reporting 1,357 members. The society had 6 missions in London, 31 in the provinces, 4 in Wales, 2 in Scotland, and 3 in Ireland, with an aggregate membership of 5,623, showing an increase during the year of 221. The African mission included 6 principal stations and 20 out stations, 8 European ministers, 3 native ministers, 6 native assistants, 40 native local preachers, 48 class leaders, and 1,040 church members, all total abstainers. An increase for the year of 76 members was shown.

The conference met in Edinburgh, June 12. The Rev. John Watson was chosen president. The Joint Committee on Union of the Primitive Methodists and the Bible Christians reported as the conclusion arrived at in the two meetings that had been held during the year, that there were so many features in which the two churches were alike that in the event of union neither would be required to make any perceptible change, while in other respects slight differences existed which could easily be adjusted. The serious differences were very few. As the name of the Church, in case union was carried out, the committee suggested "Presbyterian Methodist Church" or "Methodist Union Church." Resolutions were adopted approving of organic union as an ulterior object to be sought among all the "minor" Methodist bodies. Arrangements were made for enlarging Manchester College.

IX. United Methodist Free Churches.—The summary of the statistical returns of this body, as presented to the annual assembly in July, is as follows: Number of itinerant ministers, 435; of local preachers, 3,371; of leaders, 3,378; of members, 80,149; of persons on trial for membership, 9,304; of chapels, 1,401; of preaching rooms, 246; of Sunday schools, 1,376, with 25,800 teachers and 206,783 pupils. An increase for the year of 1,236 was shown in the number of members. During the year 8,500 persons had been admitted to membership.

Reports were made in the assembly concerning the operations of the book room, the Chapel Relief and Loan funds, Ashville College, and the Theological Institute. Promises of £15,000 had been obtained toward £20,000 to build and endow a theological college.

The report of the deaconesses' work showed that it had grown in the confidence of the Connection, and was well and universally supported. The expenditures had been £979.

The thirty-eighth annual meeting in behalf of the home and foreign missions was held in

London, April 23. The report mentioned a slight increase in the membership of the home missions, on which £2,320 had been spent during the year. The question of Methodist union in the Australian colonies had again engaged the attention of recent conferences, and resolutions had been adopted showing its urgency and suggesting methods for bringing it about. The home assembly would give its hearty sanction to colonial union on liberal lines of policy. The mission in Jamaica had been affected by commercial depression, that in Central America by civil disorder. The prospect in Sierra Leone was encouraging, and the local income included a number of subscriptions from local chiefs. The year had been one of great peril to the mission on the Tana, East Africa. In China, the work at Wenchow had been eminently satisfactory. The mission staff at the foreign and colonial stations consisted of 72 missionaries and 245 local preachers and native helpers, with 512 leaders, 10,500 church members, 2,483 on trial, 237 chapels and preaching places, and 11,684 pupils to the Sunday schools. The whole number of home and foreign members was 78,913. The total income had been £21,004, and the expenditure £21,172.

The Annual Assembly met at Norwich, July 9. The Rev. W. R. Sunman was chosen president. A scheme for the religious and denominational instruction of the young people of the churches, was adopted. It provides for the object mentioned, together with the oversight of Christian Endeavor Society junior classes and Christian Bands, establishes a system of regular instruction and examination, and contemplates competitive essays on given subjects. Counsel to whom the question had been referred whether instead of the nomination of the district members of the connectional and assembly committees in open assembly, as was now the practice, the selections could not be made at the district meetings in May, subject to approval by the assembly, decided that under the "foundation deed" the assembly could not relegate its right of appointment to any other meeting. This, however, did not affect the validity of first nomination by the district meeting. It was decided that the district meetings should in future nominate, while the final decision and the right to add to the list should be reserved to the assembly. A vote of circuit rules, for a nearer approach to uniformity in usage, was approved.

X. Methodist New Connection.—The statistical returns of this body, presented to the conference in June, give the totals of chapels, 244; ministers, 203; local preachers, 1,193; members, 32,073 (year's increase, 5); members on trial, 4,834 (increase, 90); teachers in Sunday schools, 11,000, with 84,500 pupils. While a large number of the circuits returned an increase in membership, it was neutralized by a falling off in others, chiefly in the Irish and foreign missions.

The income for Foreign Missions, £4,004, fell short by £190 of meeting the expenditure. Of the Centenary fund, to which £48,282 had been promised, more than £17,000 had been raised and paid in the circuits for local objects, and the treasurer had received £1,322 for Connectional funds.

The conference met in Halifax, June 10. The Rev. George Packer was chosen president. A revision of the rules, appointed to be made every seven years, was acted upon. All proposals to change the title of the Connection were rejected. Provision was made for the visitation of absentee members; the principle of representation in leaders' meetings in proportion to the number of members was affirmed, and women were declared not barred from becoming members of such meetings; it was ordered that the absolute time limit of a minister's stay in a circuit (five years) be so modified that a minister in special cases of need and by special sanction of the conference may remain longer, year by year, indefinitely. Some new regulations were made concerning the relations of the Christian Endeavor societies and the class meetings.

XI. Bible Christians.—The statistical reports of this connection for 1895 give it 294 traveling preachers, 34,037 members, 541 Sunday schools (in England) with 9,295 teachers and 56,222 pupils, and 980 churches and other preaching places.

The total expenditure of the Bible Christian missions for the year had been between £7,000 and £8,000. Good progress was reported at the annual meeting for the home stations. In the Australian missions a total increase of 508 members had been realized. In China, 8 brethren and sisters were working in Hunan, who reported encouraging progress.

The Bible Christian Conference met at Barnstaple July 31. The Rev. John Thorne, of South Australia, was chosen president. An increase during the year of 600 members was returned. The new missions at home and the vigorous prosecution of the mission in China had compelled greater expenditure, in consequence of which a balance deficit of £700 was returned. The report of the chapel secretary represented that £31,713 had been raised during the year for church building purposes, while £2,000 had been borrowed; but £6,108 of debt had been paid off. Since the death of James Thorne, in 1871, £258,226 had been raised for this work. Reports were made of Shutehouse College for boys and Edgehill College for girls. A report was presented by a Committee on Union with other "minor" Methodist churches, which, as adopted, approved of union, as sought by a resolution passed by the Primitive Methodist Conference (see "Primitive Methodist Church"), but suggested that it would have been better if a basis of union had been first agreed upon between the Bible Christian and the Primitive Methodist Churches; recommended the recommendation of a policy of neutral intercourse for making the two peoples better acquainted with each other; and provided for the appointment of a committee to deal with the whole question. The content of the conference was given in projected movement for the union of the Australian Methodist churches, to which the colonial Bible Christian Church will be a party. The resolutions adopted by the Committee of Methodist Churches which met in London, April 16, contemplating concerted action on certain public questions affecting the interests of those churches were approved, and representatives of the Bible Christian Church were appointed to the committee. A whole day

of the conference session was devoted to the celebration of the one hundredth year since the birth of James Thorne, one of the founders of the denomination, Sept. 1, 1795. The General Committee was instructed to prepare regulations for admission of women into Church courts, and to lay them before the next conference.

XII. The Wesleyan Reform Union reports 349 traveling preachers, 579 local preachers, 7,992 members, 175 Sunday schools with 2,908 teachers and 21,183 pupils, and 202 churches and other preaching places.

XIII. The Independent Methodist and Free Gospel Churches have 349 traveling preachers, 7,534 members, 124 Sunday schools with 2,470 teachers and 22,489 pupils, and 131 churches and other preaching places.

MEXICO, a federal republic in North America. The Senate consists of 56 members, 2 from each State, elected indirectly for four years, and the House of Representatives of 227 members, 1 to 40,000 inhabitants, elected for two years by direct suffrage. The President is elected by an electoral college for four years. The President for the term ending Nov. 30, 1896, is Gen. D. Porfirio Diaz. The President's Cabinet, consisting of secretaries of state whom he may appoint and remove at will, was composed in 1895 as follows: Foreign Affairs, I. Mariscal; Interior, Gen. Gonzalez Cosio; Justice and Public Instruction, J. Baranda; Fomento, Fernandez Leal; Finance and Commerce, J. I. Limantour; Communications and Public Works, Gonzalez Cosio; War and Marine, Gen. P. Hinojosa; Treasurer, F. Espinosa.

Commerce and Production.—The chief products of Mexico are silver, lead, gold, copper, cinnabar, iron, tin, onyx, and other metals, ores, and minerals; heniquen and other fiber plants; coffee; cotton; tobacco; oranges and other fruits; wheat and corn; mahogany, ebony, rosewood, orchil, sarsaparilla, and other woods and forest products; and cattle and horses and animal products. The commerce with different countries for the year ending June 30, 1894, was as follows, in Mexican dollars:

COUNTRIES.	Imports.	Exports.
United States	\$14,352,000	\$60,660,000
Great Britain	5,735,000	11,596,000
France	4,359,000	2,437,000
Germany	2,686,000	2,839,000
Belgium	330,000	401,000
Spain	1,949,000	554,000
Other countries	856,000	856,000
Total	\$30,257,000	\$79,843,000

The values of the principal exports were: Precious metals, \$46,484,000; coffee, \$11,766,000; heniquen, \$6,719,000; hides, \$2,256,000; timber, \$2,073,000; copper, \$1,980,000; tobacco, \$1,755,000; vanilla, \$1,184,000; ixtle, \$942,000; gums, \$803,000.

During the fiscal year 1893-'94 there were 8,958 vessels entered at Mexican ports, of an aggregate burden of 2,937,996 tons, of which 3,628 were steamers, of 2,589,768 tons. The total number of vessels cleared was 8,919, of 2,889,588 tons, of which 3,547 were steamers, of 2,540,043 tons. The merchant navy numbers 260 vessels, of which 47 are steamers.

Communications.—There were 6,284 miles of railroads in operation in 1895. All the principal lines are now completed, but branch lines are in progress. The bridges and other permanent works on the Tehuantepec line, built by the Federal Government, are about completed. The length of new railroads under construction is 6,914 miles.

The number of domestic letters and postal cards that passed through the post office in 1894-'95 was 126,211,715; the number handled in the international service, 24,612,803. The postal receipts were \$1,358,348, and expenses \$1,268,354. Internal postage rates have been reduced, and the money-order and parcels-post services are being extended.

The telegraphs in June, 1895, had a total length of 39,193 miles, of which 26,152 miles belonged to the Federal Government and the rest to individual States.

The Army and Navy.—The military forces consist of the active army, its reserve, and the general reserve. The strength of the active army on the peace footing in 1895 was as follows: Infantry, comprising 30 battalions and many *cadres*, 3 auxiliary battalions, 1 battalion of pioneers, and the invalid corps, 1,293 officers and 22,437 men; artillery, comprising 4 battalions of 6 batteries each, 1 battalion of fortress artillery, and 1 squadron of train, 184 officers and 2,120 men; cavalry, comprising 13 regiments, 1 corps of gendarmes, 6 auxiliary troops, and 9 divisions of rural guards, 793 officers and 10,276 men; total effectives, 2,270 officers and 34,833 men. The peace effective, including the reserves, is 60 general officers, 3,600 field officers, and 45,000 men, with 7,000 horses and 3,000 mules. The war effective is about 165,000 men.

The fleet consists of 2 avisos, 2 old gunboats, and 1 school ship. There are building 5 first-class torpedo boats.

Finances.—The revenue of the Federal Government is chiefly derived from import duties, internal-revenue duties, stamp duties, and the Federal contribution, which is an additional duty levied on all taxes collected by the States. The States levy excise duties and direct taxes. The budget of the Federal Government for 1896-'96 estimates the total revenue at \$44,747,000, of which customs produce \$20,475,000; the Federal contribution, \$1,650,000; direct taxation, \$1,460,000; posts and telegraphs, \$1,775,000; the mint, \$1,100,000; stamps, \$15,624,000; tax on public salaries, \$1,050,000; and other sources, \$1,618,000. The total expenditures are estimated at \$44,947,522, of which \$1,005,638 are for the Legislature, \$50,977 for the Executive, \$478,171 for the Supreme Court, \$493,994 for foreign relations, \$2,607,391 for the Interior Department, \$1,552,828 for justice and education, \$5,527,536 for financial administration, \$13,513,000 for the external debt, \$4,227,844 for the internal debt, \$4,605,639 for communications and public works, and \$10,268,334 for the army and navy.

The public debt on June 30, 1894, consisted of \$103,438,000 of foreign loans (bearing 6-per-cent. interest mostly), and \$65,821,470 of interest-bearing internal obligations and \$18,144,051 bearing no interest. The burden of the foreign debt has doubled since the decline in silver, the cost of exchange amounting to as much as the former

usual interest. The low price of silver has stimulated production and imports and the exportation of other things besides Mexican dollars. The export demand for ores has caused a revival in the mining industry, while the culture of coffee and tobacco and manufacturing industries have gained an impetus. Owing to these causes, the financial embarrassments of the Government have been nearly overcome, and the prospect of an equilibrium in the budget is so near that reforms in the *alcotol* system and the removal of the special tax on Government salaries are contemplated.

Legislation.—The Congress has under consideration changes in the Federal Constitution prohibiting coinage of money and issuance of paper money or stamps by the separate States, and also putting an end to tariff discriminations between the States and conferring on the Federal Government the exclusive right to hinder or prohibit the transportation of goods, foreign or domestic. A copyright treaty has been concluded with Spain, and a treaty of commerce and navigation with Belgium. The Mexican Government has proposed amendments to the extradition treaty with the United States, aiming to have the legal proceedings necessary for extradition simplified and shortened, and to bind each of the contracting parties to deliver up its own citizens when guilty of crimes against the peace of the neighboring republic. Attention has been given lately to sanitary legislation. Resolutions have been taken especially against the introduction of cholera and yellow fever, and the States have been urged to establish hospitals for the isolation of patients suffering from contagious diseases. As a result of recently adopted coercive measures the public health is undergoing a marked improvement. The benefits accomplished by the national pawnshop are so apparent that its action will be extended.

Indian War.—In the southern part of Yucatan, bordering on British Honduras, is a district called by the Maya Indians, on which white men have settled. The Mexican Government has confirmed their rights and defended them against the aborigines. In 1895 the Mayas acquired a large quantity of arms with the intention of forcibly regaining their hereditary possessions. In August 500 of them left Bacalar to invade the disputed district. Several bloody skirmishes occurred between them and the Mexican soldiery, and the Minister of War ordered to dispatch troops enough to the spot to check the threatened outbreak.

Colonization of American Negroes.—A colored citizen of the United States, W. P. Ellis, contracted with a company owning a large tract near Tlahuacilla to import 1,000 negroes to farm the land. In 1894 he brought 60 colonists with their families, and all these proved to be experienced cotton planters and industrious agriculturists. In the winter the rest of the colony was recruited in Alabama and Georgia, but no care was taken by the agents who sent the emigrants to get competent persons. When they arrived they could earn but little and were disappointed and miserable. A strange disease that broke out killed them with dread. In July 50 of the colonists set out to tramp to their old homes, but all lost in the Mapimi desert. They were over-

taken, but fought their rescuers before they would return to the plantation. The company furnished rations to this band and to others that followed, and shipped them back to the United States until none were left but the earliest settlers—too few to pick the 65,000 acres of cotton that had been planted.

The United States Boundary.—An International Boundary Commission that has been engaged in resurveying the boundary from El Paso, Texas, to San Diego, Cal., since July, 1892, finished its work in 1895. The Mexican commissioners were Señor Hlaman and Dolores Sanchez, while Col. J. W. Barlow, A. T. Moorman, and Lieut. D. D. Gaillard acted for the United States. Of the stone monuments erected by Col. Emery's commission in 1849-'53 some had disappeared and some that still stood were found to be out of place. In the agreement for a new survey made by the two governments in 1890, it was stipulated that property titles should not be affected by any corrections in the line. An error was found in New Mexico that transferred 40 square miles from Mexico to the United States in New Mexico. Another gave to Mexico 60 square miles in the lower part of the Colorado desert. The new boundary runs through the main business street of the town of Nogales. The commission replaced the 92 early boundary monuments and erected 296 more. A second commission began early in 1895 the survey of the boundary line along the Rio Grande, from El Paso down to the Gulf of Mexico.

MICHIGAN, a Western State, admitted to the Union Jan. 26, 1837; area, 58,915 square miles. The population, according to each decennial census since admission, was 512,267 in 1840; 297,654 in 1850; 749,113 in 1860; 1,184,050 in 1870; 1,656,937 in 1880; and 2,002,880 in 1890. By the State census of 1894 it was 2,241,454. Capital, Lansing.

Government.—The following were the State officers during the year: Governor, John T. Rich; Lieutenant Governor, Alfred Nilnes, who resigned May 31, having been elected to Congress in April to succeed United States Senator-elect J. C. Burrows; J. R. McLaughlin is the acting Lieutenant Governor; Secretary of State, Washington Gardner; Treasurer, James M. Wilkinson; Auditor, Stanley W. Turner; Adjutant General, Charles L. Eaton; Superintendent of Instruction, Henry R. Patterson; Attorney-General, Frederick A. Maynard; all Republicans; Railroad Commissioner, Simon B. Billings; Food Commissioner, C. E. Stacey; Insurance Commissioner, Theron H. Goldings; Land Commissioner, William A. French; State Tax Statistician, Victor C. De Land; Labor Commissioner, C. H. Morse; Fish and Game Commissioner, H. W. Davis; Bank Commissioner, T. C. Sherwood; Chief Justice of the Supreme Court, Charles D. Long; Associate Justices, Claudius R. Grant, Robert M. Montgomery, Frank H. Hoeker, Joseph B. Moore.

Finances.—Following is a summary of the operations of the Treasury Department: Balance on hand Dec. 31, 1894, \$60,394.24; received during 1895, \$4,075,575.59. Disbursed, \$4,079,800.76; balance Dec. 31, 1895, \$62,578.87.

The Legislature appropriated \$1,200,000 for general expenses of the State Government for

1895 and \$1,171,000 for 1896. Deficiencies left from the appropriations of 1893, which were to be provided for, amounted to \$760,509.39. The total apportionment for taxes for 1895 was \$3,013,919.32.

Several counties having held back taxes alleged to have been collected and due the State, the State petitioned as a test for a mandamus to compel Bay County to pay its claim, amounting to \$111,549.54. The county alleged that a large sum was due it from the State, and that in 1884 its treasurer erroneously accepted \$95 in settlement, when the full amount due the county was very much larger. The case was settled in favor of the State by the Supreme Court.

Census Returns.—Besides the statistics of population given by the census of 1894, summarized in the "Annual Cyclopædia" for that year, it has afforded other details, showing the growth of industries and production given in bulletins issued by the Secretary of State in 1895.

Under the census law every establishment of productive industry, including mines and fisheries, in which the value of the products amounted to \$200 or over, was to be reported. The total number of industrial establishments of all kinds reported is 8,812; capital invested, \$251,356,305; value of materials used, \$125,743,139; value of productions, \$237,857,772. The average number employed is: Adult males, 146,153; adult females, 15,659; boys, 3,482; girls, 355. The total wages paid during the year is reported at \$60,188,142; the average daily wages paid to skilled mechanics, \$1.99; to ordinary laborers, \$1.20. Compared with the census returns for 1884, there is an increase of 88 in the number of establishments, of \$72,514,481 in the capital, of 17,226 in the number of males, and of 7,374 in the number of females employed, and of \$9,434,265 in the wages paid. The number of children employed as returned for this census is 2,489 fewer than in 1884.

No farm of less than 3 acres was reported in the census unless \$200 worth of produce was actually sold from it during the census year. The number of acres of farms in the State is 15,296,078, or 42 per cent. of the total land area. In the upper peninsula they constitute 5 per cent. The number of farms reported is 178,051. The average size is about 8.46 acres less than in 1884. An average of 67.86 per cent. of the total area in farms is improved. The area in farms increased in the four years from 1880 to 1884 1,944,966 acres, or more than 2½ times the increase in the ten years from 1884 to 1894. The value of farms, including land, fences, and buildings, is shown to be \$528,249,503, compared with \$371,443,462 in 1884. The average value per acre in 1884 was \$38.48, and in 1894, \$34.54. The State totals of the dairy statistics for the year ending June 1, 1894, are as follow: Total milk produced on farms, 212,070,373 gallons; value of all milk and cream sold from farms, \$2,970,285; butter made on farms, 48,951,378 pounds; cheese made on farms, 206,660 pounds.

The number of chickens in the State June 1, 1894, was 7,162,007; turkeys, 273,578; geese, 75,146; ducks, 125,510.

The number of acres of clover mowed was 911,699, and of meadows other than clover, 1,251,477. The yield of clover hay was 1,238,185 tons, and

of meadows other than clover, 1,717,672 tons. The number of silos June 1, 1894, was 501, with a capacity of 52,846 tons. The number of acres of corn raised for silage in 1893 was 7,259.

The number of births in the year ending June 1, 1894, is returned at 59,889, an increase of 11.37 per cent. compared with the number in the year ending June 1, 1884. The number of births was 26.7 to each 1,000 inhabitants. To each 100 female children the number of male children was 108.

The proportion of the native population who become parents is about one fourth less, and of the foreign born one ninth more, in the cities than in the country.

The total number of illiterate persons ten years old and over is returned at 95,037, of whom 70,772 can neither read nor write, and 24,265 can read but can not write. By the State census of 1884 the total was 111,213. The proportion of native-born illiterates is 21 in each 1,000, and of foreign born 84 in each 1,000.

The total male population aged twenty-one years and over (voting ages) in the State is 651,920, of whom 34,545 can not read or write.

State Institutions.—A large appropriation was made this year for the new insane asylum at Newberry. It is desired to erect 8 more buildings within the next two years. On the recommendation of the Board of Corrections and Charities, the law under which private asylums are authorized to maintain certain inmates as State patients was so amended as to require State inspection as to the treatment and care of such patients before bills for their maintenance are allowed.

The number of criminal insane at Ionia was 196 at the close of the biennial period, and the average population for the term 184. During that time 102 were admitted, of whom 9 were women.

Since the opening of the State public school, in 1874, nearly 3,700 children have been received. There are now about 200 at the school, and 1,350 boarded or placed in families and under its supervision.

The State Home for the Feeble-minded and Epileptic, at Lapeer, was declared ready for the reception of patients in August.

There were 570 inmates at the Ionia prison in May. From July 1, 1894, to March 1, 1895, the furniture factory at the institution yielded a profit of \$17,600.

Education.—An abstract of the report of the President of the University of Michigan to the Legislature gives the following figures: For the year ending June 30, 1893, the receipts were \$348,753.08, and the disbursements \$375,986.68. For the year ending June 30, 1894, the receipts were \$445,801.01, and the disbursements \$387,789.11; which, after covering the deficiency of 1893, left a balance of \$44,731.34.

In the literary department 990 Michigan students have paid \$28,015 in fees this year, and 521 nonresidents \$22,738. In the medical and surgical department 191 Michigan students paid \$6,240, and 183 nonresidents \$8,770. In the law department 215 students of Michigan paid \$7,270, and 443 nonresidents paid \$22,340. In the pharmacy department 35 Michigan students paid \$1,205, and 42 nonresidents paid \$2,295. In the homœopathic school 10 Michigan stu-

dents paid \$400, and 7 nonresidents \$340. In the dental department 102 Michigan students paid \$3,330, and 80 nonresidents paid \$3,905.

The university graduated 692 students.

The State Board of Agriculture took action in June on the subject of student labor at the Agricultural College, declaring that the system of labor provided for in the organic law of the institution includes all students enrolled, whether regular or special, summer or winter; and that in the assignment of labor no special line of work done for any *attaché* of the college or for any department of the college shall be allowed to be substituted for manual labor in the regular course, unless such labor shall be considered by vote of the faculty of the college equally valuable with the regular required labor in subserving the cardinal purpose of the institution.

The Legislature of 1895 provided for farmers' institutes in every county desiring them.

State Lands.—The Land Commissioner's report shows that the State holds 429,889-23 acres. The department disposed of 9,939-24 acres the past year for a consideration of \$24,790.96. The report says: "During the year there has been collected \$6,153.07 on account of trespass on State lands."

Insurance.—The total amount of premiums received in Michigan during 1894 was \$4,530,275.91. The losses incurred were \$2,035,112.87. The amount of premiums received was \$215,000 less than in 1893, and the losses were \$1,371,304.35 less.

One company has been ordered to discontinue business, and 4 have been authorized to do business in the State, and many mutual companies to do business throughout the entire State.

The report of the life companies shows that the total number of regular or level premium life companies doing business in the State during the year was 39, being 2 in excess of the number for the year previous. The business transacted by these companies was as follows: Policies issued, \$31,775,353; policies in force at the end of the year, \$124,363,286; premiums received, \$4,296,670; losses incurred, \$1,146,367.

The question of a physician's obligation to testify came up in a suit at Battle Creek to annul a large policy on the ground that the applicant had misrepresented his physical condition. The physician who treated him refused to testify or answer any questions, on the ground that a physician's relations to his patient are sacred, and that he could not be compelled to testify in regard to the ailments with which his patients are afflicted. The attorney held that this was true so far as related to personal matters, but that under the new State law physicians could be compelled to testify in regard to any question relating to public matters or that affected other persons. The judge ruled that the physician must give his testimony.

Savings Banks.—The savings deposits in the State Dec. 19, 1894, were \$35,939,957.25, an increase of more than \$3,500,000 over those of the year preceding. Of the Central Michigan Commercial and Savings Bank, which failed in 1893, the Commissioner says: "The total assets turned over to the receiver May 8, 1893, was \$362,688.95. Of this amount the receiver has collected \$422,818.89, and from this amount,

under the direction of the Commissioner, he has declared 5 dividends. The cashier of the bank, charged with making a false statement in the report, was acquitted in February, 1895.

Labor interests.—The twelfth annual report of the Labor Bureau, issued in March, covers the year 1894. It says:

"The conditions surrounding the industrial population of Michigan have been continually changing through the year 1894. A very large proportion of laborers have found employment, quite often at wages reduced from those of two years ago. The salient point of most of the movements of life has so far partly compensated for reduction in wages. Statistics show that the percentage of farms worked by women is decreasing and the percentage of farms worked by men is increasing. The Bureau has directed factory inspection in Michigan since Sept. 1, 1894. Nearly 5,000 factories have been inspected. Over 100 fire escapes have been ordered on factories more than two stories high, and a very large proportion of them have been constructed. A large number of 'slovens' for dust-creating machines have been provided.

A great strike was on at Ishpeming and Negaunee in the summer, about 2,000 miners having quit work. By early September the situation had become so serious that troops were called for, several companies were sent by the Governor, and the works were started again under protection of the militia. By the end of the month as many as 2,000 of the strikers were taken back to work, the leaders, who were well known, being discriminated against.

Legislative Session.—This began Jan. 8 and ended May 31. On joint ballot there were 99 Republicans and 1 Democrat. The candidates for the office of United States Senator, made vacant by the death of F. R. Stockbridge, and temporarily filled by John Patten, Jr., were Julius C. Burrows, Schuyler S. Olds, John Patten, Jr., Jay Hubbell, and S. M. Stephenson. Mr. Burrows was elected, receiving 79 votes on the second ballot in the caucus. Senator McMillan was re-elected.

The Legislature passed 260 general acts. The Governor vetoed 22 bills, among them one providing for an interchangeable mileage book, passed at the solicitation of the commercial travelers of the State. It was to compel all railway companies to sell such tickets and to receive them, except such as have in their charters provisions conflicting therewith. Among bills passed was one providing a blanket charter for cities of the fourth class, each of which has the privilege of voting on the question of exempting it.

Several laws were made in reference to schools, among them the following:

Qualified voters at school meetings must be citizens of the United States. Persons qualified to vote on questions involving the raising of money by a tax must own property that is assessed for school taxes. The minimum length of the school year increased from three to five months. In addition to the qualifications formerly required of the commissioner, he must have had twelve months' experience in teaching. No certificate can legally be granted to persons twenty-one years of age and over who are not citizens of the United States. The State Board may inquire into certificates granted in other States. Provision is made for teaching the modes by which dangerous communicable diseases are spread, and the means of prevention. Trustees must provide United States flags for school buildings. Attendance at school is made

compulsory between the ages of seven and sixteen in cities, and eight and fourteen in the country, for four months in the year. Habitual and incorrigible truants may be committed to the public school at Adrian or at Lansing. Tuition is not to exceed the average cost *per capita* more than 15 per cent.

A number of amendments were made to the general tax law, one forbidding the recording of a deed until a certificate is presented showing that there are no tax liens or titles held by the State or by any individual, and that all taxes have been paid for the five years preceding the date of the instrument.

An important act was one relating to lobbying. It provides that every person, or private or public corporation, employing agents or counsel shall cause them to be registered in a docket, kept by the sergeants at arms for such purpose, with his or her address, and the bill he is interested in, and no person shall be allowed to appear before any committee unless his name appears on the docket.

Within thirty days after the adjournment of the Legislature a detailed statement of all expenses paid or incurred in connection with the employment of legislative counsel or agents must be filed with the Secretary of State.

Petitions were sent in asking that an amendment authorizing prohibition be submitted to the voters, and a resolution to that effect was introduced. Amendments of the liquor law were proposed—one to provide for the recovery of actual and exemplary damages, and one by the friends of the liquor interests for a uniform \$400 tax law, instead of the existing law of \$300 for sale of malt and \$500 for that of spirituous liquors. A uniform tax of \$500 was imposed.

Among the laws affecting elections was the "antifusion" law, forbidding the name of a candidate nominated by two or more parties from appearing more than once on the official ballot. The constitutionality of this law was questioned, and a test case was brought before the Supreme Court, which decided in favor of the law. The candidate may choose the ticket he prefers; in default of notice from him, he is to be entered as the candidate of the party first making the nomination.

The temporary office of State tax statistician was created, extending to March 1, 1897. The bill was so modified as to make the continuance of the office depend upon the next Legislature.

The newspapers of the State asked for changes in the libel laws, and changes were made, though not to the extent desired.

A "pure-food" law was enacted.

A new factory-inspection law retains the important parts of the law of 1893 and includes some new features. The employment of children under fourteen is forbidden.

Bills affecting the prisons were introduced, and the "parole system," as practiced in some other States, was adopted. If a convict has served half his term or the minimum sentence for his offense, the Governor may release him on parole, on recommendation of the prison authorities, to go to a place of employment engaged in advance, where he is to stay till his sentence expires, unless ordered back to prison.

A bill providing for capital punishment on conviction of murder in the first degree by

means of poison or in perpetrating or attempting to perpetrate rape, arson, robbery, or burglary, passed the Senate, but failed in the House by a vote of 47 to 47.

A bill for free text-books was voted down, as was also a proposition to submit a constitutional amendment giving suffrage to women. One requiring voters to be able to read the State Constitution in the English language passed both houses.

The statute relative to divorce was amended so that no decree shall be granted unless the parties have lived in Michigan at least one year preceding the date of the application, or unless the parties were married in the State and had lived there since. If married in another State, they must live in Michigan two years before a decree is granted. No testimony is to be taken in the case until four months after complaint has been made, except in case of desertion. It provides that as soon as a divorce is granted the parties may marry again.

Manitou County was divided, part of the islands being added to Grand Traverse County and part to Leelenaw County.

Acts were passed for the better protection of the estates of minors.

A joint resolution was passed urging the Michigan members of Congress to do all in their power to have Congress give the island of Mackinac to Michigan for a public park. It was given, and commissioners were appointed by the Governor to take charge of the park.

A joint resolution was passed requiring the Board of Auditors to determine the amount due on account of salaries paid to State officers who obtained office as the result of the election frauds of 1891 and 1893, and to bring suit to recover.

Other acts of the session were:

Authorizing the Michigan Dairymen's Association to hold a State institute, and making an appropriation therefor.

Enabling the regents of the university to take and hold in its perpetual trust land or other property.

Defining what shall constitute fraternal beneficiary societies.

Permitting townships, cities, and villages to use the Myers automatic ballot machine at elections.

For regulation of the sale of goods marked "sterling," "sterling silver," "coin," or "coin silver."

Providing for reorganization of fire and marine insurance companies.

For a further geographical survey of the State.

Making it unlawful for any corporation or company to abandon any factory or manufacturing establishment in any town, which town has given such company or corporation a bonus.

Raising the age at which women may marry without the consent of parents or guardians from sixteen to eighteen years.

Establishing a law uniform with that of other States relative to the acknowledgment of written instruments.

Making it unlawful for delegates to any political convention to be represented by proxy.

Providing a *per capita* tax of one eighth of a cent for the support of the naval reserve.

Directing that in suits for libel the jury shall separate its verdict as between damages for injuries to feelings and actual damages.

Providing for a recompilation of the statutes.

Providing for the removal of the homœopathic department of the university to Detroit.

Amending an act relative to the killing of deer, making the close season from Nov. 1 to Nov. 15, and

proceeding under what conditions nonresidents may come in.

Providing for the protection of fish.

Making it a misdemeanor for any person to buy, harbor, or sell any quail, partridge, or woodcock in Michigan at any season.

Providing a more severe penalty for cheating, obtaining money by false pretenses, etc.

Establishing a State normal school at Mount Pleasant.

Placing building and loan associations under the supervision of the Secretary of State.

Providing that all the assets of any insolvent person except the \$250 reserved against execution shall be considered attachable.

Reincorporating Bay City and Muskegon, and incorporating the city of North Muskegon.

Requiring foreign corporations doing business in Michigan to pay a franchise fee.

Establishing a permanent weather service.

Many of the acts were not signed by the Governor until after the adjournment; and it was the opinion of the Attorney-General that those so signed which had passed previously to the last five days of the session were, according to the Constitution, void. If sustained, this would have overthrown many laws which had been signed under similar circumstances by other governors and had been accepted as valid. The question came before the Supreme Court in a case brought by the city of Detroit to compel action under one of the doubtful laws. The court decided that the laws were valid.

Political.—A State election was held April 1, to choose a justice of the Supreme Court and 2 regents of the university. The candidates for the office of justice were Joseph B. Moore, Republican; John W. McGrath, Democrat; Robbins B. Taylor, Populist; and Myron H. Walker, Prohibitionist. The vote stood: Moore, 180,244; McGrath, 108,807; Taylor, 25,943; Walker, 18,116. The Republican candidates for the office of regents of the university—Roger W. Butterfield and Charles H. Hackley—received, respectively, 187,672 and 186,693 votes, and were elected. The other candidates were Charles J. Pailthorp and Stratton D. Brooks, Democrats; George B. Smith and Varnum J. Bowers, Populists; and Noah W. Cheever and Delavan B. Reed, Prohibitionists.

Two proposed constitutional amendments were voted upon. On one, to increase the salaries of State officers, the vote stood: Yes, 50,063; no, 13,903. On the other, relative to the jurisdiction of circuit courts: Yes, 60,567; no, 57,478. These amendments were voted upon in 1892, but it was found (see "Annual Cyclopædia" for 1894, page 486) that the returns had been falsified.

MINNESOTA, a Western State, admitted to the Union May 11, 1858; area, 83,365 square miles. The population, according to each decennial census since admission, was 172,023 in 1860; 439,706 in 1870; 780,773 in 1880; and 1,201,226 in 1890. By the State census of 1895 it was 1,573,350. Capital, St. Paul.

Government.—The following were the State officers during the year: Governor, Knute Nelson, who resigned after his election to the United States Senate, when the Lieutenant Governor, D. M. Clough, became Acting Governor and Frank A. Day Lieutenant Governor; Secretary of State, Albert Berg; Treasurer, A. T. Koerner; Auditor,

R. C. Dunn; Attorney-General, H. W. Childs; Adjutant General, H. Muehlberg—all Republicans; Superintendent of Education, W. W. Prendergast; Commissioner of Insurance, C. H. Smith; Railroad and Warehouse Commissioner, George L. Becker; Librarian, C. A. Gilman; Chief Justice of the Supreme Court, Charles M. Start; Associate Justices, William Mitchell, Daniel Buck, Thomas Cady, L. W. Collins. Justices Start and Collins are Republicans, the other 3 are Democrats.

State Census.—The census this year was limited to an enumeration of the inhabitants on June 1, 1895, classified as to sex, age, color, nativity, occupation, nationality of parents, length of time in which persons over twenty-one years of age have resided in the State and have been employed at their regular occupations during the year ending June 1, 1895; and also an enumeration of the soldiers and sailors of the civil war. The result shows that the State has gained 271,524 inhabitants in five years. The greatest percentage of gain is shown by those counties in the pine forests of the northern part of the State and in the Sixth Congressional District generally, comprising 20 counties in the northeastern part of the State, that district showing a gain of 44 per cent. The agricultural section, embracing the western half of the State and comprising the Second and Seventh Districts, shows a gain of 25 per cent. Following are the results by counties:

Aitkin	2,254	Becker	17,000
Anoka	11,161	Miller Lake	5,520
Becker	11,809	Morrison	10,000
Beltzumi	1,964	Mower	10,360
Benton	2,780	Murray	9,070
Big Stone	2,280	Nobles	14,500
Blue Earth	20,300	Norden	21,000
Brown	18,091	Norman	14,070
Carlton	7,456	Ottered	25,000
Carver	17,267	Otter Tail	26,000
Cass	8,600	Pine	9,600
Chippewa	10,800	Pipestone	7,120
Chicago	10,118	Polk	10,771
Clay	10,154	Pope	11,000
Cook	407	Ramsey	14,000
Cottonwood	10,107	Redwood	10,000
Crow Wing	11,000	Renville	10,000
Dakota	21,245	Rice	10,000
Dodge	10,720	Rock	6,000
Douglas	10,947	St. Louis	17,400
Faribault	20,100	Stearns	10,000
Filmere	25,200	Swift	10,000
Freeborn	21,100	St. Cloud	10,000
Goodhue	2,000	Tacoma	10,000
Grant	2,000	Todd	10,000
Hennepin	117,100	Townsend	10,000
Houston	10,000	Traverse	10,000
Hubbard	2,000	Wadena	10,000
Isanti	10,000	Wabeno	10,000
Jackson	10,000	Wadena	10,000
Jackson	10,000	Wadena	10,000
Kanabec	10,000	Wadena	10,000
Kandiyohi	10,000	Wadena	10,000
Kittson	10,000	Wadena	10,000
Lac qui Parle	10,000	Wadena	10,000
Lake	10,000	Wadena	10,000

Lincoln	10,000	Wadena	10,000
Lyon	10,000	Wadena	10,000
McLeod	10,000	Wadena	10,000
Marshall	10,000	Wadena	10,000
Martin	10,000	Wadena	10,000
		Total	1,201,226

The population of Minneapolis by this census is 102,282, and that of St. Paul 140,292.

Finances.—The report of the Treasurer for the year ending July 31, 1895, shows the receipts to have been \$3,436,935.96, which, with the balance on hand at the beginning of the year,

\$2,065,924.95, gives a total of \$7,522,860.91. The disbursements amounted to \$5,478,751.55, leaving a balance of \$2,044,109.36. The permanent school fund, invested in bonds, amounts to \$4,918,588.00, and the permanent university fund to \$577,800. The receipts from railroad companies amounted to \$851,394.25; from stumpage on State lands, \$227,712.19; for mineral leases on State lands, \$137,075.60. The receivers or bondsmen of the banks that had State money on deposit when they failed during the financial panic are gradually paying their indebtedness to the treasury, though there was still outstanding in May about \$125,500.

Education.—The school population in 1893-'94 was estimated at 450,000. The number enrolled was 337,861, and the average daily attendance 209,307. The number of teachers was 10,322.

Railroads.—The Bureau of Labor has published figures showing the changes in the relative burden of taxation borne by the railroads in Minnesota from 1870 to 1894. By this it appears that the relative percentage of taxation increased from 1870 to 1885, since which time it has been decreasing. This decrease in the relative amount of taxation took place, notwithstanding the fact that the taxes paid per mile of road in operation increased continuously from 1870 to 1893.

The table includes these figures of taxes per mile: 1870, 41-13; 1875, 54-60; 1880, 71-12; 1885, 159-32; 1890, 139-85; and 1894, 138-30.

The Duluth-Mesaba Railroad Company was incorporated in September with a capital stock of \$240,000. The object is to build a railroad from Cloquet to the northern boundary.

An important case affecting freight charges was decided in October. Elias Steenerson, of Polk County, began proceedings in 1894 before the Railroad and Warehouse Commission, alleging that the freight charges of the Great Northern on grain from East Grand Forks, Fisher, and Crookston, respectively, to Minneapolis and Duluth were excessive and unreasonable. The commission heard the case and fixed the rate. The commission's rate applied to the entire State, and was: For 5 miles and under, 4 cents per 100 pounds; over 5 miles and not exceeding 10 miles, 4-25 cents; over 10 miles and not exceeding 15 miles, 4-5 cents; and so on up to 400 miles. The railroad company appealed to the district court.

The court found that the rates fixed by the commission were too low to afford a reasonable income on the present value of the railroad property, so far as that was involved, but did not fix or suggest any rate that should be charged.

Products.—The total yield of wheat in the State was estimated at 63,000,000 bushels. It appears that more than two thirds of the flax crop of the United States is produced in the region tributary to St. Paul, Minneapolis, and Duluth, and that the oil-meal product is a far more valuable food than corn for production of the highest grades of beef, pork, mutton, milk, butter, poultry, and eggs. Another point that is receiving attention is the utilization of flax fiber for manufacturing tow, twine cordage, bagging, paper, and even linen.

Immigration.—A Northwestern Immigration Convention was held in St. Paul in November. A resolution was adopted to the effect that there be organized a permanent Northwestern immigration board, to be composed of representative men of all the Northwestern States, whose purpose it shall be to awaken interest in immigration. The State association organized with Theodore L. Schurmeier as president.

West Superior.—The mayor of West Superior, Charles S. Starkweather, was impeached, and at the end of a trial that lasted a month was removed from office by a vote of 17 to 1 in the Board of Aldermen. The charges were that gambling houses were permitted to be kept open and saloons to sell on Sundays; that a theater had been allowed to sell liquor without a license; that the mayor received bribes for neglecting to perform his duty; and that money was extorted from appointees on the fire department and police force.

Public Lands.—A dispatch from Duluth, July 16, says:

Four new towns were opened for entry at the United States Land Office to-day, and there was the liveliest time that has been seen there for many months. The towns are in the valley of the upper Mississippi. In some of them only fractional parts were opened, and in many cases the entries conflict with Indian allotments. Most of those who made entries were from St. Paul and Minneapolis. The crush was terrific, and some of the men who went through it were well worn out. One fellow almost fainted, and had to be assisted into one of the offices and given water in order to revive him. Another staggered through the door when his turn came, and leaned against the wall a moment to get strength enough to walk to the desk. Even then he was unable to say a word.

The State still has 220,000 acres to come to it from the General Government. There are still 230 unsurveyed townships in the State.

The school fund is to receive from the Government sections 16 and 36 in the agricultural part of the Red Lake reservation.

More pine-timber frauds (see "Annual Cyclopaedia" for 1894, page 489) have come to light since the change in the office of the State Auditor. They come under 75 permits, covering 608 sections of pine land, on which it is computed there are 304,000,000 feet of pine timber. This land was sold under the pretense that it was in danger of being destroyed by fire, under that section of the law which permits the Auditor to sell the timber on pine lands "when it is liable to waste, and not otherwise." The examiners sent out by the present Auditor report that the timber embraced in these sections is young, green, growing, thrifty pine in no danger from fire. In suits arising out of these frauds, the decision on one in July settles important points in favor of the State.

Legislative Session.—The twenty-ninth session of the Legislature began Jan. 8 and ended late in April. S. R. Van Sant was chosen Speaker of the House.

The election of a United States Senator to succeed W. D. Washburn was effected after a long contest among the supporters of 4 Republican candidates—Mr. Washburn, Gov. Nelson, and Messrs. Comstock and McCleary. The candidate of the Democrats was Judge Mitchell, and of the Populists Ignatius Donnelly. Knute Nel-

son was elected Jan. 30, receiving 102 of the 168 ballots cast.

The insurance and banking laws were revised and codified. Important changes were made in the methods to be used by insurance companies. The insurance clause is prohibited, and a valued policy—that is, the payment of the face of the policy on a building in case of total loss—is provided for. A clause in the law provides for the incorporation of boards of underwriters and the organization of salvage corps.

The new banking law adds stringent safeguards to those of previous statutes in the management of State banks, for the protection of depositors and for the enforcement of strict business methods.

The laws regulating the sale of liquor were amended. The law forbidding sale to minor children has been evaded under judicial decisions holding that such children might be sent to buy liquor for their parents or other older persons. The new enactment forbids the sale to minors either for their own use or for that of others, or to a pupil of any institution of learning. Another amendment is intended to reach the commonly attempted evasion of opening a pretended wholesale house and selling liquor by the quantity, to be left in possession of the merchant, the purchaser removing it a drink at a time. The granting of a license to sell liquor outside an incorporated city, village, or borough within 300 feet of a schoolhouse is prohibited.

A large number of laws was made for the benefit of farmers, and \$50,000 was appropriated to aid in the execution of a stringent measure for the eradication of the Russian thistle. Two additional experimental farms were provided for, and for their maintenance \$12,000 was appropriated. In the same interest was the appropriation of \$35,000 for a hard-fiber twine plant at the prison at Stillwater. To maintain an entomological department at the State University and enable it to propagate the destructive parasites of the chinch bug \$6,000 was appropriated, and to reseed the meadows destroyed by fire in our northern woods \$15,000. The most important of the local measures in aid of agriculture was the appropriation of \$50,000 to continue the work of drainage of the wet lands of the Red river valley. Some measures looking to road improvement became laws.

The unused lands of the defunct Hastings and Dakota Railroad corporation, amounting to 55,000 acres, were declared forfeited—an act which will be of benefit to the farmers along the western part of the line. A bill was passed offering a bounty of 1 cent a pound on sugar made from sorghum or beet roots. The amount of wheat exempt from taxation was raised from 50 to 100 bushels.

The most important law in the interest of labor is that which does away with contract labor in the prisons, and provides that the number of prisoners engaged in any productive occupation shall not exceed 10 per cent. of the free labor so employed. Children under fourteen years of age are not to be employed in any factory, workshop, or mine. Nor shall any such child be employed outside of the family where he resides before six o'clock in the morning nor after seven o'clock in the evening. If under the compulsory school age

he can not be employed anywhere during school hours.

For cities, a general municipal law was enacted framed on the general principle of concentration of power and responsibility.

It was enacted that either party in an action that may be tried by a jury may have a special jury at his pleasure, the party demanding the jury to be charged with the expense.

The laws for preserving game and fish were made more stringent.

Some changes in the election laws were made in order more effectually to prevent corrupt practices.

The State tax was reduced by 2 mills—from .017 to .015.

Abraham Lincoln's birthday was made a legal holiday.

A fine of \$50, or imprisonment for not more than thirty days, was made the penalty for selling cigarettes, cigars, or tobacco to pupils of the public schools or of any school supported wholly or in part by taxation.

Among constitutional amendments proposed and to be submitted is one giving every city in the State the right to frame its own charter. It provides for the appointment of 15 men by the district judges, who shall frame a charter to be submitted to the people of the city.

Another provides for taxation of unused railroad lands.

A third makes a radical change in the qualifications for voting by foreign-born residents. It requires the voter to be a naturalized citizen and a resident of the State for five years.

MISSISSIPPI, a Southern State, admitted to the Union Dec. 10, 1817; area, 46,810 square miles. The population, according to each decennial census since admission, was 75,448 in 1820; 136,021 in 1830; 375,631 in 1840; 606,924 in 1850; 791,305 in 1860; 827,922 in 1870; 1,181,597 in 1880; and 1,289,600 in 1890. Capital, Jackson.

Government.—The following were the State officers during the year: Governor, John M. Stone; Lieutenant Governor, M. M. Evans; Secretary of State, George M. Gowan; Treasurer, J. J. Evans; Auditor, W. W. Stone; Attorney-General, Frank Johnston; Superintendent of Education, J. R. Preston; Adjutant-General, William Henry; Land Commissioner, Edgar S. Wilson—all Democrats; Railroad Commissioners, J. F. Sessions, Walter McLaughlin, and J. H. Askey; Librarian, Helen D. Bell; Chief Justice of the Supreme Court, Timothy E. Cooper; Associates, Thomas H. Woods, A. H. Whitfield.

Finances.—The receipts from all sources for the year ending Sept. 16, 1894, amounted to \$1,210,651.72, and the disbursements were \$1,299,605.32, being \$88,953.60 in excess of receipts. The receipts for the year ending Sept. 30, 1893, were \$1,277,142.69, and disbursements were \$1,201,954.19, or \$75,188.50 in excess of receipts. The excess of disbursements over receipts for the biennial term ending Sept. 30, 1895, is therefore \$181,763.20. The total indebtedness of the State is \$3,241,354.53. Of this amount \$817,646.46 stands charged against the treasury on account of the common-school fund, which is not now a debt against the State. The Chickasaw School fund and the Seminary fund,

amounting to \$1,394,707.96, is held in trust, and the interest only is payable. There are \$300,000 6-per-cent. bonds, due in 1907, and \$103,000 4-per-cent. bonds with twenty years to run. The Swamp Land fund is borne as a debit to the State, amounting to \$160,960.

The last Legislature, at its special session in 1894, authorized the issuance of special warrants by the Auditor of Public Accounts in lieu of cash warrants upon the treasury to an amount not exceeding \$300,000 outstanding at any one time, the warrants to bear interest at the rate of 3 per cent. per annum. These warrants were made receivable for all dues to the State, but without interest when so paid in. The necessity anticipated for the use of these warrants arose in June, 1894, and again in June, 1895, recourse was had to the special warrant act, and the limit was again reached.

The issuing of these special warrants was held by the Treasury Department of the United States Government to be a violation of the Federal laws that prohibit the issuance of such obligations in similitude of the obligations of the United States, and the secret service division of that department caused the arrest of the Governor, Auditor, and Treasurer for an alleged violation of the Federal statute that denounces counterfeiting, and imposes a penalty of twenty years' imprisonment for such violation. But the grand jury failed to indict.

Education.—A summary of the biennial report of the State Superintendent makes the following showing: Educable children (enumeration of 1894), 542,531; enrolled in public schools, 350,615; average daily attendance, 202,683; total value of school property, \$1,636,055; amount expended for public schools, \$1,276,501.

Of the total enrolled, 209,126 are white and 274,614 are colored. Total white teachers, 4,591; total colored, 3,264.

The enrollment at the State University for the fall term was about 250, the largest number since the abolition of the preparatory department, twelve years ago. The institution has a regular income of about \$32,000 from the Seminary fund. By an act of Congress approved June 20, 1894, a township of land was given to Mississippi for the use of the university. Subsequently the lands that had been reserved for naval purposes, chiefly in Jackson and Harrison Counties, were restored to the public domain, and were selected, or enough of them, to make up the township to which the university was entitled. The lands will be sold or leased and the proceeds held in trust by the State for the university.

The Agricultural and Mechanical College, at Starkville, had 256 students for the session ending in June, 1894, and 336 for that ending in June, 1895. A class of 18 was graduated.

At the Industrial Institute and College for girls 300 pupils were enrolled Dec. 1, 1895. A new building is in process of erection, which will accommodate about 100 additional pupils.

The enrollment at the Alcorn Agricultural and Mechanical College for colored boys was 223 at the close of 1895. Of this number, 36 were learning printing, 47 farming, 54 carpentry, 40 blacksmithing, 46 shoemaking, and 3 dairying.

The agricultural colleges, like the State University, receive a township, or 23,040 acres each.

The State Normal School, at Holly Springs, had an enrollment of 202 for the spring term of 1895, and 167 for the fall term. This is for colored students, and has been supported on a yearly appropriation of \$2,000.

Millsaps College, near Jackson, is the joint property of the Mississippi and North Mississippi Conferences of the Methodist Episcopal Church, South. In February 210 students were in attendance. Five departments have been organized. The college has an endowment of about \$107,000.

Bellhaven College for girls, at Jackson, was burned in February. It is to be rebuilt. A few days earlier the Mary Holmes Seminary for colored girls, 2 miles northwest of Jackson, was destroyed by fire. It was built by the colored people of the capital.

Charities.—The State Lunatic Asylum had 632 patients at the beginning of 1894, and 751 at the end; average number, 707. In 1895 new inmates to the number of 258 were received, and 155 discharged; average, 774. There were 142 deaths during the two years. The appropriations for the support of the asylum for the two years amounted to \$190,000.

At the East Mississippi Insane Asylum during the year closing Sept. 30, 1894, there were 303 patients, 42 were discharged, 19 died, and 242 remained. In the year ending Sept. 30, 1895, 304 were treated, 41 discharged, 20 died, and 243 remained. Arrangements have been made to accommodate 300 patients.

During 1894 the patients treated at the State Charity Hospital at Vicksburg numbered 4,524, and in 1895 to Dec. 1 5,762. The Institute for the Blind has about 40 pupils.

The report of the Deaf and Dumb Institution at Jackson gives these details: Total enrollment for the session of 1894-'95—white males, 31; white females, 43; colored males, 14; colored females, 13; total both races, 101.

Penitentiary.—The value of the farm products for 1895 amounted to about \$155,000, while the expenses, aside from the cost of farming implements and animals, reached \$95,000. The number of convicts is more than 1,000.

Banks.—The Auditor's report of 63 State banks doing business Nov. 3, 1894, shows the aggregate of resources and liabilities to be \$10,284,318.77, and of capital paid in \$3,278,775. In March reports from 72 banks were summarized, showing a total capital of \$4,133,725, and deposits amounting to \$8,441,259.15.

Railroads.—Work was begun this year on the Gulf and Ship Island Railroad; the contract requires that it shall be finished to Hattiesburg by August, 1896. The line under construction is 72 miles long. It will open up a large tract of pine land.

Surveys are made for the Mobile, Jackson, and Kansas City road, which will be built as soon as \$250,000 can be raised by subscription in the towns to be benefited.

Water Ways.—A water ways convention was called to meet at Vicksburg, Oct. 22-23, with the object of arousing interest and calling the attention of Congress to the necessity of continuing the work of protecting the lands in the lower

Mississippi valley and improving the navigation of the river. All the funds so far allotted will have been expended by the end of June, 1896.

Cotton.—The cotton crop of the State in 1894-95 was given as 1,200,000 bales. A Cotton-growers' Convention was held at Jackson in January, at which it was agreed that measures should be taken to reduce the cotton acreage by 25 per cent, each member being bound by the articles of association not to cultivate more than three quarters the number of acres of cotton that he planted and cultivated in 1894, the agreement to be binding when signed by owners of three-fourths of the cotton acreage in 80 per cent. of the cotton-growing counties.

State Pensions.—In 1888 \$21,000 was appropriated and expended on Confederate veterans and their widows. In 1894 it was found that \$57,000 was needed to pay the demands on the State. In 1888 the pensioners were an even thousand. In 1894 they had increased to 2,500. In 1895 there were 1,038 applications, of which 60 had been rejected at the close of the year. Forty of the old pensioners had died. At the most, the fund would not afford a *pro rata* of much more than \$20.

Levee Board Accounts.—A question of the indebtedness of the Auditor to the Levee Board, growing out of the defalcation of its treasurer, was considered by the board at its July meeting. The finding was that of the \$12,777 which had appeared to be due from the Auditor, \$8,225.27 had been paid, most of it to the former treasurer of the board, and this was ordered refunded, the balance to be held and to be subject to credit for such payments as he should be able to establish.

Local Option.—The progress of prohibition through the operation of local option is summarized as follows: "There are 75 counties in the State, and until the last very few years saloons were in full blast in most of them, but one county after another has arrayed itself on the side of the cold-water advocates, until in 1894 only 14 remained friendly to whiskey. The total amount paid into the State treasury by these saloons in 1894 was \$107,600. In 1895 several of the 14 counties voted for prohibition. The State license in even the smallest town or village is \$600, and the municipality has the right to double or quadruple that sum at pleasure."

Political.—The Democrats were somewhat divided on the silver question, the Administration adherents being in possession of the State offices, and a large and powerful faction in favor of free silver. There was a movement for a "State primary"—a general vote to select candidates for State offices—and a large number announced their candidacy for the various places on the ticket. The proposition met with general favor, the mass of the people being wrought up on the silver question, which, the Administration Democrats maintained, should not be brought into State politics at all, as it is one for national settlement. As the next Legislature was to have the choice of a United States Senator, however, and the Representatives were expected to stay the will of the people as expressed in the election, the silver question became the great issue in the canvass. A letter from Gov. Stone to the President, apparently charging Federal

officials in the State with taking the side of free silver, and the President's answer, which was widely published, played a prominent part in the campaign. Some newspapers, which had been for free silver or not actively against it, came out for the single gold standard after the publication of the letter, and "sound-money leagues" were formed throughout the State and public debates were held.

The county conventions declared in favor of free silver. The State convention, which met at Jackson Aug. 7, was very large and was overwhelmingly for silver. More than 1,200 delegates had been appointed, though only 206 were entitled to seats. Senator J. Z. George was made permanent chairman, and the following candidates were nominated: For Governor, Anselm J. McLaurin; Lieutenant Governor, J. H. Jones; Secretary of State, J. L. Power; Auditor, W. D. Holder; Treasurer, Albert Q. May; Attorney-General, Wiley N. Nash; Superintendent of Education, A. A. Kincaid; Revenue Agent, Wirt Adams; Land Commissioner, J. M. Slaughter; Clerk of the Supreme Court, E. W. Brown; Railroad Commissioners, J. D. Melton, M. M. Evans, and J. J. Evans.

The resolutions reaffirmed the platform of the Missouri convention, held the preceding day, which was unequivocally in favor of the free coinage of silver and opposed to the issue of interest-bearing bonds. On State matters, the resolutions declared:

We firmly believe that the Democratic party of Mississippi and of the Union affords the only security for the maintenance of white supremacy in the State, and that all political movements which tend to divide or weaken our party are in direct conflict with the true interests of the State and dangerous to the welfare and happiness of both races. We therefore deplore the movement now afoot for the organization of a third party, to be known as the People's party, and we conjure all good men and true patriots to stand by the Democratic party.

Further, they commended the tariff law in force as the best one since 1846, demanded national legislation to suppress dealings in futures, and such a change in the organic law of the nation as to allow of an income tax. A resolution was adopted commending the course of Gov. Stone in the matter of the issuance of State warrants.

The People's party held its State convention at Jackson July 31. J. A. Bailey was permanent chairman, and a ticket was named as follows: For Governor, Frank Burkitt; Lieutenant Governor, S. W. Robinson; Secretary of State, R. E. Buntin; Auditor, R. T. Love; Treasurer, C. W. Bolton; Attorney-General, J. J. Deane; Superintendent of Education, A. Trotter; Revenue Agent, R. E. Mitchell; Land Commissioner, N. C. West; Clerk of the Supreme Court, L. R. Collins; Railroad Commissioners, G. W. Dyer, N. M. Hollingsworth, and T. N. Jackson.

The platform declared in favor of "the free and unlimited coinage of both gold and silver at the ratio of 16 to 1, without the grace of foreign powers and principalities"; for the abolition of national banks and the issue and coinage of all money by the General Government; for an increase of the currency to at least \$50 per capita by the coinage of silver and the issue of full

legal-tender notes, and for payment of the public debt in either silver or gold or both; it condemned the issuance of interest-bearing bonds in time of peace, and declared that public expenses should be reduced, especially fees, salaries, and perquisites of officials, that dealing in futures should be prohibited and trusts and monopolies discouraged; and it favored an income tax, a limit to the term of Federal judges, and "an American Government for American citizens." On State matters these resolutions were included:

Believing the ballot box to be the palladium of liberty, we favor the enactment of laws to guarantee fairness and honesty in elections. We arraign the former and present Democratic administrations for squandering 2,700,000 acres of public-school lands, and we favor, first, the abolition of the office of Land Commissioner and, second, the enactment of laws to prohibit the acquisition of land in this State by a nonresident alien and requiring the disposition of lands now held by such aliens within a given time. We favor a reduction of at least 20 per cent. in the salaries and fees of all public officials.

A legislative committee in 1892, composed of Democrats, ordered by that body to investigate the Auditor's office, reported that it had not had time to make more than a " cursory examination of the office, and that they had not been able to do anything. To make such thorough examinations of the books, vouchers, and warrants as would warrant an exhaustive report would, in your committee's opinion, require several months of diligent work," and the same committee at the session of 1894 " asked leave to say that owing to the limited time and other duties more urgent on the floor of the Legislature, they are not prepared to say they have been able to give that strict examination which alone can make this report accurate." It is inconceivable how a public office could be so conducted as not to show whether or not it was indebted to the Levee Board more than \$12,000, or has to be given until Sept. 1 to prove whether or not it owed the money, keeping up its forfeit in the meantime.

The Hemingway and Ferguson defalcation, together with those of numerous sheriffs and county treasurers, is the logical result of ring rule and life tenure.

Debates between the candidates for the office of Governor and others were held through the State. At the election the entire Democratic ticket was successful. The total vote polled was 64,339, of which the Democrats cast 46,873, and the People's party 17,466.

MISSOURI, a Western State, admitted to the Union Aug. 10, 1821; area, 69,415 square miles. The population, according to each decennial census since admission, was 140,455 in 1830; 333,702 in 1840; 682,044 in 1850; 1,182,012 in 1860; 1,721,295 in 1870; 2,163,380 in 1880; and 2,679,184 in 1890. Capital, Jefferson City.

Government.—The following were the State officers during the year: Governor, William J. Stens, Democrat; Lieutenant Governor, John B. O'Meara; Secretary of State, Alexander A. Leasure; Auditor, J. M. Seibert; Treasurer, Lon V. Stephens; Adjutant General, Joseph A. Wickham; Superintendent of Education, John R. Kirk; Attorney-General, R. F. Walker; Commissioner of Labor, Henry Blackmore; Chief Justice of the Supreme Court, Theodore Brace; Associate Justices, Thomas A. Sherwood, Shepard Barclay, James B. Gantt, Gavin D. Burgess, George B. Macfarlane, Walter M. Robinson.

Finances.—The Auditor's report for the year ending Dec. 31, 1895, showed: Balance on Jan.

1, 1895, \$719,725.43; receipts from all sources, \$3,805,977.49; disbursements for all purposes, \$4,191,666.77; balance, Dec. 31, 1895, \$334,014.15. Of the \$2,746,478.50 appropriated from the revenue fund for the general expenses of the State in 1895-'96, \$1,687,279.60 was drawn in 1895 leaving \$1,061,198.93 to be paid out in 1896. The principal items of appropriations were: Pay of General Assembly, \$121,744, and contingent expenses of the same, \$92,310.52; civil officers, \$232,884.65; costs of criminal cases, \$466,351.50; assessing and collecting revenue, \$171,746.60; and payments on debt, \$527,000. The bonded debt on Jan. 1, 1895, aggregated \$6,016,000, and on Dec. 31, \$5,489,000, comprising \$5,086,000 in 3½-per-cent. bonds, redeemable at the pleasure of the State at any time before 1907, and of \$403,000 in 6-per-cent. bonds. Of the last class of bonds, \$55,000 was payable on Jan. 1, 1896, and \$337,000 on July 1 following, leaving only \$11,000 to be paid in 1897.

Valuations.—The State Board of Equalization fixed the values of real and personal property for taxation in 1895 as follow: Acreage property, returned by assessors, \$337,676,032; net decrease by the board, \$30,952,498; value as fixed by the board, \$306,923,534; town lots, returned by assessors, \$410,693,363; net decrease, \$3,493,697; value as fixed, \$407,199,666; and personal property, returned by assessors, \$218,048,473; net decrease, \$1,513,448; value as fixed, \$216,535,025. The items summarized show: Aggregate returned by assessors, \$966,617,868; net decrease by the board, \$35,959,543; and aggregate as fixed by the board, \$930,658,225. The board reported fully on the results of the assessors' convention of 1894, called by the Governor at the request of the board to remedy the inequalities in the assessment of property. The convention adopted resolutions recommending the assessment of property at its true value. The expectations of the board were not realized, as efforts to assess according to the statute were made in 15 counties only, thus creating greater discrepancies than before. The board was therefore compelled to equalize the aggregate returns by reducing those in the 15 counties and increasing those in others where the valuations were manifestly too low.

Banks.—The State banks, on April 3, 1895, numbered 482, and had a combined capital of \$20,070,040; loans and discounts, \$60,913,434; total resources, \$102,867,688; deposits, \$68,312,358; surplus, \$8,722,890. The loan-and-trust companies numbered 7, and had aggregate capital of \$6,150,000; loans and discounts, \$4,164,011; total resources, \$16,367,807; deposits, \$6,687,974; and surplus and undivided profits, \$1,413,766. There were also 94 private banks with reported capital of \$1,191,860; resources, \$8,258,390; deposits, \$6,053,389; loans and discounts, \$4,591,729; and surplus, \$418,056. The State had an aggregate banking capital of \$46,526,900, and the banks had deposits of \$127,935,200, loans and discounts of \$122,043,328, and surplus of \$13,689,797.

Education.—The annual statement of the United States Commissioner of Education, Sept. 1, 1895, reported an enrollment of 657,505 pupils in the public schools, an average daily attendance of 469,846 pupils, and an expenditure for

public education, exclusive of payments on debts, of \$5,816,634. There were 5,567 male teachers and 8,954 female teachers—total, 14,521. For superior education there were 30 universities and colleges of liberal arts, with 528 professors and instructors; 7,219 students (4,968 males and 2,251 females); and 147,531 volumes in the libraries. The value of grounds and buildings was \$4,208,200, of scientific apparatus and libraries, \$201,050. The institutions had productive funds aggregating \$2,955,958, and a total income in 1893-'94 of \$542,472.

Taxable Manufactures.—In the fiscal year ending June 30, 1895, the collections of internal revenue in the two districts into which the State is divided aggregated \$7,890,000.70. There were 528 cigar factories, which in the calendar year 1894 used 1,196,040 pounds of tobacco in the manufacture of cigars and 3,880 pounds in that of cigarettes, and had an output of 65,420,772 cigars and 1,194,800 cigarettes; and 92 other factories, which used 45,253,659 pounds of leaf tobacco, 2,236,759 pounds of scraps, and 1,587,739 pounds of stems, 11,967,951 pounds of licorice, 6,999,406 pounds of sugar, and 2,605,570 pounds of other materials, and had an output of 31,948,528 pounds of plug tobacco, 85,057 pounds of fine cut, 5,569,077 pounds of smoking tobacco, and 26,012 pounds of snuff. The revenue stamps required for the sale of the different kinds of manufactured tobacco cost \$3,461,653.14. During the year 53 out of 76 grain distilleries and 24 out of 18 fruit distilleries were in operation. The production of fruit brandy was 5,606 gallons from apples and 192 gallons from grapes, and of fermented liquors, 2,132,743 barrels. The amount of spirits rectified was 2,760,364.16 gallons, and amount of distilled spirits gauged, 6,599,680 gallons. Oleomargarine was manufactured to the amount of 1,013,544 pounds.

Agriculture.—The United States Department of Agriculture reported as follows on the principal crops of the calendar year 1895: Corn, 4,613,118 acres, 238,072,248 bushels, value \$47,614,450; wheat, 1,541,664 acres, 18,499,968 bushels, value \$9,494,984; oats, 1,102,805 acres, 30,547,609 bushels, value \$5,498,586; rye, 20,183 acres, 246,233 bushels, value \$96,031; potatoes, 95,594 acres, 10,765,276 bushels, value \$2,691,319; and hay, 2,329,731 acres, 2,725,785 tons, value \$18,535,588; total value, \$83,870,708. The department's estimate of the average farm price of the principal products, on Dec. 1, 1895, was as follows: Corn, 20 cents per bushel; wheat, 31; rye, 39; oats, 18; barley, 48; buckwheat, 36; Irish potatoes, 25; sweet potatoes, 42; hay, \$6.80 per ton; cotton, 74 cents per pound; and leaf tobacco, 87 cents per pound.

Live Stock.—In January, 1895, the United States Department of Agriculture estimated the number and value of farm animals in the State as follows: Horses, 998,277, value \$27,031,442; mules, 240,123, value \$8,096,916; milch cows, 758,447, value \$14,014,114; oxen and other cattle, 1,594,670, value \$28,036,872; sheep, 860,820, value \$1,401,587; and swine, 3,561,136, value \$16,050,041; total value, \$94,630,972.

Mineral Productions.—The eleventh report of the United States Geological Survey on "Mineral Resources of the United States," which was issued at the close of 1895, covers the calendar

year 1894, and shows a considerable decrease in amounts and values of many of these products in Missouri, largely caused by the business depression and local labor troubles of that year. The most important of these industries is coal mining, which had a product of 2,245,000 short tons, valued at \$2,634,564, a decrease in quantity of 652,400 short tons and in value of \$629,193 from the output and value of 1893. Of the total product, 1,965,355 tons were loaded at the mines for shipment, 242,501 tons were sold to local trade and used by employees, and 47,860 tons were used at the mines for steam and heat. The average number of men employed was 7,202, and the average price per ton at the mine was \$1.17, a decrease of 6 cents from 1893. There were 3 coking establishments in the State, operated exclusively for the zinc-smelting works, which had 10 ovens, used 3,442 short tons of coal, and produced 2,250 tons of coke, valued at \$3,563. The quarry products were granite, 998,757, a decrease from \$208,800 in 1893, principally taken from Iron, Wayne, St. Francois, and Madison Counties; sandstone, \$131,687, an increase from \$75,701 in 1893; and limestone, \$578,802, a decrease from \$601,543 in 1893 and \$1,850,960 in 1890. Of manufactures of clay products, reports from 242 establishments showed an output of 258,922,000 common and pressed brick, valued at \$1,541,563; ornamental brick to the value of \$47,363; fire brick, \$202,722; vitrified and paving brick, \$190,239; drain tile, \$172,220; sewer pipe, \$150,000; tile other than drain, \$24,679; and miscellaneous articles, \$296,026; total value, \$2,615,578. Iron mines yielded 64,601 long tons of red hematite and 17,225 of brown—total, 81,926; and the production of pig iron declined from 32,000 long tons in 1894 to 6,522 tons. Of other there was a product of 1,800 short tons; value, \$23,160.

Commerce.—During the fiscal year ending June 30, 1895, the receipts of imported merchandise at the interior ports of delivery of Kansas City, St. Joseph, and St. Louis aggregated in value \$3,358,148, an increase of \$1,091,187 over the total of the previous year.

Defense of the Ballot.—In April the Supreme Court of the State rendered an important decision in connection with the new ballot law. At the elections in November, 1894, gross frauds were alleged to have been committed in Kansas City and in Jackson County, and the grand jury called on the recorder of voters to produce the ballot boxes for inspection. The recorder demurred, and the case went to the Supreme Court, which denied the right of the criminal court to compel the recorder to produce the ballot boxes, and held that to give the grand jury the right to inspect the ballot boxes would be a violation of the secrecy of the ballot, as well as an infringement of the Constitution. In summing up, the court said: "The considerations which induced the States of this Union to adopt the secret ballot not only continue to exist, but others have been added. The timid voter to-day is not only protected from his opulent employer, but from the aggressive spirit of his own fellows and the dominations of brotherhoods and unions."

Missouri at Chickamauga.—The State will be represented on this historic battlefield by 4

monuments, 2 commemorating the Bledsoe and Barrett batteries of the Confederate Army, and 2 in honor of the Second and Fifteenth Regiments of Missouri Infantry that served in Laidlaw's Brigade of the National Army.

Immigration.—During 1895 a large number of wagon trains of settlers passed through Ozark, going southward. Douglas and Taney Counties have attracted most of the immigrants, and the Government lands in the White river country have become popular with people of limited means from the more crowded States. Among the new settlers are many experienced farmers, anxious to escape the cold winters of Nebraska, Iowa, Minnesota, and the Dakotas.

Political.—The Free-silver Democratic members of the Legislature held conferences in Jefferson City, May 1 and 2, and adopted resolutions declaring that the vital question before the country was the money question, and that the Democratic party from its organization had always been a party of bimetallism, claiming that the redemption money of the country and the basis of all currency and paper credits should be both gold and silver, and that these metals should be coined at the ratio of 16 to 1. The resolutions also asked the Democratic State Committee to call a convention for the purpose of enabling the Democratic party of Missouri to declare its views on the subject. A convention was held at Pertle Springs, Aug. 6, and Congressman R. P. Bland was chosen chairman. The convention decided to reorganize the State Democratic Central Committee by adding 19 new members, 1 from each congressional district and 4 from the State at large, and authorized calls for a State convention to elect delegates to the National Convention not later than April 15, 1896, and for another to nominate candidates for State offices, to be held after the National Convention. A platform was adopted which contained the following resolutions:

That we, the Democratic party of Missouri, in convention assembled, demand the free and unlimited exchange of silver and gold into primary or redemption money at the ratio of 16 to 1, without waiting for the action or approval of any other nation; and

That we are irrevocably opposed to the substitution for metallic money of a panic-breeding corporation credit currency based on a single metal, the supply of which is so limited that it can be cornered at any time by a few banking institutions in Europe and America.

That we are opposed to the policy and practice of surrendering to the holders of the obligations of the United States the option, reserved by the law of the Government, of redeeming such obligations in either silver coin or gold coin.

That we are opposed to the issuing of interest-bearing bonds of the United States in time of peace, and especially are we opposed to placing the Treasury of the Government under the control of any syndicate of bankers, and the issuance of bonds to be sold by them at an enormous profit, for the purpose of supplying the Federal Treasury with gold to maintain the policy of gold monometallism.

MONTANA. a Western State, admitted to the Union Nov. 8, 1889; area, 146,080 square miles; population, according to the census of 1890, 132,159. Capital, Helena.

Government.—The following were the State officers during the year: Governor, John E. Richards; Lieutenant Governor, Alexander C.

Botkin; Secretary of State, Louis Rotwitt; Treasurer, Frederick W. Wright; Auditor, Andrew B. Cook; Attorney-General, Henri J. Haskell; Superintendent of Public Instruction, Eugene A. Steere; Adjutant General, C. F. Lloyd—all Republicans; Game and Fish Warden, C. S. Taylor; State Examiner, D. D. Bogart; Register of the Land Office, S. A. Swiggert; Chief Justice of the Supreme Court, William Y. Pemberton, Populist-Democrat; Associate Justice, W. H. De Witt and W. H. Hunt, Republicans.

Finances.—The assessed valuation of all the counties is \$124,076,585.50, and the total indebtedness is \$2,798,030.82. The tax levy in the counties varies from 14½ mills in Lewis and Clarke County to 27½ in Custer. The railroads are assessed at \$10,522,354, which is included in the above total. In 1894 they were assessed at \$10,062,457. The live-stock assessments were increased in all the counties by the State board. In providing for the bounties to be paid for wolves, coyotes, or other stock-destroying animals, the legislative act named two sources of supply for the fund—one the State and county licenses, of which 5 per cent. is devoted to the purpose, and the other a tax of 1½ mill on the assessed value of live stock throughout the State. It is estimated that the percentage of licenses will amount to about \$20,000, and \$30,000 more will be raised by the tax. The assessed value of horses in the State is \$3,391,571; of cattle, \$11,446,888; of sheep, \$4,135,987.

The balances on hand in the following funds, Nov. 3, 1895, were: Escheated estates, \$5,773.20; permanent school fund, \$156,498.04; school income fund, \$47,972.47; University fund, \$9,850.10; Normal School bond fund, \$2,321.00; State Capitol building fund, \$4,745.22; Reform school building fund, \$1,546.58; Agricultural College bond fund, \$176.97; general fund, \$32,415.95; stock inspection and detective fund, \$353.55; stock indemnity fund, \$2,481.94; sheep inspection and indemnity fund, \$5,676.41; State bounty fund, \$2.53; beautifying State Capitol grounds, \$3,220; total, \$273,034.86.

Education.—Under the new law the State school fund was established, and \$51,044.50 received from the sale and lease of school lands was in the treasury at the end of the year, to be divided among the counties at \$1.30 *per capita*. The number of children between the ages of six and twenty-one is 39,265.

The State University, at Missoula, was opened for the first time in September, with Oscar J. Craig as president. Missoula gives the use of a new school building for the university until the State shall have erected one.

The Agricultural College, at Bozeman, had an enrollment of 120 the first term of the year. It has a farm of 160 acres, and a building site of 20 acres. Contracts have been let for buildings. A building has been finished for the experimental station, and several farm buildings. Temporary accommodations are provided for the classes.

Contracts have also been let for building the State Normal School at Dillon.

State Institutions.—The report of the State Prison, at Deer Lodge, for the year ending Nov. 30, 1895, shows a total of 321 convicts, 2 of whom are sentenced for forty years, and 18 for life. The current expense for the year was

\$40,730.30. The prisoners have built a massive stone wall around the grounds, and assisted in the work on the new building, the cost of which was \$19,427.51 in addition to their labor, which, at the rate of \$1 a day, amounted to \$39,023. The completion of the building, which has taken two years, was celebrated Dec. 5 and 6 by musical and dramatic entertainments, the performers being inmates of the prison. A school was opened in the prison Dec. 12. Both instructors and pupils are convicts.

The legislative committee appointed to inspect the Insane Asylum at Warm Springs recommended the management in every particular. The plant is not owned by the State.

The first annual report of the State Orphans' Home, at Twin Bridges, shows that the institution is in good running order. There are 5 employees, including the superintendent, and 21 children. The average cost of each for one week is \$3.25.

The Asylum for Deaf, Dumb, and Blind Children, at Boulder, had only 13 in attendance in February—all that could be accommodated—while there were 40 applications for admission. The Legislature of 1895 made provision for suitable buildings.

The Reform School, near Miles City, had in February 37 inmates, of whom 6 were girls, of ages from eight to twenty. Of the land given to the school by Miles City, 35 acres were put under cultivation in 1894, and 5 left for pasture. The crop raised was worth about \$2,300.

Railroads.—A suit of one railway corporation against another, involving the right of the one to condemn lands already condemned by the other, but not in use by them, was decided by the Supreme Court in favor of the new road, the court holding that the land could be recondemned if not in actual use.

The Montana Railroad Company has bought the Montana Midland. The articles of incorporation state that the line of the road is to be extended through Lewis and Clarke, Jefferson, Meagher, and Gallatin Counties. The capital stock is \$3,500,000.

Banks.—The following summaries show the resources and liabilities of the 2 savings banks on Oct. 7, 1895: Loans and discounts, \$602,191.82; overdrafts, \$66,059.90; stocks and bonds, \$515,273.80; due from other banks, \$372,640.88; banking houses, furniture, etc., \$89,221.15; other real estate, \$80,525.61; current expenses and taxes, \$4,250.26; cash and cash items, \$331,319.21; total, \$2,021,392.63.

The liabilities are: Capital stock, \$200,000; surplus, \$55,000; undivided profits, \$57,360.12; deposits subject to check, \$528,955.26; individual deposit on interest, \$887,374.90; demand certificates on deposit, \$185,609.02; time certificates of deposit, \$185,609.02; cashiers' checks, \$9,919.76; due other banks, \$2,342.50; total, \$2,021,392.63.

Irrigation.—Work has been going on during the year on the Tongue river irrigating canal in Carter County; but two or more seasons in addition will be required to finish it. A canal in Park County was completed in July after three years' work. It taps the Yellowstone about a mile above Fridley and is 12 feet wide on the bottom. It winds around on the bench land

and has a length of 13 miles. The canal has a capacity for carrying water sufficient to irrigate about 2,500 acres.

State Lands.—The office of State Land Register was created by the last Legislature. This officer has charge of all lands in which the State is interested. The Government gave 72 sections to the Territory in 1891, amounting to 46,080 acres; and in 1899 it gave 822,000 acres for public institutions. Sections of land aggregating 235,510.06 have been selected. When land is sold outright it is sold at its appraised value, provided it brings \$10 an acre. No land is sold for less than that sum. When property is sold the money derived from the sale goes into the permanent school fund, while the interest and rentals go into the general school fund.

Industries and Products.—The wool clip of 1894 was 6,527,469 pounds, and the quantity in 1895 was estimated as considerably larger. A State Wool-growers' Association was organized in November. The chief inspector for the Montana Stock-growers' Association, reported the number of Montana cattle received at Chicago this season as 215,534. During the season he forwarded \$105,358.31 to the secretary of the association for strays.

The dry season was unfavorable not only to the farmers and stock men, but also to those engaged in placer mining. Many rich strikes and valuable finds have been reported from the mining districts during the year. One of these is the finding of valuable ore in a "belt lead" running east and west through Helena, which had been theoretically located by Prof. F. Carr. Lump Gulch is a silver camp which has been largely developed in the past year. A strike of very rich gold ore at Whitehall, in the Pipestone district, was reported in June. A rich gold strike is said to have been made on Deer creek above De Borgia, and the Monitor Gulch district, beyond Rimini, has been attracting attention this season, also the Ontario district west of Helena, while the Marysville district north of Helena, one of the oldest in the State, has been brought into fresh notice, and valuable properties have been opened up. Other localities where rich deposits of gold have been reported are St. Louis, Birch creek, in Meagher County, Belt creek, near Neilhart, and the Little Rocky, Beaver creek, Curlew, and Prickly Pear districts.

A rich strike of copper was made at Meaderville in May, a ledge of copper glassed 16 feet in width. The copper works at Anaconda have a capacity for turning out 50 tons of refined copper a day.

The discovery of a large deposit of asbestos 15 miles from Dillon was reported early in the year. It was traced 2,500 feet and is over 100 feet wide. A company has been formed to work the gypsum deposits at Killbuck.

A new discovery of valuable lead ore, showing an average of nearly \$60 a ton, has been made in Park County.

According to the figures given out from the Government assay office at Helena, the values of metals produced in the State in 1894 are as follows: Gold, fine, \$2,508,428.97; silver, fine, \$17,634,219.78; copper, \$17,252,718.06; lead, \$730,351.52; total, \$39,466,919.13.

The silver is estimated at the coinage value of \$1.29 an ounce.

Fort Harrison.—The new military post was established at Helena in September, when 2 companies of infantry arrived from Fort Assiniboine to garrison the fort. The site comprises 1,040 acres, of which 200 acres are hilly and will in time be used for bomb-proof cellars. When all the buildings are up they will form almost a complete circle. Appropriations amounting to \$300,000 have been expended upon them.

The Cree Indians.—Several hundreds of these Indians formerly living in British territory, but expatriated in the Riel rebellion, are roaming about the State, perfectly lawless and a terror to the people in the sparsely settled districts. The Legislature adopted a memorial to Congress asking that they might be returned to their own country or settled on some of the reserved land. This was vetoed by the Governor on the ground that the only proper course was to insist upon the removal of these foreign Indians from the State. The veto was sustained.

Legislative Session.—The Legislature convened Jan. 7, and adjourned March 7. On joint ballot, the Republicans had 56 members, the Democrats 7, the Populists 15, the Fusion and Populists 3, the Independent Republicans and Populists 1. Representative Swett was Speaker of the House.

Two United States Senators were to be chosen, one for the regular term beginning March 4, 1895, and one to fill a vacancy caused by the failure of the third Legislative Assembly to elect. The Republicans nominated Lee Manly for the vacancy and Thomas H. Carter for the full term. Before the vote was taken a communication was sent into the House from the A. P. A. headquarters in Butte, protesting against the election of Mr. Carter, who is a Catholic. When the reading had proceeded far enough to show the tenor of the remonstrance its reading was interrupted, and by unanimous vote the House directed that it be returned as unopened. All the Republican members voted for the nominees.

The radical work of the session was the adoption of the new code, which had been prepared by the Code Commission. It was not merely a codification of existing laws of the State, but involved some changes, especially in the code of civil procedure, where the code prepared for New York by David Dudley Field was mainly followed. The House committee to which were referred the 4 codes—viz., the code of civil procedure, the penal code, the civil code, and the political code—reported that they should be adopted at the earliest day possible.

The codes were enrolled and passed as recommended, and amended in various particulars, especially the political code. A bill to prevent corrupt practices at elections and requiring published statements of election expenses by candidates became a law, and one to regulate the holding of caucuses and primary elections. An act relative to the marking of ballots was vetoed and passed over the veto.

The law on the sale of property for delinquent taxes was amended.

Bills were introduced for the creation of 4 new counties, but only 2, Carbon and Sweet Grass, were formed.

A bill was passed authorizing the construction of a Capitol at Helena, to cost \$1,000,000. One previously passed provided for a commission to buy a site. The money is to come from the sale of lands given to Montana by the Government for such purpose.

A law was made forbidding all forms of gambling. Heretofore games of chance have been licensed; the revenue from this source in 1894 was \$34,894.44, of which the State treasury received one fourth. The new law, placing Montana in line with most of the other States in this respect, was to go into operation July 1, and at that time gambling places were closed. But it was claimed that the law was not properly passed, owing to an erroneous title, which made it an amendment to a section in the code which contained no reference to gambling. Test cases were brought before two district judges, who decided that the law was void, and their decision was affirmed by the Supreme Court.

The game laws were amended. Fishing is allowed throughout the year, but can be done only with a pole, hook and line, or a spear. Bison, buffalo, quail and Chinese pheasant, female moose and elk are protected indefinitely. The open season for bull moose and elk is from Sept. 1 to Dec. 15. The open season for deer, mountain sheep, Rocky Mountain goats, and antelope is from Sept. 15 to Jan. 1. During that time no person is allowed to kill more than 8 animals of each kind. Prairie chicken, grouse, fool hen, pheasant, or partridge can be killed between Aug. 15 and Jan. 1, and during the open season no more than 100 birds of each kind may be killed. Ducks, brant, and geese may be hunted between Aug. 15 and May 15. All kinds of singing birds are protected forever. A Board of Fish and Game Commissioners was created.

Later in the year the Attorney-General decided that the law of 1893, which was not repealed or amended, is still in force. That law made it illegal to kill any elk or moose for six years.

Several bills were introduced providing for the establishment and maintenance of a soldiers' home, each naming a location. They were referred to the Committee on State Institutions, and it reported a substitute which was passed, providing for the location of a soldiers' home, but leaving the selection of a site to a committee of 5 veterans, to be appointed by the Governor, no more than 2 to be from the same Grand Army post. Appropriations of \$10,000 for a building and \$13,000 for support for two years were made. The committee decided upon a site at Columbia Falls, 50 feet above Flathead river, and about half a mile from the Great Northern Railway. Other acts of the session were:

Providing for a State examiner.

Creating a free State employment agency in connection with the Bureau of Agriculture, Labor, and Industry.

Providing for the payment of bounties on certain stock-destroying animals and to create a bounty fund.

To provide a floral emblem for Montana.

To protect associations and unions of workmen and persons in their labels, trade-marks, and forms of advertising.

Providing for the erection of buildings for the State Normal School.

Regulating the sale of oleomargarine and butterine.
Prohibiting the sale of cigarettes or tobacco to minors.

Requiring the American flag to be displayed over national banks.

Changing Arbor Day from April to May.

Providing for the incorporation of co-operative associations.

To prevent the alteration and defacements of brands and marks on animals, and to provide compensation to animals whose brands or marks have been altered or defaced.

Changing the conditions under which foreign corporations may do business in the State.

For the suppression of the Scotch bull and the Russian thistle.

Providing for circulating libraries in the State.

Making the age of consent sixteen years.

Providing for the erection of buildings for the School of Mines.

Providing for the organization, government, and control of building, loan, and savings associations.

Appropriating money for the completion of the Eastern State Prison.

To encourage best culture and the manufacture of sugar.

It was enacted that an amendment to section 2, chapter ix, of the Constitution, relative to the rights of suffrage and qualifications for holding office shall be submitted to the people.

The State Constitution calls for a census of Montana in 1895, but the Legislature failed to pass a bill that was introduced providing for it on account of the expense involved.

MORAVIANS. The following is a summary of the statistics of the Moravian Church in the United States, as given in the latest published report for the year ending Dec. 31, 1894:

Northern American Province.—Number of congregations, 80; of communicants, 10,593; of noncommunicants, 1,075; of children, 4,658; total membership, 16,329; of members of Sunday schools (teachers and children), 10,040; amount of contributions for church support, \$111,276; of contributions for Church enterprises and other Christian objects, \$23,343. The objects for which these latter contributions are taken include retired ministers, the Bohemian mission, foreign missions, the Alaska mission, home missions, the Theological Seminary, and other Moravian causes and general Christian objects.

Southern American Province.—Number of communicants, 2,330; of noncommunicants, 387; of children, 1,031; total membership, 3,548; of members of Sunday schools, 3,514. Total for the United States, 12,923 communicants, 1,362 noncommunicants, 5,689 children, 19,977 members in all and 12,554 members of Sunday schools. The net increase of communicants during the year was 388; of members, 360; and of members of Sunday schools, 846.

The year's contributions for foreign missions in the Northern American Province were \$4,467, in addition to which the Unity's Elders' Conference appropriated \$7,500, making a total fund for the district of \$11,967. The Alaska mission, in which the American provinces have a special interest, includes 9 stations, and returns 12 missionaries, 14 native helpers, 180 communicants, 87 noncommunicants, 134 children, 155 "new people" (who attend the services and are brought under the care of the missionaries), and 29 candidates for admission. The increase of members during the year was 59; 25 adults and 33 children were baptized, 2 adults and 3 children were received, 28 candidates were confirmed, 22 couples were married, and 11 members were excluded and dropped.

The general missionary work of the Church is under the care of the Unity's Elders' Conference, at Berthelsdorf, Saxony, and extends around the world, reaching from Alaska to Australia, and from Greenland to the Cape of Good Hope. It embraces, according to the report for 1894, 21 missions, 150 stations, 24 preaching places, 174 brethren and 174 sisters missionaries, 43 native missionaries, 1,896 native assistants, 32,363 communicant members, 17,503 baptized adults, 37,641 baptized children, 6,196 candidates, etc., 251 day schools, with 566 teachers and assistants and 24,002 pupils, 111 Sunday schools, with 1,244 teachers and assistants and 16,278 pupils, and a total membership of 93,643, or 200 more than in 1893.

A new "Atlas of the Missions," published by the Mission Department of the Unity's Elders' Conference to take the place of the one published twenty-five years before, consists of 16 maps, with descriptive letterpress, and shows the growth of the missions during a quarter of a century. An effort was made during the year to pay off the debt existing against the Foreign Mission fund of \$27,971. In January, 1896, a sufficient amount having been contributed, the debt was canceled.

The annual "Text-book" of the Moravian Church is substantially the same throughout the world, with only such changes as are necessary to adapt it to the different nationalities by which it is to be used. It is translated into 9 languages, and about 100,000 copies are printed in German, 16,000 in French, and 6,000 in English. The American edition includes 2,185 copies in English and 2,121 in German. Editions are also printed, some of them without the hymns, in Bohemian, Dutch, Spanish, Negro-English (for Surinam), and Eskimo. In Europe it is much used by others than Moravians. It is originally prepared by the Unity's Elders' Conference at Berthelsdorf.

N

NATIONAL ACADEMY OF SCIENCES. The officers of the Academy in 1895 were: President, Wolcott Gibbs; Vice-President, Francis A. Walker; Foreign Secretary, Alexander Agassiz; Home Secretary, Asaph Hall; Treasurer, John S. Billings. Two meetings were held in 1895.

The first or stated meeting was held in Washington on April 16-19. On that occasion the following papers were read:

"Notes on the Florida Reef" and "The Progress of the Publications on the Expedition of 1891 of the United States Fish Commission Steamer 'Albatross'."

Lieut.-Commander Z. L. Tanner, commanding," by Alexander Agassiz; "On Some Variations in the Climate Europe," by Alexander Agassiz and W. McMillan Woodworth; "On the Composition of Expired Air, and its Effect upon Animal Life," by John S. Billings; "On a New Determination of the Nutation Constant, and Some Allied Topics," by Seth C. Chandler; "The Extinct Cetacea of North America," by Edward D. Cope; "Systematic Catalogue of Euro-

George J. Brush, of New Haven; Benjamin A. Gould, of Cambridge; Simon Newcomb, of Washington; Ira Remsen, of Johns Hopkins; George L. Goodale, of Harvard; and Othniel C. Marsh, of Yale.

In accordance with the requirements of the will of President Barnard, of Columbia College, the Academy selected the name of Lord Rayleigh for presentation to the trustees of Columbia College as that of the scientist most worthy of the Barnard medal, which is awarded every five years to the person who shall have most distinguished himself by a discovery in physical or astronomical science. The deaths of James Edward Oliver and James Dwight Dana were announced, and the preparation of biographical memoirs of the deceased academicians assigned respectively to George W. Hill and Edward S. Dana. The death of John Newton occurred later. Sketches of these members will be found elsewhere in this volume.

The scientific session was held in Philadelphia, Oct. 29-30, when the following papers were read:

"On Borings through the Coral Reef in Florida," by Alexander Agassiz; "The Filar Anemometer" and "The Countertwisted Curl Aneroid," by Carl Barus; "The Olindiadæ" and "New Campanularian Medusæ," by William K. Brooks; "On a New Variety of Peculiar Character," by Seth C. Chandler; "On a Bone Cave at Port Kennedy, Pa.," and "On the Paleozoic Reptilian Order of the Cotylosauria," by Edward D. Cope; "On the Alkali Uranates," by Wolcott Gibbs; "On the Persistence of Fresh-water Types," by Theodore Gill; "On the Asteroids," by Asaph Hall; and "On the Broadening of Spectral Lines by Temperature and Pressure," by Albert A. Michelson.

Dr. Gibbs presided for the first time at this session, and delivered an address in which he described the functions of the Academy. Besides the adoption of certain rules governing the meeting of the Academy two important resolutions were passed. The first, of congratulation to J. Peter Lesley on the successful termination of the second and great geological survey of Pennsylvania, the results of which have been given to the public in over 150 octavo volumes. The second, likewise congratulatory, was to Dr. John S. Billings. It was in appreciation of the completion of his "Catalogue of the Army Medical Library" and the issue of the sixteenth and final volume of that unequalled gift to the physician and medical scholar of the world.

NATIONAL GUARD. The aggregate strength of the National Guard of the several States, ascertained from Federal and State reports, together with data supplied direct by State and Territorial authorities, bringing results as nearly as possible up to date is 114,397.

Independent Force.—In addition to the aggregate given above there is a considerable independent force scattered throughout the States, yet not attached or responsible directly to the local or Federal military or administrative authorities. No reliable data can be secured to show the aggregate strength of these independent organizations; but in an emergency several thousands would be added to the rolls from this source.

Total of Each Arm.—The National Guard proper consists of about 1,500 general and staff officers, and a regimental strength in officers and men of 97,900 infantry, 5,088 cavalry, 5,079 artillery, 1,438 cadets, and 3,392 naval militia.

WOLCOTT GIBBS.

pean Fishes," by Theodore Gill; "On the Application of a Percentage Method in the Study of the Distribution of Oceanic Fishes: A. Definition of Eleven Faunas and Two Subfaunas of Deep-sea Fishes. B. The Relationships and Origin of the Caribbeo-Mexican and Mediterranean Subfaunas," by G. Brown Goode; "On the Color Relations of Atoms, Ions, and Molecules," by M. Carey Lea; "A Linkage showing the Laws of the Refraction of Light," by Alfred M. Mayer; "Relation of Jupiter's Orbit to the Mean Plane of Four Hundred and One Minor Planet Orbits" and "Orbit of Miss Mitchell's Comet, 1847 VI," by Hubert A. Newton; "On the Two Isomeric Chlorides of Ortho-sulpho-benzoic Acid" and "On Some Compounds containing Two Halogen Atoms in Combination with Nitrogen," by Ira Remsen.

The following papers were read by gentlemen not members of the Academy:

"On the Secular Motion of a Free Magnetic Needle," by Louis A. Bauer; "Mechanical Interpretation of the Variations of Latitude," by Robert S. Woodward; and "On Soil Bacteria," by M. P. Ravenel; also a "Biographical Memoir of Dr. Lewis M. Rutherford" was presented by Benjamin A. Gould.

One of the conspicuous events of this gathering was the presentation of the Watson medal to Seth C. Chandler, of Cambridge, for his "researches on the variation of latitudes, on variable stars, and for his other works in astronomy."

At this meeting the following new members were elected: William L. Elkin, of the astronomical observatory of Yale University; Charles S. Sargent, of the botanical department of Harvard University; William H. Welch, of Johns Hopkins Medical College; and Charles O. Whitman, of the biological department of the University of Chicago. Also the following foreign members were chosen: Rudolph Leuckart, of Leipzig, a physiologist; Sophus Lie, of Leipzig, a mathematician; and Julius von Sachs, of Würzburg, a botanist. At the business session new officers were chosen, and the changes made were the advancing of Wolcott Gibbs from the place of foreign secretary to that of president, and the election of Alexander Agassiz to the office of foreign secretary.

The members of the council chosen were:

Infantry Armament.—All the infantry in every State except New York, 3 regiments in Connecticut, and a portion of the National Guard in Florida, Virginia, and Wyoming, are armed with the Springfield rifle, caliber '45, of all models from that of 1873 to the latest. The New York infantry carry the Remington, caliber '90; the three Connecticut regiments mentioned use the Peabody, '45, and some of the infantry in Florida, Virginia, and Wyoming use the same rifle as those of New York. The Federal report pronounces the general condition of rifles as fair to good, "but many arms are unserviceable from neglect."

Cavalry Armament.—The arms of the cavalry are of the same kind as those used by United States troops, with exceptions in New York, Pennsylvania, Georgia, Oregon, and New Mexico, where non-regulation carbines are carried. In Alabama, Arkansas, California, New Jersey, Ohio, Wisconsin, the District of Columbia, and Utah the cavalry armament includes the saber, carbine, and revolver, and the armament in the several States ranges from that condition of efficiency to the carbine as the only weapon, as in Colorado, North Dakota, and New Mexico. New Hampshire cavalry depend entirely on the saber as a means of defence.

Artillery Armament.—The total artillery armament, according to the latest and most reliable reports, comprises 252 ordinary field-pieces (not all serviceable), 102 Gatling guns, and 11 howitzers. The men in this branch generally carry a saber. Some have a revolver in addition, and in a small number of batteries the men are armed with rifles or carbines.

Camp Equipage.—The number of tents available for the force of State militia, including squares, common, and hospital tents, is 1,614.

Arrangement by Groups.—For ready reference in making comparisons of sectional strength and availability, the synopsis of State reports which follows is given by geographical groups, the first being that of the North Atlantic States, including Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, and Pennsylvania.

North Atlantic Division.—The aggregate force in the North Atlantic division, including the nine States above mentioned, shows an authorized strength of 48,351. The total of infantry actually organized is 33,853; cavalry, 861; artillery, 1,575; cadets, etc., 1,438; naval militia, 1,428. The number of adults liable to serve in this division is reported to be 2,572,305. The artillery armament of the organized militia in the division consists of 96 ordinary field pieces, 42 Gatling guns, and 8 howitzers. The number of tents available, as reported, is 8,655.

South Atlantic Division.—The South Atlantic division embraces Delaware, Maryland, District of Columbia, Virginia, West Virginia, North Carolina, South Carolina, Georgia, and Florida. The authorized strength of the State militia aggregated for this group is 36,373. The actually organized force includes 15,503 infantry, 3,452 cavalry, 409 artillery, and 782 naval militia. The number of adults liable to serve is recorded as 1,083,144. The artillery armament available consists of 30 ordinary field pieces, 6

Gatling guns, and 2 howitzers. The number of tents available is given as 3,007.

North Central Division.—The North Central division includes Ohio, Indiana, Illinois, Michigan, Wisconsin, Minnesota, Iowa, Missouri, North Dakota, South Dakota, Nebraska, and Kansas. The authorized strength aggregated for these States is 49,277. The actually organized force includes 27,431 infantry, 348 cavalry, 1,305 artillery, and 437 naval militia. The number of adults liable to serve is reported to be 3,772,157. The artillery armament available comprises 57 ordinary field pieces, 29 Gatling guns, and 1 howitzer. The number of tents available is stated to be 4,968.

South Central Division.—The South Central division consists of Kentucky, Tennessee, Alabama, Mississippi, Louisiana, Texas, Oklahoma, and Arkansas. The authorized strength aggregated for the South Central division is 16,996. The actually organized force includes 10,958 infantry, 581 cavalry, 1,028 artillery, and 141 naval militia. The number of adults liable to serve is reported to be 1,597,984. The artillery armament available includes 24 ordinary field pieces and 23 Gatling guns. The number of tents available is given as 2,421.

Western Division.—The Western division includes Montana, Wyoming, Colorado, New Mexico, Arizona, Utah, Nevada, Idaho, Washington, Oregon, and California. The authorized strength aggregated for the Western group is 23,147. The actually organized force includes 10,155 infantry, 846 cavalry, 902 artillery, and 315 naval militia. The number of adults liable to serve is given as 321,042. The artillery armament available includes 35 ordinary field pieces and 12 Gatling guns. The number of tents available is 661.

Completeness of Reports.—It will be noted, in going over the State reports, that some are much more complete than others. Wherever details are wanting, the defect can be attributed in every instance to lack of information. No pains have been spared to furnish a statement sufficiently exhaustive to be useful. Where the figures in this article vary from others elsewhere published the difference is caused by diversity in State and other published or written reports. Sometimes the variations reach into the hundreds, but, as a rule, considering that all data given herein is from reports or letters sent or issued over the signature of a responsible official, the facts may be accepted as trustworthy.

State and Territorial Reports.—Now follow brief State and Territorial reports prepared from the several official sources within reach. At the end of the article will be found an interesting summary, from which a number of valuable facts concerning the present condition of the National Guard may be gathered.

Alabama.—The authorized strength of the Alabama State troops is 4,896. The actually organized force includes 15 general and staff officers, 376 other officers, 2,461 infantry, 172 cavalry, and 304 artillery. This force is formed into 3 regiments, each consisting of 12 infantry companies, a troop of cavalry, and a battery of artillery. The number of adults in the State liable to serve is 175,000. Regimental encampments occupy ten days.

An annual State appropriation is made for encampment purposes. For 1893-'94 the sum set apart was \$23,000; Federal, 1893, \$9,587.83.

Cavalry equipment is the same as that used by United States cavalry. Artillery equipment comprises 8 3-inch rifle guns and 7 Gatling guns. The infantry arm is the Springfield rifle. Each regiment has 263 wall tents, supplied by the Federal Government, including 3 for hospital use. Each company, in order to draw the quarterly armory rent allowance of \$50 must drill at least once a month, with an attendance of not less than 25 rank and file in uniform. The drills actually occur much oftener. Armories of a clublike character are owned or hired by single or combined companies, according to location. There are no arsenals in the State. Stores are kept at the Capitol, Montgomery.

About 50 per cent. of the organized force can be concentrated for service within twenty-four hours, 60 per cent. in thirty-six hours, and 90 per cent. in forty-eight hours. Plans are now ready for use in any emergency. Eighty per cent. of the force would turn out for sixty days.

MAJ.-GEN. E. A. McALPIN,
Adjutant-General of New York.

Arizona.—The authorized strength of the Arizona National Guard is 893. The actually organized force includes 26 staff officers and 460 infantry, formed into a regiment, with headquarters at Tucson. The regiment consists of 19 companies in 3 battalions. A few men are trained for hospital service. The number of adults liable to serve is 7,562. There is a State appropriation of \$360 for each company. The Federal appropriation, 1894, was \$2,000. Infantry use Springfield rifles. Camp equipage is not yet provided. Companies drill once a week. There are no armories; rooms for drill purposes are rented. There are no arsenals in the State. No details are available as to concentration.

Arkansas.—The authorized strength of the Arkansas State Guard depends entirely on the Governor's special order. At present there is no limit. The actually organized force includes 15 general and staff officers, 974 infantry, 39 cavalry, and 33 artillery. This force is formed into

a brigade, with headquarters at Forrest City. It consists of 2 infantry regiments or battalions, 1 troop of cavalry, and 1 light battery of artillery. The number of adults in the State liable to serve is 214,708. There is an ambulance corps in the brigade. Regimental encampments occupy seven days.

There is no State appropriation.

The Federal appropriation, 1894, was \$6,900.90. Cavalry are armed with carbines, Colt's revolvers, and sabers. The battery carries 2 3-inch muzzle-loading pieces and 2 Gatling guns. The infantry arm is the Springfield rifle. The brigade possesses 296 tents, including 41 with walls and 5 for hospital use. Companies drill once a week. One infantry company, at Little Rock, owns an armory; other armories are hired. There are no arsenals in the State.

Within twenty-four hours the whole organized force can be concentrated at any point on the main lines of railroad. About 70 per cent. of the force would turn out for sixty days.

California.—The authorized strength of the National Guard of California is 8,172. The actually organized force includes 161 general and staff officers, 215 other officers, 4,083 infantry, 261 cavalry, 586 artillery, and 315 naval militia. This force is formed into a division of 6 brigades, comprising 8 regiments and a battalion of infantry, a regiment of artillery armed as infantry, 2 light batteries of artillery, a troop of cavalry, and 4 signal corps. The naval battalion, of 4 companies, is not included in the division, but acts under the Adjutant General of the State. The divisional headquarters are at San Francisco. Headquarters of brigades are at Los Angeles, San Francisco, Fresno, Sacramento, Chico, and Eureka respectively. The companies of the several regiments and battalions are distributed in cities and towns throughout the State. Ambulance corps and hospital corps are attached to each brigade. Signal corps have also been organized for several brigades. The number of adults in the State liable to serve is 139,343. Encampments occupy seven to nine days.

There is an annual State appropriation of \$180,000. The Federal appropriation, 1894, was \$7,844.58.

Cavalry troops are armed with Springfield carbines and sabers. Colt's revolvers are allowed for one half of each troop. The 2 batteries of artillery carry 7 Parrott rifled guns, 6 Napoleons, 6 Gatlings, 2 Hotchkiss guns, and 1 3-inch B. L. rifle. Infantry carry the Springfield rifle. The average camp equipage for each regiment includes 12 wall tents. Each company is called upon to attend 3 drills a month except in December. Cavalry must have mounted drill twice a year. Armories are not State properties. Most of them are rented. There are no arsenals in the State. There are several independent companies, in addition to the State troops.

Organizations in the larger cities could assemble at from eight to twelve hours' notice. The whole organized force except 2 companies could assemble within three days at San Francisco, Sacramento, or Los Angeles. About 75 per cent. would serve for sixty days.

Colorado.—The authorized strength of the National Guard of Colorado is 2,847. The actually organized force includes 38 general and

staff officers, 45 other officers, 826 infantry, 65 cavalry, and 47 artillery. This force is formed into a brigade, with headquarters at Denver. It consists of 2 regiments of infantry, 1 troop of cavalry, a battery of light artillery, and a signal corps. Bicycles form part of the signal-corps equipment. The number of adults in the State liable to serve is 85,000. Encampments occupy about eight days.

The State appropriation is secured from the military poll tax. The average for 1893 and 1894 was \$30,645. The Federal appropriation is not officially reported.

Cavalry troops have carbines and sabers. The artillery carries 2 Napoleons and 2 Gatlings. Infantry and signal corps use the Springfield rifle. The camp equipage, recently received from the Federal Government, includes 118 wall tents and 2 for hospital use. Each company drills once a week. Armories are hired by the State for each company. There are no arsenals.

The organized force can be concentrated at Denver or any other important point in from forty-eight to sixty hours, without railroad right of way; with right of way, within twenty-four hours. From 80 to 90 per cent. would turn out for sixty days for State service.

Connecticut.—The authorized strength of the National Guard of Connecticut is 4,383. The actually organized force consists of 25 general and staff officers, 183 other officers, 2,720 infantry, 114 artillery, 81 naval militia, and 36 members of a signal corps. The troops are formed into a brigade, with headquarters at Hartford. It consists of 4 regiments of infantry, a light battery, a machine-gun battery, 2 separate companies, a battalion of naval militia, and a signal corps. Each regiment is assigned to two companies. There is an ambulance corps and hospital corps. The number of adults in the State liable to serve is 92,330. Brigade encampments occupy eight days.

There is no fixed State appropriation. Funds are secured on requisition. The Federal appropriation for 1894 was \$5,175.67.

Artillery carry 4 3-inch rifles and 4 Gatlings. Three regiments of infantry use Peabody rifles, and one possesses Springfields. The camp equipage includes 1,298 tents. There are 22 armories. A number of these belong to the State. The arsenal is at Hartford. Independent companies include 2 companies known as the Governor's Horse Guards, 2 companies of foot guards, and an organization known as the Putnam Phalanx.

The organized force can be concentrated in any of the largest towns in from eight to twelve hours. Seventy-five per cent. would turn out for sixty days.

Delaware.—The authorized strength of the Delaware National Guard is 600. The actually organized force consists of 15 general and staff officers, 55 other officers, 323 infantry, and 54 cavalry. The number of adults in the State liable to serve is estimated at 42,123. This force is formed into a brigade, consisting of a regiment of infantry and a troop of cavalry, with headquarters at Wilmington. There is an ambulance, hospital, and signal corps.

No State appropriation was granted in 1894. No Federal appropriation is reported.

Camp equipage consists of 36 wall, 7 hospital, and 150 common tents. Companies drill once a week. There is an armory at Wilmington. There is no arsenal in the State.

MAJ. GEN. GEORGE H. BROWN,
Pennsylvania N. G.

District of Columbia.—The authorized strength of the National Guard of the District of Columbia is 3,520. The actually organized force includes 64 staff officers, 82 other officers, 1,215 infantry, 54 cavalry, 29 artillery, 93 engineers, 22 members of an ambulance corps, and a field-music corps of 28. This force is formed into a brigade, composed of 3 regiments and one separate battalion of infantry, a troop of cavalry, a battery of light artillery, a cycle company, a company of veterans, an engineer battalion, an ambulance corps, and a corps of field music. Brigade headquarters are at Washington. Signal duties are performed by the engineer corps. The number of adults in the district liable to serve is about 42,000. Encampments occupy six days.

There is a District appropriation.

For the year ending June 30, 1895, the sum was \$26,500; national appropriation, \$9,000.00.

Cavalry carry Springfield carbines, Colt's revolvers, and sabers. Artillery armament consists of 2 Gatling guns and 2 light 6-pounder bronze guns. Infantry use the Springfield rifle. Camp equipage consists of 164 wall, 249 common, and 10 hospital tents. Companies drill once a week. There are 6 halls for drill purposes, including 2 regular armories. There are no arsenals in the District. Independent commands comprise the National Rifle, the Old Guards, and several colored companies.

For local duty, the force can be concentrated on Pennsylvania Avenue, Washington, within three hours; for outside service within twenty-four hours. Seventy-five per cent. of the force would respond for a short term of service. For a long term of service, the whole force would be available.

Florida.—The authorized strength of the Florida State troops is 1,474. The actually organized force includes 827 infantry and 69 artillery. This force is formed into 5 battalions. Three of these consist of infantry, and the re-

mainder of infantry and artillery. The headquarters of battalions are at Jacksonville, Leesburg, Pensacola, Gainesville, and Tampa. The number of adults in the State liable to serve is 60,000. Encampments occupy about eight days.

There is a State appropriation of \$5,000 for camp instruction, also additional sums for other purposes. The Federal appropriation, 1894, was \$3,486.48.

Gatling guns are used by the artillery. Infantry companies are armed with Springfield rifles. The camp equipage includes 391 wall tents and 14 for hospital use. Companies are required to drill once a week. In each county where a company is located county authorities provide for armories. There is no arsenal. Stores are held at the Capitol.

The maximum of time necessary for concentration at any point is forty-eight hours; if called into Federal service, 80 per cent. of organized strength would respond for duty; "but if for sixty days, the call would be ruinous to the business of many of the officers and men."

MAJ.-GEN. J. W. PLUME,
New Jersey N. G.

Georgia.—The authorized strength of the State militia, known as the Georgia Volunteers, is 12,500. Of this total, 94 officers and 1,978 men are colored. The actually organized force includes 3,515 infantry, 580 cavalry, 134 artillery, and 268 naval militia. Of these, 83 officers and 1,976 men are colored. There are no divisions or brigades. The white infantry force contains 2 regiments of 3 battalions, 4 regiments of 2 battalions, and 1 battalion unassigned. There are 4 battalions of white cavalry, including 1 regiment of 3 battalions. The white artillery consists of 2 unassigned companies. There are 3 battalions and 4 unassigned companies of colored infantry, also 1 company of colored cavalry and 1 company of colored artillery. There is an ambulance corps and a hospital corps, also a signal corps. The number of adults in the State liable to serve is 264,021. Encampments occupy about ten days.

There is a State appropriation. In 1893 and 1894 the sum was \$20,000. The Federal appropriation, 1894, was \$11,213.95.

Artillery carry 4 3-inch M. L. rifles, 2 brass field pieces, and a Gatling gun. Thirteen of the 14 cavalry troops use the Springfield carbine, also a saber. One troop is armed with the Marlin carbine. Infantry use the Springfield rifle. The camp equipage includes 364 wall tents and 4 for hospital use. Companies drill once a week, except cavalry, whose exercises are held usually once a month. Some battalions and companies own their own armories. Others rent buildings for the purpose. Military stores are held at the Capitol.

Within twenty hours, the organized force, except cavalry, could be concentrated at Atlanta, Savannah, Albany, or Griffin. About 85 per cent. of the force would turn out for sixty days.

Idaho.—The authorized strength of the Idaho National Guard is 450. The actually organized force is 305, consisting of 8 staff officers and 297 infantry. The number of adults in the State liable to serve, 1893, was 13,932. The above are the only details available concerning Idaho, and have been taken from the Federal report for 1894.

Illinois.—The authorized strength of the Illinois National Guard is 8,999, exclusive of 401 officers. The actually organized force consists of 59 general and staff officers, 317 other officers, 4,957 infantry, 99 cavalry, 135 artillery, and 359 naval militia. This force is formed into 3 brigades. The First Brigade, with headquarters at Chicago, includes 2 infantry regiments of 3 battalions and 1 with 2 battalions, also a battery of artillery and a troop of cavalry. The Second Brigade, with headquarters at Springfield, comprises 2 infantry regiments, of 3 battalions each, and a battery of artillery. The Third Brigade, with headquarters at Aurora, consists of 2 infantry regiments, of 3 battalions each, and a troop of cavalry. There is a hospital corps in every regiment. Each regiment has a bicycle and a signal detachment. The number of adults in the State liable to serve is 852,635. Annual regimental encampments last eight days; brigade encampments, every four years, have a similar duration.

The State appropriation, 1895, was \$120,000. The Federal appropriation amounted to \$80,918.20.

Cavalry use Springfield carbine and a saber. One troop is armed with revolvers. Artillery carry 8 Gatling guns, 4 3-inch M. L. Rodman rifles, and 4 12-pounder Napoleons. This arm is also supplied with sabers and revolvers. Infantry use the Springfield rifle. Three Gatling guns are included in the infantry armament. The camp equipage includes 900 tents. Weekly drills are required. All armories are rented. The State arsenal is at Springfield. There are numerous independent organizations, consisting mainly of boys, and located principally at Chicago. They drill with arms by permission of the Adjutant General.

The whole or any portion of the force can be concentrated at Chicago within eighteen hours; at East St. Louis, in sixteen hours; at Springfield, in fourteen hours. Plans for emergencies are on file in the Adjutant General's office. Eighty-five per cent. of the force would turn out for sixty days.

Indiana.—The authorized strength of the State militia, known as the Indiana Legion, is 4,582 men. The actually organized force includes 15 general and staff officers, 205 other officers, 2,389 infantry, and 200 artillery. This force is formed into a brigade containing 4 regiments of infantry and 3 batteries of artillery. Indianapolis is the headquarters of the brigade. Men are instructed in ambulance, hospital, and signal work. The number of adults in the State liable to serve is 481,192. Encampments occupy from six to eight days.

The annual State appropriation is \$45,000. The Federal appropriation is \$13,821.45.

Artillery carry 12 guns, including 4 machine guns and 8.5-inch rifles. Infantry use Springfield rifles. The camp equipage includes 843 tents. Drills are held weekly. Buildings for use as armories are hired, with the exception of the light artillery battery at Indianapolis. There is a United States arsenal at Indianapolis.

The force can be concentrated at Indianapolis within from ten to twenty-four hours. Nearly the entire force would turn out for sixty days.

Iowa.—The authorized strength of the Iowa National Guard is 5,000. The actually organized force includes 50 general and staff officers, 500 other officers, and 2,155 infantry. The force is formed into 2 brigades, and consists of 4 regiments of infantry of 3 battalions each, and a hospital corps. There is a signal corps made up by details from companies. This corps is partially mounted on bicycles and partially armed with Remington pistols. The number of adults in the State liable to serve is 665,510. Regimental encampments last six or seven days. There is an annual State appropriation of \$45,000. The Federal appropriation amounts to \$11,213.96.

The infantry arm for about two thirds of the force is the same as that used by the United States Infantry; the remainder use the Springfield rifle, old pattern. There is a Gatling gun for artillery purposes. The total camp equipage consists of 263 wall tents, including 15 for hospital use. Companies drill once a week. There are no armories; halls are rented for drill purposes. A fireproof arsenal is located at Des Moines.

The force can be concentrated within twenty-four hours at any point where a regiment is quartered. Ninety per cent. would turn out for sixty days.

Kansas.—The authorized strength of the Kansas National Guard is 3,500. The actually organized force includes 22 general and staff officers, 109 other officers, 1,557 infantry, and 82 artillery. This force is formed into 3 regiments of infantry and 2 batteries of artillery. The number of adults in the State liable to serve is 100,000. No reports are available concerning encampments or appropriations. Artillery armament comprises 4 Napoleons and 1 Gatling gun. Infantry use the Springfield rifle. There is no report available concerning camp equipage. There are drill rooms or armories at the headquarters of every company. The independent organizations include 2 colored companies of infantry.

The whole force can be concentrated at central points within fourteen hours.

Kentucky.—The authorized strength of the State militia, known as the Kentucky State Guards, is 3,500. The actually organized force includes 17 general and staff officers and 1,454 infantry. This force consists of 3 infantry regiments. There is no brigade organization. The number of adults in the State liable to serve is 361,137. Encampments occupy ten days.

BRIG.-GEN. FREDERICK B. SACKETT,
Adjutant-General of Rhode Island.

There is an annual State appropriation of \$10,000. The Federal appropriation, 1894, was \$11,213.96.

There are 2 3-inch M. I. field pieces and 3 Gatling guns available for artillery. Infantry use the Springfield rifle. Camp equipage includes 145 wall tents, of which 6 are for hospital use. Company drills are held weekly. There are no regular armories, but each county provides drill halls and storage. There is a small arsenal at Frankfort.

The force can be concentrated at central points within from ten to twelve hours. About 80 per cent. would turn out for sixty days.

Louisiana.—The authorized strength of the Louisiana State National Guard is 4,000. The actually organized force includes 15 general and staff officers, 99 other officers, 1,087 infantry, 801 light artillery, and 141 naval militia. This force is formed into a brigade, consisting of 3 battalions and 3 separate companies of infantry and 3 batteries and 1 battalion of artillery. The number of adults in the State liable to serve is about 138,439.

There is no report available concerning a State or Federal appropriation. Artillery armament comprises 4 Gatling guns, 2 12-pounders, 4 10-pounders, 3 M. I. rifles, 2 B. I. rifles, 1 howitzer, and 1 Hotchkiss. Infantry use the Springfield rifle. Camp equipage includes 43 wall tents. Companies drill once a week. There are armories in nearly every city at or near which troops are quartered. The total number of armories given is 12.

No data is available to show length of time necessary for concentration, but the entire force can probably be got together in less than twenty-four hours.

Maine.—The authorized strength of the State militia, known as the National Guard of the

State of Maine, is 2,114. The actually organized force includes 11 general and staff officers, 90 other officers, 1,135 infantry, and 22 members of an ambulance corps. The infantry force is formed into 2 regiments. The number of adults in the State liable to serve is 97,220. Encampments occupy five or six days.

BRIG.-GEN. CHARLES F. HEEDE,
Oregon N. G.

The State appropriation is secured by a tax of $\frac{1}{4}$ of 1 mill upon all taxable property. In 1894 this tax produced \$26,185.87. The Federal appropriation, 1894, amounted to \$5,299.72. There are 3 brass 12-pounders, 3 brass 6-pounders, and 2 Gatling guns available for artillery. Infantry use the Springfield rifle. Camp equipage consists of 218 wall and 21 conical tents. Each company must drill at least twice a month. Rooms called armories are provided for each company, and partially paid for by the State. There is a small arsenal near Bangor. An independent command, called the Yarmouth Rifles, is quartered at Yarmouth. It has no connection with the National Guard.

The force can be concentrated at Portland, Lewiston, Auburn, Saco, Biddeford, Augusta, Bangor, or any other important point within twenty-four hours. About 90 per cent. would turn out for sixty days to serve within the State.

Maryland.—The authorized strength of the Maryland National Guard is not fixed, but may consist of 40 companies of 65 men each. The actually organized force includes 25 general and staff officers, 175 other officers, 1,912 infantry, and 135 naval militia. The troops are formed into a brigade of 3 regiments of infantry, a veteran corps, and 3 separate colored companies. Brigade headquarters are at Baltimore. The number of adults in the State liable to serve is 125,000. Encampments occupy about ten days.

There is an annual State appropriation of \$45,000. The Federal appropriation, 1894, was \$6,972.96. Infantry are armed with Springfield rifles. Camp equipage consists of 438 common and 37 wall and hospital tents. Companies drill once a week. One infantry regiment occupies an armory in Baltimore provided by the city. Ar-

mories for other organizations are rented from the State appropriation. There are no arsenals. Extra stores are kept in the Fifth Regiment armory. A battalion of naval militia has been formed. It is practically independent, but must report to the Adjutant General, and, through the Governor, to the Secretary of the Navy. Two of the 3 infantry regiments can be concentrated at Baltimore within from four to six hours. From 85 to 90 per cent. would turn out for sixty days.

Massachusetts.—The authorized strength of the State militia, known as the Massachusetts Volunteer Militia, is 6,514, not including the bands. The actually organized force includes 22 general and staff officers, 419 other officers, 4,302 infantry, 285 cavalry, 266 artillery, 501 naval brigade, 502 cadets, 49 members of a signal corps, and 61 members of an ambulance corps. This force embraces 6 regiments of infantry, 2 corps of cadets, 1 battalion and 1 separate company of cavalry, 1 battalion and 1 separate battery of artillery, an ambulance corps, and a signal corps. The whole force is divided into 2 brigades, with headquarters at Boston and Lynn. In each brigade there are 3 infantry regiments of 12 companies and a proportion of the other arms. The number of adults in the State liable to serve is 389,529. Encampments occupy from four to eight days.

There is an annual State appropriation of \$45,000. The Federal appropriation, 1894, was \$6,972.96.

Cavalry have Springfield carbines and sabers. Artillery ordnance consists of 8 3-inch M. L. field guns, 4 12-pounder Napoleons, and 6 Gatling guns. The naval brigade is armed with Lee rifles, Gatlings, howitzers, and rapid-fire Hotchkiss guns. Infantry use the Springfield rifle. Camp equipage consists of about 900 wall tents. Companies are expected to drill once a week. There are 9 State armories. Two of these are in Boston, the others being situated at Worcester, Fall River, Fitchburg, Lowell, Lawrence, Lynn, and Springfield. In 36 other towns there are leased or rented halls. There is an arsenal at South Framingham. Seven independent commands exist in the State, including the Ancient and Honorable Company of Artillery, the Boston Light Infantry Association, and 5 veteran associations.

The force can be concentrated within eighteen hours at any one point in a regimental district, and within twelve hours thereafter can be moved any other point selected. About 86 per cent. would turn out for sixty days.

Michigan.—The authorized strength of the Michigan National Guard is 3,644. The actually organized force includes 18 general and staff officers, 160 other officers, and 2,643 infantry. This force is formed into a brigade, consisting of 5 regiments of infantry of 2 battalions each. The headquarters of the brigade are at Ypsilanti. The number of adults in the State liable to serve is 224,000. Encampments occupy five days.

The State appropriation, 1895, was \$120,000. The Federal appropriation, 1894-'95, was \$20,918.20.

One Gatling gun is available for artillery use. Infantry use Springfield rifles. Camp equipage includes 607 wall tents. Companies drill once a

week. There are no State armories. Buildings are rented for drill purposes. There is a small arsenal at Lansing. There are many independent commands, privately armed and equipped, not controlled or recognized by the State. Besides these independent organizations there is a battalion of naval militia. The force could be concentrated within forty-eight hours at the principal points. About 90 per cent. would turn out for sixty days.

Minnesota.—The authorized strength of the Minnesota National Guard is 2,570. The actually organized force includes 38 general and staff officers, 243 other officers, 1,625 infantry, and 113 artillery. This force is formed into a brigade, consisting of 3 regiments of infantry and a battalion of artillery, with headquarters at St. Paul. There is a signal corps in 2 of the 3 regiments. The number of adults liable to serve is 169,000. Encampments occupy nine days.

There is an annual State appropriation of \$40,000. The Federal appropriation, 1894, was \$7,844.58.

The artillery equipment consists of 2 3-inch rifles and 2 Napoleon guns. Infantry carry the Springfield rifle. Camp equipage includes 200 wall tents. Companies drill once a week. Armories are in use at Stillwater and Redwing; at other places small buildings, called armories or drill rooms, are used. The only independent commands are 4 organizations of Sons of Veterans. There are no arsenals in the State.

The force can be concentrated within twenty-four hours at St. Paul, Minneapolis, Kasota, or Duluth; 50 per cent. would turn out for sixty days.

Mississippi.—The authorized strength of the Mississippi National Guard is 1,800. The actually organized force includes 15 general and staff officers, 160 other officers, 1,200 infantry, 90 cavalry, and 240 artillery. This force is formed into a brigade, consisting of 3 regiments and a rocket battalion of infantry, a battalion of cavalry, and a battalion of artillery, attached to an infantry regiment. Headquarters of the brigade are at Columbus. The number of adults in the State liable to serve is 228,700, of which number 127,900 are colored. Encampments occupy seven days.

The State appropriation, 1895, was \$3,600, but it can only be used in extraordinary cases, such as riots, insurrections, or rebellions. The Federal appropriation, 1894, was \$7,763.61, with an additional allowance for transportation of supplies.

Infantry are armed with rifles of a make not specified. Cavalry carry carbine and saber. The artillery armament consists of 8 guns, including 4 Gatling guns. Camp equipage comprises 305 tents, 100 of which have walls, 200 are common, and 5 are for hospital use. Company drills take place at short intervals. Armories are rented by companies, ordinary halls and rooms being used. There is no arsenal in the State. There are 2 independent organizations at Natchez. These are not officially reported.

The force can be concentrated at Jackson, Meridian, West Point, Holly Springs, Greenville, or other important points within twenty-four hours. About 90 per cent. would turn out for sixty days.

Missouri.—The authorized strength of the Missouri National Guard is 2,500. The actually organized force includes 14 general and staff officers, 1,961 infantry, and 121 artillery. This force is formed into a brigade, with headquarters at Kansas City. The brigade consists of 4 regiments of infantry and 2 battalions of artillery. Each regiment contains 2 battalions of 4 companies each. There is no organized ambulance corps or hospital corps, but provision is made in each regiment to meet emergencies. The number of adults in the State liable to serve is 403,000. Encampments occupy one week.

The State appropriation for 1894, with 1895, was \$25,000. The Federal appropriation, 1894-'95, was \$14,664.41.

Artillery carry 5 3-inch M. L. rifles and a Gatling gun. Infantry use Springfield rifles. Camp equipage consists of 349 common tents, 8 covered, 86 wall, and 10 for hospital use. Companies drill once a week. There is an armory, hired, for the combined use of a regiment and a battery, at St. Louis. Two of the remaining companies own their own armories; the others hire rooms for drill and storage purposes. There is an arsenal in Jefferson City.

The force can be concentrated at St. Louis within from twenty-four to thirty hours. About 80 per cent. would turn out for sixty days.

MAJOR CHARLES F. ROSS,
Squadron A, New York N. G.

Montana.—The authorized strength of the Montana National Guard is 385. The actually organized force includes 13 general and staff officers, 42 other officers, and 439 infantry. This force is formed into a regiment of infantry and a signal corps. The headquarters of the regiment is at Butte City, where 3 companies are stationed. The number of adults in the State liable to serve is 25,000. Encampments occupy seven days.

The State appropriation, 1894, was \$21,700. The Federal appropriation, for year ending June 30, 1895, was \$2,587.83. Carabines and sabers are available for cavalry. Four wrought-iron M. L. rifled guns are available for use of artillery.

The infantry arm is the Springfield rifle. Camp equipage provides tentage for 600 men. Companies usually drill once a week. There is a State armory at Helena; at other points rooms are hired. There is also an arsenal at Helena.

COL. THOMAS R. MATHEWS,
1st Regiment, Massachusetts Volunteer Militia.

The force can be concentrated at the several armories within twenty-four hours. Eight companies could be assembled at Helena or at Bozeman within six hours. From 60 to 75 per cent. would turn out for sixty days.

Nebraska.—The authorized strength of the Nebraska National Guard is 2,000. The actually organized force includes 7 general and staff officers, 91 other officers, 997 infantry, 46 cavalry, and 62 artillery. This force is formed into a brigade, consisting of 2 regiments of infantry, a troop of cavalry, and a battery of artillery. Omaha is the headquarters of the brigade. The number of adults in the State liable to serve is 135,000. Encampments occupy six days.

The State appropriation, 1894, was \$30,000. The Federal appropriation, 1894, amounted to \$6,900.00.

Cavalry carry carbines. Artillery armament consists of 2 Rodman guns. Infantry are armed with Springfield rifles. Camp equipage includes 38 wall tents, 379 common, and 6 for hospital use. Companies drill at least twice a month. There is an armory at every place where a company is located. There is no arsenal in the State. The existence of 12 independent companies is reported. The strength of each is not given.

The force can be concentrated at Omaha, Lincoln, or Kearney within thirty-six hours. One hundred per cent. would turn out for sixty days.

Nevada.—The authorized strength of the Nevada National Guard consists of 112 men, officers included, in each county where more than 2,000 votes are polled at general elections, with an additional company for each additional 1,000 votes. The law provides that any organized companies in existence prior to the passing of this act should not be disbanded. The actually organized force includes 8 general staff officers, 39 other officers, 376 infantry, and 62

artillery. The force consists of 7 companies of infantry and a battery of light artillery attached to infantry. The 7 companies constitute a regiment. The headquarters, 2 companies of infantry, and the battery of artillery are stationed at Virginia City. The number of adults in the State liable to serve is 14,000. Encampments occupy six days.

There is an indirect State appropriation, each company drawing a county allowance of \$75 per month, with extra allowance when ordnance is issued. These allowances are reimbursed by the State. The Federal appropriation, 1894, was \$2,587.83.

Artillery carry 2 3-inch M. L. rifles. Infantry use Springfield rifles, with a Gatling gun attached for regimental use. Camp equipage consists of 103 tents, 10 of which have walls and 8 are for hospital use. Companies drill once a week. Armories, with one exception, are rented. The armory at Carson is owned by a company. There is no arsenal in the State. A storeroom at Carson is utilized for arsenal purposes.

The whole force can be concentrated at Reno within forty-eight hours. Four companies and the battery can be assembled at Reno within four hours, and 2 more companies within twenty-four hours. An accurate percentage of men who would turn out for sixty days can not be given, but nearly all can be relied upon to meet an emergency.

New Hampshire.—The authorized strength of the New Hampshire National Guard is 1,663. The actually organized force includes 10 general and staff officers, 110 other officers, 1,120 infantry, 64 cavalry, and 79 artillery. The force is formed into a brigade, consisting of 3 regiments of infantry, a troop of cavalry, and a battery of light artillery. Brigade headquarters are at Concord. Each regiment of infantry consists of 2 battalions, and each battalion of 4 companies. The number of adults in the State liable to serve is 34,000. Encampments occupy one week.

The annual State appropriation is \$30,000. The Federal appropriation, 1894, was \$3,450.45.

Cavalry have sabers only. Artillery carry 4 12-pounder brass smooth-bore guns. Infantry use the Springfield rifle. Camp equipage consists of 393 small and 15 large tents. Companies drill once a week. There is a State armory at Nashua and an armory building at Keene. There is an arsenal at Concord. There are 2 independent organizations of veterans and 1 of cadets.

The whole force can be concentrated at White River Junction or any other point in the State within thirty-six hours. About 80 per cent. would turn out for sixty days.

New Jersey.—The authorized strength of the New Jersey National Guard is 5,609. The actually organized force includes 65 general and staff officers, 248 other officers, 3,369 infantry, 54 cavalry, 57 artillery for Gatling-gun purposes, and 176 naval militia. This force is formed into a division of 2 brigades, each containing 3 regiments of infantry. The Second Brigade includes a Gatling-gun company. The headquarters of the division are at Newark; that of the First Brigade at Jersey City; and that of the Second Brigade at Camden. Provision is made for ambulance, hospital, and signal purposes.

The number of adults in the State liable to serve is 284,287. Encampments occupy six days.

There is a State appropriation of \$500 per annum for infantry and artillery companies, \$750 for Gatling-gun companies, and \$1,000 for cavalry companies. Additional sums are also appropriated for brigade purposes, etc. The Federal appropriation, 1894, was \$8,710.

Cavalry are supplied with carbines, revolvers, and sabers. Artillery carry 2 Gatling guns, also Springfield rifles. Infantry are armed with Springfield rifles. There is a reserve artillery armament of 12 Napoleon guns, 4 3-inch Griffin guns, 4 bronze guns, 4 howitzers, and 7 Gatling guns. Camp equipage is ample. Companies drill once a week. There are 4 regimental armories. There is one arsenal in the State. Numerous cadet corps exist and are attached to the National Guard.

The whole division can be concentrated at any given place within the State inside of six hours. At least 75 per cent. would turn out for sixty days.

New Mexico.—The authorized strength of the New Mexico militia is 1,000. The actually organized force includes 18 general and staff officers, 38 other officers, 268 infantry, and 152 cavalry. This force is formed into a regiment of 8 companies of infantry, with headquarters at Albuquerque, and 3 troops of cavalry. The number of adults in the Territory liable to serve is 25,000. The Territorial appropriation for 1894 was \$1,000. The Federal appropriation, 1894, was \$4,000. Cavalry carry carbines and infantry use the Springfield rifle. Camp equipage consists of 2 wall and 20 common tents. More tents have been applied for. There is an armory at Santa Fé. There is no regular arsenal in the Territory. An armory is used for store purposes.

The force can be concentrated in a few hours. A large percentage would turn out for sixty days.

New York.—The authorized strength of the New York National Guard is 15,000. The actually organized force includes 89 general and staff officers, 641 other officers, 12,159 infantry, 134 cavalry, and 416 artillery. The cavalry arm is being strengthened. An additional troop of 80 men has been formed in Brooklyn, and one of 60 men in Buffalo. There is a battalion of naval militia consisting of 20 officers and 324 men, with headquarters at New York. There are also 2 separate divisions of naval militia, the total strength of each being 51 and 49 respectively. Their headquarters are at Rochester. This force is formed into 4 brigades, with headquarters at New York city, Brooklyn, Albany, and Buffalo. The First Brigade consists of 7 regiments of infantry, a squadron of cavalry, 2 batteries of light artillery, and a signal corps. The Second Brigade consists of 4 regiments and a separate company of infantry, a battery of light artillery, a troop of cavalry, and a signal corps. The Third Brigade consists of a battalion and 30 separate companies of infantry and a battery of light artillery. The Fourth Brigade consists of 2 regiments and 14 separate companies of infantry and a battery of light artillery. There are hospital corps and regimental ambulance appliances in each brigade. The Fourth Brigade has appliances and trained men for signal purposes. The

number of men liable to serve is 750,000. Encampments occupy one week.

There is an annual State appropriation of \$400,000 with additional sums for special purposes. The Federal appropriation, 1894, amounted to \$31,034.65.

Cavalry armament consists of Remington carbines and sabers. Artillery armament includes 12 3.2-inch B. L. rifles, 6 light 15-pounder guns, 7 Gatling guns, and 4 mountain howitzers. There is also a reserve of 4 3.2-inch B. L. rifled guns. Camp equipage, available or ready for delivery, consists of 1,465 wall tents, including 65 for hospital use. The regulations require one inspection, 5 drills and parades, and 12 evening drills during each year. There is ample armory accommodation. An arsenal is located in New York city. The only independent organizations are the Old Guard and the Albany Burgesses' Corps.

The entire force can be concentrated at any given point within forty-eight hours. About 90 per cent. would turn out for sixty days.

COL. DANIEL APPLETON,
7th Regiment, New York N. G.

North Carolina.—The authorized strength of the North Carolina State Guard is 2,000. The actually organized force includes 62 general and staff officers, 1,462 infantry, 42 cavalry, and 175 naval artillery. This force is formed into a brigade consisting of 4 infantry regiments of 7 companies each, an unattached colored company of infantry, a troop of mounted riflemen, and a battalion of naval artillery. Brigade headquarters are at Tarboro. The number of adults liable to serve is 240,000. Encampments occupy about eight days.

The State appropriation, 1894, was \$10,000. The Federal appropriation, 1894, amounted to \$9,587.83.

The armament of cavalry and infantry is the same as in the United States army. The naval battalion is furnished with Lee magazine rifles, a Gatling gun, 2 3-inch B. L. and 4 12-pounder M. L. howitzers. Camp equipage consists of 275 common, 78 wall, and 4 hospital tents. Companies drill once a week. There is one large armory at Winston. Halls are rented by company all the companies for drill purposes. There is

an arsenal at Raleigh. There is an independent company of infantry at Fayetteville. It is not part of the State guard.

The force can be concentrated in from twelve to twenty-four hours, according to location. From 75 to 90 per cent. would turn out for sixty days.

North Dakota.—The authorized strength of the North Dakota National Guard is 884. The actually organized force includes 4 general and staff officers, 45 other officers, 370 infantry, 73 cavalry, and 54 artillery. This force consists of a regiment of infantry, a battery of light artillery, and 2 troops of cavalry. The infantry regiment consists of 8 companies, with headquarters at Jamestown. The home station of artillery is Lisbon. Cavalry stations are Dunsmuir and Bottineau. The number of adults liable to serve is 50,000. Encampments occupy ten days.

There is an annual State appropriation of \$11,000. The Federal appropriation is \$2,587.83 per annum.

Cavalry carry Springfield carbines. Artillery equipment consists of a Gatling gun and 2 3-inch M. L. rifles. Infantry are armed with Springfield rifles. Camp equipage consists of 20 wall, 65 common tents, and 6 for hospital use. Companies drill from once to three times a week. There are small rented armories in 11 towns. There is no arsenal in the State.

The force can be concentrated at any point in less than twenty-four hours. About 95 per cent. would turn out for sixty days.

COL. WILLIAM K. CAFFEE,
2d Regiment, Missouri N. G.

Ohio.—The authorized strength of the Ohio National Guard is 9,460. The actually organized force includes 18 general and staff officers, 455 other officers, 5,125 infantry, 93 cavalry, 437 artillery, and 66 members of a bicycle corps. This force consists of 9 regiments of infantry, 8 batteries of artillery, 2 troops of cavalry, and a bicycle corps of cadets. It is not brigaded. Men for hospital work form part of their own regiments. Three regiments have ambulance wagons. Men for signal work are trained in several regiments. Signal equipment includes a number of bicycles. The number of adults in the

State liable to serve is about 645,000. Encampments occupy six days.

The State appropriation, 1894, was \$33,299.58. The Federal appropriation, 1894, was \$19,840.09.

Cavalry carry Springfield carbines, Colt's revolvers, and regulation sabers. Artillery armament aggregates 10 3-inch rifles, 12 Gatlings, and 6 bronze pieces. Camp equipage consists of 649 wall tents, including 8 for hospital use. Companies drill once a week. There are large armories built or being built in 8 cities. In the smaller towns, buildings are rented for the purpose. There is a State arsenal at Columbus. At Cleveland there are 6 independent organizations; also 1 at Columbus. They are not recognized by the State. One of these is a battery with Gatling guns.

There are 24 points for concentration. At any one of these troops can be concentrated within twelve hours. A large percentage would turn out for sixty days.

Oklahoma.—The authorized strength of the National Guard of the Territory is not officially stated. The actually organized force includes 4 general and staff officers, 9 other officers, and 202 infantry. This force is formed into 3 companies. The number of adults in the Territory liable to serve is not officially reported. No report is available concerning a Territorial appropriation. The Federal appropriation, 1895, was \$1,000. Infantry use the Springfield rifle.

Oregon.—The authorized strength of the Oregon National Guard is 2,166. The actually organized force includes 26 general and staff officers, 1,275 infantry, 108 cavalry, and 60 artillery. This force is formed into a brigade, comprising 3 regiments of 2 battalions of 4 companies each, a separate infantry battalion of 2 companies, 2 troops of cavalry, and a battery of artillery. The headquarters of the brigade are at Klamath Falls. Men are especially enlisted in each organization for hospital work. There is a signal officer on the staff of each regiment. The number of adults in the State liable to serve is 88,049, not including exemptions. The duration of encampments is not officially reported.

There is an annual State appropriation of \$30,000. The Federal appropriation, 1894, was \$3,486.48.

Cavalry troops have Spencer carbines and light sabers. One troop has revolvers. The battery armaments include 2 brass 6-pounders and 2 Gatling guns. The infantry arm is the Springfield rifle. Camp equipage consists of 193 tents, including 34 with walls and 6 for hospital use. Companies drill once a week. There is a large armory at Portland. Other armories are hired halls. There is no arsenal in the State.

The force can be concentrated at Portland within three days. About 75 per cent. would turn out for sixty days.

Pennsylvania.—The authorized strength of the Pennsylvania National Guard is 10,878, not including 3 divisions of naval militia. The actually organized force includes 65 general and staff officers, 7,638 infantry, 188 cavalry, 245 artillery, 183 naval militia, 63 Invincibles, and 256 Fencibles. This force is formed into a division of 3 brigades. The First Brigade, with headquarters at Philadelphia, comprises 4 regiments of

infantry, a battalion of Fencibles, a colored company, a troop of cavalry, and a light battery. A battalion of naval militia is attached to this brigade. The Second Brigade, with headquarters at Franklin, comprises 6 regiments of infantry, a troop of cavalry, a battery of artillery, and a battalion of naval militia. The Third Brigade, with headquarters at Lebanon, consists of 5 infantry regiments, a troop of cavalry, and a battery of artillery. There is a hospital corps in every regiment. The division is able to furnish good signal service, with appropriate equipment. The number of adults in the State liable to serve is 800,330. Encampments last about eight days.

The State appropriation, 1894, was \$330,000. The Federal appropriation, 1894, was \$27,891.87.

Cavalry carry Winchester carbines, also a number of Colt's revolvers, Sharp's carbines, and sabers. The artillery armament includes 6 2-inch H. L. rifles and 6 3-inch M. L. rifles. Infantry carry the Springfield rifle. Camp equipment includes 92 hospital tents, 1,591 wall tents, and 2,350 common tents. Companies drill once a week. There are 6 large armories, 2 in Philadelphia, 1 in Wilkesbarre, 2 in Pittsburg, and 1 in Scranton. Most of the others are large rooms or halls. There is an arsenal at Harrisburg. There are numerous separate organizations of a social or political character, carrying arms for parade purposes, but not in any way recognized by the State.

The entire force can be concentrated in thirty-two hours at any point. Plans are ready for use in case of emergency. About 95 per cent. would turn out for sixty days.

Rhode Island.—The authorized strength of the State National Guard, known as the Rhode Island Militia, is 1,400. The actually organized force includes 13 general and staff officers, 92 other officers, 783 infantry, 93 cavalry, 118 artillery, and 5 members of a signal corps. This force is formed into a brigade consisting of 2 regiments of infantry, 2 separate colored infantry companies, a battalion of cavalry comprising 3 troops, a machine-gun battery, a light battery, and a signal corps; also 2 companies of naval reserves, consisting of 113 officers and men, not included in figures above given. Headquarters of the brigade are at Providence. Ambulance and hospital equipment is attached to the regiments. The number of adults in the State liable to serve is 73,945. Encampments occupy six days.

The State appropriation, 1894, was \$104,000. The Federal appropriation, 1894, was \$3,450.45.

Cavalrymen are armed with Springfield carbines and sabers. Artillery armament includes 4 3-inch wrought-iron guns, 12 6-pounder and 4 4-pounder bronze M. L. rifles, and 4 Gatling guns. Infantry and the naval reserve are armed with Springfield rifles. Camp equipment consists of 350 wall and 5 hospital tents. Companies drill once a week. There are armories at Pawtucket, Newport, and Bristol. Other drill rooms are rented. There are no arsenals in the State. Independent organizations consist of the Newport Artillery Company, the United Train of Artillery (Providence), Bristol Train of Artillery, Kentish Guards, and Warren Artillery.

The force can be concentrated within twelve

hours at Providence. Seventy to 75 per cent. would turn out for sixty days.

COL. JOHN W. CRAIG,
1st Regiment, Indiana N. G.

South Carolina.—The authorized strength of the State militia, known as the South Carolina Volunteer Troops (white) and National Guard (colored), is 4,674. The actually organized force includes staff officers (number not officially stated), 3,009 infantry, 1,519 cavalry, and 219 naval militia. The composition of this force, as to regiments and troops of cavalry, is not officially reported. The number of adults in the State liable to serve can not be ascertained from any published statement.

There is no definite information available concerning the annual State and Federal appropriation for militia purposes. The details given above comprise all the information available.

South Dakota.—The authorized strength of the South Dakota National Guard is 2,357. The actually organized force includes 29 general and staff officers, 679 infantry, and 46 artillery. This force is formed into a regiment of infantry consisting of 3 battalions of 3 companies each, a battalion of infantry, and a battery of artillery. The number of adults in the State liable to serve is 79,219.

The State appropriation, 1894, was \$4,000. The Federal appropriation, 1894, amounted to \$3,486.48.

Artillery carry 2 3-inch wrought-iron rifles, Springfield rifles, and sabers. Infantry use Springfield rifles. Camp equipment consists of 72 wall and 1 hospital tent. Armories are hired. There are armories at Watertown, Pierre, and Rapid City. There are some Sons of Veterans independently organized, and not recognized by the State.

The force can be concentrated from the several armories within about twelve hours at Lake Preston or Aberdeen. About 75 per cent. would turn out for sixty days.

Tennessee.—The authorized strength of the Tennessee National Guard is not limited. The actually organized force includes 18 general and staff officers, about 1,300 infantry, and 100 artillery. This force is formed into a brigade consisting of 2 regiments, 2 battalions, and 2 detached companies of infantry; also a battery and

2 detachments of artillery. Brigade headquarters are at Memphis. The number of adults in the State liable to serve is 180,000. Encampments occupy ten days.

The State appropriation, 1894, was \$15,000. The Federal appropriation, 1894, amounted to \$10,531.95.

Carbines and sabers are provided for cavalry purposes. Artillery carry 4 3-inch M. L. rifles, 2 Napoleons, 3 Gatlings, and a mountain howitzer. Infantry use the Springfield rifle. Camp equipage consists of 70 wall, 100 common, and 2 hospital tents. Companies drill once a week. Armories are rented, the smaller ones being used as club rooms. There is no State arsenal; stores are kept at the Capitol. Military instruction is given to cadets at 9 of the largest educational institutions in the State, including the State University. Cadet rifles and equipments are furnished from the Federal supply. A Federal officer is on duty for drill at the 3 largest institutions. The force can be concentrated within twenty-four hours at Memphis, Nashville, or Chattanooga. About 90 per cent. would turn out for sixty days.

COL. WENDELL P. BOWMAN,
1st Regiment, Pennsylvania N. G.

Texas.—The authorized strength of the State militia, known as the Texas Volunteer Guard, is 3,000. The actually organized force includes 32 general and staff officers, 252 other officers, 2,250 infantry, 290 cavalry, and 110 artillery. This force is formed into a division of 2 brigades, each brigade consisting of 3 regiments of infantry. A regiment of cavalry, a battalion of artillery, and a battalion of colored infantry are unattached. The headquarters of the division are at Austin. Brigade headquarters are at Austin and Platteville. There is a signal corps, partly organized, with equipment. The number of adults in the State liable to serve is 300,000. Encampments occupy eight to nine days.

The State appropriation, 1894, was \$20,000. The Federal appropriation, 1894, amounted to \$12,930.

Cavalry are armed with Springfield carbines and sabers. Artillery carry 3-inch rifles and Gatling guns. Infantry use the Springfield rifle. Camp equipage consists of 595 wall, 60 common,

and 16 hospital tents. Companies drill once a week. There are no State armories. The State arsenal is at Austin. The independent commands consist of 7 unassigned companies in different sections of the State.

The whole force can be concentrated within sixty hours at Austin, Houston, Fort Worth, Dallas, Longview, or Jefferson. At least 80 per cent. would turn out for sixty days.

Utah.—The authorized strength of the National Guard of Utah is 4,691. The actually organized force includes 28 general and staff officers, 726 infantry, 140 cavalry, 105 artillery, and 23 members of a mounted signal corps. This force is formed into a brigade consisting of 2 regiments of infantry, 3 troops of cavalry, and 2 batteries of light artillery. The signal corps is a distinct organization. Headquarters of the brigade are at Salt Lake City. The number of adults in the State liable to serve is 25,000. Encampments occupy eight days.

There is an annual State appropriation of \$1,500. The Federal appropriation is \$3,000 per annum.

Cavalry armament includes Springfield carbines, Colt's revolvers, and sabers. Artillery carry 8 B. L. rifled cannon and 2 Gatling guns. Camp equipage consists of 50 wall, 20 common, and 2 hospital tents. Infantry use the Springfield rifle. Companies drill once a week. Drill rooms are usually rented. There are no arsenals in the State. Stores are kept at Fort Douglas.

The entire force can be concentrated within thirty hours at Ogden, Salt Lake City, or Provo. About 70 per cent. would turn out for sixty days.

Vermont.—The authorized strength of the Vermont National Guard is 790. This is also the organized strength, and includes 24 general and staff officers, 637 infantry, 80 artillery, and 49 cadets. This force is formed into a brigade, which consists of a regiment of 3 infantry battalions, a battery of light artillery, and a partly independent command of artillery cadets. Brigade headquarters are at Brattleboro'. The companies are distributed throughout the State. Special arrangements are made for hospital and ambulance service. The number of adults in the State liable to serve is 44,164. Encampments occupy six days.

There is no specific State appropriation. The annual amount is usually about \$15,000. The Federal appropriation in 1893 amounted to \$3,486.48.

Artillery carry 4 new 3 1/2-inch steel B. L. rifled guns, also sabers. Infantry use the Springfield rifle. The camp equipage is adequate. Companies drill once a week. Rooms are hired for drill purposes. There is an arsenal at Montpelier.

The infantry force can concentrate in about twelve hours at any of the principal cities; artillery within seven hours. About 95 per cent. would turn out for sixty days.

Virginia.—The authorized strength of the State militia, known as the Virginia Volunteers, is 5,176. The actually organized force includes 10 general and staff officers, 336 other officers, 2,391 infantry, 191 cavalry, 167 artillery, and 204 naval militia. This force is formed into a brigade of infantry, with headquarters at Richmond, a regiment of cavalry, consisting of 5

troops, and a battalion of artillery. The infantry brigade consists of 4 regiments. There are 4 unattached infantry battalions. The number of adults in the State liable to serve is 220,000. Encampments occupy ten days.

The State appropriation, 1894, was \$11,242.57. The Federal appropriation, July, 1894, amounted to \$10,831.35.

The cavalry arm is the Springfield carbine. Sabers are also carried. For artillery use there are 4 12-pounder and 4 6-pounder brass guns, also 12 3-inch iron rifled pieces. Artillery carry axes. Infantry use the Springfield rifle. Camp equipment consists of 65 wall and 30 common tents. Companies drill once a week. There are 4 armories at Richmond and 5 in other cities set apart for volunteer use. There is an arsenal at Lexington, and a bell house at Richmond is used for store purposes.

About 60 per cent. of the force can be concentrated at Richmond in twelve hours, and about 25 per cent. additional within eighteen hours. From 80 to 95 per cent. would turn out for sixty days.

Washington.—The authorized strength of the Washington National Guard is 2,343. The actually organized force includes 27 general and staff officers, 82 other officers, 808 infantry, 120 cavalry, and 42 artillery. This force is formed into a brigade, with headquarters at Spokane. The brigade consists of 1 regiment and 1 battalion of infantry, 1 cavalry battalion of 4 troops, and 1 battery of light artillery. Men in infantry regiments are detached for signal duty. The number of adults in the State liable to serve is 85,193. Encampments occupy nine days.

The annual State appropriation is \$40,000. The Federal appropriation, 1894, amounted to \$3,450.45.

The cavalry arm is the Springfield carbine, with saber and pistol. Infantry use the Springfield rifle. Camp equipment is ample. Companies drill once a week. All drill halls are rented. There are no arsenals in the State.

The whole force can be concentrated within 48 hours. The infantry regiment and cavalry troops can be assembled within twenty-four hours. Between 65 and 70 per cent. would turn out for sixty days.

West Virginia.—The authorized strength of the West Virginia National Guard is 1,438. The actually organized force includes 21 general and staff officers, 81 other officers, and 789 infantry. This force is formed into a brigade, consisting of 2 regiments of infantry, with headquarters at Parkersburg. The number of adults in the State liable to serve is not officially reported. Encampments occupy six days.

The annual State appropriation is \$15,000. The Federal appropriation, 1894, amounted to \$3,175.67.

Springfield rifles are in use. Camp equipment consists of 287 tents of all kinds, including 6 for hospital use. Companies drill once a week. Rooms are rented by companies for drill purposes. There are no arsenals in the State.

The whole force can be concentrated within twenty-four hours at Charleston or Grafton. About 80 per cent. would turn out for sixty days.

Wisconsin.—The authorized strength of the Wisconsin National Guard is 3,081. The actual-

ly organized force includes 25 general and staff officers, 165 other officers, 2,529 infantry, 57 cavalry, and 54 light artillery. There is no brigade organization. The force consists of 4 regiments of infantry, 1 troop of cavalry, and 1 light battery. The headquarters of one infantry regiment, the troop of cavalry, and the battery of artillery are at Milwaukee. A few men in infantry regiments are trained for signal purposes. The number of adults in the State liable to serve is 375,601. Encampments occupy seven days.

COL. HENRY L. THOMAS,
1st Regiment, Illinois N. G.

The amount disbursed for State military purposes, 1894, was about \$100,000. The Federal appropriation is \$10,351.35 per annum.

Cavalry carry the Springfield carbine, revolver, and saber. Artillery armament includes 2 3-inch rifles and 2 Gatling guns. Camp equipment includes 227 wall tents, 2 common, 2 miscellaneous, and 13 hospital tents. Companies drill three times a month. There are 67 company armories. They are all rented. There are no arsenals in the State. Surplus stores are kept in the Capitol at Madison.

The entire force can be concentrated at West Superior or Marinette within fifteen hours; at other prominent points within twelve hours. Ninety per cent. would turn out for sixty days.

Wyoming.—The authorized strength of the Wyoming National Guard is not limited by law. The actually organized force is 400. This force consists of a regiment of infantry, with headquarters at Evanston. The number of adults in the State liable to serve is 13,000. The State appropriation for two years ending March 31, 1895, was \$7,200. The Federal appropriation, 1894, amounted to \$2,597.83. Two 3-inch steel guns are available for artillery service. Infantry use the Springfield rifle. No official report on camp equipment is available. Companies drill once a week. There are no armories; drill halls are rented. There are no arsenals in the State.

The force can be concentrated within a few hours. About 75 per cent. would turn out for sixty days.

Summary. *Strength.*—The authorized strength, which represents the force available

if every officer and enlisted man allowed by law were commissioned or enlisted, varies from 15,000 in New York to 450 in Idaho. In 5 States and Territories there is no fixed limit to the strength. These States and Territories include Tennessee, Oklahoma, Arkansas, Wyoming, and Nevada.

COL. ALONZO B. COIT,
10th Regiment, Ohio N. G.

Infantry.—The 3 States having the largest infantry force available at the present time for active service are New York, with 12,159; Pennsylvania, with 7,638; and Ohio, with 5,125. The remainder of the States having over 3,000 infantry ready for the field are Massachusetts, 4,302; New Jersey, 3,369; South Carolina, 3,069; Georgia, 3,515; Illinois, 4,957; and California, 4,178.

Cavalry.—Six of the 9 States in the North Atlantic division have cavalry militia. The same is true of the South Atlantic division. Of the 12 States comprising the North Central division, 5 only include cavalry. Among the troops available at this time 4 of the 8 States and Territories in the South Central division and 6 of the 11 States and Territories in the Western division have this arm of the service represented. The 3 States having the largest cavalry force are South Carolina, with 1,519, white and colored; Georgia, with 589; and Texas, with 290. The States having more than 200 cavalry in addition to the 3 States already given are Massachusetts, 285, and California, 261. Several other States, including New York, are organizing an additional force of cavalry.

Artillery.—The only States and Territories without artillery militia, according to the latest available reports, are Maine, Delaware, Maryland, West Virginia, North and South Carolina, Michigan, Iowa, Kentucky, Oklahoma, Montana, Wyoming, New Mexico, Arizona, and Idaho.

The 3 States having the largest artillery force at present are California, 586; Ohio, 437; and New York, 416. Other States having 200 artillery or over are Massachusetts, 266; Pennsylvania, 343; Indiana, 299; Alabama, 204; Mississippi, 340; and Louisiana, 401.

Adults liable to serve.—The 3 States of the Union credited with the largest number of

adults liable to serve are Illinois, 852,635; Pennsylvania, 806,230; and New York, 750,000. The only other State able to furnish more than 500,000 fighting men under a special call to arms is Ohio, with 645,000.

The States able to furnish from 250,000 to 500,000 are Massachusetts, 389,529; New Jersey, 284,887; Georgia, 264,021; Indiana, 481,192; Wisconsin, 375,601; Iowa, 269,510; Missouri, 400,000; Kentucky, 361,137; and Texas, 300,000. Figures are not available under this heading for South Carolina and Oklahoma.

Organization.—The organized militia force in New Jersey, Pennsylvania, Mississippi, Texas, and California is formed into a division of several brigades. The force in nearly every State and Territory is brigaded. The exceptions are Maine, Georgia, Ohio, Wisconsin, South Dakota, Kentucky, Alabama, Oklahoma, Montana, Wyoming, New Mexico, Arizona, and Nevada.

Hospital or Ambulance Corps.—Of the 49 States and Territories, from 15 to 20 are lacking in provision for hospital and ambulance forces and equipment in connection with the State militia. Those included in the last Federal report as being most serviceable are Maine, Massachusetts, Connecticut, New York, New Jersey, and Pennsylvania—being 6 of the 9 States in the North Atlantic division; the District of Columbia, Ohio, Illinois, and Oregon.

Signal Corps.—Corps for signaling purposes have been organized in Massachusetts, Rhode Island, Connecticut, New York, Georgia, Montana, Colorado, Utah, and California. In 14 other States and Territories there are trained detachments ready to serve. In California one signal corps is mounted and equipped as cavalry. In Connecticut, Iowa, Colorado, and Utah the signal corps are mounted on bicycles. This last form of equipment is also used in connection with an Ohio regiment. Homing pigeons are utilized for signaling in the District of Columbia. The latest Federal report credits Massachusetts, Connecticut, and Montana with having attained the greatest proficiency in this branch of the militia service.

Encampments.—In 1894 officially ordered encampments of State troops took place for practice drills and other exercises in 30 States. In some of the other States companies and battalions went into camp of their own volition. According to the latest reports, 15 States have ground set apart as State property for camp exercises. During recent encampments in Vermont, New York, Pennsylvania, Wisconsin, Minnesota, and Texas regular troops were present.

Mobilization.—The time required for concentrating the entire command ranges, approximately, from three days in Oregon and California to twelve hours in Connecticut. This excludes the District of Columbia, where, for local service, the force could be mustered within three hours.

The percentage of the entire force that could probably be counted on to turn out for sixty days' active service, as given in the various State summaries preceding, is based on estimates furnished by commanding officers, and varies from 95 per cent. in New York, Pennsylvania, and North Dakota to 50 per cent. in Minnesota and South Dakota. The States and Territories reported as having well-developed plans prepared

to meet emergencies are the District of Columbia, North Carolina, Illinois, South Dakota, and Alabama. In numerous other States plans have been partially prepared.

Armed Resistance.—One reason why the synopsis of State summaries at the beginning of this article has been arranged by geographical groups is that some idea may be gained of the possibilities with reference to armed resistance on land in the event of threatened invasion.

For convenience of illustration, let it be supposed that New York city and vicinity required protection. From the statistics furnished in the introductory part of the article the aggregate strength of the National Guard within each geographical division can be easily noted. The first part of the entire force to reach threatened points in New York State would be, of course, that located within the North Atlantic division. Taking it for granted that the railroads give right of way to troops, and that no obstacles would be encountered in the matter of equipment or transportation to railroad rendezvous, and allowing twenty-four hours clear for the troops in each State to assemble at their selected points of concentration, within State boundaries, it would seem safe to say that fully 20,000 infantry, 300 cavalry, and 700 artillery, with at least 50 ordinary field pieces, 20 Gatling guns, and 8 howitzers, would be in position for immediate action within forty-eight hours of the first alarm. Of these, a large number would be ready for action within twelve hours, and more than one half within twenty-four hours. This force, equipped with at least 5,000 tents and supplemented by about 700 naval militia, would within another twenty-four hours or thereabouts be reinforced by quite two thirds of the organized militia of the South Atlantic group.

Each day thereafter, regiments, troops, and batteries of fully equipped officers and men with an ample supply of armament and ammunition, would reach their appointed rendezvous for attack or defense, those of the South Atlantic division being closely followed by the forces comprised in the North and South Central divisions and the Western division, with the net result that in less than six days, in round numbers, from 80,000 to 90,000 infantry, from 4,000 to 5,000 cavalry, from 4,000 to 5,000 artillery, and from 2,000 to 3,000 naval militia, fully officered, armed, and equipped, would stand at the points threatened, fully prepared to support the Federal troops and engage the enemy. The difference between the organized force and the total authorized strength being over 50,000, such an emergency as the one just referred to would bring into service a sufficient number of adults in each State and Territory to protect State interests during the absence of the organized militia troops.

Appropriations.—The largest regular annual State appropriation (\$400,000) is made by New York. This sum does not include a number of allotments for special purposes. In 1894, other States appropriating \$100,000 or more were Massachusetts, Rhode Island, Pennsylvania, Illinois, Wisconsin, and California. The amount appropriated by Congress annually (\$400,000) is divided among the States according to the representation to which each is entitled in Congress,

and to the Territories and the District of Columbia in such proportions as the President may direct. The largest Federal allotment is that granted to New York.

Ammunition.—All States and Territories except North Dakota, Arizona, Oregon, and California have on hand, ready to be delivered promptly to troops on arrival at points of concentration, amounts of cavalry and infantry ammunition ranging from 600,000 rounds in New York to 10,000 each in Florida, Missouri, Washington, and the District of Columbia. In addition to these amounts nearly every company throughout the United States keeps a fairly large stock at its armory or within easy reach. The batteries of artillery are usually kept fairly well supplied with artillery ammunition, the largest quantity being for Gatling-gun purposes.

Camp Equipage.—Nineteen States are reported as having sufficient tentage for the present force. A similar number of States are not sufficiently well equipped. Some of these are taking steps to supply the deficiency. The above 38 States own their tent equipage. The balance of the States and Territories are not yet satisfactorily arranged for in this matter. Only a few States have complete mess outfits.

Drills.—The drilling capabilities of the State troops are continually improving. The interest taken in their efficiency by the Federal Government, as represented by specially detailed army officers, is producing excellent results.

In the Federal summary, 1894, it is noted that the degree of proficiency in drill attained by large bodies of troops is reported as ranging from excellent in some organizations in Massachusetts, New York, Ohio, and Pennsylvania, to poor. "The best-executed drills seem to be those of the company in close order, but little attention seems, as a rule, to have been paid to company extended order in most States. The drill of the cavalry is generally reported as being good; in some cases, excellent. The artillery drill is generally very good, and special mention is made of the proficiency of Battery A, Missouri National Guard, and of the Vermont battery. So much time is given to the ceremonies that they are generally better performed than the regular drills."

NEBRASKA, a Western State, admitted to the Union March 1, 1867; area, 77,310 square miles. The population, according to each decennial census since admission, was 121,904 in 1870; 452,402 in 1880; and 1,038,919 in 1890. Capital, Lincoln.

Government.—The following were the State officers during the year: Governor, Simon A. Holcomb; Lieutenant Governor, Robert E. Moore; Secretary of State, Joel A. Piper; Treasurer, Joseph S. Bartley; Auditor, Eugene Moore; Attorney-General, Arthur S. Chennell; Superintendent of Public Instruction, Henry H. Corbett; Commissioner of Public Lands and Buildings, Henry C. Russell—all Republicans except the Governor, who is a Populist, as is also the Adjutant General, P. H. Barry; Chief Justice of the Supreme Court, T. L. Norval; Associate Justices, A. M. Post and T. O. C. Harrison—all Republicans.

Finances.—The State valuation in 1893 was \$171,468,207.48, a falling off from 1894, when it

was \$183,717,498.78. The decrease is in personal property. Improved lands have increased in acreage from 17,558,533 to 18,091,963, and in value from \$61,411,598 in 1894 to \$61,817,884 in 1895. The value of railroad property and sleeping cars is placed at \$25,492,513.08. Horses are valued at \$5,019,253, and cattle at \$4,132,704. It is estimated that the taxes will be too small at 5 mills on this valuation to meet the expenses of the general fund for the coming two years, and that the floating debt at the end of that time will amount to at least \$1,400,000. The total tax for all purposes is about $7\frac{1}{4}$ mills.

The Bureau of Labor, in the report of mortgage indebtedness for the year ending May 31, 1895, shows that the amount of incumbrances is decreasing.

The inspector of oils reports that the total received for inspection of illuminating oils in 1894 was \$10,106.40, and the salaries and expenses amounts to \$11,274.31. The gasoline fees, amounting to over \$10,000, the inspector refused to pay into the treasury, lest they might some time be demanded of him on the ground that they were illegally taken. The State then brought suit against the inspector's bondsmen. The question whether gasoline was contemplated as coming under the law had been settled in the affirmative at a former term.

The case of the State against ex-Treasurer Hill (see "Annual Cyclopaedia" for 1893, page 504) and his bondsmen was tried in the spring, and the jury failed to agree. The State appealed to the Supreme Court.

Education.—The December apportionment of State school funds disposed of \$216,336.33, and the rate for each pupil was 61 cents. The whole number of children was 352,028. The amount apportioned in May, 1895, was \$256,996.42, and the rate per pupil was 70 cents. At that time 362,729 children of school age were listed, fully 10,000 more than the number afterward reported.

The regents of the State University, in their report to the Legislature, said that to make it adequate to the accommodation of the young men and women of the State who are flocking to it additional buildings, to cost over \$400,000, will be required. The State has appropriated only about \$25,000 toward the erection of the present buildings, which have cost between \$250,000 and \$400,000. A short course in agriculture was established, the Legislature having given for its use the Morrill fund received from the National Government. A class of 95 was sent out in June, the largest in the history of the university.

The Nebraska Wesleyan University graduated 16 at its last commencement. The original debt of \$30,700 was paid then by subscription.

The Penitentiary.—The joint committee of the Legislature appointed to investigate charges of cruelty and misconduct at the Penitentiary reported that no ground was discovered for the charges; but they recommended that the contract system by which the prisoners were maintained and worked should be abolished, and that the State should buy the plant of the contractor in charge and itself maintain the prisoners and manage their labor. This was decided upon, and the contractor's property, together with the

value of his unexpired lease, was appraised at \$33,400. The Board of Public Lands and Buildings appointed ex-Warden Beemer as superintendent and steward, with the power to lease convict labor. But the Governor disputed the right of the board to make the appointment, claiming that all business and the making of contracts ought to be through the warden, and that in the appointment of Beemer the board exceeded its authority by creating a new office. The matter was complicated by an application for an injunction distraining the Auditor from issuing the warrant to the contractor in payment for his plant. The board could not annul his lease until the payment was made, and appealed to the Governor to eject him, which the Governor declined to do. When this difficulty was over, the board directed ex-Warden Beemer to take control at the Penitentiary as the new contractor, but the warden, supported by the Governor, refused to admit him and would receive no supplies from him. The prisoners were kept idle while this controversy was pending. It was taken to the courts and was undecided at the end of the year.

Charities.—The Governor appointed a new superintendent, Dr. Abbott, for the Lincoln Hospital for the Insane, and the appointment was confirmed by the Senate and was to take effect March 10. But the superintendent in charge, Dr. Hay, refused to retire, claiming that by the statutes he is appointed for six years, and hence there was no vacancy. The Governor declared that he would install his appointee by force, if necessary, and the superintendent applied for an injunction to prevent it. In April the Governor asked Dr. Hay to resign, and intimated that in case he did not, charges would be preferred against him and he would be removed for cause. Charges were brought and the superintendent's counsel laid them before the Board of Public Lands and Buildings with a request that the board grant a hearing on them. The charges—which were for extravagant management, negligence, and the permitting of abuse of patients by subordinates—were, however, heard by the Governor under protest from Dr. Hay. Dr. Hay presented statements to refute the charge of extravagance, showing that the Lincoln Hospital for the Insane is maintained at less *per capita* than 16 asylums in other States, but one, the Colorado institution at Colorado Springs, costing less. The Governor also made an appointment of a new assistant physician, and this was resisted on the same grounds as the other. The Attorney-General asked the courts to settle the controversy. There was similar trouble about the control of other State institutions.

Agriculture.—The cultivation of beets for sugar was greatly stimulated in 1895 by the action of the Legislature, and will be still further increased by the introduction of improved processes of manufacture. Since and including the year 1891 the sugar factory at Grand Island has paid for beets an aggregate of \$485,303. Of that sum the beet growers in the autumn of 1895 received \$180,000, though much of the crop failed to bring the maximum price; but numerous instances were reported where beet growers realized over \$45 an acre net profit. A

much larger acreage was devoted to the purpose than formerly, and it was estimated that the factories in the State would have turned out 4,500,000 pounds in the season. Local organizations for promoting the culture of beets have been formed, and a convention was appointed to be held in Lincoln Feb. 5 and 6, 1896.

The cultivation of alfalfa has been highly successful in parts of the State.

The corn crop for the year was estimated at 18 bushels to the acre.

The work of irrigation has made good progress. Many private plants are established with wells and windmills. The extent of irrigating canals is summarized by the State engineer as follows: There are 372 canals either constructed or under construction, having a total length of 1,908 miles, of which 1,156 are completed. These canals, when finished, will have cost \$2,015,336, of which amount \$1,271,808 has already been expended. The number of acres under ditch will be 866,180.

A law for dividing the State into irrigation districts and creating a State Board of Irrigation was passed, and all persons who have built ditches are required to describe them in detail in an application to the board, and state how much water they want.

A large irrigation convention was held in Sidney in December.

Omaha.—The bill for a new board of fire and police commissioners, passed by the Legislature, and applicable to Omaha, was resisted as invalid. The Governor vetoed the bill, which was passed over the veto; and he refused to act on the appointing board, of which he was ex officio a member. The question came before the Supreme Court, and the law was declared valid.

The Relief Commission.—The report of the commission appointed to distribute the charity contributed for the relief of destitute citizens, finished its work and made its report in August. Following are extracts from it.

It was found on taking up the work of investigating the loss and destruction of crops and the destitution of citizens from the hot winds of July last, that of the 31 counties of the State, 61 have been affected by the calamity, and that in 26 the crops had been totally destroyed. An imaginary line from Furnas County, on the southern border of the State, northwesterly to Knox County, on the Missouri river, comprehends on the west of it the counties referred to. It is believed that the agricultural loss to this section was equal to \$100,000,000. In July, 1894, all crops yielded an abundant harvest, and not less than 200,000,000 bushels of corn were to be considered as the principal product, of which there were gathered not more than 15,000,000 in the entire State. Valuable contributions in kind were forwarded from various localities on the Ohio river in the East, from sympathetic sections of the South, particularly Georgia and Louisiana, and especially from Illinois and Iowa, from the New England States, California, and Oregon. The most weighty obligation which rests on the commissioners is that due to the owners of the railway lines throughout the State for free transportation and remitted rates of freight. The telegraph and telephone companies contributed cash services. The citizens of Omaha and Lincoln provided storage for all supplies delivered and awaiting transportation there. The Senators and Representatives in Congress and the Commissioner of Agriculture at Washington supplied 22,000 packages of garden seeds. The Merchants' Exchange at St. Louis and

the Board of Trade at Chicago, commercial sections of large importance, extended their most substantial sympathies in liberal cash contributions.

The financial statement shows receipts of \$70,449.63.

The Committee on Appropriations of the Connecticut Legislature proposed to send \$5,000 from the State treasury, and other States offered assistance in the same way; but these proposals were declined by the Governor, and the work was left to voluntary contribution and the aid of the Nebraska Legislature.

The Barrett Scott Case.—Several men were arrested on suspicion of being connected with the horrible lynching of the defaulting treasurer of Holt County (see "Annual Cyclopaedia" for 1894, page 505), and 3 were held for trial. The case was carried to Boyd County, in order to remove it from the scene of excitement. Some of the accused were identified by the murdered man's little daughter and a young lady, both of whom were with Mr. and Mrs. Scott in the carriage when he was taken from it; and they were shown to have been members of a vigilance committee and to have been away from home at the time, and together; but they swore alibi for themselves and for one another, and the jury failed to convict.

Legislative Session.—The regular biennial session began Jan. 1 and ended April 5. The members were divided among parties as follows: Senate—25 Republicans, 7 Populists, and 1 Populist-Democrat; House—4 Democrats, 72 Republicans, 4 Populists, and 19 Populist-Democrats.

John M. Thurston was elected United States Senator to succeed Charles F. Manderson.

Of 120 bills that were passed, 9 were vetoed by the Governor, and 3 of these were passed over the veto.

An appropriation of \$1,375,479.21 was made for the current expenses of the government for the two following years, and one of \$26,722.21 for the payment of miscellaneous claims against the State, and another for the same purpose of \$80,833.02. For salaries of officers of the State government, State institutions and departments \$808,075 was appropriated. For defending in the Federal court the maximum-rate law (see "Annual Cyclopaedia" for 1893, page 505, and for 1894, page 505), an appropriation of \$21,648.75 was made. For payment of the Legislature \$85,000 was set apart, and an additional \$40,000 for incidental expenses. An appropriation of \$50,000 was made for relief of the sufferers by the drought, and an act was passed to give \$200,000 to provide seed and feed and for its distribution.

The registration law was amended, making it apply only to cities of over 5,000 population, and providing for three days instead of five for general registration.

Amendments to the election laws prescribed the manner of voting for amendments to the Constitution, of designating newspapers in publish proposed amendments, and of placing on the official ballot names of candidates nominated by petition.

The State banking law was amended so as to require all State banks to be chartered under the seal of the State by the State banking

board. Four public statements are required annually. Two directors are required to be present when a bank is examined. Bank examiners' bonds are raised from \$10,000 to \$25,000. Instead of uniform fee for examination, fees are graded according to capital of banks. Banks must keep 15 per cent. of deposits on hand, and in cities of 20,000 population or over 20 per cent. Incorporated banks are prohibited from buying or holding any part of their stock. All banks are required to set apart one tenth of their net proceeds until they have a surplus of at least 20 per cent. No bank can hold any real estate, except bank building and fixtures, to exceed one third of its capital, unless taken to satisfy a debt, and it must then be sold within five years. Notes by any bank or banker or partnership can not be carried as an asset. No dividend can be made where any bad debt or loss is carried as an asset.

It was made unlawful for any railway to use any car or engine not equipped with automatic couplers after Jan. 1, 1898, and to run any train not having enough automatic brakes so that the engineer can control the train without requiring brakemen to go between the cars.

Corporations working under the mutual assessment and other similar plans for life and accident insurance must give bonds and show applications for at least 250 lives, for at least \$1,000 each, and must be licensed by the Auditor, and make annual statements to him. Accumulations shall be invested in United States bonds, State or municipal bonds, or in notes secured by real-estate mortgage or in district irrigation bonds not to exceed 40 per cent. of the value thereof, and deposited with the Auditor.

The statute relating to the formation of new counties was so amended as to make 450 square miles the minimum territory, and the votes necessary to the establishment of a new county a majority instead of a three-fifths vote.

A bounty of $\frac{1}{4}$ of 1 cent a pound was ordered for the manufacture of sugar by established factories and $\frac{1}{2}$ to those hereafter established, and the same for chicory. The sugar beets must have been paid for to the grower at a rate not less than \$5 a ton, and the chicory at not less than \$10.50. The sugar must contain not less than 90 per cent. of crystallized sugar, and the chicory must be 99 per cent. pure. This law is to be in force for three years.

It was enacted that any "person making or keeping for sale any imitation butter or cheese shall be fined not less than \$10 nor more than \$20, but the manufacture of substitute butter not colored shall not be prohibited. Each package shall be stamped 'imitation butter.'"

Other acts were:

Providing for boards of health in cities of the second class and villages.

Allowing cities of the second class and incorporated villages to issue bonds to the amount of 5 per cent. of the assessed value of their property for extension or enlargement of their waterworks.

Authorizing councils in cities of the second class and village boards by ordinance to levy a special license tax not to exceed \$5 per annum upon every fire insurance company transacting business in such city or village, the tax so raised to be used for the support of volunteer fire departments.

Providing for boards of park commissioners in

cities, and empowering cities to issue bonds for park purposes.

Regulating the practice of dentistry.

Raising the age of consent from fifteen to eighteen years.

Imposing a penalty of one to ten years' imprisonment for cattle stealing, buying stolen cattle, or harboring cattle thieves.

Imposing a fine of \$10 to \$50 for the manufacture, sale, or giving away of cigarettes or cigarette materials.

To protect Mongolian pheasants.

Making daylight burglary a felony.

Imposing heavy fines on landowners who allow the Russian thistle to grow upon their lands.

Providing for the establishment of a branch of diers' home at Milford.

Twelve constitutional amendments were proposed, the principal of which were:

Providing that all votes shall be by ballot, or such other method (voting machine) as may be prescribed by law, the secrecy of voting to be retained.

Providing for the investment of the permanent school fund in registered school district bonds.

Authorizing the Legislature to provide that in civil actions five sixths of the jury may render a verdict.

Authorizing three fifths of both houses to change salaries of State officers.

Adding 3 railroad commissioners to the list of State officers.

Authorizing the Legislature to increase the number of supreme and district judges.

Limiting the number of State officers, except by concurrence of three fourths of each House.

Authorizing the Legislature to create an appellate court.

Among joint resolutions were the following:

That Nebraska shall hereafter, in a popular sense be known and referred to as the 'Tree-planter State.

Authorizing the Governor to appoint 3 commissioners to act in conjunction with a like committee of the State of South Dakota in ascertaining the true and correct boundary line between Nebraska and South Dakota as far as the same may be the boundary between the counties of Clay in South Dakota and Dixon in Nebraska.

Asking Congress to provide for payment to all Union soldiers who were confined in rebel prisons during the war a pension of \$2 a day during the time so confined and \$12 a month for the remainder of their lives.

That the Legislature of Nebraska hereby declare the flower commonly known as "golden rod" to be the floral emblem of the State.

Political.—A justice of the Supreme Court was to be chosen this year, and 2 regents of the State University. At the Democratic State Convention, Aug 22, in Omaha, the free-silver element was in control, and the resolutions declared in favor of free and unlimited coinage of gold and silver at the ratio of 16 to 1. The candidates named were: For Justice, Charles J. Phelps; for Regents, A. T. Blackburn and Robert Kittle. A delegate attempted to place the following before the convention as a minority report:

We recommend the administration of President Cleveland, as being able, patriotic, and honest, so reaffirm the platform adopted by the Democratic National Convention at Chicago in 1892.

Scarcely had the first word been uttered when the whole convention was protesting. There was such a roar that order was not established for

ten minutes, when the offending resolution was tabled without comment.

The second Democratic State Convention, called by the "bulwers," and made up of the Administration, anti-Silver Democrats, met in Lincoln, Sept. 5, with 631 delegates. The resolutions, which approved the Administration and decried for "sound money," were unanimously adopted. The following nominations were made: For Supreme Judge, T. J. Mahoney; for Regents of the State University, W. S. Ashby and John H. Ames.

The Republican Convention, in Lincoln, Oct. 2, nominated for Justice T. L. Norval; and for Regents C. H. Morrill and H. L. Gould. The platform denounced the Wilson tariff law and asked the enactment of another "McKinley bill"; favored the use of both gold and silver as money, and demanded a national currency of equal debt-paying power; denounced the Democratic administration's supine neglect of American interests in foreign lands; expressed sympathy with the Cuban revolutionists; pledged the support of the party to irrigation interests; and congratulated the people on the re-enactment of the sugar-bounty law.

The Populist State Convention opened in Lincoln Aug. 28. The platform reaffirmed the party principles. Much discussion was caused by a resolution in reference to the A. P. A., and the matter was finally settled by the adoption of a resolution deprecating the bringing of religious issues into politics. Samuel Maxwell was nominated for Justice, and Ella W. Peattie and James H. Hayston for Regents.

The Prohibitionists nominated A. G. Wolfenbarger for Justice, and J. J. Bryant and Anna R. Woodley for Regents.

The Republicans elected their candidates. Following were the returns for Justice of the Supreme Court: Norval, Republican, 79,516; Maxwell, Populist, 70,578; Mahoney, Administration, Democrat, 18,638; Phelps, Free-silver Democrat, 10,214; Wolfenbarger, Prohibitionist, 4,344. Messrs. Gould and Morrill, Republican, were elected by votes of 81,847 and 80,962 respectively. Of the district judges elected at the same time, 20 were Republicans, 2 Democrats, 3 Populists, and 3 Populist-Democrats.

NETHERLANDS, a constitutional monarchy in western Europe. The First Chamber of the States General has 50 members, elected for nine years by the provincial councils, one third of whom retire every three years. The Second Chamber is composed of 100 members, elected directly for four years by popular suffrage, every Dutch male citizen being entitled to a vote if he pays 10 guilders in direct taxes above the limit of partial exemption or has a separate lodging. One half of the members are elected every two years. The reigning sovereign is Queen Wilhelmina, born Aug. 31, 1880, whose mother, Queen Emma, widow of the late Willem III, acts as regent during the daughter's minority. The country constituted May 7, 1894, was composed as follows: President of the Council and Minister of Foreign Affairs, Dr. J. Roell; Minister of the Interior, Dr. S. van Houten; Minister of Finance, Dr. J. P. Sprenger van Eyk; Minister of Justice, Dr. W. van der Kaay; Minister of the Colonies, J. H. Bergsma; Minister of Marine,

Jonkheer H. M. van der Wyck; Minister of War, Lieut.-Gen. C. O. H. Schneider; Minister of Waterstaat, Commerce, and Industry, P. W. van der Sleyden.

Area and Population.—The area of the kingdom is 12,648 square miles. The population on Dec. 31, 1903, was computed to be 4,722,911, consisting of 2,341,484 males and 2,381,427 females. The number of marriages in 1902 was 34,311; of births, 159,005; of deaths, 99,372; excess of births, 69,633. The number of emigrants in 1893 was 4,920, all destined for the United States, comprising 2,562 adult males, 1,248 women, and 1,310 children. Of the total population 324 per cent. is found in the cities and large towns. The population of Amsterdam at the end of 1893 was 446,657; of Rotterdam, 238,207; of the Hague, 174,790; of Utrecht, 91,970.

Finances.—The budget for 1903 makes the total revenue 128,311,870 guilders, of which 11,910,000 guilders come from the land tax, 11,712,000 guilders from the personal tax, 6,870,000 guilders from the tax on incomes from investments, 4,525,000 from the tax on professional incomes, 26,400,000 guilders from the tax on alcoholic drinks, 13,995,000 guilders from other excise taxes, 19,815,000 from stamps, registration, and succession duties, 5,811,230 guilders from customs, 7,895,000 guilders from the post office, 1,336,500 guilders from telegraphs, 2,335,000 guilders from domains, 661,400 from the lottery, 130,000 from shooting and fishing licenses, 214,820 guilders from the assay tax on gold and silver articles, 1,400,000 guilders from pilot dues, 5,175 guilders from mining royalties, and 7,327,625 guilders from other sources. The total expenditures are estimated at 135,742,280 guilders, of which 821,000 guilders are for the royal household, 667,800 guilders for the state authorities, 5,287,063 guilders for justice, 12,446,899 guilders for the interior, 15,412,393 guilders for the navy, 21,402,187 guilders for the army, 25,139,209 guilders for the national debt, 19,158,533 guilders for finance and worship and payments to communities, 1,377,023 for central administration of the colonies, 22,125,728 guilders for commerce, industry, railroads, and canals, and 50,000 guilders for unforeseen expenses. The budget for 1904 estimates the expenditures at 137,800,000 guilders, and anticipates a deficit of 7,500,000 guilders.

The capital of the public debt in 1903 was 1,076,220,050 guilders, of which 625,000,000 guilders pay 24 and 375,000,000 guilders 34 per cent. The paper money amounts to 15,000,000 guilders.

Army and Navy.—The peace effective of the permanent army is 1,280 officers and 26,000 men, with 5,595 horses. The army is recruited partly by voluntary enlistment for six or eight years, one third of the troops being raised in that way, while the rest are drawn from the militia levies, of which the annual contingent is 10,400. The land militia serve seven years and the naval militia five years. The Chamber, on March 14, 1895, passed a bill for supplying the army with the Mannlicher rifle of 85 millimetres caliber.

The naval force consists of 9 armored sailing vessels of 2,000 to 5,400 tons displacement ("Konink der Nederlanden," "Koninklijke Wilhelmina," "Prins Hendrik," "Evertsen," "Kortenaar," "Pieter Hein," "Gedusa," "Scherpschild," and "Star"), with 44 to 8 inches of armor and 1 to

8 heavy guns, the largest having a caliber of 28 centimetres; 3 other squadron vessels incomplete ("Holland," "Zeeland," and "Friesland"); 13 monitors having 5½ inches of armor and 1 or 2 28-centimetre guns; 22 gunboats, besides 5 river gunboats; and 6 frigates and 2 corvettes.

Commerce.—The imports and exports in 1894 were divided between different countries as follows, values being given in guilders (1 guilder = 40 cents):

COUNTRIES.	Imports.	Exports.
Great Britain.....	244,100,000	260,800,000
Germany.....	287,400,000	126,800,000
Belgium.....	161,100,000	123,900,000
France.....	21,500,000	11,900,000
Sweden and Norway.....	21,900,000	9,400,000
Russia.....	173,900,000	2,900,000
Roumania.....	88,600,000	100,000
Turkey.....	11,500,000	8,300,000
Italy.....	8,800,000	5,100,000
Spain.....	29,000,000	1,000,000
Dutch East Indies.....	225,000,000	53,800,000
British East Indies.....	45,800,000	700,000
Africa.....	8,300,000	15,700,000
United States.....	182,100,000	22,200,000
Brazil.....	5,500,000
Peru and Bolivia.....	14,500,000
Other countries.....	89,100,000	14,000,000
Total.....	1,460,800,000	1,114,700,000

Of the total value of the imports, 440,200,000 guilders represent articles of food and drink, 526,200,000 guilders raw materials, 239,000,000 guilders manufactured articles, and 240,900,000 guilders miscellaneous articles. Among the exports alimentary substances amounted to 384,400,000 guilders, raw materials to 366,000,000 guilders, manufactures to 236,500,000 guilders, and miscellaneous merchandise to 125,100,000 guilders. The imports of precious metals were 14,400,000 guilders and exports 2,700,000 guilders. Iron and steel and their manufactures were imported in 1893 to the amount of 122,219,000 guilders and exported to the amount of 75,547,000 guilders; imports of textile fabrics and materials were valued at 130,513,000 and exports at 161,332,000 guilders; cereal imports at 213,648,000 and exports at 116,383,000 guilders; imports of coal at 44,418,000 guilders and of petroleum at 9,162,000 guilders; imports of rice at 46,240,000 and exports at 12,089,000 guilders; imports of coffee at 35,013,000 and exports at 19,932,000 guilders; imports of butter at 1,917,000 and of margarine at 23,923,000 guilders and exports of butter at 13,003,000 and of margarine at 43,842,000 guilders; exports of cheese at 10,541,000 guilders; imports of drugs at 181,569,000 and exports at 145,926,000 guilders; imports of wood at 28,470,000 and exports at 15,773,000 guilders; imports of skins at 21,297,000 and exports at 19,738,000 guilders; imports of copper at 48,562,000 and exports at 40,978,000 guilders; exports of flax at 16,796,000 guilders; imports of oil seeds at 34,485,000.

Navigation.—The Dutch mercantile navy in the beginning of 1894 numbered 442 sailing vessels, of 118,500 tons, and 154 steamers, of 176,846 tons. There were entered in the ports of Holland during 1894 the total number of 1,431 sailing vessels, of 1,109,014 cubic metres, and 8,302 steamers, of 18,455,556 cubic metres, and cleared 1,597 sailing vessels, of 1,200,535 cubic metres, and 8,144 steamers, of 18,150,999

cubic metres. Of the sailing vessels entered 1,138 and of those cleared 1,162 carried cargoes, and of the steamers 7,910 were entered and 5,501 were cleared with cargoes. Of the vessels entered 625 sailing vessels, of 309,480 cubic metres, and 2,192 steamers, of 5,042,252 cubic metres, were of Dutch nationality.

Communications.—The railroads in operation on Jan. 1, 1894, had a total length of 1,816 miles, over half of which belong to the Government. The total length of the canals is 1,907,170 miles and of other navigable waters 3,000.

The State telegraphs in 1894 had a total length of 3,465 miles, with 12,395 miles of wire. The number of dispatches sent in 1894 was 4,423,739, of which 2,247,192 were internal, 2,137,818 international, and 38,729 official. The receipts were 2,951,079 francs; the expenditures 4,459,380 francs for ordinary and 258,959 francs for extraordinary purposes.

The number of letters sent through the post office in 1894 was 61,236,000 in the internal and 21,198,000 in the foreign service; of postal cards, 31,907,000 internal and 5,243,000 foreign; of printed inclosures, 105,220,000 internal and 514,000 external; of registered letters and postal orders, 3,019,000 internal, remitting 304,321,000 francs, and 514,000 external, remitting 110,357,000 francs.

Legislation.—The bill for the reform of the franchise, framed by Minister of the Interior Van Houten, goes almost as far as the more radical measure of Tak van Portvliet, which was rejected in 1892. That bill proposed to increase the number of electors to 800,000, more than double the existing number, by conferring the franchise on every Dutchman twenty-three years of age who can show that he is not a burden on the community. The bill of a minister must be submitted to the Council of State before it is offered in the Second Chamber; but a bill may be proposed in the Second Chamber by any one of its members, and, like a ministerial measure, it must first be discussed in committee before it comes up for public debate. The First Chamber must either adopt in its entirety a measure that has gone through the Second Chamber or reject it, but can not amend its provisions. The electoral law of 1850 fixed the maximum electoral impost at 112 guilders for the capital and 20 guilders for the rural communes, but the amount could be decreased according to local conditions. By the partial revision of the Constitution in 1887 the electoral tax was lowered and made invariable, increasing the electorate from 140,000 to 300,000. This measure was admitted to be provisional only, and the Clerical ministry that came into power in 1888 promised an extension of the suffrage; but it failed to keep the promise. It was overthrown and Tak van Portvliet, the Radical reformer, entered the ministry three years later with a scheme to confer the right to vote upon every true-born Dutchman twenty-three years of age, who could furnish external evidences of capacity and well-being. Owing to the vagueness of this condition a long and exciting controversy followed, and Mr. van Houten, who drew up the bill, adopted the views of the Moderate Liberals, who combined with the Conservatives and under the name of the Anti-Revolu-

Monary party insisted that the evidences of well-being should consist in the payment of certain specified taxes, not the fact that a citizen is self-supporting. The Anti-Revolutionaries pictured the country as falling a prey to the Socialists and Anarchists in the event of the admission of 500,000 new electors. Mr. Tak accepted various amendments to meet the wishes of the Moderates, but resigned when the Chamber was on the point of deciding that a lodging or habitation that qualifies for the franchise must consist of not less than two rooms, thus shutting out a large proportion of the poorest workingmen. The Anti-Revolutionaries gained the victory at the polls in 1894, and their interpretation of the Constitution was therefore embodied by Mr. van Houten in the new electoral bill. The bill fixes the electoral age at twenty-five; reduces the property qualification to the payment of a land tax of 1 guilder; and admits a new category of voters, consisting of householders or lodgers who pay a certain rent, citizens who own or rent boats of 30 tons burden, men whose earnings are at least 275 guilders a year or who have 50 guilders in the savings bank, and those who follow certain specified professions or occupations. The same conditions qualify electors for the provincial states and the communal councils.

The Socialists were left almost unrepresented in the new Dutch Chamber by the defeat of their leader, Domela Nieuwenhuis; but some of their principles are inscribed in the programme of the Radicals that follow the guidance of Tak van Poortvliet, who proclaim it to be the duty of the state to institute social reforms and to protect the workingman. To apprise this element the Government in August, 1895, appointed a commission composed of 25 members representing all shades of political opinion, to report on the best system of state pensions for old and infirm members of the working class. The immediate subjects presented to the States General by the speech from the throne opening its session on Sept. 17 are the reform of the personal tax and the new electoral bill.

The Amsterdam Exhibition.—An international exhibition was held in the summer of 1895 on the grounds originally prepared for the exhibition of 1883. The plan at first was to collect exhibits of hotel equipments and facilities of travel, and thus the designing and furnishing of hotels and *cafés* and the equipment of railroads and ships came to be the prominent features of the exhibition, though electrical inventions and various industries were also well represented. One striking exhibit was a restaurant in which the guests were served by means of electrical contrivances without the help of waiters. Another feature was a reproduction of the life and scenes of old Holland.

The Dutch East Indies.—The Asiatic possessions of the Netherlands comprise the population of Java and other large and small Malaysian islands, having an aggregate area of 719,974 square miles and 33,121,300 inhabitants. Java and Madura, with an area of 50,848 square miles, had in 1893 a population of 24,642,985. Batavia, the capital, had 110,669 inhabitants; Surabaya, 147,330; Surakarta, 99,358. The European population of Java and Madura was

48,649, and there were 245,484 Chinese and 16,123 Arabs. The other possessions, called the outposts, are the island of Sumatra, southern Borneo, Riooe, Banks, Billiton, Celebes, Menado, Ambon, western New Guinea, Timor, and Bali and Lombok, having an aggregate population of 8,478,300. The Governor General of the East Indies is assisted by a council of five members. Jonkhoeur C. H. A. van der Wyck was appointed Governor General in July, 1896.

The budget for 1896 makes the total revenue 128,041,045 guilders, of which 21,825,863 guilders are derived from sales of coffee, 143,250 guilders from sales of quinine, 5,325,187 guilders from sales of tin, 17,608,000 guilders from the opium monopoly, 15,255,000 guilders from customs, 17,164,250 guilders from the land tax or tithe, 8,557,000 guilders from the salt duty, 1,792,000 guilders from posts and telegraphs, 9,573,000 guilders from railroads, and 30,757,245 guilders from various sources. The total expenditure was estimated at 128,441,354 guilders.

The army of Netherlands India on Jan. 1, 1895, was made up of 15,867 Europeans and 20,738 native soldiers. There were 437 staff and specially detailed officers, with 2,138 men; 731 officers of infantry and 29,638 men; 31 cavalry officers and 880 men; 129 officers of artillery and 3,287 men; and 64 engineer officers and 639 men; total, 1,822 officers and 20,003 sub-officers and privates.

The naval force consists of 1 modern protected cruiser ("Sumatra"), 1 old ironclad of 4,000 tons displacement, 14 gunboats, 3 paddle-wheel steamers, and 1 torpedo boat. The number of cannon is 141. The crews number 3,169 men.

The value of the imports in 1895 was 177,358,000 guilders, of which 159,474,000 guilders represent merchandise imported on private account and 6,886,000 guilders were imported for the Government, making the total merchandise imports 166,000,000 guilders, while the specie imports were 11,258,000 guilders, 10,299,000 guilders for individuals and 1,000,000 guilders for the Government. The total value of the exports was 192,431,000 guilders, 171,063,000 guilders representing private exports of merchandise, 20,377,000 guilders exports of merchandise for the Government, and 1,001,000 guilders exports of specie. The merchandise imports of Java and Madura were 113,200,000 guilders in value, and the exports 129,999,000 guilders; the imports of merchandise from the exterior provinces were valued at 41,244,000 guilders, and the exports at 41,217,000 guilders. The values of the principal exports from Netherlands India in 1895 were: Sugar, 71,049,000 guilders; coffee, 37,629,000 guilders; tobacco, 10,226,000 guilders; tin, 12,043,000 guilders; pepper, 2,318,000 guilders; rice, 2,002,000 guilders; copra, 2,418,000 guilders; rattan, 2,042,000 guilders; skins, 2,215,000 guilders; indigo, 2,223,000 guilders; nutmegs, 1,021,000 guilders.

The number of vessels that visited the ports in 1895 was 2,946 steamers, measuring 3,280,000 cubic metres, and 1,401 sailing vessels, of 4,547,000 cubic metres capacity.

The railroads of Java had a total length in 1895 of 879 miles, and there were 184 miles building, while in Sumatra there were 174 miles working and 30 miles under construction.

The telegraph lines, which belong to the Government, had a total length in 1893 of 4,274 miles, with 6,547 miles of wire. The number of dispatches in 1893 was 564,334, of which 367,572 were paid inland and 196,730 paid international dispatches. The postal traffic in the same year was 8,671,842 domestic and 7,925,823 international letters. The receipts of the post office were 2,090,000, and expenses 3,516,000 guilders.

The expedition sent in 1894 to subjugate the Balinese Rajah of Lombok was successful, and the rajah, who had bought rifles to fight the Dutch instead of paying the regular tribute, and had entered into intrigues with British and other foreigners and brought the fertile island and its industrious Sassak population to a deplorable condition by his misrule, was taken to Batavia for trial and deposed. One of the constantly recurring seditious conspiracies was discovered early in 1893 in the residency of Buitenzorg, Java, and 50 chiefs and their followers, who were supposed to be plotting a general massacre of Europeans and Chinese, were arrested.

NEVADA, a Pacific coast State, admitted to the Union Oct. 31, 1864; area, 110,700 square miles. The population, according to each decennial census since admission, was 42,491 in 1870; 62,266 in 1880; and 45,761 in 1890. Capital, Carson City.

Government.—The following were the State officers during the year: Governor, John E. Jones; Lieutenant Governor, Reinhold Sadler; Secretary of State, Eugene Howell; Treasurer, W. J. Werterfield; Comptroller, C. A. La Grave; Superintendent of Public Instruction, H. C. Cutting; Attorney-General, R. M. Beatty—all Silver party; Adjutant General, C. H. Galusha, Republican; Chief Justice of the Supreme Court, R. R. Bigelow, Republican; Associate Justices, Charles H. Belknap, Democrat, and M. S. Bloomfield, Silver party.

Finances.—The report of the Comptroller, rendered in January, gives the following details: On Dec. 31, 1894, the debt of the State amounted to \$157,628.91, and there were \$146,063.18 in the treasury applicable to its payment. The Territorial indebtedness is represented by a \$380,000 5-per-cent. irredeemable State bond belonging to the school fund. The cash in the treasury Jan. 1, 1894, was \$384,546.45; received during the year, \$453,461.23; transfer from library fund, \$13.59; total, \$838,021.18. Disbursements during the year, \$522,174.56; cash in treasury, Dec. 31, 1894, \$315,846.62. The actual expenses of the State Government for the two years 1893-'94 were \$505,386.23. The revenue collected applicable to the payment of those expenses was \$490,872.95.

Education.—There were \$78,645.88 in the school fund, \$7,868.26 in the university fund \$9,000 were grant, and \$12,140.18 in the university fund awaiting investment. In conformity to an amendment to the Constitution, an act approved Feb. 4, 1891, provides for the investment of these moneys in the bonds of other States as well as in United States bonds and bonds of Nevada, and \$100,000 of United States securities were purchased during 1894. The expenditures from the distributive school funds for the benefit of the public schools and the State University for 1893-'94 amounted to \$249,515.59.

The school population in 1894 was 9,454; the number enrolled, 7,298; the average number belonging, 5,839; the average attendance, 5,190; average duration of school, 7-8 months; average salary of teachers monthly, \$70.16; total number of schools, 294.

There were about 223 students enrolled at the State University at the beginning of 1895. The mechanical building and machinery were destroyed by fire in November, causing a loss of about \$8,000.

State Institutions.—Following are reports of the cost of these and the number of inmates for the biennial period 1893-'94:

State Prison—appropriation, \$65,000; total cost, \$62,994.18; receipts for board of United States and county prisoners and sales, \$18,993.89; net cost, \$44,000.29; average number of prisoners, 884; average daily expense for each, 68 cents.

State Insane Asylum—appropriation, \$80,000; amount expended, \$70,908.62; receipts, \$2,165.16; net cost, \$68,743.46; average number of patients, 187 $\frac{3}{4}$; average daily expense, including improvements, transportation, etc., 50 $\frac{3}{4}$ cents.

State Orphans' Home—appropriation, \$28,000; expense, \$27,975.17; receipts, \$279.50; net cost, \$27,695.67; average number of children, 80; average daily cost, 47 $\frac{1}{2}$ cents.

For the Deaf, Dumb, and Blind—appropriation, \$2,000; cost, \$2,357.47; deficit, \$357.47. There is no State institution. Children are sent to the California Institution for the Deaf, Dumb, and Blind at Berkeley. The cost is \$300 a year.

Farming.—A report on the crops says: "Nearly everything in the way of crops and fruit has yielded far better than was expected at the beginning of the season. While the rainfall was below the normal, the supply of water for irrigation held out very well, except in central Elko County, along the upper portion of Humboldt river. The tame hay crop is fair, although wild hay cut less than usual. All small fruits yielded better than for years in Humboldt, Lyon, Storey, Douglas, Ormsby, and the extreme southern portions of Washoe County.

Mining.—Considerable activity was reported in the mining districts during the year. Gold is said to have been taken out in many places, The De Lamar district, in southern Nevada, especially, where the mines have been in operation only about three years, has had a great influx of gold seekers. The activity there is said to have been unequalled in the State since its palmy days. Most of the large mines are controlled by the De Lamar company, which was reported in August to be shipping about \$100,000 in gold every month.

The men have been paid in checks and small aluminum coins issued by the company, of different face values, which have been in general circulation in that section as well as portions of Utah. This was held by United States officials to be contrary to the law, making it punishable to make or utter any coins. The company claimed as their reason for using these instead of Government coins that it was unsafe for them to transport gold and silver back into the camp, and that as the money was not intended for general circulation they were violating no law. The United States District Attorney, however, be-

beaved differently, and arrested the superintendent. An examination was had and the superintendent was held, but allowed to go on his own recognizance. Later, the attorneys of the company in New York were consulted, and they directed that the aluminum coins should be withdrawn from circulation.

The Mount Como group of mines was bonded in August to an English company for \$40,000 for six months. A tunnel is to be run from the mill in Palmyra cañon to the North Rapidan mine. This tunnel will run through 2 claims of the group now bonded, and drain all the mines in that section so that they can be prospected and worked to a greater depth.

Vigorous work has been begun on the Brunswick lode. The plan is given as follows: "The Chumstock companies to purchase 5,000 feet of the Brunswick lode at \$12.50 per foot. This ground to be prospected from the Suto Tunnel, and the expense to borne *pro rata* by the companies interested. The Suto Tunnel to be extended west through the west formations. A branch tunnel to be started from the vicinity of the Alta shaft and extended into the American Flat country. The expense of this tunnel to be borne by 12 of the south-end mines. The drift run from the Alta will be in a country which has proved to be mineral-bearing, but which is so wet that it can not be worked. The new tunnel will drain it at a depth of between 1,300 and 1,400 feet."

Legislative Session.—The seventeenth session of the Legislature began Jan. 21 and ended March 23. Lem Allen was elected Speaker of the Assembly. The political character of the two Houses was: Senate—3 Republicans, 3 Independents, and 9 Silver party; Assembly—4 Republicans, 1 Populist, and 20 Silver party.

The Assembly passed a bill repealing the law of the last Legislature limiting the session to fifty days. The Senate adopted a substitute for this bill, passing it unanimously, that this Legislature might sit to the full constitutional limit of sixty days, but should draw pay for only fifty days. The session continued sixty days.

The State University received an appropriation of \$38,000 for land and a building for dormitories and \$1,000 for a library.

Bills were introduced providing for consolidating certain counties. A bill was passed incorporating Storey County, doing away with the city of Virginia and the town of Gold Hill, and vesting their property in the county, providing for one county general fund instead of the three city and county funds, and for a tax levy for county purposes of \$3.50 instead of \$3.60.

The validity of this law was questioned. It was claimed that if put into operation it would do away with the saloon license by the act of setting aside the city organization.

A law was passed requiring that owners of sheep pastured in the State must pay a license of one cent per head per month, or have made the first payment upon a certain amount of land for each sheep. The question came before the courts whether lands leased from the overland railroad are to be included under the above description. Judge Cheney, in the district court, decided in the affirmative.

Another bill provided that live stock driven

into the State from other States shall be liable to the same tax as stock that have wintered in Nevada, notwithstanding the tax on such stock may have been paid in other States. Live stock driven in for commercial purposes are, however, exempt from this rule. It also extended the time for assessing live stock by giving the assessor authority to make the assessment on any calendar day of the year. The occasion for the law as given is that it has been the custom for California sheep owners to drive their flocks into Nevada and summer them there. They fatten on the grasses and damage the roads in Nevada, yet do not contribute to support the State or county governments.

A bill making changes in the election laws, so as to secure the purity of the ballot, was one of the important measures of the session.

The game law was amended, extending the season for killing teal, mallard, and the like, to April 1. The close season for grouse, quail, woodcock, and similar game is from March 15 to Sept. 15.

An act was passed to protect public ranges from wild horses. This is made necessary by the great numbers of these horses—estimated as high as 200,000—that are roaming over the State, eating off the grass so that sheep and cattle are deprived, and also in many instances landing off domestic horses from the ranches.

The statutes were ordered compiled by the Attorney-General and F. H. Harman and published at \$5 a copy.

The following joint resolutions passed:

That we demand the collection of the indebtedness of the Pacific Railway companies to the United States, as it matures upon the same principle that individual demands are enforced, and we instruct our Senators and Representatives in Congress to vote for such a bill as will dispose of this important question to the best interests of the people of the State of Nevada and the whole people of the United States, and in accordance with the law and justice to all.

And be it further resolved that we demand the enforcement of the Interstate Commerce act everywhere.

Another joint resolution, after a preamble in reference to the restoration of silver and the services of Senator Jones, continued:

That the people of Nevada fully appreciate the transcendent intellectuality that has characterized the reasonableness of Senator Jones in the National Senate and at Helgum's capital in behalf of Nevada's interests, and trust that he may be spared to persevere in the good work until victory may be achieved.

A concurrent resolution declared opposition to national banks, and in favor of free and unlimited coinage of silver.

Another resolution that passed both houses accused the President, "aided by the Democracy, of high crimes and misdemeanors in the financial policy of the Administration, especially relative to the silver question, and declared that he was deserving of impeachment," etc.

In reference to the address of the Biometallurgical League, it was:

Resolved, That we hail with satisfaction the action of the American Biometallurgical League, in calling on the people of the United States to make all the questions in the campaign of 1896 subordinate to the paramount one of the restoration of silver and the cause of monetary reform.

That the people of Nevada fully approve and endorse the declaration of principles and addresses formulated by the Bimetallic League at its session at Washington on Tuesday, March 3, and will encourage and sustain the work of Nevada's friends by pledging the electoral vote of the State to Hon. George C. Sibley for President, or any true friend of the people, in preference to the candidate of any party whose interests are irrespectively connected with the single standard.

An act providing for a portrait of ex-Gov. Colcord was amended by the Assembly with a provision that the work be done by a Nevada artist.

A bill providing for the submission of an amendment allowing woman suffrage was lost in the Assembly by a vote of 12 to 17.

Other acts of the session were:

Making it the duty of county commissioners of any county in which public arms, accoutrements, or military stores are now had or shall hereafter be received for the use of any volunteer organized militia company to provide a suitable and safe armory for organized militia companies within said county, and providing that the expense should be paid from the State general fund, but not making an appropriation. The Constitution forbids payment of money from the treasury except in consequence of an appropriation. Providing that after May, 1896, commissioned officers will be elected for two-year terms, and not less than 44 members will constitute a military company, instead of 40, as at present.

Regulating appeals to the Supreme Court.

Changing the name of the State insane asylum to Hospital for Mental Diseases.

Appropriating \$15,000 for an annex to the State insane asylum.

Declaring the willful intention of any person to prevent another person from securing employment a misdemeanor.

Providing for the establishment of high schools in various counties.

To prevent the spread of contagious diseases.

Regulating the practice of dentistry.

Providing for Typographical Union labels on public printing.

Requiring corporations to pay their employees monthly and in lawful money.

NEW BRUNSWICK, an eastern province of the Dominion of Canada. Capital, Fredericton.

Government.—The Executive Council, or ministry, consists of the Hon. A. G. Blair, Premier and Attorney-General; Hon. J. Mitchell, Provincial Secretary; Hon. A. J. Tweedie, Surveyor General; Hon. H. R. Emmerson, Commissioner of Public Works; Hon. A. S. White, Solicitor-General; Hon. Albert T. Dunn and Hon. C. H. Labllois, members of Council without portfolio or salary. Mr. Blair is a Liberal in politics and has been Premier of the province since 1883. As in Nova Scotia and Ontario, it retains a local Government of a different political nature from that which the province supports in the Dominion. But Mr. Blair has had Conservative members in his Government and at times it has been called a coalition. Elections for the Assembly took place on Oct. 16, 1895, and resulted in another victory for the Premier.

Legislation.—The third session of the Twenty-eighth General Assembly was opened by Lieut. Gov. John James Fraser, Jan. 31, 1895, in Fredericton. The most important paragraphs of his speech were these:

The liberal provision which the Legislature has made in the past few years for the encouragement of the dairy interests of the province and the cordial cooperation of the Dominion authorities with my Government in this important work have produced very gratifying results. Three years only have elapsed since the province was obliged to depend very largely upon outside production for its cheese supply. Last year, not only was the home demand fully supplied by the home production, but there remained a considerable surplus for export.

The importance of providing for a more equitable representation in Parliament of those counties whose wealth, population, and relative importance have increased in recent years, has engaged the serious attention of my Government. The measure which my Government will submit to you will be found, it is hoped, to some extent at least, to redress the inequalities which in these respects now exists.

An active interest is being awakened among the enterprising business men of St. John in favor of holding a provincial exhibition in that city during the current year. Should the plans of the association provide for a suitable display of agricultural products, my Government believes it would be desirable to assist the undertaking in a substantial manner.

The principal legislation of the session—which was prorogued on March 5—consisted in the following acts:

To secure to wives and children the benefit of life insurance.

In aid of an exhibition at St. John.

To provide for the inspection of butter and cheese intended for export.

Respecting the property of married women.

Relating to the issue of provincial debentures.

To amend further the New Brunswick medical act of 1881.

Respecting assignments and preferences by insolvent persons.

To amend "the New Brunswick Elections act of 1889."

To provide for the cost of certain international bridges.

Finances.—Mr. Mitchell delivered his budget speech Feb. 6. At the end of the fiscal year the bonded indebtedness was \$2,628,000; at the time of speaking it was \$2,675,000. During the year \$30,000 of bonds bearing 6 per cent. interest had been replaced at 4 per cent. The same policy would be pursued in 1895 with \$109,000 debentures. The floating debt was \$146,483. During the year a large number of steel bridges had been built. The total estimated expenditure was \$669,372, the actual outlay \$661,521. The estimated receipts for 1895 were \$670,560, the chief items being \$483,560 from the Dominion Government subsidy, \$145,000 from territorial revenue (mainly timber lands), and \$24,000 from taxes on incorporated companies. The estimated expenditure for 1895 was \$669,194, the chief items being \$14,160 upon the administration of justice, \$21,650 upon agriculture, \$183,914 upon education, \$27,600 upon executive government, \$114,000 upon interest, \$19,295 on legislation, \$40,000 upon the lunatic asylum, \$11,000 upon public printing, and \$192,150 upon public works.

Education.—The Provincial Board of Education consists of the Lieutenant Governor, the members of the Executive Council, the President of the University of New Brunswick, and the Chief Superintendent of Education. The schools are by statute free and unsectarian. Since 1890 there has been an increase of 136 in

the number of schools, 132 in the number of teachers, and 1,125 in the number of pupils. During the first term of 1894 there were 1,653 schools in the province, 1,749 teachers, and 61,280 pupils. The average attendance during the year was 69,648. The expenditure for the year ending June 30, 1894, included \$150,882 from provincial grants, \$92,281 from county funds, and \$183,166 from district assessments, a total average cost of \$6.13 per pupil.

Agriculture.—The report of the Commissioner of Agriculture, presented in January, 1895, claimed a very prosperous season in dairying and great success for the governmental importation of thoroughbred stock. The crops, on the whole, do not seem to have been good, but the cultivation of apples and small fruits was greatly increased and very successful. Dairying was the chief new resource of agriculturists during the year. There were 45 factories in the province in 1894, against 9 three years before. The number of patrons had increased from 900 to 1,800, the value of the product from \$18,000 to \$100,000, the export of cheese from nothing to \$20,000, and of butter from nothing to \$8,000. The official report speaks of meetings averaging 100 a year, which have been addressed on this subject and attended by 25,000 people. On Aug. 16, 1894, an agricultural conference was held at Fredericton, attended by 4,000 persons, and addressed by the Governor General, Lord Aberdeen, ex-Gov. W. D. Hoard, of Wisconsin, Lieut. Gov. Fraser, of New Brunswick, Premier Blair, and others.

Fisheries.—During 1894 the province had 519 fishermen in vessels and 10,831 in boats. The value of these boats, traps, nets, wharves, etc., was placed at \$1,680,912, and the value of the yield was \$4,351,527—an increase of \$600,000 over 1893 and of \$1,150,000 over 1892. Its export of fish was \$715,619. The distribution of the catch in 1894 will be seen from the following figures: Salmon, \$454,974; hake, \$81,240; mackerel, \$152,184; pollock, \$46,787; herring, \$1,127,197; halibut, \$23,748; cod, \$492,463; smelts, \$336,400; haddock, \$89,983; sardines, \$278,706; lobsters, \$531,570; oysters, \$57,840; miscellaneous, \$667,655.

Shipping.—The registered tonnage carrying cargo into and out of the province during 1894 was \$1,167,586. The tonnage of vessels employed in the provincial coasting trade was in 1894 \$1,118,787.

NEWFOUNDLAND. Several important acts were passed by the Legislature during the session of 1895, some of which were rendered necessary by the financial crisis that followed the failure of the only two banks in the island on Dec. 10, 1894. Their notes constituted almost the entire currency of the country, and when these became worthless people found themselves without any medium of exchange. To meet this serious emergency the Legislature passed an act providing for the registration of notes of both banks then in circulation, and for a guarantee thereupon by the Government of 80 per cent. of their value in the case of Union Bank notes, and of 20 per cent. in the case of the Commercial Bank. Notes thus guaranteed were not to be presented for payment till July 1, 1897; and no notes were to be redeemed before Jan. 1,

1897, nor after Dec. 31, 1897. This measure afforded a slight temporary relief; but so great was the distrust that the guaranteed notes soon ceased to circulate, and it was not till 3 Canadian banks had opened branches in St. John's that a satisfactory currency was established.

Two acts followed, providing for liquidation of the 2 banks. Trustees were appointed, who were empowered to realize and distribute the assets and to make compromise with the debtors and creditors of the banks.

Another act was passed regarding the currency, which is in dollars and cents. It orders that the sovereign shall be worth \$4.80, and British silver be taken at proportionate rates. The gold eagle of the United States, weighing 10 pennyweight 18 grains troy, shall pass for \$16, and multiples or parts thereof in proportion. Coins struck for circulation in the colony shall be legal tender for the rates assigned them. No other coins shall be legal tender.

Another act provides for the raising of a loan of £350,000, and the appropriation annually of £27,700 for payment of interest and creation of a sinking fund. Interest on the whole public debt is to be a first charge on the revenue of the colony. The loan is to be applied to the payment of the floating debt of the colony and other services.

Another act provided for the establishment of a fire department for the city of St. John's, which is to be in connection with the Newfoundland constabulary. Toward its support the Municipal Council contributes \$7,000 per annum and the insurance companies \$2,000.

The act to amend the law relating to slander provides that words spoken or published which impute immorality are actionable, and the plaintiff is entitled to damages without proof of special damage.

The act to continue for a further period the Newfoundland French Treaty act provided for the continuance of this act to Dec. 31, 1897.

The act respecting reduction of salaries of public officials gives power to the Governor in Council to reduce all salaries according to a fixed scale, which is laid down.

The act to remove certain disabilities under the election act of 1889, after reciting facts in connection with the election petitions and trials of 1894, by which certain members of the House of Assembly were disqualified for alleged corrupt and illegal acts and practices, declares that nothing in the corrupt practices act of 1887 shall be construed to render any one incapable of being a candidate for, or sitting or voting in the existing General Assembly, or of holding any office under the Crown.

Events.—Dec. 10, 1894, Newfoundland's Black Monday, will long be remembered in the annals of the country. On that day, without any warning, the people found themselves without a currency, and all business was suspended. Factories and workshops had to dismiss their employees. The failure of the banks was speedily followed by the collapse of 7 large mercantile firms and a number of the smaller trading establishments. Want of employment created widespread destitution among the working people. The revenue declined rapidly, as it depended on the duties on importations, now considerably reduced.

The people courageously faced their difficulties, confident that they were able to overcome them, and that better days were in store. The establishment of branches of 3 Canadian banks of high standing in St. John's was attended with the best results, and helped greatly in restoring confidence. Speedily business began to revive. The Bank of Montreal extended a helping hand to the Government, and by a loan enabled it to meet all liabilities on Jan. 1 and April 1. Money became more plentiful, and shops and stores resumed their former busy aspect. The destitute poor were temporarily provided for by generous contributions from abroad. Factories and workshops resumed operations, and employment became more plentiful as the year advanced. About 2,500 men found employment on the railway.

Still more important was the success of the seal fishery, which proved to be the best for many years, and in value exceeded \$600,000. This was followed by one of the best summer cod fisheries experienced in recent years. Not only was the catch large, but, owing to favorable weather and greater care, the cure was superior to that of recent years. The cash trade proved to be the best for many years.

Meantime a floating debt of \$2,500,000 remained, and the condition of the revenue created much anxiety as to the ability of the colony to meet its liabilities. This had a depressing effect at home and exercised an injurious influence on credit abroad. If a loan could be obtained sufficient to wipe out the floating public debt, and if a retrenchment policy were adopted, then all might go well. The Hon. Robert Bond, Colonial Secretary, obtained in the London money-market a loan of \$2,500,000 at 4 per cent., to be repaid in forty years. He also negotiated a loan of \$1,000,000 for the savings bank at 3½ per cent., rendering this institution absolutely safe in any emergency. As soon as the success of the loan was announced, the Government formulated a stringent retrenchment policy, which was adopted by the Legislature, and at the same time a slight increase of taxation was made. The retrenchments announce aggregate \$494,000. All official salaries are reduced, and reductions are also made in the grants to various public services. The expenditure for the fiscal year is estimated to reach \$1,331,000, while the estimated revenue for the year is \$1,725,022.

The revenue, which had suffered severely by the crash, has rallied to a wonderful extent, and as business improved and imports increased, it fully shared in the general prosperity. Before the end of 1895 it regained its normal condition. The revenue for October and November exceeded that of the same months in 1894; and as quarter day approached, Jan. 1, 1896, the Government was able to remit to London the money required for payment of interest on the public debt and to meet all home liabilities out of the revenue for the year.

The old "truck" or credit system, on which the fisheries had been carried on for generations, has received its deathblow; and in future these industries will be conducted on a cash basis. The effect of the "truck" system was to undermine and destroy the industry and honesty of the fishing classes, to render them reckless and indolent,

and to involve them hopelessly in debt. At the same time the system worked disastrously for the merchant class, and ultimately ruined them.

A general election took place at the close of 1893, resulting in a decided victory for the party headed by Sir William Whiteway. The numbers stood: 24 Whitewayites, and 12 Opposition. When the new Legislature met in February, 1894, it was found that 19 members of the Whiteway party, including the Premier himself and all the members of his Cabinet, had been petitioned against on the ground that they had been guilty of bribery and corruption. When the cases came up for hearing before the judges of the Supreme Court, the first three tried were found guilty, and were unseated and disqualified for standing again as candidates during the term of the present Parliament. Finding that the others were likely to share the same fate, Sir William Whiteway advised the Governor to dissolve the present Parliament and order a new election. Had this been done it would have ended the prosecutions for bribery and left all open to re-election. But the Governor refused to act on the advice of his ministers, on the ground that it would amount to his using the royal prerogative for the purpose of interfering with the ordinary course of justice, and shielding men who were accused of corrupt practices. In this course he was sustained by the imperial authorities. In consequence, Sir William Whiteway resigned, and the Hon. D. Morrison, leader of the Opposition, was called on to form a Government. Not having a majority in the House of Assembly, the new Government could not carry any measure; and the Legislature was prorogued from time to time, so as to permit the accused members to be tried. The trials proceeded, and, one after another, 17 members of the Whiteway party were unseated, till only 7 were left. The new Government had then a majority; the House met and passed the necessary bills, and the session closed.

When the new elections were ordered, to fill the vacancies caused by the unseating of members, the great majority went against the Morrison Government, and a large majority of Whitewayite candidates were returned. This finally led to the resignation of the Government, and Mr. Green was called upon to form a Government, which he did, and soon afterward an act was passed removing the disabilities of the condemned members; so that Sir William Whiteway and the other disqualified members were re-elected, and he again became Premier.

While these political events were in progress there was much excitement, and party animosity ran high. Much friction was experienced in carrying on the Government under such anomalous conditions, and especially in the collection of the revenue. But when the Legislature assembled, in the spring of 1895, these political turmoils were hushed in presence of the financial calamity; and the Legislature devoted itself to devising remedial measures and saving the colony from bankruptcy.

In April, 1895, the Government sent a deputation to Canada to endeavor to negotiate terms for the admission of Newfoundland into the Dominion; but, after protracted discussions, the attempt at union proved a failure, the terms

offered by Canada not being such as Newfoundland could accept.

In October, 1895, discoveries were made of extensive smuggling operations from St. Pierre to Newfoundland, causing serious losses to the revenue. Ramifications of this smuggling system were found to extend to St. John's and the principal ports of the island. Several seizures were made, and about 20 of the smugglers were tried and heavily fined. It is estimated that the annual loss to the revenue by smuggling is not less than \$100,000. The French at St. Pierre afford every facility for the illicit traffic, and refuse to allow a British consul to reside there.

The French shore treaty question is still unsettled, and the *modus vivendi* has been extended till the end of 1897. Under this arrangement matters have of late been going on rather smoothly.

Trade.—The value of imports in 1894 was \$7,164,798; exports, \$5,811,169. The revenue in 1894 was \$1,641,035. The public debt amounted to \$2,116,535.

Railways.—The new line from Placentia Junction to Port-au-Basque, 500 miles, is making rapid progress and is admirably built. During 1895 it reached Bay of Islands on the western coast, 156 miles from the Junction and 406 miles from St. John's, leaving 144 miles to be built. By the close of 1896 it will be completed and operated to Port-au-Basque. A short run of 100 miles by swift steamers across the Gulf of St. Lawrence to Cape Breton island will place travelers in connection with the continental railway system, and Newfoundland will almost cease to be an island. On the completion of the present line the colony will have 550 miles of railway.

Mining.—Two important discoveries have been made during the past year. One is of a coal area, 12 miles long and 6 broad, on the new line of railway, near the eastern end of Grand Isle, 40 miles by rail from Bay of Islands. One seam is estimated to contain 11,000,000 tons, and there are 6 smaller seams. The coal is of excellent quality. In St. George's Bay, at no great distance from the railway iron ore is reported in abundance. Not less important is the discovery of a deposit of iron ore on Belle Isle, Conception Bay, a dozen miles from St. John's. There are 2 beds of ore on the island, which have an area of 2 square miles. A mining expert estimates that these contain 50,000,000 tons of ore. It is all surface mining. The ore tests 55 per cent. The property has been leased to a Nova Scotia company, who have already shipped several large cargoes to be smelted at New Glasgow.

Copper mining, in the north of the island, continues to be prosecuted successfully. In 1894 28,824 tons of copper ore and regulus were exported, the value being \$235,179. In addition, 40,382 tons of iron pyrites were exported from a mine in Pilley's island, valued at \$285,474.

Fisheries.—The total value of the exports of fishery products in 1894 was \$5,144,589. The bank fishery employed 58 vessels and 785 men. The average catch per man was 60 quintals. The seal fishery of 1895 employed 20 large steamers, carrying 4,680 men. The number of seals taken was 270,058. The export of lobsters

in 1894 was 48,036 cases; value, \$311,364. The export of herrings in the same year was 132,000 barrels; value, \$244,790.

Education.—Under the retrenchment policy, the education grant is fixed at \$124,559. The system is denominational, and the whole grant is divided denominationally, according to the population, and the expenditure is controlled by denominational boards.

NEW HAMPSHIRE, a New England State, one of the original thirteen, ratified the Constitution June 21, 1788; area, 9,305 square miles. The population, according to each decennial census, was 141,885 in 1790; 182,829 in 1800; 214,469 in 1810; 244,022 in 1820; 269,328 in 1830; 284,574 in 1840; 317,916 in 1850; 328,073 in 1860; 318,300 in 1870; 346,901 in 1880; and 376,350 in 1890. Capital, Concord.

Government.—The following were the State officers during the year: Governor, Charles A. Busiel; Secretary of State, Ezra S. Fournes; Treasurer, Selton A. Carter; Attorney-General, Edwin J. Eastman; Adjutant General, Augustus D. Ayling—all Republicans; Commissioner of Insurance, John C. Linahan; Bank Commissioners, James O. Lyford, Alpha W. Baker, John Hatch; Mr. Lyford was succeeded Dec. 1 by Thomas J. Walker; Superintendent of Public Instruction, Frederic Gowling; Railroad Commissioners, Henry M. Putney, Benjamin W. Prescott, Thomas Cogswell; Labor Commissioner, John W. Bourlet; Chief Justice of the Supreme Court, Charles Doe; Associate Justices, William M. Chase, Abner P. Carpenter, R. M. Wallace, I. N. Hildgett, L. W. Clark, and Isaac W. Smith, who retired in May, and was succeeded by Frank N. Parsons.

Finances.—The transactions of the treasury for the year were: Cash, June 1, 1894, \$228,027.44; receipts to June 1, 1895, \$1,792,964.47; total, \$2,020,991.91; expenditures, \$1,908,738.10; balance, \$112,253.81. The net debt, June 1, 1895, was \$2,026,300.65; reduction during the year, \$10,241.58.

Among the extraordinary appropriations were \$94,604.76 for the State Library building; \$14,430.59 for the asylum special appropriation; \$13,025.22 for the balance of current expenses at the State Prison, and \$2,722.96 for repairs there; \$14,729.90 for carrying out legislative resolves; \$8,814.51 for White Mountain roads; \$8,307.45 for the Soldiers' Home; \$7,000 for Dartmouth College; and \$6,847.42 for the Webster and Stark statues. Bonds to the amount of \$146,000 were redeemed during the year.

The State treasury was robbed about noon, June 3, of \$3,855.50 belonging to the State and valuable securities belonging to the Treasurer.

Valuations.—The equalized valuation of the State, which is to form the basis of apportionment of the State taxes for five years beginning with 1893, and covering the inventories of cities and towns, savings-bank deposits, railroad property, and insurance capital subject to taxation, aggregates \$286,756,618. In 1890 the amount was \$202,378,917. Since 1879, the date of the formation of the Board of Equalization, the increase has been \$79,791,001. "The increase has arisen very largely," says the report of the board, "from savings-bank deposits (\$45,000,000), railroad properties (\$11,000,000), and insurance capi-

tal (\$1,275,000). In the same time there has been a decrease in 'money on hand, at interest, or on deposit' from nearly \$20,000,000 in 1879, when the law requiring sworn inventories went into effect and was universally enforced, to about \$6,000,000 in 1894, when in a large portion of cities and towns it has practically become a dead letter. In the past four years the equalized valuation in the 10 cities of the State has advanced \$15,238,854, or more than three fifths of the entire increase previously shown. The depreciation of agricultural properties in the State is becoming year by year more apparent." The number of ratable polls has risen from 86,827 in 1879 to 100,017 in 1894. With a State tax of \$500,000, which has been the regular annual levy since 1888, the amount required on each \$1,000,000 of valuation, under the new apportionment, will be \$1,750; with the last apportionment (1890) it was slightly in excess of \$1,900.

Education.—The forty-eighth annual report of the schools of the State, issued in October, 1894, gives the number of schools as 2,222; the average length of school sessions in weeks, 24.95; the average attendance, 42,030; the average to each school, 18.91; the percentage of average attendance to the whole number, 67.3; the number reported attending private schools, 7,425; whole number of male teachers, 280; female teachers, 2,907; average wages of the former, \$49.78 a month; of the latter, \$27.36. There are reported 52 public high schools and 22 private schools of similar grade. The State Normal School at Plymouth has about 75 students.

The Legislature passed an act establishing a two-years' course in practical and theoretical agriculture, a department of horticulture, and a system of practical instruction and manual training at the College of Agriculture, to which students shall be admitted who can pass a fair and reasonable examination in reading, spelling, writing, arithmetic, English grammar, and the geography and history of the United States. This act was the result of the agitation in reference to the college which has been going on for some time. It was claimed that the trustees and instructors were devoting their efforts mainly to building up a classical, scientific, and polytechnic institution. The Legislature appropriated \$2,500 a year for two years, for the purpose of carrying the act into effect.

The class from Dartmouth Medical College, numbering 38, was the largest ever graduated in that department.

The term at Dartmouth College opened in September with a freshman class of 130, while 30 upper classmen from other colleges were added. The standard for admission has been raised in all departments and also the rank for college work. State aid to the amount of \$17,500 a year was continued to the college by the Legislature for the present biennial period.

State Institutions.—The report of the Board of Lunacy for the year ending Sept. 30, 1894, shows that there were then in the State asylum 404 patients. Jan. 1 there were 402. The new building for male convalescents was opened in November, 1895. It is designed to accommodate 26 patients. The cost was nearly \$19,000, exclusive of plumbing and heating. The old buildings are being refitted. The mortality in

1894 was a little over 6 per cent. The percentage of recoveries was 28.23, a slight increase over that of the previous year.

The report of the Orphans' Home at Franklin for the year ending May 31, shows that 55 were received during the year and 4 returned from on trial, making a total of 135. The receipts were \$11,644.73, and the expenditures \$10,736.65. The profit from the farm was \$1,035.

The Soldiers' Home received an appropriation of \$15,000 for two years, in addition to such sums as the State may be entitled to receive from the General Government in aid of the support of disabled soldiers and sailors for that period, and \$10,000 was appropriated for building and furnishing a hospital.

The report of the State Prison for the year ending Nov. 30, 1894, shows that there were then 172 inmates, of whom 4 were women. The earnings from all sources were \$11,412.11, the expenditures \$24,597.20. This includes \$3,250 for the purchase of a shop. While the expenses of the prison were more than \$1,000 less than in 1893, there was a large deficit caused by the loss of earnings during the months from January to May, and to the lower price received for convict labor since that time. In December, 1895, it was decided to continue the contract with the chair manufacturers, but they are to pay an increase of 10 cents a day.

Insurance.—The commissioner's report, published in July, gives statistics as follows:

Domestic fire companies: Risks written, \$42,243,566.44; premiums received, \$494,840.94; losses paid, \$283,580.08. These figures show a decrease of risks written, \$12,976,373.96; in premiums received, \$88,244.12; and an increase in losses paid of \$37,328.57. The New Hampshire business of companies of other States and countries was: Risks written, \$33,828,209.10; premiums received, \$492,936.33; losses paid, \$289,496.33.

The number of authorized life insurance companies May 1, 1895, was 22, an increase of 1 over the previous year. The principal items are: Number of policies issued, 2,514; amount, \$3,945,677; policies in force Dec. 31, 1894, 14,606; amount, \$24,800,011; amount of premiums received, \$884,442; losses and claims, \$371,806.

The business of the casualty and surety companies within the State for the year ending Dec. 31, 1894, was: Risks written, \$9,927,930.47; premiums received, \$64,432.91; losses paid, \$31,611.99.

Savings Banks.—In January the largest of the Concord banks announced a reduction of dividends from 4 to 3 per cent., and was followed by the others. The reason given was the withdrawal of deposits consequent on the operation of the income-tax law. Two of the Concord banks lost in 1894 over \$100,000 each in deposits. The Nashua Savings Bank, the fifth largest in the State, closed its doors March 5, an injunction having been issued against it on application of the bank commission. The withdrawals were very heavy after the reduction. Eight savings banks were under injunction at the close of the year. The net decrease of deposits in the savings banks for the year was \$3,870,240.79. The guarantee fund and surplus

of the savings banks decreased for the same period \$583,887.52 by reason of losses, reduction of book values of assets, and charges incident to the protection of Western real-estate holdings.

There are 7 trust companies that are now conducting savings bank departments, and 2 that are closing out that branch. The savings deposits of the 7 aggregate \$1,680,760.30.

The Legislature of 1895 reduced the rate of taxation on deposits from 1 per cent. to three quarters of 1 per cent. This made the total of savings-bank tax for the year \$484,000, against \$793,000 in 1894. Many of the banks then increased their dividends to 3½ per cent.

Railroads.—The great railroad event of the year in the State was the lease of the Concord and Montreal to the Boston and Maine, which was decided upon in a meeting of the stockholders June 29. The vote stood 34,538½ shares in favor to 10,047 against the lease. At the same meeting it was voted that the capital stock be increased \$1,200,000, making it in all \$7,200,000. This practically removes the control of the railroads of the State to owners outside, and does away with competition.

Manufactures.—A comparison of the establishments reporting to the Labor Bureau in 1893 and 1894 shows a decrease in every respect. The capital invested in 1893 was \$14,968,161; in 1894, \$14,488,890; wages paid declined from \$4,579,906 to \$4,397,607; and value of product, from \$18,936,633 to \$16,312,963.

Farming.—On Jan. 1, 1890, the selectmen of the towns reported 1,342 abandoned farms in the State, with vacant buildings suitable for occupancy. During 1895 the selectmen were requested to make a canvass of this class of farms, and reported 750. Letters of inquiry about these farms, received by every mail, come mainly from residents of cities desiring farms for permanent homes or summer residences.

Fish and Game.—There are 11 hatcheries in the State, the largest number in any State of the Union. Two were built last season. The strict enforcement of the game laws has increased the number of deer in all parts of the State, especially the northern section, where it is estimated they outnumber the sheep 2 to 1, while moose and caribou have been seen there for the first time in many years.

Forests.—The report of the Forestry Commission says that the area of forests in the State comprises practically 60 per cent. of the entire surface, and has not greatly changed since the publication of the report of the first temporary Forestry Commission in 1895.

The acreage of virgin spruce is about 525,000, of which about 300,000 is in the White-mountain district. The annual product from this is for lumber about 240,000,000 feet, and for pulp about 40,000,000 feet. The amount used for pulp is increasing about 15 per cent. a year.

The State Library.—The new building for the library at Concord was dedicated Jan. 8. The library now numbers 35,000 to 40,000 volumes. The act providing for the new building was passed by the Legislature of 1891 with an appropriation of \$175,000. Land was bought the same year for \$28,500, and contracts let.

The further sum of \$75,000 was appropriated in order that the plans might be enlarged.

The architecture of the building is Romanesque or Italian Renaissance. The structure is two stories high, except for the square tower that rises from its southwest corner. The exterior is of New Hampshire granite, the body being of red stone from the Conway quarries, while the cornices, belts, pilasters, buttresses, balustrades, and entrance steps are of Concord granite. The 8 polished columns of the main entrance are of green granite from Conway.

The Law and Order League.—The first annual circular of this league, issued in May, says that more than 400 liquor sellers were prosecuted and scores were driven out of the business during the year. Between June 1 and Sept. 12, 1895, the league is reported to have had 809 more cases of illegal selling. The fight on the enforcement of the laws has been very hot in the cities. The Ministers' Association, of Manchester, filed charges with the Governor against the police commissioners, accusing them of neglecting to enforce the liquor law.

Legislative Session.—The ninth biennial session began Jan. 2 and ended March 29. There were 283 Republicans in both Houses and 104 Democrats. Frank W. Rollins was chosen President of the Senate and Stephen S. Jewett, Speaker of the House. William E. Chandler was re-elected United States Senator by a vote of 261 to 79.

The commission appointed by the Legislature of 1893 to revise and amend the militia laws made its report, and a revised code for government of the State troops was adopted.

Many bills relating to the liquor traffic were brought in, and the House appointed a special committee to which to refer them. The bills providing for greater restriction of the traffic were lost.

Several acts were passed in reference to savings banks.

An act to establish a new apportionment for the assessment of public taxes was passed, and another, amending the law on taxation, specifying as personal estate liable to be taxed: Stocks in public funds and corporations; the surplus capital on hand of banking institutions; money on hand or at interest more than the owner pays interest for; stock in trade; carriages over \$50 in value; horses, mules, mares, oxen, cows, and other neat stock over three years old; sheep and hogs over one year old (but two such hogs to each family shall be exempt); and fowls of every description exceeding \$50 in value.

An act to aid in the reorganization of corporations provides that when a mortgage of a corporation has been foreclosed the purchasers may obtain all the rights, powers, and privileges of the original corporation.

Amendments were made to the statutes relating to charter fees, public funds liable to be taxed, proceedings in insolvency, discharge from arrest, grade crossings, foreign insurance companies and their agents, teachers, and school boards, and fish and game.

Other acts were:

Prohibiting the giving of cigarettes, snuff, or tobacco to minors.

Authorizing the Governor to institute suits at law or in equity in the name of the State whenever such

course shall be necessary to prevent the diversion of water that would naturally flow into New Hampshire.

Providing for strict examination of supposed insane persons before committal to an asylum.

Providing that seats shall be provided for women employed in factories and stores.

Prohibiting the display of foreign flags on public buildings.

For the protection of associations and unions of workmen and persons in their labels, trade-marks, and forms of advertising, and the owners of literary, dramatic, and musical compositions and works of art in their property.

Allowing trustees and guardians to invest funds in their hands in the bonds of any city, town, or district whose net debt does not exceed 5 per cent. of the last assessment for purposes of taxation. Net debt is to be understood as excluding indebtedness for water supply as well as the amount of sinking funds.

Prohibiting the killing of wild pigeons and turtle doves before Aug. 1, 1898.

Amending the law relating to the sale of adulterated butter and cheese, providing that such butter and cheese shall be plainly labeled.

Imposing a fine of \$20 for every billiard or pool table and every bowling alley kept for hire without license.

Prohibiting the taking of fish through the ice from the waters of certain specified ponds and lakes.

Requiring selectmen in each town to assess taxes for establishing and maintaining free public libraries.

Appropriating \$500 for the introduction of foreign game birds.

Requiring school boards to prescribe and enforce scientific temperance instruction.

Among the joint resolutions passed were the following:

Providing for permanent headquarters for the State Grand Army of the Republic in the Statehouse.

Appropriating \$11,600 for the repair of highways in the State.

Providing for taking the sense of the qualified voters of the State as to the expediency of calling a constitutional convention.

NEW JERSEY, a Middle Atlantic State, one of the original thirteen, ratified the Constitution Dec. 18, 1787. Area, 7,815 square miles; population in 1890, 1,444,933; by the State census of 1895, 1,672,942. Capital, Trenton.

Government.—The following were the State officers during the year: Governor, George T. Werts, Democrat; Secretary of State, Henry C. Kelsey; Treasurer, George B. Swain; Comptroller, William S. Hancock; Commissioner of Banking and Insurance, George S. Durycie; Attorney-General, John P. Stockton; Adjutant General, William S. Stryker; Superintendent of Public Instruction, Addison B. Poland; Chancellor, Alexander T. McGill; Vice-Chancellors, John T. Bird, who, July 30, was appointed Vice-Ordinary of the Prerogative Court to fill the vacancy occasioned by the death, Dec. 25, 1894, of Vice-Chancellor and Vice-Ordinary Abraham V. Van Fleet, Henry C. Pitney, John R. Emery, Robert S. Green, who died May 7, and Alfred Reed, who was appointed June 4; Chief Justice of the Supreme Court, Mercer Beasley; Associate Justices, Bennet Van Syckel, David A. Deput, Jonathan Dixon, William J. Magie, Charles G. Garrison (reappointed), Job H. Lipincott, William S. Gummere, and George C. Ludlow, who was appointed to the judgeship made vacant by the resignation of Vice-Chancellor Reed; Clerk of the Supreme Court, Benjamin F. Lee.

Finances.—The reports of the Comptroller and the Treasurer show the following: The receipts of the State fund during the year ended Oct. 31, 1895, were: From tax on railroad corporations, \$1,103,956.98; from tax on miscellaneous corporations, \$698,342.36; from collateral inheritance tax, \$121,339.35; from official fees, \$102,751.09; from State Prison receipts, \$52,702.64; from judicial fees, \$31,548.45; from dividends, \$18,870; from loans to sinking fund, \$40,000; from other sources, \$6,420.96; total receipts, \$2,175,931.83; total net receipts being \$2,120,346.59. The ordinary disbursements amounted to \$1,638,893.43; the extraordinary disbursements were \$527,692.70; the special appropriations were \$46,863.49. The balance on hand Oct. 31, 1895, was \$893,747.88, as against \$986,855.91. Among the extraordinary disbursements were \$139,590.23 for the Paterson armory and \$75,295.26 for the Jersey City armory. The estimated resources for 1895 are \$2,965,117.88; the estimated disbursements, \$1,993,529.32; the estimated balance, \$971,588.56.

The war debt (the only debt of the State) had been reduced to \$660,400 by the payment during the year of \$71,000. Of this amount \$44,000 was loaned from the State fund to the sinking fund, which returned \$40,000 to the State fund. The sinking fund at the close of the fiscal year 1894 owed the State fund \$134,819; at the close of 1895 the sum owed was \$138,819. The available assets of the sinking fund are \$413,711.40.

The condition of the school fund is as follows: Total amount of securities Oct. 31, 1895, \$3,508,725.80; securities Oct. 31, 1894, \$3,498,490.77; decrease in school fund securities, \$10,235.03. The cash balance Nov. 1, 1894, was \$218,207.90; gross receipts during the year, \$280,113.21; total, \$498,321.11; gross disbursements during the year, \$332,701.48; balance Oct. 31, 1895, \$165,619.63, out of which sum there must be reinvested in school fund securities \$83,130.11, leaving available for payments required to be made from the income of the school fund \$82,489.52; decrease in cash balance from 1894, \$52,588.27; net decrease in property of the fund, \$62,823.30. The total property of the fund Oct. 31, 1895, was \$3,664,110.40, in addition to which there was due \$66,171.51.

The returns of the taxable property in the several counties as valued in 1895 for taxation in 1896 by the county boards of assessors for school and local purposes give a total of \$786,998,070, an increase over 1894 of \$12,599,738.

The State Board of Assessors this year valued the railroad and canal property at \$221,576,221; and on this amount the tax levied for State purposes is \$1,107,881.10; for local use, \$412,682.02. Property exempt from taxation was valued at \$90,864,564, making the total valuation of property in the State \$1,099,438,855, an increase during the year of \$30,194,640.

Banks.—The abstract of the condition of the national banks of New Jersey on Sept. 28, 1895, shows the average reserve to have been 30.46 per cent., against 30.55 per cent. on July 11. Loans and discounts increased from \$48,903,104 to \$61,321,840. Stocks and securities from \$9,222,336 to \$9,272,999. Gold coin decreased from \$1,811,143 to \$1,783,738. Total specie from \$3,356,259 to \$3,076,586. Lawful money reserve from

\$5,819,639 to \$5,211,843. Individual deposits increased from \$53,206,397 to \$56,292,660.

The total resources of the 26 savings banks of the State Jan. 1, 1895, amounted to \$39,905,752, an increase for the year of \$2,260,670. The gain in the number of depositors was 6,263, the total number of open accounts being 144,160.

The number of State banks is 21. The State banking exhibit shows: Loans and discounts, \$7,471,606.76; overdrafts, \$14,441.15; due from banks, \$1,128,012.66; cash on hand, \$505,415.13; stocks and bonds, \$330,069.79; furniture and fixtures, \$33,040.30; bonds and mortgages, \$124,025.11; current expenses and taxes paid, \$41,324.57; checks and other cash items, \$31,601.76; other assets, \$17,606.53; total, \$10,635,113.60.

Trust Companies.—The resources of the trust companies were as follow: Bonds and mortgages, \$3,892,692.32; stocks and bonds, \$3,415,056.24; loans secured by collateral, \$4,255,062.38; loans on personal security, including bills purchased, \$2,164,377.02; loans to cities and towns, \$179,000; overdrafts, \$1,782.56; due from banks, \$482,339.89; real estate, \$787,303.85; cash in banks and deposit companies, \$1,779,850.70; cash on hand, \$481,035.21; cash items, \$1,251,260.27; other assets, \$365,538.51; total, \$17,940,729.19.

Legislative Session.—The Legislature met Jan. 8, and continued in session until March 22, when a recess to June 4 was taken, and it adjourned June 13. William J. Sewell, Republican, was chosen United States Senator to succeed John R. McPherson.

An act was passed, going into effect March 25, reconstituting the Board of Arbitration, naming 5 persons to constitute the board, each arbitrator to receive an annual salary of \$1,200 a year.

One of the provisions of an act regulating lottery companies doing business in the State requires each company to keep on deposit with the Comptroller at least \$50,000 in good securities.

By other acts the organization of the Naval Reserve was provided for.

The Legislature appointed 4 commissions, of 3 persons each, who are to report to the Legislature of 1896. One commission is to revise and codify the corporation laws; a second is to examine the subjects of marriage and divorce, of insolvency, insurance, the form of notarial certificates, and other subjects with a view to securing uniformity of legislation in the several States; the third commission was to investigate the penal laws of the State; and the fourth was to confer with like representatives of New York for the acquisition of the Palisades of the Hudson river by the United States. A commission of 5 persons was appointed to make investigation as to the number and condition of the epileptics in the State.

A concurrent resolution was adopted unanimously by each House that the Comptroller of the State be and he is hereby requested to confer with the Attorney-General, and with his assistants, as law officer of the State, to institute at once legal proceedings to recover for the use of the State all sums of money due the State or illegally withheld by public officers, or custodians of public moneys.

Thirty-seven witnesses were examined by the committee; investigation of the acts of past and

present State officials and of State boards was made, and of business corporations and private individuals as well, and, on the reassembling of the Legislature, a majority report, signed by the 4 Republican members of the committee, was presented, as was also a minority report from the 1 Democratic member, which, in the main, agreed with the resolutions and recommendations of the majority report. The report made sweeping general charges, among them the following:

In the furnishing of coal, lumber, and other supplies for the Statehouse there was deliberate systematic swindling. Quantities and prices were falsely raised, goods being billed to the State and paid for that were never furnished; large percentages were added to bills, sometimes exclusively for the benefit of State officers; at other times, possibly, for the benefit of the dealer.

We think that from 1889 to 1894 there was great waste, and, in not a few cases, corruption and bribery of officials in the reconstruction, furnishing, and supplying of the Statehouse. Where gross exchanges and false charges occur, the evidence warrants the belief that it was always by the collusion or acquiescence of some State officer or employee.

The prices were exorbitant, being over double the usual retail price of the goods. Bills were falsified in quantities and prices. Large incomes and commissions were paid to the State officers. Furniture and carpets paid for by the State were sent to persons holding offices under the State for their private use.

Much remedial legislation was recommended.

Among the bills passed by the Legislature in accordance with these recommendations of the committee, vetoed by the Governor, and passed over his veto, were the following:

Repealing the 17 acts relative to the printing of the laws, proceedings of the Legislature, and public documents.

Providing that the current printing and the printing of the Senate and House Journals, minutes of joint meeting and executive sessions shall be awarded to the lowest bidder, the work to be done in the State.

Providing that after Nov. 1, 1895, no money shall be drawn from the treasury unless it shall have been explicitly appropriated by the annual appropriation act to the purpose for which it was drawn.

Providing that the clerk in chancery shall receive no compensation for services in suits brought by the State against corporations.

Among other bills that were passed, some of them over the Governor's veto, were these:

Providing that when parents of children are grossly immoral or fail to be instructed with their care and education, or shall neglect them, and children may be taken by petition to the Chancellor or Supreme Court and placed in charge of such person or persons as the court may name.

Allowing persons to give treatment by chancery who are graduates of a reputable medical-chancery college of ten years' standing by filing affidavits with the Secretary of State.

Prohibiting the printing of the laws in any but the English language.

Requiring life insurance companies to make no discrimination in favor of individuals between insurance of the same class in amount of premiums paid.

Providing that trust and security companies having an undivided surplus equal to the capital stock need give no bond to act as trustees, guardians, etc.

Making it unlawful to sell leaves of broad weighing less than 1 pound, or any that is impure.

Providing that upon the expiration of the term of the present Fleet Commissioners the Governor, with

confirmation of the Senate, shall appoint 4 persons for terms of five years, who shall be known as the Board of Fish and Game Commissioners, but 2 of which members shall belong to the same political party.

Amending act relative to absconding debtors. Favors defendant relative to attachments.

Authorizing cities to issue bonds to the extent of \$100,000 to purchase condemned lands for public purposes.

Providing that household goods shall not be attached to value of \$200, unless the attachment is issued on account of debt on said household goods.

Securing to creditors an equal and just division of the estate of debtors who convey to assignee for the benefit of creditors.

Providing that the Mayor of Newark may appoint school commissioners.

Appropriating \$200,000 annually to the State School fund.

Appropriating \$325,000 for the improvement of Morris Plains Asylum.

Making a married woman liable on her "promise to pay," providing she has herself received something.

Making a married woman, living with her husband, equally liable with him for goods supplied for the use of the family.

Authorizing boards of education in all municipalities of over 10,000 population to provide free lectures to be given at night for the benefit of the laboring people.

Providing that Lincoln's birthday (Feb. 12) shall be a legal holiday.

As a result of the work done by the Senate Investigating Committee, the grand jury found indictments against John T. Van Cleef, secretary of the State Board of Assessors, as implicated in excessive charges for maps; against Bernard Ford, formerly superintendent of the State Capitol, and John Mullins, from whom he purchased large bills of furniture; against Mrs. Benedict Prieth, proprietress, and John L. Kuser, formerly manager and agent for the Newark "Freie Zeitung," for acts in securing contracts for printing; and, in the same connection, against Otto Heinz, a printer, and against Emil Kraentler, of the Newark "Deutsche Zeitung," and Charles S. Robinson, publisher of the "Princeton Press." Kuser, Robinson, Heinz, and Kraentler were indicted jointly, were tried for conspiracy to defraud the State, and were acquitted. Van Cleef also, who was tried for obtaining money under false pretenses, was acquitted. Bernard Ford during the summer was a fugitive from justice. Mullins was tried for conspiring with him to defraud the State, and was acquitted. On Dec. 24 Ford voluntarily appeared in court and was charged under 4 indictments for obtaining money under false pretenses, under 2 for official misconduct, and under 2 for conspiracy to defraud the State. His bail was fixed at \$1,000 and the date of trial fixed for Feb. 10, 1896.

Education.—The school census of 1894 gave the number of children of school age as 423,872. The amount of State school tax for 1894, levied in 1893 and expended in 1895, was \$2,119,360. The school tax for 1895 was \$2,196,240, the number of school children being 429,248. The annual appropriation to public schools was \$100,000. For the normal school \$42,493.76 was expended; for industrial education, \$36,226.25; for the Farnum Preparatory School, \$1,200; for free school libraries, \$4,730; for teachers' institutes, \$1,597.98; for the school census, \$2,066.90. The enrollment of the nor-

mal school was 537, the number of graduates 134. The model school is self-sustaining; its earnings during the year were \$23,349.59, and its enrollment 605.

The annual appropriation for the Agricultural Experiment Station is \$15,000.

The School for Deaf Mutes received for maintenance and tuition, \$37,164; for repairs, \$4,501.74; and \$13,474.15 for its new building. The number of pupils was 126, of whom 65 are boys and 61 girls.

For the blind and feeble-minded the State paid to the 2 institutions at Vineland and to other States \$93,932.57; 381 pupils were cared for, an increase over 1894 of 23 pupils, and of \$6,227.16 in expenditure.

Hospitals.—The amount disbursed this year for this account was \$214,958.01, as follows: To State Hospital for the Insane at Trenton, \$68,654.04; to State Hospital at Morris Plains, \$157,306.51; for additional land and buildings at Morris Plains, \$57,651.50. By the last quarterly report the number of county patients in the Trenton hospital was 903; at Morris Plains, 954; insane convicts at Trenton, 21; at Morris Plains, 54. The number of patients at Trenton hospital, Oct. 31, was 1,001; at Morris Plains, 1,116. The number of patients in the county asylums was 3,140, and to these asylums \$114,887.05 was paid. An act of 1895 authorized the expenditure of not more than \$125,000 for buildings at Morris Plains. The foundations have been laid of a new building having a frontage of 530 feet and a total depth of 300 feet. At the Trenton hospital an infirmary, to cost \$35,000, is in process of building.

Soldiers' Home.—During the year the average number of beneficiaries was 520; last year it was 509. The expenditures were \$62,698.01; the average cost of ration per day being about 18½ cents. The total receipts of the year were \$68,166.01; the balance, \$5,467.48. The Legislature of 1895 reduced the annual appropriation \$36,000 to \$30,000, and also converted into the State Treasury a balance to the credit of the home of \$78,619.17. In 1895 the United States Government paid to the home \$32,955.23.

Penal Institutions.—For the State Prison \$175,812.08 was disbursed. The receipts from convict labor and other sources were \$52,702.64. The number of convicts Oct. 31 was 977, a decrease of 43 since the report of 1894. The Legislature of 1895 appropriated \$150,000 to enlarge the State Prison. A wing is being added, and a new hospital is under construction.

The Legislature of 1895 appropriated \$100,000 for the purchase of land at or near Rahway, and the erection of a building to be used as a place of confinement for male criminals between the ages of sixteen and thirty who are under sentence for the first time. The land has been secured, and work on one wing is begun, which will accommodate 255 prisoners. The disbursements for this institution amounted to \$81,928.28, of which the State contributed \$60,769.60. Of the special appropriation for water supply and hospital, \$8,936.18 also was paid over. The hospital is in course of erection. The number of inmates at the close of the fiscal year was 376. 86 had been released on their recognizance and 42 indentured.

At the Industrial School for Girls the *per capita* allowance for maintenance and repairs paid by the State amounted to \$20,116.95; the balance of the special appropriation of \$17,000 in 1894 for building an addition to the school, which was \$7,539.77, also was transferred. The expenses for maintenance and general repairs were \$15,385.39. There remained in the school Oct. 31, 119 inmates; 16 were indentured during the year, and 16 previously.

State Census.—The fifth State census, among other statistics, gives the following: Total population, 1,672,942; white males, 621,111; white females, 635,649; colored males, 28,714; colored females, 30,296; males, Irish, 41,814; females, Irish, 51,619; males, German, 62,885; females, German, 55,938; males, other nationalities, 80,542; females, other nationalities, 64,403; males under twenty years of age, 335,572; males over twenty, 499,465. The number of dwelling houses is 379,753; the number of families, 357,373.

Road Building.—The Road Commissioner reports, as work done under the commission, that 49.11 miles of highway have been completed, that 49.12 miles have been approved, and that applications have been filed for 130 miles of stone road.

An act of the last Legislature makes an annual appropriation of \$100,000 for road building. It makes the State pay 33½ per cent. of the cost of construction, the property owners 10 per cent., and the county the remainder.

Electric Roads.—The first rails of the trolley system that is to connect New York and Philadelphia were laid in February at Raritan. The plan of laying the rails along one side of the highway will be generally enforced by the county and township officials as a means of insuring the danger of the trolley and preventing the obstruction of public travel. The electric line between Burlington and Mount Holly was completed in July, and at first was operated by steam power, as the electric motors were not ready.

The Palisades.—The commissioners from New Jersey and New York agreed on a report to be presented to the Legislature of each State. This report states that the commissioners are of opinion that a portion of the Palisades, including the cliffs, should be preserved and held by the United States in order that it may remain open and unobstructed, and they recommend the passage of an act by Congress to provide for the purchase of the lands, and to establish a military and national park. They also propose that New York and New Jersey cede jurisdiction of certain lands to the United States for specified purposes and under conditions.

Memorial Tablets.—Two stone tablets to mark the place at which Gen. Washington and the Continental army crossed the Delaware river on Christmas night, 1776, preceding the battle of Trenton, were dedicated at Taylorsville, Pa., and Washington's Crossing, N. J., Oct. 15. The Pennsylvania monument was erected by the Rock's County Historical Society, and the New Jersey monument by the Society of the Cincinnati in the State of New Jersey.

Decisions.—By the last Legislature a naturalization act, making fraud more difficult, was passed, the Attorney-General having previously

declared it unconstitutional. The act defines which of the State courts shall have jurisdiction over the subject of naturalization, eliminating therefrom the courts of common pleas. The question of its constitutionality was brought before the Supreme Court on an application for mandamus, and on Aug. 31 Justice Van Syckel delivered an opinion by which the constitutionality of the act was upheld.

On March 14 an elective-judiciary act was passed over the Governor's veto, the effect of which was to give the people the power to select their own county judges. On Sept. 9 Justice Van Syckel, Justice Lippincott concurring, rendered a decision declaring the law invalid, because it merely changed the name of the county courts, while it sought to deprive the Governor of his constitutional right of appointing the judiciary. On Sept. 15 Justice Magie filed an opinion dissenting from the opinion of the other members of the court.

On March 3 Justice Van Syckel filed a memorandum declaring unconstitutional the *Short Law*, under which *Municipal* and other *Essex* municipalities were incorporated.

On Feb. 26 Justice Reed filed an opinion in the Cranbury School case, argued at the November term, 1894. At a special meeting calling the legal voters of the township together to cast their votes authorizing certain expenditures, many women voted. Objections were raised, but the court decided, regarding the votes cast by women, that the act of 1887 allowed it, and in view of this the assessments made by the township authorities were affirmed.

A suit was brought to test the legality of the act passed March 20, 1890. This act fixed a minimum license fee in respect to population. In the township of Stafford the minimum fee was fixed at \$2,000. The population of the township is only 1,000. Justice Van Syckel pronounced the act unconstitutional.

Political.—The convention of the Prohibition party was held June 14. The platform declares for public ownership of all State and municipal monopolies, for woman suffrage, for a more equal distribution of the products of labor, for a free and untrammelled press. The last Legislature is arraigned for "trucking to the interests of the liquor and monopoly power." Henry W. Wilbur was nominated for Governor.

On Sept. 19 a Republican convention was held in Trenton. The essential portions of the platform were as follows:

We reaffirm our opposition to any attempt to impose upon this country a debased or depreciated currency and our firm belief in the wisdom and beneficence of a tax upon imports which will afford protection to American industries and employments. We reaffirm our purpose of monitoring to New Jersey a clean and honest government.

We pledge ourselves to oppose any attempt to impose upon the people a tax for the support of the State government, any attempt to invade or divert from its proper use the fund for the support of the free public schools. We pledge ourselves to the abolition of unnecessary offices and the reduction of excessive salaries.

John W. Griggs was nominated for Governor. The Democratic convention was held in Trenton, Sept. 26. Among the declarations of the platform are the following:

We reaffirm the national Democratic platform adopted at Chicago in 1892, and cordially indorse the administration of President Cleveland.

We congratulate the people upon the revival of prosperity everywhere evident in our land, and we assert that the industrial depression with which we have been afflicted during the past three years is chargeable to the national legislation enacted by the Republican party. The purchase of silver to be stored in the Treasury and the enactment of unjust tariff laws to enrich a few favorites by the oppression of millions of consumers were the main causes of the paralyzation of our markets.

We denounce as maliciously false the statements of the Republican State platform that the government of New Jersey has been conducted by the Democratic party in a dishonest or extravagant manner.

We favor the adoption of a constitutional amendment that will render impossible any law for the legalization of gambling in any form.

We pledge the Democratic party to the enactment of laws that will secure to the people of New Jersey control of the potable waters of the State.

We condemn the action of the late Republican Legislature, which ridiculed every request made for legislation in the interest of organized labor and repealed acts passed by Democratic Legislatures for the protection of the wage workers of New Jersey.

Alexander T. McGill was nominated for Governor.

At the election in November 5 candidates were voted for. In addition to those above named the People's party, by petition, nominated William B. Ellis, and the Socialist-Labor party, by petition, nominated Joseph B. Keim. The result was the success of the Republican party, the Republican candidate for Governor and the 7 Republican State Senators being elected. The vote for Governor was as follows: Griggs, Republican, 162,900; McGill, Democrat, 136,000; Ellis, Populist, 1,901; Wilbur, Prohibitionist, 6,661; Keim, Labor, 4,147. The total vote was 311,609; in 1892 it was 336,871. The Legislature in 1895 was composed of 18 Republicans in the Senate and 43 in the House, and 3 Democrats in the Senate and 17 in the House.

NEW MEXICO, a Territory of the United States, organized Sept. 9, 1850; area, 122,580 square miles. The population, according to each decennial census, was 61,547 in 1850; 93,516 in 1860; 91,874 in 1870; 119,565 in 1880; and 153,593 in 1890. Capital, Santa Fé.

Government.—The following were the Territorial officers during the year: Governor, William T. Thornton, Democrat; Secretary, Lorion Miller; Treasurer, S. Eldott; Auditor, Marcellus Garcia; Adjutant General, G. W. Knable; Solicitor-General, J. P. Victory; Superintendent of Public Instruction, Amado Chavez; Chief Justice of the Supreme Court, Thomas Smith; Associate Justices, N. C. Collier, N. B. Laughlin, G. D. Bantz, H. B. Hamilton; Clerk, George L. Wyllys.

Finances.—The receipts for the last two quarters of the forty-fifth fiscal year were \$168,795.20; the expenditures, \$134,455.96. The receipts for the first two quarters of the forty-sixth fiscal year to Sept. 1, 1895, were \$100,580.44; the expenditures were \$104,368.84. For appropriations made by the 31st Legislative Assembly the total sum of \$21,758.29 was paid.

The Territorial indebtedness July 25, 1895, was: Capital building bonds, 7 per cent., \$200,000; Capitol contingent fund bonds, 6 per cent.,

\$50,000; current expense bonds, 6 per cent., \$150,000; provisional indebtedness bonds, 6 per cent., \$200,000; Insane Asylum bonds, 6 per cent., \$25,000; casual deficit bonds, 5 per cent., \$100,800; refunding bonds, 6 per cent., \$101,000; Penitentiary refunding bonds, 6 per cent., \$81,000; total bonded indebtedness, \$907,800.

Valuation and Taxation.—From the Governor's report to June 25, 1895, the following figures are taken: Valuation of lands in 1894, \$12,780,909.77; of houses and improvements, \$5,909,048.16; of 63,623 horses, \$1,263,613.65; of 3,724 mules, \$140,732.88. Upon the foregoing property the rate of assessment for 1894 was as follows: For Territorial purposes, 6 mills on the dollar; for casual deficit bonds, interest, 0.25 mills; for Territorial institutions, 1.50 mill; total rate of 7.75 mills. To the above rate is added one half of a mill on the assessed value of cattle. The total assessed value of all kinds of property was \$41,128,620.95; the exemptions of all kinds were \$2,038,119.31; balance subject to taxation, \$39,090,501.64. On this amount the arithmetical product of taxes for the forty-sixth fiscal year is: For Territorial purposes, \$204,638.61; for casual deficit, bond interest, \$10,288.98; for Territorial institutions, \$58,435.28; for cattle indemnity, \$2,227.69; total, \$304,636.56. The receipts in the treasury during the first three quarters of the forty-fifth fiscal year amounted to \$186,281.06.

A new tax law provides that after Jan. 1, 1895, "city councils and boards of trustees of incorporated towns shall have power and authority to levy taxes upon the same classes of property, 'real, personal, and mixed, within the limits of such city or town, as are subject to taxation for territory and county purposes for city or town purposes,' provided that only 1 per cent. shall be levied or collected upon the value of said property as assessed by such city or town."

Education.—The receipts during the school year, including balance due Dec. 1, 1894, were \$118,771.20. Expenditures: Teachers' wages, \$56,229.07; rent, fuel, etc., \$10,055.23; school-houses and grounds, \$6,935.75; on hand, \$26,929.09; total, \$115,820.94. The number of teachers was 403; and of schools 310, with an enrollment of 14,507 pupils. The School of Mines, which had been closed for a year, was reopened in September, with a fair attendance. The normal school at Silver City opened with about 100 students. The last Legislature appropriated \$10,000 for enlarging its buildings, and the same amount for the normal school at Las Vegas, which has not yet been opened. For the enlargement of the Agricultural College, where 85 students were entered in September, \$15,000 was voted, and for the Military Institute at Roswell a bond issue of \$15,000 was authorized. During the year the United States Government assumed control of the Ramona Indian school for girls, at Santa Fé.

The Asylum for the Deaf, Dumb, and Blind had under instruction during the year 10 deaf and 9 blind pupils.

Charities.—The 4 hospitals receiving Territorial aid are in good condition, and not hampered by lack of necessary funds. The number of patients received at the St. Vincent Hospital,

at Santa Fé, during the year ended March 4, 1892, was 121; the number treated was 158. The expenditures were \$7,119.67, and the legislative appropriation was \$6,000. To the Orphan's Home and Industrial School, for girls only, the expenses of which were \$5,872, for the care of 67 pupils during the year \$5,000 was appropriated.

For the enlargement of the Insane Asylum, which is very much crowded, an issue of bonds to the amount of \$35,000 was authorized.

Penitentiary.—There remained in the Penitentiary June 30, 1895, 191 prisoners, 264 being the total number in confinement during the year, a daily average of 166. The cost of maintenance has been reduced from 43 cents a day to 28 and cents.

Legislative Session.—The Legislature organized Jan. 3 and adjourned Feb. 28. About 60 bills passed the two houses, but several of them failed to reach the Governor in time. With the exception of the appropriation bills and one or two other measures, very few general laws were enacted. Among them are the following:

- Expropriating cattle brands.
- Prohibiting the sale of tobacco or giving it, in any form, to persons under eighteen years of age.
- Amending chapter II of the laws of the twenty-ninth Assembly, so that no property shall be sold under decree until ninety days after the date of such decree.
- Repealing certain sections of the Compiled Laws, in that a married woman is not now compelled to live with her husband irrespective of his treatment of her.
- Providing for the probating of foreign wills.
- Regulating the practice of medicine and establishing a board of health.
- Amending the funding of outstanding indebtedness.
- Allowing the funding of school warrants.
- Providing that half of the delinquent Territorial taxes amounting to about \$400,000, shall, when collected, be utilized for court purposes, the rest to go to the payment of interest on county bonded debts.
- Providing for service of process in suits against nonresidents by publication.
- Giving the Cattle Sanitary Board jurisdiction over diseased cattle.
- Providing for the appointment of sheep inspectors.

Among bills carrying appropriations, in addition to the general biennial appropriation bill, were these:

- Providing a bond issue of \$75,000 for the erection of the Capitol at Santa Fé; and one of \$15,000 for the New Mexico Institute, at Roswell.
- Establishing a weather and crop service for collection of crop statistics and climatological data.

Court of Private Land Claims.—In this court there were tried between Aug. 13, 1894, and June 26, 1895, 37 suits, involving the ownership of 15,731,818 acres, the grant of 589,006 acres being confirmed. A claim for 10,000,000 acres in Arizona and 2,000,000 acres in New Mexico—known as the Peralta-Reavis grant—was brought before the New Mexico court and proved to be fraudulent. A rectangular tract was involved measuring 75 miles from north to south and 225 miles from east to west, and containing, in Arizona, the State capital, Phoenix, and the towns of Florence, Maricopa, Clifton, and others,

and supporting a population of more than 30,000 people. On March 27, 1893, James Addison Reavis filed in Arizona a petition setting forth that, by purchase from the heirs of the original grantee, he had become the owner of a tract in New Spain granted by Ferdinand VI of Spain to Miguel de Peralta de la Cordoba in 1746, located in 1788; the grant and location being confirmed by Carlos III. Upon this showing, sustained by pretended original documents from the Government archives of the city of Mexico, duly attested transcripts of the record in the city of Guadalajara, etc., Reavis petitioned the Surveyor General to recommend the confirmation of the alleged grant to him by the United States. After thorough investigation the prayer of the petitioner was denied, forgery and fraud being asserted. But while the claim was pending, on Sept. 2, 1887, Reavis filed an amended claim to the property under the title of his alleged wife, Doña Sofia Loreto Micaela de Peralta Reavis, née Mamo y Silva de Peralta de Cordoba, alleged granddaughter of the original Miguel de Peralta de la Cordoba, and signed himself therein as James Addison Peralta Reavis. This claim called for a still larger tract, and the suggestions of the Surveyor General in his adverse report were used to strengthen and perfect it. The pretended grant claim was filed for confirmation in the United States Court of Private Land Claims in Santa Fé, Feb. 18, 1893. Matthew G. Reynolds began the investigation on the part of the Government; experts were sent on investigating missions to Mexico and Spain and to California, and even judges of the court went to California, to Mexico, and to Spain to take testimony, with the final result of proving, in 1895, that the whole structure was a forgery; that no Miguel de Peralta ever existed, that no such grant as alleged was ever made, and that the wife of Reavis was really the daughter of one John Treadway and a Digger Indian squaw.

Supreme Court Decisions.—A decision of this court given in October ends the suit of the Bent heirs against the Maxwell Land Grant Company, involving the title to a twelfth interest in the Maxwell grant, a case that has been before the courts for thirty-five years. The decision was a complete victory for the Maxwell Company.

The Capitol.—In 1884 the Territory issued \$200,000 of bonds at 7 per cent., and in 1887 \$50,000 at 6 per cent., to erect and furnish a Capitol building. In 1892, soon after its completion, it was burned; but figures given by the Capitol Custodian Committee show that the value of the uninjured portion of the building is not less than \$45,000. The last legislature authorized the issue of bonds to the amount of \$75,000 at 3 per cent. to restore the building, and work was at once begun.

Irrigation.—The fourth annual Irrigation Congress met at Albuquerque, Sept. 16, delegates from Kansas, Nebraska, Texas, Colorado, California, Arizona, Utah, Oklahoma, and New Mexico, as well as Mexico and Canada, being present. It was asserted that the reclaiming of arid lands made additional legislation necessary, and the control by the General Government of the various irrigating systems was strongly advocated. Following is an account, under date

of Aug. 16, 1895, of what has been accomplished within a year in the Bluewater valley, Valencia County, through irrigation:

The Bluewater valley was nine months ago an arid, dry, sandy, and wind-swept waste. On Aug. 24, 1894, we placed our first scrapful of earth upon our proposed dam, since which time we have constructed a dam 150 feet base, 260 feet long, and 42 feet high. Capacity, 6,000 acre-feet of water. Waste-way cut through the solid rock mountain at south end of dam 170 feet long, 100 feet mouth, 30 feet throat, 20 feet width, with perpendicular fall of 6 feet at throat, and 4 feet fall from there to lower end. We have constructed 31 miles of canals and laterals—30 feet wide, 1 foot deep; 12 feet wide, 2 feet deep; and 8 feet wide, 3 feet deep, much of the work being done around rocky points and stony hillsides. Have cleared and plowed 2,600 acres sage-brush land, and have planted 2,000 acres. We have magnificent stands of grain in all our fields. Sugar and mangel beets have proved a great success.

NEW YORK, a Middle State, one of the original thirteen, ratified the Constitution July 26, 1788; area, 49,170 square miles. The population, according to each decennial census, was 340,120 in 1790; 589,051 in 1800; 959,049 in 1810; 1,372,111 in 1820; 1,918,608 in 1830; 2,428,921 in 1840; 3,097,394 in 1850; 3,880,735 in 1860; 4,382,759 in 1870; 5,082,871 in 1880; and 5,997,853 in 1890. According to a State census taken in 1892, the population was 6,513,344. Capital, Albany.

Government.—The following were the State officers during the year: Governor, Levi P. Morton, Republican; Lieutenant Governor, Charles T. Saxton; Secretary of State, John Palmer; Comptroller, James A. Roberts; Treasurer, Addison B. Colvin; Attorney-General, Theodore E. Hancock; State Engineer and Surveyor, Campbell W. Adams; Superintendent of Public Instruction, James F. Crooker, who was succeeded on April 6 by Charles R. Skinner; Superintendent of Insurance, James F. Pierce; Superintendent of Banking Department, Charles M. Preston; Superintendent of State Prisons, Austin Lathrop; Superintendent of Public Works, George W. Aldridge; Commissioner of Statistics of Labor, Thomas J. Dowling; Railroad Commissioners, Michael Rickard, S. A. Beardsley, and Alfred C. Chapin; Chief Judge of the Court of Appeals, Charles Andrews; Associate Judges, Albert Haight, John C. Gray, Rufus W. Peckham (who resigned in December to become an Associate Justice of the Supreme Court of the United States, and was succeeded, Dec. 31, by Irving G. Vaun), Denis O'Brien, Francis M. Finch, Edward T. Bartlett, Robert Earl.

Finances.—The balance in the treasury on Oct. 1, 1895, was \$811,762.98, as compared with \$1,548,286.57 Sept. 30, 1894. The receipts were \$19,630,121.83, as compared with \$18,537,948.03 in 1894. The expenditures were \$20,366,646.42, as compared with \$20,183,011.13 in 1894. There was a balance at the beginning of the year of \$1,548,286.57. The actual receipts of the year were \$76,524.59 less than the expenditures, but a balance on hand was available for paying the State's debts. In October, 1893, the beginning of the fiscal year preceding, there was a balance of \$3,193,249.67. This year's balance was only \$811,762.98, so that the working funds of the State are less than they have been for several years. This is due to the falling off in the col-

lateral-inheritance tax, the abolition of the pool-selling tax, and increased expenditures for the insane.

The Comptroller reports that the receipts from the corporations for 1895 were as follow: Insurance companies on premiums, \$132,588.04; insurance companies on capital, \$15,061.45; transportation companies on earnings, \$403,992.54; telephone and telegraph companies on earnings, \$30,460.26; transportation companies on capital, \$615,457.63; telephone and telegraph companies on capital, \$34,865.31; gas, electric, and miscellaneous corporations, \$589,243.65; foreign banks, \$34,306.47; total, \$1,855,975.35.

There was collected in 1895 \$1,367.90 from foreign corporations as license fees, making the total amount received from corporations \$1,857,343.25, an increase of \$211,464.37 over 1894. The Comptroller's department collected \$95,980.54 from the racing societies of the State, which was distributed among agricultural societies. Since this sum was distributed \$16,546.57 has been collected, making the total \$112,527.11. The State tax rate is 3-24 mills. Last year it was 2-18. The tax is to be distributed as follows: For schools, 0-94 mill; for canals, 0-36 mill; for general purposes, 0-94 mill; for State care of insane, 1 mill. This tax of 3-24 mills on the present valuation, \$4,292,082,167, will yield \$13,906,346.23, distributed as follows: General tax, \$4,034,557.24; schools, \$4,034,557.24; canals, \$1,545,149.58; State care of insane, \$4,292,082.17; total, \$13,906,346.23. The amount received from the corporation and organization tax for the year ending Sept. 30, 1895, was \$2,115,807.85.

Wealth of the State.—The total amount of property in the State in 1894, as assessed by the local assessors, was \$4,433,776,127. It was divided as follows: Real estate, \$3,841,582,748; personal property, \$592,193,379. Of the personal property so assessed, \$111,693,960 was corporate property not subject to taxation locally for State purposes. The amount of property, both real and personal, subject to taxation locally for all purposes was \$4,292,082,167. The total increase in the taxable property locally for all purposes was \$92,200,109, divided as follows: Real, \$79,903,364; personal, \$12,296,745.

Legislative Session.—The one hundred and eighteenth regular session of the Legislature began on Jan. 2, 1895, and continued until May 16. As elected, the Senate consisted of 18 Republicans, 13 Democrats, and 1 Independent Democrat; and the Assembly of 105 Republicans and 23 Democrats. The organization being in the hands of the Republicans, Edmund O'Connor was chosen President *pro tem.* of the Senate and Hamilton Fish, Jr., Speaker of the Assembly. During the session 1,045 bills were signed, the largest number in any one year in the history of the State.

On the last day of the session a special Senate committee, appointed to investigate the bribery charges against Senators Coggeshall, Robertson, and Raines, in connection with the passage of the New York City Firemen's Salary bill, and in connection with an amendment increasing the salary of the officers of the New York City Fire Department, submitted a report exonerating the Senators mentioned. Also at the close of the session Assemblyman Vacheron was called be-

fore the Court of Oyer and Terminer and pleaded not guilty to the indictment for bribery in connection with the legislative bill regulating the cutting of ice on Hudson river.

Among the most important measures adopted are the following:

Concerning New York city: A bill giving the mayor power of removal; abolishing the police justices and creating a bench of city magistrates; creating a tenement-house commission's bill; providing for the separation of the Bureau of Charities and Correction; four tenement-house reform bills; a bill for the consolidation of the Astor, Lenox, and Tilden libraries; establishing a great zoological garden; a rapid-transit bill; providing for two additional assistant district attorneys in New York city at \$7,500 a year each.

Requiring the display of the United States flag on every schoolhouse.

Providing for a broader study of the nature and effects of alcoholic drinks and other narcotics in connection with physiology and hygiene in the public schools.

To protect colored citizens in their civil and legal rights. The bill provides that all persons within the jurisdiction of this State shall be entitled to the full and equal accommodations, advantages, facilities, and privileges of inns, restaurants, hotels, eating houses, bath houses, barber shops, theaters, music halls, public conveyances on land and water, and all other places of public accommodation or amusement, subject only to the conditions and limitations established by law and applicable alike to all citizens.

Authorizing the city of Brooklyn to make yearly provision for celebration of Washington's birthday.

Amending the Rochester charter and to extend the city boundaries.

Making appropriations for continuing the work of erecting monuments and memorial structures in honor of New York troops engaged in the military operations around Chattanooga in 1863.

Appropriating \$3,000 for a monument to Gen. Nicholas Herkimer in Danube, Herkimer County.

Providing a commission to prepare and submit to the next Legislature general city laws relating to cities of fewer than 50,000 inhabitants.

Appropriating \$75,000 for the erection at the Genesee State Normal School of a new building for the scientific department.

Amending the law providing for incorporation of associations for lending money on personal property to cities of over 500,000 inhabitants.

Imposing a tax of 1 mill on each dollar of real and personal property for the State care of the insane for the year beginning Oct. 1, 1895.

Prohibiting barbering on Sunday, except in New York and Saratoga, where barbers may keep open till 11 p. m.

Providing for the issue by the city of Brooklyn of bonds to be known as "consolidated stock of the city of Brooklyn," payable in gold or currency.

Allowing the American Geographical Society of New York to take and hold real and personal property to the amount of \$1,000,000.

Providing for the issue of mileage books by railroad corporations at not exceeding 2 cents a mile by every road over 100 miles long. The law applies only to roads authorized by law to charge a maximum fare of more than 2 cents a mile, and not more than 2 cents.

Submitting to the people the question of appropriating \$5,000,000 to enlarge the Erie Canal.

Amending the foreign corporation tax law, which will add at least \$100,000 annually to the income of the State.

A blanket-ballot bill.

The constitutional requirement that all bills affecting cities must be approved by the mayors

and common councils, caused a large amount of unnecessary legislation. At the close of the session there was sent to the various mayors of cities 272 bills. Of these, 68 went to the city of New York, 74 to Brooklyn, 11 to Buffalo, 25 to the cities of the second class, and 90 to the cities of the third class. Of these, 170 were approved, 19 were rejected, and 83 remained in the hands of the city authorities.

The appropriation was \$4,300,000 higher than in 1894. Of this, \$500,000 was left from 1894.

Among the State commissions created by act of Legislature, are the following: The most important one, the Capitol Commission created, is that consisting of 8 persons, 1 residing in each judicial district, who shall constitute a State Commission of Prisons. This commission is to visit all penal institutions for sane convicts and institutions used for witnesses or debtors, to aid in securing just, humane, and economic administration.

Another commission, composed of 3 persons, has for its object an investigation in relation to the organization and government of the Legislature, the introduction and progression of bills, and generally in relation to legislative business and methods.

For the proper maintenance and efficiency of the military and naval forces of the State within 1895, a commission was named of 3 citizens as a board of examiners to test improved arms.

Another commission consisted of 3 members of the bar, who are to examine the Code of Procedure of the State and the codes of procedure and practice acts in force in other States and countries, and the rules of court.

A commission was named to formulate legislation for government of cities of the second class.

Also a commission to prepare general city laws relating to cities of the third class.

The State Board of Health was empowered to appoint 2 of its members a commission to carry out the law relating to tuberculosis in cattle.

Banking.—During 1895 the depositors' organization of the Commercial Bank of Brooklyn preferred charges against Superintendent Charles M. Preston, alleging that he was incompetent and that the banking department has been conducted for years in the interest of speculators. Similar charges were filed with Gov. Flower, and were dismissed by him, Dec. 12, 1895, and after examination Gov. Morton issued an order dismissing the charges.

The annual statements of the 57 New York city and Brooklyn trust companies filed with the State Superintendent of Banking, show in the aggregate: Resources, \$273,901,322; profits, \$15,651,863; dividends, \$3,750,000.

Corporations.—There were 1,423 corporations with capital stocks formed during 1895 which paid taxes amounting to \$228,464.00.

The telephone, railroad, and land companies to a large extent made up the great total of the corporations for 1895. The 1,423 corporations formed during the calendar year paid taxes in the aggregate of \$432,445.06, on aggregate capitalizations of \$393,955,000. The combined capital of 1894 (calendar year) was \$106,290,400. The business of 1895 shows that more than 60 new railroad companies were incorporated, and

that 27 of the new corporations have each a capital of \$1,000,000 or over.

Law.—An important case was decided in the State's favor by the United States Supreme Court, that against the United States, involving the sum of \$131,188 for enrolling, subsisting, clothing, etc., of troops furnished in the war of the rebellion. In the Court of Appeals, of the cases with a pecuniary interest and principle involved, the most important was that of the People *ex rel.* Roberts, as State Comptroller, against Fitch, as Comptroller of New York city. By the court's decision the defendant will pay over to the State \$714,568, with interest, as its share of the tax of 1893 levied for the care of the State's insane. The number of cases in which the State is party on appeal pending in the Court of Appeals is 24 against 31 a year ago.

Insurance.—The aggregate receipts of New York State companies in 1894 were \$161,714,963; other States' companies, \$94,909,514; making the gross receipts \$256,624,477. The net excess of receipts over disbursements for 1894 was \$78,761,144. The total premium receipts for 1894 were \$305,132,043.86. The disbursements were \$177,863,333, of which \$116,054,725 was paid to policyholders, while the cost of management, including dividends to stockholders, was \$618,08,608.

There was an increase in the number of policies of 102,219, and of insurance \$147,880,810. At the close of 1894 the companies doing business in the State had 1,780,307 policies in force, insuring \$4,657,583,046.

The co-operative organizations received \$47-756,347 from members last year, against \$42-937,902 the preceding year. The claims paid by them last year aggregated \$38,921,664, against \$35,191,664 the preceding year.

Claims.—The annual report of the Board of Claims for 1895 shows that since its creation in 1883 it has heard and decided 2,382 claims against the State, claiming in the aggregate \$5,397,070, exclusive of interest, and has awarded thereon \$1,316,328. This number of decisions is exclusive of those made from 1884 to 1891 in appeals from the Board of Canal Appraisers to the Canal Board, 273 of which, in May, 1884, were transferred to the board by chapter cccxxix of the Laws of 1884.

Education.—The biennial school census, taken during 1895 in all of the cities and villages of the State exceeding 10,000 in population, revealed the necessities for additional school facilities. In it occurred the one hundredth anniversary of the inauguration of the free-school system in the United States, under the administration of Gov. George Clinton. The first act, chapter lxxv, Laws of 1795, provided that the sum of \$20,000 should be annually appropriated for the term of five years, "for the purpose of encouraging and maintaining schools in the several cities and towns in this State."

The number of public-school buildings in 1894 was 11,121, a decrease of 49, caused by consolidation of districts. The amount expended for schoolhouses was \$4,139,295.87, of which the cities expended \$2,916,950.21 and the country \$1,222,345.66. The total number of persons of school age was 1,632,295, of whom the cities claim 1,208,855 and the country 723,440. The to-

tal increase in school population during the year was 39,937. The total attendance at school—cities, 589,363; country, 535,635; increase, 41,770. The total number of teachers, 32,929, of whom 5,096 were men and 27,833 were women. The total amount of teachers' salaries was: cities, \$7,264,613.25, an increase of \$117,920.20; and in country districts, \$4,788,404.01, an increase of \$52,002.12.

Tuberculosis.—The State Commission on Tuberculosis in Cattle made its first annual report to the Legislature in January, 1895. During the year and a half following the passage of the Tuberculosis act 22,000 cattle were examined and 800 were slaughtered. The Commission on Tuberculosis in Cattle was constituted May 31, 1894, to inquire further into the existence of the disease. This commission has carefully studied, by a system of special inspection, the prevalence, distribution, mode of infection, and general behavior of tuberculosis in cattle, confining part of its work to a given area, which was thought to be comparatively free from general infection from other sources. In this district 947 animals were examined and 66 were condemned.

Prisons.—In the year ended Sept. 30, 1894, the prison population had increased to 3,624.

The deficiency for care and maintenance was \$11,195 less than in 1893. More money was earned by the prisoners, and less was spent for maintenance. The expenditures for 1894 were less than those of 1893 by \$38,894.

The earnings of the prisoners show an increase of \$72,300 after deducting two items, namely, for fire loss in Auburn prison, \$27,897, and bills receivable canceled by act of the Legislature on account of the fire of 1893, amounting to \$14,845. The expenditures for the care and maintenance of the three State prisons and their earnings are shown as follows:

Sing Sing—Expenditures, \$150,814; industry, \$42-952; compensation paid convicts, \$7,670; deficiency, \$94,532.

Auburn—Expenditures, \$157,264; earnings, \$77-363; loss by fire, \$27,897; account due and canceled by Legislature, \$14,845; compensation paid convicts, \$6,239; deficiency, \$128,883.

Clinton—Expenditures, \$157,191; earnings, \$17-858; compensation paid convicts, \$3,323; deficiency, \$142,656.

There were 104 prisoners in the women's prison.

A State Commission of Prisons made at the close of 1895 its first annual report. It shows that the unfair competition caused by contracting out the labor cheaply has disturbed the market, injured some industries, and driven others out entirely. The manufacturing on State account for sale in the open market worked even more disastrously, for the reason that the cry against prison-made goods forced the State to sell below the prices that other manufacturers could afford, and thus had the same effect in disturbing the market, while the large expense of commissions and expenses of sales agents made it even more expensive to the State. The commission called for estimates from all public institutions of the supplies purchased by them of such articles as can be manufactured in the prisons, and finds that it is practicable to have

each estimated each year and upon them base a distribution of the labor of filling the orders among the several penal institutions. All the labor of the convicts in the Blackwell's Island penitentiary is devoted to the use of the public institutions of New York city alone, and can not half supply them. In this way New York city gets the full value of the labor of its convicts.

Canals.—The financial report shows an expenditure out of the ordinary repair fund of \$754,362.70. There was expended for improvement of the canals, under special appropriations, \$951,120.37. The number of tons carried upon the canals during the season of 1895 was 3,500,014, of which 2,327,481 tons were in transit toward tide water and 1,172,533 tons were moved westward. Of these amounts, 1,762,663 tons were through freight and 1,797,651 tons were way freight. The amounts carried by the several canals were as follow: Erie, 2,356,048 tons; Champlain, 966,335; Oswego, 64,691; Black River, 64,154; and Cayuga and Seneca, 49,050; total, 3,500,841.

In 1895 the Legislature passed a law submitting to the people the proposition to issue bonds of the State not to exceed \$9,000,000 for the improvement of the Erie, the Champlain, and the Oswego Canals, by deepening the Erie and Oswego Canals to a depth of not less than 9 feet and the Champlain Canal to 7 feet of water, and also lengthening and improving the locks and strengthening the walls. The act was approved by the people by a majority vote of 243,770. This law requires the Legislature annually to impose a tax of $\frac{1}{32}$ of a mill on each dollar of valuation of real and personal property in the State subject to taxation, the proceeds of which, after paying the interest due upon the bonds, shall be invested by the Comptroller, under the direction of the commissioners of the Canal fund, and together with the interest arising therefrom shall be devoted to the sinking fund created for this purpose.

The experiments with electric motors for canal-bus propulsion made at the western end of the Erie Canal in October were so successful as to lead to the belief that when the system is applied to the entire canal it will increase its traffic capacity at least 35 per cent.

Labor Troubles.—More than 400 strikes and lockouts occurred during the year ending Oct. 31, 1895. Of these, 80 lasted less than twenty-four hours, while nearly 200 were settled within three or four days. The most disastrous strike began Jan. 14, 1895, when about 4,500 men employed by trolley railroads of Brooklyn quit work. The workmen claimed that the strike was precipitated by the locking out of some of their associates. Agreements fixing the conditions of labor had for several years been entered into between the roads and their employees. The Brooklyn Heights Company controlled the largest system, embracing 26 lines. Its agreement expired in January. Conferences were held before the strike, with a view to renewal of the agreement between the labor organization and the officials of the company. The men demanded an advance in wages of 25 cents a day and the maintaining of the proportion of two-thirds "full-day" men to one-third "trippers," or extra men. Just before the tie-up the men

waived the demand for additional pay, but insisted on the proposed number of "trippers." This the companies refused to concede, and a tie-up was ordered on all the lines in the city. The Board of Arbitration at once undertook to settle the differences between the companies and the strikers, among whom were included motormen, conductors, linemen, electricians, and other employees. At two o'clock on the morning of the fourth day of the strike the board effected a settlement between the officials of the Brooklyn City and Newtown Company and its striking employees, and the same day the 300 men on that system returned to work. During the one month's existence of the strike the board made repeated efforts, in conjunction with the Mayor of Brooklyn, to adjust the troubles. The officials of the two largest systems declined to arbitrate or treat with the strikers, despite the fact that the companies were unable to fill the places of the old men with competent workers, and further, that the city of Brooklyn was an armed camp, the militia of New York city and Brooklyn having been called to assist the police in preserving order, at the request of the mayor. The strike was declared off Feb. 16, and many of the strikers were taken back. A boycott by organized labor was prosecuted against the roads until Aug. 9, when the board, through one of its members, secured concessions from the new management of the Brooklyn Heights Company by which the old employees were guaranteed situations as rapidly as vacancies occurred, and the boycott on that system was removed.

Railroads.—The report on the financial operations of the railroads is for the year ended June 30, 1895. The increase of earnings for 1895 was \$1,241,039; decrease in operating expenses, \$702,970; increase in net earnings from operation, \$1,944,010. The decrease in net earnings for 1894 was \$4,264,171, while the decrease in income from operation that year was \$10,399,511, showing that \$6,023,260 of the loss was made up by a reduction in operating expenses which have therefore been reduced nearly \$7,000,000 since June 30, 1893. Capital stock shows a decrease this year of \$12,812,614; cost of road and equipment, decrease, \$19,672,129; funded debt, decrease, \$1,264,021; unfunded debt, increase, \$13,941,636. The percentage of dividends declared on capital stock is 2.42, against 2.60 in 1894. The decrease in number of passengers carried during 1895 was 1,262,172. This is accounted for partly by the World's Fair traffic reported for the year ended June 30, 1894. The freight business shows an increase of 1,453,777,000 in the number of tons carried one mile.

Labor Statistics.—In 1894 850 organizations reported 118,628 members. The returns received from 659 unions show that the membership was 155,203. Since their reestablishment they have gained 108,906 members, an increase of 165 per cent. There has been a falling off in membership in two trades, coopers and machine woodworkers and turners.

Of the labor organizations, 401 say that they have increased wages, 61 report that wages are less now than they were previous to the formation of the organizations, and the figures presented by 174 unions indicate that there has been no change. As to working time, 202 or-

ganizations report that the hours of labor have been reduced, 6 that they have been increased, and the returns from 246 show no change.

Four hundred and seventy-three organizations, with 122,580 members, state that they expended in benefits \$511,717.59. Of this amount, \$106,801.69 was for out-of-work benefits, \$60,107.98 for sick benefits, \$93,437.92 for death benefits, \$89,130.04 for strike benefits; \$10,676.74 was given to other labor organizations, and \$151,543.22 was expended in benefits that are not classified by the organizations.

Factory Inspection.—During 1894 13,866 separate workshops and factories were visited, and 2,609 of these were inspected several times. There were 465,926 persons employed in the places inspected, 150,662 of whom were women and 12,536 children under sixteen years of age. As a result 10,425 notifications were issued requiring changes to be made in or about the places visited or with reference to the individuals employed. The most important were as follows: Factories ordered to stop overworking minors, 188; children under fourteen years ordered discharged, 182; illiterate children under sixteen years ordered discharged, 238; elevators and hoistways ordered guarded, 597; fire escapes ordered erected, 262; machines ordered protected, 1,320; separate toilet rooms for women ordered, 1,148; factories ordered renovated, 638; buildings condemned as unsafe, 52; ordered to cease making clothing in sweat shops, 718; overcrowding ordered stopped, 53; and better ventilation ordered, 118.

The number of children employed in factories during 1894 showed a decrease from 1893 of about the same ratio as in previous years.

Fish and Game.—During the year ended Sept. 30, 1895, the State planted 196,247,840 fish of various kinds and ages. Calling the brook trout, brown trout, rainbow trout, landlocked salmon, sea salmon, muskellunge, and black bass hook-and-line or "game" fish, there were planted of these species 8,627,908. Of whitefish, pike perch, tomcod, smelts, ciscoes, shad, bullheads, frostfish, etc., the commercial or food fish, there were planted 187,619,932. In 1895 the commission planted 41,305,000 pike-perch fry, 24,080,000 whitefish, and 18,000,000 ciscoes. Reports were received from all but one township in the 12 counties in the Adirondack region, and these show that 5,083 deer were killed during the open season.

The game law signed on June 7 makes the trout-fishing season uniform throughout the State, the open season being from April 16 to Aug. 31. The bill prohibits the pollution of streams or the taking of fish by drawing off water or by dynamite, or the taking of fish from a stream to stock a private pond or stream. No fishing through the ice in waters inhabited by trout or salmon is permitted. Salmon trout and landlocked salmon may be fished from May 1 to Sept. 30; bass, from May 30 to Dec. 31, eight-inch limit; pickerel, pike, and wall-eyed pike from May 1 to Jan. 31, except as provided in section 141 of the game law.

The open season for deer is Aug. 16 to Oct. 31; limit, two deer to each person; for squirrels, hares, and rabbits, from Sept. 1 to Nov. 30; ferrets prohibited.

For web-footed wild fowl the open season is from Sept. 1 to April 30; quail, open season November and December; woodcock and grouse, open season from Aug. 16 to Dec. 31; clover, snipe, and English snipe shall not be shot or possessed during May, June, July, or August; snaring, netting, or trapping of game birds is prohibited.

There is a special provision to regulate the killing of deer on Long Island. No deer may be killed during the next two years. After that period there is to be an open season every other two years, of six days only, from Nov. 10 to Nov. 16. The close season for ducks has been shortened. The new law allows these and other web-footed birds, except brant and geese, to be hunted, except from May 1 to Sept. 1. The open season for trout begins on April 16 and closes Aug. 31.

State Capitol.—The Legislature passed an act providing for a commission to take steps for the completion of the Capitol by contract. It was estimated in January, 1895, that the value of the material on hand was \$41,243, and the plant for carrying on the work \$65,000. Deducting the value of materials, the commissioner estimated that it would cost \$2,638,112 to complete the building. On Dec. 27 the commissioners approved of the plans and specifications for the completion, by contract, of the Capitol and all its unfinished portions, except the carving on the western staircase and the completion of the eastern approach. It was decided to abandon the tower as originally proposed.

Political.—On Sept. 17 a Republican State convention was held in Saratoga Springs. Charles W. Hackett, chairman of the State committee, called the convention to order, and named J. S. Sherman, of Oneida, as temporary chairman. For the permanent organization Clarence Lexow was made chairman. Concerning national issues the platform declared:

We denounce the Wilson tariff, with its iniquitous income-tax attachment—happily declared unconstitutional by the Supreme Court of the United States—as the first step accomplished in the campaign for the annihilation of American industries. This measure is neither a tariff for protection nor a tariff for revenue, but a tariff for deficit, failing by scores of millions a year to raise the amount of revenue necessary for the expenses of our National Government.

We denounce the Democratic Administration for its gross mismanagement of the finances of the nation. It already has added more than \$165,000,000 to the national debt and the burdens of the people.

We denounce the Democratic Administration for its false and misleading statements of the public expenditures and for its failure promptly to pay the nation's honest debts.

Of State issues it said:

The revised Constitution, which went into effect last January, imposed many important duties upon the Legislature, which were fully met and faithfully discharged. Prominent among them was the constitutional requirement of uniform charters for cities of the various classes. Among the acts of the Legislature designed for the amelioration of the condition of the working people of the city of New York, the law providing for the inspection and improvement of tenement houses is entitled to special commendation.

The most rigid care and economy were exercised by the Republican Legislature of the State in granting appropriations of the people's money. The tax

rate was kept down to the lowest figures possible under the shrinkage of receipts from indirect taxation, due to the general business depression which was brought about by Democratic mismanagement in the nation. The necessity of meeting expenditures which were rendered obligatory by the new Constitution and the extension of the act for State care of the poor, insured to the counties of New York and Kings a more imperative an increase in the tax rate.

Concerning New York city it said:

The reform measures which the people of the city of New York asked for and which were indispensable to the complete overthrow of the corrupt political machine that had so long plundered and betrayed the great metropolis of the State were, with a single exception, enacted into law in the face of a united Democratic opposition.

Subsequently an amendment to the platform as follows was introduced and carried by the efforts of Warner Miller: "We favor the maintenance of the Sunday laws in the interest of labor and morality."

The following ticket was nominated: For Secretary of State, John Palmer; Comptroller, James A. Roberts; Treasurer, Addison B. Colvin; Attorney-General, Theodore E. Hancock; State Engineer and Surveyor, Campbell W. Adams; and Associate Judge of the Court of Appeals, Celora E. Martin.

The Democratic State Convention was held in Saratoga, Sept. 24, and it was called to order by Chairman James W. Hinckley. Perry Belmont was made temporary chairman, and was succeeded by Rowell P. Flower as permanent chairman. A platform essentially as follows was adopted:

It declared for honest public officials and against legislative bribery, such as was witnessed in connection with the defeat of the Hudson river ice-cutting bill in this last Legislature. Economy in public expenditures was dwelt upon as one of the foundation stones of the Democratic party. The increase in the tax rate by the last Republican Legislature and present Republican State officials was denounced, and was followed by a declaration to restore a low tax rate should the Democracy be returned to power.

Home rule for municipalities and equal taxation were upheld in separate planks. Under the head of "Personal Liberty for the Individual" it declared for home rule and local option as regards the Sunday laws. This plank placed the party in favor of a general law with a provision that local option might be possible in a municipality or community by a majority vote, so that the people might determine themselves what hours they shall have to the necessities and conveniences of life on the Sabbath day. Gov. Morton and the Legislature were severely criticised for placing so many unnecessary laws on the statute books last winter. The financial plank demanded an agreement among foreign powers for the common use of gold and silver, and at the same time declared against unlimited coinage of silver until such an agreement could be brought about.

The National Administration was approved, as well as the operations of the Wilson tariff law.

The following ticket was then nominated: For Secretary of State, Horatio C. King; Comptroller, John B. Judson; Treasurer, De Witt C. Dow; Attorney-General, Norton Chase; Engineer and Surveyor, Russell R. Stuart; and Associate Judge of the Court of Appeals, John D. Teller.

The Prohibition party convened in Saratoga Springs, Sept. 4, and named the following ticket: For Secretary of State, William W. Smith; Com-

troller, Frederick B. Dieffendorf; Treasurer, William R. Rathbone; Attorney-General, W. Martin Jones; State Engineer and Surveyor, Walter M. Miles; and Judge of the Court of Appeals, Edwin C. English.

The other tickets in the field were: People's party—For Secretary of State, Thaddeus R. Wakeman; Comptroller, David Housman; Treasurer, H. L. Case; Attorney-General, Eliza Root; Engineer and Surveyor, R. A. Borden; and Judge of the Court of Appeals, Charles Ward. Socialist-Labor party—For Secretary of State, Erasmus Pellenz; Comptroller, Patrick Murphy; Treasurer, William Steer; Attorney-General, John H. Moore; Engineer and Surveyor, Morris Berman; and Judge of the Court of Appeals, Henry Gray.

A vote upon a proposition to bond the State in the sum of \$9,000,000 for the purpose of improving the Erie, Champlain, and Oswego Canals was also taken.

The election, Nov. 5, resulted in the success of the Republican ticket, the candidate for Secretary of State receiving a plurality of 80,145. To the State Senate 35 Republicans, 14 Democrats, and 1 Independent Republican were returned. Of the justices of the Supreme Court 37 Republicans and 21 Democrats were chosen.

Little Falls, Herkimer County, was incorporated May 8, 1893, as the thirty-sixth city in the State. It is on the direct line of both the New York Central and the West Shore Railroads, 75 miles west of Albany, 22 miles east of Utica, and precisely half way between New York city and Buffalo. The village of Little Falls was incorporated in 1810. The city, including the former village and a part of what was the town of Manheim, has a population of 11,000. It is, perhaps, the most picturesque of all the inland cities in New York. At this point the Mohawk river breaks through a ledge of rocks closely resembling those of the Thousand Islands in the St. Lawrence. In breaking through the ledge the river falls 50 feet within the limits of the city, and thus affords a power that has been used to advantage ever since the place was settled. In the chief industry, that of knit goods, 9 mills with 2,100 employees produce 3,925 dozens daily, 1,197,500 weekly, and a total of 14,376,000 garments annually—the whole product requiring 7,186,000 pounds of material. There are 2 machine shops that make exclusively machinery for knitting mills. There are also factories for the making of bicycles, paper boxes, barrels, axes, laths, wooden boxes, chairs, and furniture; also wooden and paper mills and furnaces. The total of capital employed in manufactures is \$2,465,500. The city is in the center of a fine agricultural country, and it has long been noted as the largest cheese market in the United States, as many as 50,000 boxes having been shipped in a single day. An abundance of water has been secured from an Adirondack stream at a cost of \$400,000. The city has electric lights to the extent of over 2,000 candle power. There are 2 banks, 7 churches, a graded school, a free academy, a parochial school, a free library, 1 daily newspaper, and 2 weeklies.

Johnstown, Fulton County, was incorporated May 8, 1893, as the thirty-seventh city in the State. The incorporation made the limits of the new city

the same as those of the former village of Johnstown, the north line being coincident with the south line of the adjoining city of Gloversville, which was incorporated in 1800. Johnstown is 44 miles west of Albany and 50 miles east of Utica. It is on the Cayadutta creek 4 miles north of Fonda, a station on the New York Central Railroad, with which it is connected by a steam and an electric railway. The city has a population of 10,000, and is divided into 4 wards. The chief industry is the making of gloves and mittens, there being 63 factories with an aggregate capital of \$1,565,000. The 3 knitting mills have a capital of \$156,000, and the 31 other mills and factories have a capital of \$637,000. In all, over \$3,000,000 is invested in manufactures. The number of churches is 10; of schools, 5; and of newspapers, 2. The city is in the center of a fine agricultural and grazing country. Among the mineral products of the vicinity are oil and gold, but neither has been found in paying quantities. The settlement of Johnstown began in 1762 under the auspices of Sir William Johnson. In that year, after residing for thirty years near the old fort on the Mohawk, he began the erection of what is now known as "the Hall," which the boundary of the city closely approaches. At the same date the lands were thrown open for settlers. The Hall, sometimes known as the Manor House, is still in a good state of preservation. Within its walls Sir William Johnson became famous for his baronial hospitality. He was in command of a body of regular and provincial troops during the French and Indian War, and on the banks of Lake George, in the battle of that name, he defeated the French under DuRoi and shattered their hope of invading the Mohawk and Cherry valleys. The English Government gave him a grant of what was then Tryon County, from which Montgomery, Fulton, Hamilton, and a part of Saratoga Counties have been formed. He located the county seat at Johnstown, and in 1772 he built the courthouse, and a church and a jail which are still in use. When trouble occurred between the colonies and Great Britain most of his followers joined the colonial side. Johnson was in the employ of the English Government. He died before the active part of the Revolutionary War had begun, but his descendants and relatives fought on the British side. His son, Sir John Johnson, was the leader in the massacre at Cherry valley, and his estates were confiscated by the act of attainder.

NEW YORK CITY. Government.—The city officials who held office during the year were: Mayor, William L. Strong; President of the Board of Aldermen, John Jeroloman; Register, Ferdinand Levy; and Sheriff, Edward J. H. Tamsen, all of whom were elected on the anti-Tammany ticket and took office on Jan. 1, 1895, except the Register, who is a Tammany Democrat and took office on Jan. 1, 1892.

Finance.—The condition of the city debt on Dec. 31, 1895, is shown in the table on page 547.

During the year the cost of permanent improvements amounted to \$15,127,215.76, and bonds for that sum were issued. The expenses of the municipality exceeded the income and the net funded debt of the city was increased by

\$5,806,688.64. The returns as given beyond in the wealth of the city resulted, in August, in the announcement of a tax rate of \$1.91 for each \$100 of assessment as compared with \$1.79 for 1894.

Board of Estimate and Apportionment.—This body, consisting of the Mayor, the President of the Board of Aldermen, the Comptroller (Ashbel P. Fitch), the President of the Department of Taxes and Assessments (Edward P. Barker), and the Counsel to the Corporation (Francis M. Scott), allowed the following amounts for 1896: Mayoralty, \$26,000; Common Council, \$88,000; Finance Department, \$316,400; interest on city debt, \$5,566,597.88; redemption of principal of city debt, \$2,989,901.60; State taxes and common schools, \$6,402,000.92; rents, \$168,073.77; armories—rents, \$10,250 judgments, \$125,000; Law Department, \$206,050; Bureau of Public Administrator, \$13,800; Department of Public Works, \$3,270,530.66; Park Department, \$1,219,255; Department of Street Improvements, Twenty-third and Twenty-fourth Wards, \$633,000; Department of Charities, \$1,543,417; Department of Correction, \$475,999.33; Health Department, \$519,508; Police Department, \$5,925,410.30; Bureau of Elections, \$515,294; Department of Street Cleaning, \$3,020,700; Fire Department, \$2,345,355; Building Department, \$265,000; Department of Taxes and Assessments, \$162,520; Board of Education, \$5,679,302.59; College of the City of New York, \$150,000; Normal College, \$150,000; printing and stationery, \$277,200; Civil-service Board, \$27,500; coroners, \$56,200; commissioners of accounts, \$65,000; sheriff, \$137,232; Register, \$115,250; armories, wages, etc., \$81,200; jurors' fees, \$85,000; preservation of records, \$40,280; street and park openings, \$250,000; libraries, \$63,500; salaries—city courts, \$338,000; salaries—judiciary, \$1,427,929.73; charitable institutions, \$1,543,301.68; miscellaneous, \$201,712.85; total, \$46,496,571.31; deduct general fund, \$2,500,000; grand total, \$43,996,571.31.

This statement shows that the amount allowed for 1896 is \$46,496,571.31, which is reduced by deducting from the general fund made up by receipts from various sources during the year, including the unexpended balance of previous years, amounting to \$2,500,000. The total amount to be raised by taxation is \$43,996,571.31, which represents an increase of \$6,519,611.27. Of this increase, \$4,585,269.41 is mandatory. Excluding the State tax and other mandatory items there is to be charged a net increase in the running expenses of \$1,934,341.86, which is principally distributed as follows: Public works, \$135,050.66; street improvements in Twenty-third and Twenty-fourth Wards, \$206,530; Health Department, \$58,828; police, \$60,588; elections, \$102,394; street cleaning, \$644,700; fire, \$260,934; building, \$60,300; education, \$716,879.45; and accounts, \$32,500.

Wealth of the City.—This department is a county charge, and is cared for by a board of 3 tax commissioners, as follow: Edward P. Barker (president), John Whalen, who was succeeded by Theodore Sutro on June 7, and Joseph Blumenthal, who was succeeded by James L. Wells, each of whom receives a salary of \$7,000 and

FUNDED DEBT.

	Outstanding Dec. 31, 1894.	Issued during 1895.	Redeemed during 1895.	Outstanding Dec. 31, 1895.
1. Payable from the sinking fund, under ordinances of the Common Council.	\$4,367,300 00		\$1,750,100 00	\$2,617,200 00
2. Payable from the sinking fund, under provisions of chapter 461, section 4, Laws of 1878, and section 174, New York City Consolidation act of 1893.	9,700,000 00			9,700,000 00
3. Payable from the sinking fund, under provisions of chapter 461, section 4, Laws of 1878, and section 172, New York City Consolidation act of 1892, as amended by chapter 174, Laws of 1894.	20,252,597 93	\$11,400,828 14	\$11,200 00	\$9,051,769 83
4. Payable from the sinking fund, under provisions of chapter 77, Laws of 1893.	9,000,100 00	2,000 00		9,002,100 00
5. Payable from the sinking fund, under provisions of the constitutional amendment adopted Nov. 4, 1894.	\$1,087,500 00	2,002,500 00		\$3,089,000 00
6. Payable from taxation.	445,000 00			445,000 00
7. Payable from taxation, under the several statutes authorizing their issue.	49,745,346 05		147,100 00	49,598,246 05

the president \$1,000 additional. The office is at 280 Broadway. They report the total valuations of real and personal property, as assessed for taxation in 1895, to be \$2,016,947,662, against \$2,003,452,037 for 1894, showing a net increase of \$13,615,625, which is distributed as follows: Increase in real-estate assessments, \$30,978,678; decrease in personal-estate assessments, \$23,363,053; difference, \$13,615,625. The total taxation was distributed as follows: Insurance companies, \$2,237,746; trust companies, \$4,574,646; shareholders of banks, \$82,343,420; railroad companies, \$23,874,196; resident corporations, \$46,081,818; nonresident corporations, \$18,570,456; personal, nonresident, \$37,955,233; personal, resident, \$250,620,354; shareholders of banks, \$82,343,420; total, \$370,919,007; real estate, \$1,646,028,655; total real and personal estate, \$2,016,947,662. The decreases are ascribed to decisions of the courts reducing the assessments on railroads and other corporations, and to the hard times. The Gould estate was valued for \$10,000,000. George Gould personally was assessed for \$400,000, and Helen, Edwin, Howard, and Anna Gould for \$100,000 each. Cornelius and William K. Vanderbilt for \$400,000 each, and George Vanderbilt for \$200,000. John Jacob and W. W. Astor were taxed on \$2,000,000 personal property each.

Public Works.—This department is under the charge of a commissioner appointed by the

Mayor. He holds office for four years, and receives a salary of \$8,000. At the beginning of the year the commissioner was Michael T. Daly, who on Feb. 13 was superseded by William Brookfield, who on Dec. 2 was succeeded by Charles H. T. Collis. The headquarters are at 31 Chambers Street. During 1895 the average daily consumption of Croton water was 300,000,000 gallons, being an increase of 12,000,000 gallons over 1894. The water in storage on May 1 amounted to 24,000,000,000 gallons, and the drafts on it amounted to 22,540,000,000. The revenue from the water service to Nov. 30 was \$3,232,320, which was an increase of \$117,646 over last year. During the year 7½ miles of new sewers were built, and 7,187 linear feet of sewers altered and improved. The length of sewers on Manhattan Island on Jan. 1, 1895, was 468 miles. New pavements were laid as follows: Granite on concrete and macadam, 134,000 square yards; granite on sand, 31,500 square yards; asphalt, 20,000 square yards; also, payable from legislative appropriation, 137,000 square yards of asphalt pavement and 4,000 square yards of asphalt and wood laid under permits, without public expense; making a total of 299,500 square yards. Some 124,000 square yards of macadam roadways have been repaired and resurfaced. During the year there were 691 new gas lamps and 122 new electric lamps lighted, so that with 25,379 gas lamps, 2,751 electric lamps, and 223 naphtha lamps, and those with 567 electric lamps and 376 naphtha lamps in the annexed district, give a grand total of 29,006 lamps of all kinds in the city. The proceedings for the widening and extending of Elm Street has progressed rapidly during the year, and a large amount of testimony has been taken.

The widening of College Place, proposed by the Board of Street Openings in 1893, began on Jan. 11, 1895, and the tearing down of buildings and preparing for carrying out the law that was opposed by many of the property owners was accomplished during the year. The

plan included the widening of College Place by beginning at Chambers Street and cutting off 25 feet on the west side of Murray Street, making it 90 feet wide, and thence cutting off 25 feet on the west side of Barclay Street, widening it to 80 feet, and so on until the entire street became 125 feet wide. The estimated cost of widening and extension was \$1,400,000, of which the city will pay one half and the persons benefited the other half.

It is interesting to note that all the property in this vicinity belonged originally to Trinity Church, which in 1827 ceded a large part to St. Mark's, Christ, St. Esprit, Grace, Lutheran Episcopal, St. Michael's, St. George's churches, and to the Society for Promoting Religion. Several of the above churches have parted with some of their property.

Parks.—This department is under the direction of a board of 4 commissioners, of which the president receives a salary of \$5,000. At the beginning of the year the board was composed of Abram B. Tappan, president, Edward Bell, George C. Clausen, and Nathan Strauss. During February this board was succeeded by one consisting of David H. King, Jr., president, A. D. Julliard, George G. Haven, and James A. Roosevelt, and it in turn resigned on Sept. 22. On Nov. 10 the following board—Stephen V. R. Cruger, Smith Ely, Samuel McMillan, and William Stiles—was named by the Mayor, and Col. Cruger became president. The secretary of the board was Charles De F. Burns, who toward the close of the year resigned to give place to William Leary. The headquarters are at 31 Chambers Street. During the year plans were furnished, the contract let, and work begun on the Corlears Hook Park, which is between Corlears and Jackson Streets, from Cherry Street to the East river. The park is ten acres in extent and a perfect square.

New York is to have an immense botanic garden, to cost \$500,000, exclusive of the ground, and an endowment of \$250,000. The incorporators of the New York Botanic Garden met on June 18, and learned that the remainder of the \$250,000 required by the act establishing the garden had been subscribed. The city must issue bonds for \$500,000 to erect the necessary buildings, and must set aside 250 acres for the use of the garden. The ground selected by the scientific directors is on both sides of Bronx river.

New Bridge.—The Central Bridge over Harlem river at Eighth Avenue was formally opened May 1, although the approaches were not completed. It took three years to build the bridge, and during its construction 3 men were killed and 12 injured. It cost \$2,000,000, and is 1,920 feet in length from the eastern approach to the western bulkhead. It has a roadway 40 feet wide and a footpath 10 feet wide. The draw span weighs 2,407,169 pounds. Sixty-four cluster lights will illuminate the bridge.

Building Department.—This department is under the control of a commissioner, who receives a salary of \$5,000 a year. The incumbent at the beginning of the year was Thomas J. Brady, who was removed and gave place, March 25, to Stevenson Constable. The office is at 220 Fourth Avenue. During the year there were filed in this department 2,029 plans for new

buildings at an estimated cost of \$77,979,432 and 1,885 plans for alterations at an estimated cost of \$8,781,694. The other items in the annual report are: Unsafe buildings reported, 2,282; unsafe building notices issued, 4,349; violations reported, 5,178; violation notices issued, 6,375; fire-escape cases reported, 2,054; fire-escape notices issued, 2,961; plans received, 6,361; iron beams, columns, lintels, girders, etc., examined, 92,906; cases forwarded to the department attorney for prosecution, 4,473; and new buildings and alterations in progress, 2,908.

Vital Statistics.—The Board of Health consists of the president of the Board of Police, the health officer of the port, and 2 commissioners, 1 of whom must have been for five years a practicing physician. The commissioner that is not a physician is president of the board and receives a salary of \$5,000, while the other member is paid \$4,000. The *ex-officio* commissioners receive no salary. The officials during 1895 were as follow: President Charles G. Wilson, Dr. Cyrus Edson, who was succeeded on June 30 by Dr. George B. Fowler, Health-Officer William T. Jenkins, who was succeeded by Dr. Alvah H. Doty on Jan. 1, and President of the Board of Police James J. Martin, who was succeeded by Theodore Roosevelt. The secretary of the board is Emmons Clark, and the headquarters are in the Criminal Court building, on Center Street. The vital statistics were as follow:

ITEMS.	1894.	1895.
Deaths under one year.....	10,822	11,130
Deaths under five years.....	17,596	18,100
Total deaths.....	41,212	43,419
Total reported births.....	55,643	58,791
Total reported marriages.....	17,888	20,613
Total reported stillbirths.....	8,571	8,872
Death rate per 1,000 living.....	23.05	23.41

The principal causes of death were the following: Pneumonia, 5,707; phthisis, 5,182; diarrheal diseases, 3,208—under five years, 2,820; heart disease, 2,286; Bright's disease and nephritis, 2,681; diphtheria, 1,628; bronchitis, 1,616; measles, 766; influenza, 566; whooping cough, 495; scarlet fever, 465; croup, 342; typhoid fever, 321; cerebro-spinal meningitis, 203; malarial fever, 90; and small pox, 10. Among the deaths by violence were the following: Accident, 2,036; suicide, 375; homicide, 76; and sunstroke, 85.

To the introduction of diphtheria antitoxin, its production by the Board of Health, and its use in this city during the year, may be attributed the decrease in the mortality from that disease. This remedy is furnished without charge to the hospitals, to the public and charitable institutions, and to the poor of the city.

In the division of food inspections and offensive trades, the investigations in regard to the character of the milk have been increased, the number of analyses being 3,106; the number of arrests made, 695, against 159 for 1894; and the fines collected, \$12,802, against \$2,708 last year. The number of pounds of fruit, meat, and fish seized and condemned was 6,766,432.

Street Cleaning.—This department is managed by a single commissioner, who receives a salary of \$6,000 a year. At the beginning of the year William S. Andrews was commissioner,

but he soon gave place to Col. George E. Waring, Jr. During 1894 \$2,226,419.49 was spent by this department for the pay of workmen, while in 1895 \$2,369,926.99 was similarly expended. Of this, \$29,227 was due to an increase in the rate of hiring dumping boats (from \$23 to \$30 a day), making the actual increase in the cost of the work of cleaning the streets \$114,290.50.

The foregoing does not include "snow and ice" and "new stock," because these are accidental. During 1894 \$69,155.09 was spent for "snow and ice" and \$74,987.63 for "new stock." During 1895 \$217,836.78 was spent for "snow and ice" and \$85,520.51 for "new stock."

According to the Mayor, "the streets have been made and are kept clean, the public health has been improved, and the decrease in the mortality rate has been greater during 1895 than it was in the last ten years."

Docks.—This department is under the control of 8 commissioners, each of whom receives a salary of \$5,000 a year. At the beginning of the year the board consisted of J. Sergeant Cram, president, Andrew J. White, and James J. Phelan. Later Edward Einstein was named as successor to Cram, Edward C. O'Brien to White, and John Monks to Phelan. Office, Pier 4, North River.

During 1895 this department constructed 3 new piers and 245 feet of bulkhead. The gross income received by the city from this department for the calendar year 1895 (the month of December estimated) was \$2,025,527.45. The total expenditures during the same year were \$995,262.42, of which amount \$246,307.09 went for acquired property, \$453,046.63 in the work of construction, \$217,836.19 for the maintenance and repair along the whole water front belonging to the city, and \$78,073.46 was charged to the annual expense account.

Police.—This department is managed by a board of 4 commissioners, appointed by the Mayor for a term of six years. The board at the beginning of 1895 consisted of James J. Martin, president, John C. Sheehan, Michael Kerwin, and Charles H. Murray. John C. Sheehan was removed, and on Feb. 13 Avery D. Andrews was appointed to succeed him, and on May 1 Theodore Roosevelt, Andrew D. Parker, and Frederick D. Grant were appointed to succeed the other three. Mr. Roosevelt was chosen president. The Superintendent of Police was Thomas F. Byrnes, who was retired during the year and Inspector Peter Conlin appointed as his successor. The headquarters are at 300 Mulberry Street.

During the year the police made 112,800 arrests, an increase of 14,000. The number of men arrested was 92,473, and the women 20,327. There were 64,379 lodgers accommodated in the various stations. The number of complaints made against policemen was 3,969. Sixty-one members of the force died, 78 were dismissed, and 116 were retired.

There were 2,523 lost children and foundlings taken in by the police. The fines and judgments imposed upon delinquent policemen amounted to over \$21,000.

The property clerk received 3,627 lots of lost

and stolen property. He delivered 1,176 lots valued at \$95,724.

The Lexow Committee.—Notwithstanding the numerous indictments obtained against police officials and referred to on page 537 of the "Annual Cyclopaedia" for 1894, the fact is that on Jan. 1, 1896, not one man who was accused before the Lexow Committee had begun to serve a term of imprisonment. On Dec. 29, 1895, the Supreme Court granted a new trial to Capt. John T. Stephenson, the first man to be convicted on an indictment growing out of the Lexow investigation. The results may be summarized as follows: One conviction, subsequently reversed—that of Stephenson; 1 conviction after 2 trials with an appeal pending—that of Inspector McLaughlin; 2 disagreements of jury—the cases of Doherty and Levy; 40 indictments dismissed; 35 indictments not yet tried. To obtain these results cost the State of New York \$76,534.

Fire.—This department is under the control of a board of 3 commissioners, appointed by the Mayor for a term of six years, each of whom receives a salary of \$3,000. The board during 1895 consisted of John J. Seannell, president, who was succeeded on March 5 by Oscar H. Lagrange; Anthony Kiekhoff, who was succeeded on March 7 by James R. Sheffield; S. Howland Robbins, who was succeeded on May 1 by Austin E. Ford. The chief of the department is Hugh Bonner, and the headquarters are at 127 East 67th Street. The force on Jan. 1, 1896, included 1,239 officers and men, 39 engine companies (including 3 fire boats), 22 hook-and-ladder companies, 98 steam fire engines, 4 water towers, 39 hook-and-ladder trucks, and 456 horses. During the year there were 2,949 fires, of which 3,294 were confined to the point of starting, 176 were confined to the building, and 58 extended to other buildings. Of the total number, 112 were not in buildings. The estimated loss by these fires was \$2,115,431, on which the insurance was \$77,261,412. There were 33 buildings destroyed by fire, and 1,759 fires resulted in nominal damages only. For arson, 26 persons were arrested, 4 persons were convicted, and 15 cases are pending.

Education.—The board having control of this subject consists of 21 commissioners, who are appointed by the Mayor and receive no salary. The president of the board at the beginning of the year was Charles H. Knox, who resigned on July 2 and was succeeded by Robert Maclay. The city superintendent is John Jaeger (salary, \$7,500), and the headquarters are at 146 Grand Street.

There are under the jurisdiction of the Board of Education 331 schools and departments—294 grammar and primary, 27 evening, 4 evening high, 1 nautical, and 43 corporate. During 1895 there were organized 10 grammar and primary schools and departments, 1 evening school, and, by the annexation from Westchester County, 19 grammar and primary schools and departments come within the jurisdiction of the Board of Education. On Nov. 30, 1894, the number of pupils registered was 184,281, with an average attendance of 174,101. There were 10,000 more on the school register at the end of November, 1895, than on the same day in the preceding

year. According to a school census completed on Dec. 31 the total number of children was 423,164.

The committee appointed to select a site for the College of the City of New York recommended the 4 city blocks, or 80 lots altogether, lying between 138th Street and 140th Street, and Amsterdam Avenue and St. Nicholas Avenue. To the college has been given by an act of the last Legislature \$600,000 for a site and \$575,000 for the buildings. The Legislature authorized in the last session the issue of \$5,000,000 of bonds by the city of New York for schoolhouses, and the sum of \$1,500,000 is available for the same purpose. The city has about \$15,000,000 invested in school property. On Jan. 1, 1895, there were under construction 15 school buildings and annexes. Since that date contracts for 2 school buildings have been let.

Excise Department.—This bureau is under the control of 3 commissioners, each of whom receives a salary of \$5,000. At the beginning of the year the board consisted of William Dalton, president, Michael C. Murphy, and Eugene L. Bushe, who were removed and a new board appointed on Feb. 20, consisting of Joseph Murray, president, Charles H. Woodman, and Julius Harburger.

During 1895 12,070 applications were received, 848 were canceled, 281 were rejected, and 52 revoked. The expenses of the board were: For general administration, \$40,204.66; inspectors' salaries, \$92,020.91; contingencies, \$2,064.70; total, \$134,290.27. There was received \$1,790,590 for 11,029 licenses, distributed as follows: Liquor saloons, 6,930; transfers and assignments, 1,869; storekeepers, 1,071; saloon, ale, and beer licenses, 448; restaurants, 371; hotels, 283; additional, 42; and drug stores, 15.

Law Department.—The legal interests of the city are intrusted to the counsel of the corporation, who receives \$12,000, and 8 assistants, with salaries from \$4,000 to \$10,000. The counsel at the beginning of the year was William H. Clark, who was removed in February and Francis M. Scott appointed to his place.

On Jan. 1, 1896, there were pending against the city 3,895 actions and special proceedings. There were begun 1,030 such proceedings and 900 were closed; 155 actions were tried, 62 appeals at the General Term argued and 27 in the Court of Appeals; 850 written opinions were delivered. Money was collected and turned into the city treasury by the department as follows: By the general office, \$40,719.75; by the corporation attorney, \$15,436.69; by the attorney for the collection of arrears of personal taxes, \$106,198.32, or nearly enough to pay for the whole expense of running the department. During 1895 10,410 miles of new streets were acquired by the city in 44 different cases, in which condemnation proceedings were instituted for the purpose and completed.

Judiciary.—At the last session of the Legislature the police courts and the Court of Special Sessions were abolished, and the present Court of Special Sessions and city magistrates' courts formed. On June 8, 5 justices of the Court of Special Sessions were appointed, as follow: E. Burke Hinsdale, W. Travers Jerome, E. A. Jacob, John Hayes, and William C. Holbrook,

each of whom receives a salary of \$9,000 a year. According to the laws of 1895 there was transferred to the court the unfinished business of the former Court of Special Sessions, together with its records.

Also on June 8 the following city magistrates, with a salary of \$7,000 a year, were appointed: Charles A. Flammer, Robert C. Cornell, John O. Mott, Henry A. Brann, Leroy B. Crane, Joseph M. Deuel, William J. Fanning, Herman G. Kuchlich, and Charles E. Simms, Jr. The total number of cases brought before the courts for the year ending Oct. 31 was 112,719, an increase of 11,099 over the preceding year. Of the total number of arrests made, 82,494 cases were disposed of summarily, leaving 30,215 cases which, if held, required trial either at General or Special Sessions.

The old Tombs police court, which for more than seventy years had been held at the corner of Franklin and Center Streets, closed forever at 5 o'clock on Nov. 12.

The Court of Common Pleas was adjourned without date on Dec. 30, at 4.35 o'clock. The Court of Oyer and Terminer and of Jail Delivery, established in 1665, one year after Peter Stuyvesant's capitulation of New Amsterdam, likewise came to an end on Dec. 30.

Power of Removal.—During the first six months of 1895, under the authority of an act of the Legislature, signed by the Governor Feb. 11, power was given to the Mayor to remove at will the heads of departments.

Monuments.—The Memorial Arch, at the lower end of Fifth Avenue, in Washington Square, passed into the custody of the city on May 4. Early in the afternoon the committee men and invited guests gathered on the stand around the arch. The Governor of the State, Levi P. Morton, with his staff, escorted by Troop A and the First Brigade, came down Fifth Avenue from the Hotel Renaissance. The special exercises were begun with a prayer by Bishop Henry C. Potter, and an oration by Gen. Horace Porter followed. Mr. Henry Marquand made a brief address, saying: "The key of the monument will now be handed to you, Mr. Mayor, by the treasurer, Mr. William R. Stewart, whose labors and activity have been so conspicuous."

Mr. William R. Stewart, treasurer of the committee, addressing Mayor Strong, said: "Your Honor: In behalf of the committee on the erection of the Washington Arch, formed in 1889, it is my privilege to transfer to you, in your representative character as the chief magistrate of the city of New York, the beautiful civic monument which Stanford White's genius conceived and the subscriptions of public-spirited fellow-citizens have enabled us to build. The structure, although substantially complete, still lacks for its embellishment two groups of statuary. The pedestals for these stand ready. The committee purposes continuing its organization until it shall have seen them filled."

In his reply, Mayor Strong said: "It is with peculiar pleasure that I pass to-day to the President of the Park Board of the city of New York, the key, knowing well that the interest he took in creating this beautiful arch will ever remind him of his duty, not only to guard carefully this

structure, but to see that its surroundings will ever be kept in the purest and most beautiful manner, and in a way appropriate to the character of George Washington, whom it commemorates." David H. King, Jr., of the Park Department, received the key with a few words expressive of his pleasure and desire to follow out the Mayor's instructions.

The troops then passed in review before the Governor, and the ceremony was at an end.

A memorial service was held on Dec. 8 in the Bruce Memorial Lodging House, 9 Duane Street, to celebrate the unvelling of a tablet, with a medallion portrait of Charles Loring Brace, founder of the Children's Aid Society. The tablet is over 6 feet in height, and the medallion is a life-size bust. It was presented to the society by the late Egisto P. Fabbri, and was unveiled on Dec. 8.

On Dec. 14 a handsome tablet in memory of Charles James Wills, Vice-President of the Brotherhood of St. Andrew, was presented to Bishop Potter, the representative of the corporation of St. John the Divine, in the Episcopal Pro-Cathedral, 130 Stanton Street.

A granite fountain, erected at the expense of Jacob H. Schiff in the open triangular space known as Rutgers Square, was informally transferred to the Park Department in July. The work is entirely in granite, except the two bronze basins and the finial in bronze. An inscription serves to show that the fountain is presented to the city in 1895. Another inscription is drawn from Exodus xvi, 6: "And there shall come water out of it that the people may drink."

During the year 10 drinking fountains presented to the city by President John P. Haines, of the Society for the Prevention of Cruelty to Animals, were placed in position. They are for the use of man and beast. Some of the money for them came from friends of the society, and some from its treasury.

Aqueduct Commission.—This board consists of the Mayor, the Comptroller, the Commissioner of Public Works, and 4 commissioners, each of whom receives \$5,000. The board during the year consisted of James C. Duane, president, Francis M. Scott, who resigned and was succeeded by George W. Green, John J. Tucker, and Henry W. Cannon. The work of the commission in 1895 was confined mainly to the extension of the storage system. Titicus dam, near Purdy's Station, was completed at a cost, exclusive of the land taken, of \$970,329.11, and 4,000,000,000 gallons have been stored in the adjacent reservoir, an addition of more than 20 per cent. of the whole storage available heretofore. The Carmel dams were finished, the main one costing \$403,241.64, and the auxiliary dam costing about \$155,000. The reservoir thus formed by these dams will contain about 10,000,000,000 gallons. In August the contract for the construction of the Jerome Park Reservoir was awarded for \$5,473,060. The excavation necessary for this extensive structure will require seven years for completion. On the construction of the Croton dam, begun at the end of 1892, \$273,000 was expended during 1893. The additional storage expected upon the completion of this dam will be 32,000,000,000 gallons, which will make the total storage more than

70,000,000,000 gallons. The total expenditure for the work of construction during the year was approximately \$382,000.

The consumption of water in New York during the last five years has been beyond what was estimated, there having been an increase from 110,000,000 gallons a day in 1890 to over 200,000,000 gallons a day in 1895.

Annexed District.—On June 1 new territory covering about 20,000 acres, with a population of 17,000, was added to the city by Senator Robertson's Annexation bill. All that part of Westchester County which lies southerly of a straight line drawn from the point where the northerly line of the city of New York meets the central line of the Bronx river to the middle of the channel between Hunter and Glen islands, in Long Island Sound, is a part of New York city. The territory thus annexed includes Thruway Neck, Unionport, Westchester, Williamsbridge, Bronxdale, Olinville, Baychester, Eastchester, Wakefield, and Harter. The city lines of Yonkers, Mount Vernon, Pelham, and New Rochelle now form the northern line of the city.

East River Bridge.—In round numbers, 180,000 persons cross the East River Bridge on the railroad daily. More than 2,000 vehicles cross the roadways, and the total daily receipts from the traffic on the structure are about \$4,000.

Rapid-transit Railroad Commission.—This body consists of Alexander E. Orr, president, Seth Low, John Claflin, John H. Deane, John H. Starin, and William Steadway. Regular meetings were held during the year, and the following routes were decided upon:

A route, the center line beginning at a point under the westerly side of Whitehall Street distant along the same 12½ feet north from the northerly line of South Street produced; thence by diverging lines under Whitehall Street and Battery Park and State Street, forming a loop line, the tracks converging to parallelism at a point at or near the westerly side of State Street and the southerly side of Battery Place; thence under Broadway and Union Square to 10th Street; thence under the Boulevard to a point at or near 9th Street; thence by a viaduct along the Boulevard to a point near 12th Street; thence by a viaduct along the Boulevard to a point at or near 11th Street; thence under the Boulevard to a point at or near 15th Street; thence by a viaduct along the Boulevard to a point at or near 16th Street; thence under the Boulevard to 16th Street; thence under Eleventh Avenue to a point at or near 16th Street.

Also a loop from Broadway, under Mail Street, City Hall Park, Park Row, and Chambers Street, and again connecting with the Broadway line.

Also a connection from said loop at a point in Park Row, near Printing-house Square, thence under Park Row to Broadway, and connecting with the above-described line under Broadway at a point at or near Fulton Street.

Also a route the center line of which shall diverge from the Broadway line at or near 14th Street, and run under Union Square to Fourth Avenue; thence under Fourth and Park Avenues to a point at or near 10th Street; thence by viaduct along Fourth or Park Avenue to the Harlem river; thence turning to the right by bridges across the Harlem river; and thence to the left until it is shall coincide with the center line of Walton Avenue produced at or near its intersection with 11th Street; and thence along the line of Walton Avenue to a point at or near 14th Street.

Political.—The election of 1895 was held on Nov. 5, when the following candidates were voted for:

Democrat (Tammany).—County Clerk, Henry D. Purroy. Register, William Schiner. Judges of the City Court—full term, Robert A. Van Wyck, John P. Schuchman; two years, Edward F. O'Dwyer. Judges of the Court of General Sessions—full term, Joseph E. Newburger; unexpired term of Randolph B. Martine, Martin T. McMahon. Judges of the Supreme Court (3), Frederick Smyth, Charles F. McLean, and Charles H. Truax. Also for 35 members of Assembly, 12 State Senators, and Amos Cummings as Congressman from Tenth District to fill vacancy caused by death of Andrew J. Campbell.

Fusion (Republican and State Democracy).—County Clerk, Thomas L. Hamilton. Register, Thomas L. Keating. Judges of the City Court—full term, Daniel O'Connell, Henry C. Batty; two years, Sherman Everts. Judges of the Court of General Sessions—full term, Thomas Allison; unexpired term, John Fennel. Judges of the Supreme Court (3), Myer S. Isaacs, Charles C. Beaman, and Ernest Hail. Also for 35 members of Assembly, 12 State Senators, and Robert A. Greacen as Congressman from Tenth District to fill vacancy.

The Prohibition, Socialist, Labor, and People's parties also had tickets in the field.

Owing to the rigid enforcement of the law compelling the closing of the saloons on Sunday by the Police Commissioners the German vote was very largely cast against the Fusion ticket, and again Tammany Hall placed its candidates in office by pluralities of about 20,000 votes. Amos J. Cummings was elected to Congress by a plurality of 5,072 votes. Of the 12 State Senators chosen from the city, 9 were Democrats and 3 Republicans; while of the 35 Assemblymen the Democrats elected 27 and the Republicans 8.

NICARAGUA, a republic in Central America. The Senate consists of 18 and the House of Representatives of 21 members, elected by the people for six years and four years respectively. The President is elected for four years. Gen. José Santos Zelaya was proclaimed President in September, 1893, as the result of a revolution, and afterward elected for the term ending in 1898. His Cabinet, as reorganized in April, 1895, was composed as follows: Foreign Affairs, Manuel Caronel Matus; Interior, Gen. Francisco Baladarez Feran; War and Marine, Gen. Reuben Alonzo; Finance, Santiago Callejas.

Finances.—The receipts in 1892 were \$1,764,037, of which \$532,057 came from customs, \$622,096 from a tax on spirituous liquors, \$271,491 from a duty on tobacco, and \$338,423 from other sources. The expenditures were \$142,928 for the executive, \$49,679 for foreign affairs, \$99,624 for justice, \$142,699 for financial administration, \$1,265,727 for the public debt, \$132,007 for public instruction, \$343,173 for public safety, and \$817,739 for the army; total, \$2,882,576. The internal debt in 1891 amounted to \$382,309, and the foreign debt to \$3,037,536. The army does not exceed 3,500 troops.

The chief exports are coffee, hides, bananas, and gold and silver. The mines and many of the coffee and banana plantations are owned by Americans. The foreign trade is carried on largely by German merchants. The exports go to the United States, Germany, France, and Great Britain.

There are 88 miles of railroads and 1,245 miles of telegraphs. The construction of a railroad to Rama for the Government, 102 miles in length, has been begun.

British Ultimatum.—After the unsuccessful attempt to restore Chief Clarence in the Mosquito reserve in the summer of 1894, the British vice-consul, Hatch, 9 other British traders, and 2 Americans were arrested and, by order of the Nicaraguan Congress, expelled from the country. After the Mosquito troubles were ended by the establishment of Nicaraguan administration in the territory, Mr. Bayard obtained from Lord Kimberley the positive assurance that Great Britain asserts no right of sovereignty or protection over the territory, but, on the contrary, respects the full and paramount sovereignty of the Government of Nicaragua. The Mosquito nation by its voluntary act in December, 1894, agreed to the incorporation of the reserved territory in Nicaragua, and the Indians formally subjected themselves to be governed by the general laws of the republic instead of by their own customs and regulations, availing themselves of a right secured to them by the treaty of Jan. 28, 1860, concluded between Nicaragua and Great Britain. The British Minister of Foreign Affairs wished to have it understood that any action that the British Government might take in the way of obtaining redress from Nicaragua is wholly unconnected with any political or conventional question concerning the Mosquito reservation, but is simply a proceeding on the grounds of international law to obtain satisfaction for an affront. In matters concerning political control in Central America he had no other wish than to act in full accord and with the approval of the United States. The British Government demanded an explanation for the arrest and banishment without trial of British subjects. The Nicaraguan minister in London, Modesto Barrios, explained that no affront to England was intended, that the men were deported for fomenting disturbances, and that the proconsul, Hatch, was not a consular officer of Great Britain and had no *exequatur* from the Nicaraguan Government. On Feb. 26, 1895, Lord Kimberley presented a demand that the Nicaraguan Government pay £75,000 for arresting, imprisoning, and expelling those British subjects, and further cancel unconditionally the decree of expulsion and agree to a commission, composed of a British representative, a Nicaraguan representative, and a jurist not a citizen of any American state, to assess the damages that they had sustained; or, failing an agreement, that the assessment of damages should be committed to the President of the Swiss republic. For the seizure of a British schooner and the duress of an English engineer an indemnity of £500 was demanded. Nicaragua in her reply, while reiterating her denial of a breach of international law or an intentional affront to Great Britain, proposed that all the questions of payment for personal injury, damage to property, etc., be submitted to arbitration.

On March 19 Lord Kimberley handed to the Nicaraguan minister an ultimatum requiring that the British demand be complied with before April 26. The decree of banishment against the

British subjects implicated in the Mosquito rebellion was revoked before the first communication from Great Britain on the subject was received. The British Government intimated its intention to occupy the port of Corinto, on the Pacific, and receive the customs until sufficient revenue was collected to pay the fine and damages claimed. The United States Government acquiesced, Minister Bayard being assured that no acquisition of territory was intended and satisfied in his mind that England sought only satisfaction for an affront to which no self-respecting Government would submit without exacting redress. The expulsion of Proconsul Hatch was declared to be not a proper case for arbitration. The people of Nicaragua expected the Government of the United States to interfere and forbid the occupation of American territory and the collection of a fine arbitrarily assessed, on the ground that such proceedings would be a violation of the Monroe Doctrine.

British Occupation of Corinto.—A British fleet under Rear-Admiral Henry F. Stephenson, consisting of the "Royal Arthur," the "Wild Swan," and the "Satellite," entered the port of Corinto on April 22. The Nicaraguans had made preparations for resistance, sending 800 troops to the city under Gen. Rivas, and planting cannon. An officer was sent by the British commander to President Zelaya, at Managua, with a letter announcing that unless full compliance with Lord Kimberley's demands was received within three days he would take military possession of the port. If he encountered resistance he threatened to bombard the town. In a reply to the British naval commander the Nicaraguan Government persisted in its refusal to submit to the ultimatum. On the morning of April 27 a force of 400 sailors and blue-jackets was landed from the ships. All the Nicaraguan officials left the town, and the soldiers were withdrawn and all arms removed. Active opposition was offered by the Nicaraguans, all except a guard of 50 men were sent back to the ships in the evening. The British flag was hoisted over the customhouse, and Capt. Frederick French was appointed governor of the port. President Zelaya issued a proclamation, declaring Corinto to be a closed port and all goods landed contraband and liable to seizure if duties were paid on them to the British. He also proclaimed martial law throughout the republic. He published also a protest against the outrages perpetrated by Great Britain in the seizure of the port in order to seize by force a sum of money that Nicaragua did not owe, in absolute disregard of international law and the dictates of right and justice. In his reply to Rear-Admiral Stephenson's letter he protested against all acts of jurisdiction exercised by the British officers, and any violent means that might be used to force Nicaragua to comply with the ultimatum as being contrary to the sovereignty of the republic and highly offensive to its dignity and independence, declaring that justice bade the Government of Nicaragua to refuse compliance, and that the proposed method of carrying the ultimatum into effect was contrary to sound principles and the rights of persons.

The populace of Managua showed great excitement, calling upon the Government to resent the insult to the nation. People begged to be given

arms that they might go to Corinto to fight the English. A mob attempted to tear down the coat of arms over the door of the British consulate. Some rioting occurred at Corinto. Finding Corinto a useless possession, having no business and no means of communicating with the interior, Rear-Admiral Stephenson asked the authorities in London whether he should seize San Juan del Sur and other ports.

An effort was made in Nicaragua to raise the sum necessary to ransom the port by private subscriptions, and \$125,000 in silver was subscribed. The governments of Guatemala, Salvador, and Costa Rica urged the Nicaraguan President to submit, and offered to guarantee the payment. The United States Government continued to offer its good offices to both parties, and induced the Nicaraguan Government to promise that if the forces were withdrawn from Corinto Nicaragua would agree to pay the indemnity in fifteen days. The Nicaraguan Government requested the Salvadoran agent in London to intercede. He was unable to persuade the British Government to remove from its position. The Government of Salvador then offered to guarantee the payment of the indemnity, and finally induced President Zelaya to promise that the money would be paid if the British forces were withdrawn. Gen. Barrios on leaving the British capital for Nicaragua had left the interests of his Government in charge of the representative of Salvador.

On April 30 the British at Corinto further incensed the Nicaraguans by arresting Col. Camiro Gonzalez on the charge of intimidating people to prevent them from selling provisions to the ships. The terms offered through the mediation of Christanto Medina, the Salvadoran minister to France and Great Britain, were finally accepted, and after a formal offer to that effect was made to Rear-Admiral Stephenson he embarked the British troops and evacuated the port on May 4. The money was deposited in London and paid over within the time fixed.

Nicaraguan Canal Project.—A concession was granted by the Republic of Nicaragua to the Nicaragua Canal Association of New York in April, 1887, and a Maritime Canal Company was organized to construct a ship canal across the isthmus, and was incorporated by the United States Congress Feb. 20, 1890. The contract for the execution of the work was taken by a Nicaragua Canal Construction Company. The period of three years and a half was allowed for the surveys, and a further period of ten years for the completion of the canal. The work of excavation was begun, and was formally acknowledged by the Nicaraguan Government Oct. 8, 1889, and in September, 1890, a commission reported that the company had fulfilled the provisions in the concession requiring the expenditure of at least \$2,000,000 within the last year of the preliminary period. In the first year 19 miles of the route were cleared, 60 miles of telegraph were erected, and steam dredges were set at work at the Greytown end. After two years the work was continued at a slower rate. For a description of the proposed canal, with colored map, see "Annual Cyclopaedia" for 1896, page 634.

In 1891 the company, having spent \$4,000,000 and issued certificates of stock for \$20,000,000

and bonds for \$5,953,000, asked the United States Congress to guarantee \$100,000,000 of bonds, and appoint an officer of the army to supervise the construction; but the bill failed to pass. In 1892 another was prepared by a committee of the Senate, which proposed to limit the capital stock to \$100,000,000, to cancel all stock and contracts excepting the stock assigned to the governments of Nicaragua and Costa Rica, and \$3,000,000 to be retained by the company in exchange for the concessions and privileges it had obtained; the United States was to reimburse the canal company for all its legitimate expenditures, and then the canal was to be constructed from the proceeds of bonds guaranteed by the United States Government. This bill was finally passed. It provided that the United States Government should issue \$70,000,000 of 3-per-cent. bonds to supply funds and should receive in return \$70,000,000 of the stock. The House of Representatives considered another bill, but took no final action. On April 2, 1895, President Cleveland appointed a board of experts to investigate and report upon the feasibility, permanence, and expense of a Nicaragua canal constructed along the route projected, so as to determine the advisability of the Government taking part in the enterprise. The board consisted of Major William Ludlow, of the Engineer Corps; Commander M. T. Edicott, of the navy; and Alfred Noble. When the company proposed to have the canal made with the credit of the Government the estimate of cost was put down to \$69,893,660, not far from Mr. Menocal's estimate for the actual work, which was \$65,000,000.

The board made an investigation on the spot, and concluded its studies in November, 1895. It reported that there were insufficient data upon which to found a final judgment as to the feasibility, permanence, and cost of a canal, and recommended that a survey and examination be made for the Government that would take eighteen months and cost \$350,000. The estimate the commission reached was \$133,472,893.

NORTH CAROLINA, a Southern State, one of the original thirteen, ratified the Constitution Nov. 21, 1789; area, 52,250 square miles. The population, according to each decennial census, was 316,751 in 1790; 478,103 in 1800; 555,500 in 1810; 698,829 in 1820; 737,987 in 1830; 753,419 in 1840; 869,039 in 1850; 992,622 in 1860; 1,071,261 in 1870; 1,399,750 in 1880; and 1,617,947 in 1890. Capital, Raleigh.

Government.—The following were the State officers during the year: Governor, Elias Carr; Lieutenant Governor, Richard A. Doughton; Secretary of State, Octavius Coke, until Aug. 30, when he died; Charles M. Cooke was appointed to succeed him; Treasurer, W. H. Worth; Auditor, R. M. Furman; Attorney-General, F. M. Osborn; Adjutant General, F. H. Cameron; Superintendent of Public Instruction, J. C. Scarborough—all Democrats except the Treasurer, who is a Populist; Commissioner of Labor Statistics, B. R. Lacy; Commissioner of Agriculture, S. L. Patterson; Chief Justice of the Supreme Court, William T. Faircloth, Republican; Associate Justices, D. M. Furches, Republican; and A. C. Avery, Walter Clark, and W. A. Montgomery, Democrats.

Education.—The centennial commencement of the State University was celebrated at Chapel Hill, June 4, 5, and 6. An oration was delivered by Alfred M. Waddell representing the older alumni, and one by Adolphus H. Eller for the younger, a poem by Henry J. Stockard, and a centennial ode by James D. Lynch of the graduating class. Addresses were made by Henry A. London and Stephen B. Weeks. Subscriptions amounting to \$18,000 were made for an alumni building. The university received \$21,500 during the year from the Mason and Speight bequests. The "fraternity question" was settled by the trustees who adopted a rule that students be not allowed to join fraternities until the second half of the sophomore year.

The Agricultural Department was consolidated by the Legislature with the Agricultural and Mechanical College, and appropriations were made for support for two years. The college graduated a class of 23. Wake Forest College graduated a class of 22 in June. Elon College graduated 5. It has had an addition of nearly \$20,000 to its endowment. Trinity College sent out a class of 15. At the commencement \$3,100 was subscribed toward a memorial building to the late President Baxton Craven, and \$5,000 was given for improving the grounds. Salem Female College graduated, at its ninety-third commencement, from its nearly 400 pupils, 53 in the regular course and 9 in special studies. At Greensboro Female College, founded in 1837, the senior class numbered 25. Peace Institute, at Raleigh, graduated 9 young ladies.

The State Normal and Industrial School, at Greensboro, closed its third year in May. The number of applicants to the school has been twice as many as could be accommodated, but more room has been added. The graduates numbered 28. In July the board bought 112 acres north of the institution for \$12,000.

The summer school of the university at Chapel Hill was attended by 104 teachers and those preparing to teach.

State Institutions.—The Legislature made appropriations for these for the biennial period as follows: Raleigh Asylum, regular \$130,490.20, special \$11,390.48; Morganton Asylum, regular \$180,000, special \$20,000; Eastern Hospital (colored), regular \$75,000, special \$20,000; Deaf and Dumb Institute at Morganton, regular \$70,000, special \$21,500; Blind Institute, \$80,000; Soldiers' Home, \$17,000; Penitentiary, \$49,000; State University, \$20,000; Normal and Industrial School, regular \$27,500, special \$10,000; Agricultural and Mechanical College, regular \$20,000, special \$30,000; Agricultural and Mechanical College (colored), \$10,000; Colored Normal Schools, \$13,250; Orphan Asylum, \$20,000; Colored Orphan Asylum, \$6,000.

The Penitentiary report gives the following statistics: There was an average number of 1,237 convicts in 1895, 3 more than in 1894. Of these, 180 were at the Central Penitentiary at Raleigh; 529 were at work on the Caledonia farm, 235 on the Northampton farm, 146 on the Halifax farm, and 73 at the Castle Hayne farm and mine; 67 were employed building for the Roanoke Rapids Company on the Great Falls Canal; and 45 for two months building a dam for the

Rocky Mount Cotton Mills. The number of deaths was 40; in 1894 it was 52. The 150 employees were paid \$47,278.49. The total expense of the Penitentiary for the year was \$186,484.49. Of this amount, the Penitentiary raised products, etc., to the value of \$34,860.23, and \$103,625.26 was paid out in cash.

The Oxford Orphan Asylum contained 101 boys and 103 girls in July. Cottages for the boys are building.

The census shows a total of 573 blind children in the State of school age; of this number only 143 are in the Institution for the blind. There are accommodations for 250.

Industries and Products.—The Labor Commissioner's report gives the following statistics of cotton mills: Number, 156; in course of construction, 11; looms, 24,858; spindles, 953,458; persons employed, 15,752 (of these, 4,888 are men, 6,157 women, and 4,689 children); capital employed, about \$15,000,000, or \$952.33 to each operative; cotton consumed, 123,658,775 pounds, or 209.147 bales weighing 400 pounds each. The average daily wages are: engineers, \$1.61; foremen, 89¢ cents; skilled men, \$1.10; unskilled, 70 cents; skilled women, 65 cents; unskilled, 50 cents; children, 30 cents. The average number of days worked in a year, 286½. At only 2 mills are there libraries. The per cent. of adults who can read and write is 95; children, 70.

The employees in railroad management and operation for 1895 are given at 9,439; 1894, 8,099; 1893, 9,000.

Insurance.—In July a conspiracy was discovered at Beaufort involving several prominent citizens, by which life insurance companies had been defrauded for eight years. Policies were taken out on the lives of persons in the last stages of fatal disease, and on the old and infirm. The medical examiners, who were working with local agents and others, made out false reports of examinations, ages, etc. Trials were held and convictions obtained. Six of the accused were sentenced in December.

Railroads.—There are in the State 3,616.58 miles of railroad, with a valuation of \$24,501,899.62, an increase of over \$12,000,000 since 1890. The taxable property increased in 1895 \$507,897. The gross earnings were \$9,008,054.55; the net income, \$2,974,475.93. About 10,000 persons are employed. Three roads have been abandoned: the Milton and Sutherlin, the Laurel River and Hot Springs, and the Hamilton. Only 9 are in the hands of receivers: the Cape Fear and Yadkin Valley, the Marietta and North Georgia, and the Norfolk and Western.

The most important matter concerning the railroads of the State is the lease of the North Carolina Railroad to the Southern Railway Company for ninety-nine years, at a rental in excess of the limit as fixed by its charter before the roadbed would become liable for taxation. This lease is denounced as most flagrantly unjust and unfair.

Monuments.—The monument at Raleigh to the Confederate dead, which was built by means of the efforts of the Ladies' Monumental Association of the State, was unveiled, May 20, by the little granddaughter of Gen. Thomas J. ("Stonewall") Jackson, in presence of a large

assemblage. The speakers were Capt. S. A. Ashe, Hon. A. M. Waddell, ex-Gov. Hildt and Hon. W. H. Cowles. The work for the monument began in 1892; the corner stone was laid May 30, 1894. The Legislatures of 1894 and 1895 made appropriations. The monument is 72 feet 6 inches high; at the top stands the figure of a Confederate infantry soldier at ground rest; the shaft near its base, about 25 feet from the ground, is flanked on one side by a cavalryman and on the other by an artilleryman. These figures are of bronze, and were made in Munich. The stone of which the monument was built is white North Carolina granite. It bears the inscription: "First at Bethel, last at Appomattox."

A monument was unveiled at Bentonville, March 20, the thirtieth anniversary of the battle between Sherman's and Johnston's armies.

The corner stone of a monument to Leonidas Polk, bishop and general, killed at Pine Mountain, Georgia, June 14, 1864, was laid, Feb. 7, at Raleigh by Masons and members of the Farmers' Alliance, of which he was president. Gen. Polk was a native of Raleigh.

Legislative Session.—The regular biennial session of the General Assembly began Jan. 8 and ended March 12. The Assembly was divided politically as follows: Senate—Democrats, 8; Republicans, 18; Populists, 24. House—Democrats, 46; Republicans, 28; Populists, 26. Z. V. Waher was chosen Speaker of the House. At the election of a United States Senator to fill out the term of the late Senator Vance Jeter C. Pritchard, Republican, was elected by a vote of 116 to 45. His term will expire in 1897. For the full term, Marion Butler, Populist, was chosen by a vote of 117 to 45.

A bill to revise, amend, and consolidate the election laws filled 34 closely printed pages.

The method of county government was changed. Heretofore the county commissioners were elected by the magistrates of the county, who were appointed by the Legislature. Under the new law the people will elect 3 commissioners, who shall serve as a board of co-operation, with 2 others, to be appointed by the Superior Court judge, these 2 extra commissioners to be of a different political party from the commissioners elected by the people.

The county boards of education were abolished, and their powers and duties devolved upon the county commissioners.

It was enacted that the choice of schoolbooks be left to each county instead of, as heretofore, to a board consisting of State officers.

A revenue act was passed which increased the State levy 4 cents on the \$100 of property. Among the license taxes imposed were those upon hotels and boarding and lodging houses at the rate of 20 cents for each bedroom maintained, and on every practicing lawyer, practicing physician, and dentist the sum of \$40.

It was discovered in July that this act had not been ratified, and the question of its validity without ratification was taken to the courts.

A new oyster law was made. It requires that persons taking oysters must take a license and make oath that they are citizens and residents of twelve months' standing. A chief inspector of oysters is provided. Purchasers of oysters for

packing or otherwise dealing in them are to make sworn statements as to quantity, price paid, and the like, and pay a tax of 2 cents a bushel.

The public-school fund was increased from 16 to 18 cents on \$100 worth of property.

Two new criminal courts were created.

The legal rate of interest was made 6 per cent.

A law against prize fighting was enacted.

A resolution in the House to adjourn, out of respect to Frederick Douglass at the announcement of his death, was passed by a vote of 34 to 20. This, taken in connection with the report that resolutions to adjourn on the birthdays of Washington and Robert E. Lee had been voted down by the Senate, caused a great deal of feeling, and indignation meetings were held in several counties. Senator Butler gives the following version of the incident: "As a matter of fact, there is on the record of the House journal a resolution providing that when they adjourn on a certain day it be as a mark of respect to Fred Douglass. The Senate took no notice of the matter at all. The resolution was offered by a colored representative in a rush of business and was voted for by all parties, Democrats included, none of whom ever expected to hear of it again; and while the regular hour of adjournment by the House was 2 o'clock p. m., the House was in session that particular day till thirty-seven minutes past 2 o'clock. Both Senate and House adjourned promptly in honor of both Washington and Lee."

A resolution instructing Representatives in Congress to vote for free coinage of silver was indefinitely postponed.

The following appropriations were increased beyond those of the preceding Legislature: Insane asylums, increase of \$29,529.41; deaf, dumb, blind, and orphans, \$34,850; educational institutions, \$10,500; Penitentiary, \$49,158.71. The following were diminished: State Guard, \$20,000; Soldiers' Home, \$2,000; Normal and Industrial School, \$4,000.

A measure entitled "An Act to regulate assignments and other conveyances of like nature," provided that "all conditional sales, assignments, mortgages, or deeds in trust which are executed to secure any debt, obligation note or bond which gives preferences to any creditor of the maker shall be absolutely void as to existing creditors."

This act, which was said to be equivalent to a stoppage of business, and the manner of its passage made a disturbance that continued through the year. The apparent purpose of the law was to prevent preferences only in case of assignments for benefit of creditors; but in its effects the act was held to extend much further, and until the courts should have construed it, banks, associations, and others were afraid to lend money on mortgages. It was brought before the Supreme Court, which decided that the law only restricted the right to execute assignments, mortgages, and deeds of trust or make conditional sales to secure pre-existing debts. It was claimed that the act was not passed properly, and the question of its validity was brought before the Supreme Court in an application for an injunction to prevent the Secretary of State from publishing it. The court decided, by 3 against 2, that it had not the power to go back of the

record of the Legislature, which showed ratification of the act, and that the remedy must lie with the legislative branch of the Government. Justices Avery and Clark wrote dissenting opinions. An indictment was afterward found against the clerks of the two houses, and early in 1896 they were convicted. One was sentenced to pay \$250 fine and costs, and the other the same with the addition of twelve months at hard labor.

NORTH DAKOTA, a Northwestern State, admitted to the Union Nov. 3, 1889; area, 70,795 square miles. The population in 1890 was 182,719. Capital, Bismarck.

Government.—The following were the State officers during the year: Governor, Roger Allin; Lieutenant Governor, John H. Worst; Secretary of State, C. M. Dahl; Auditor, Frank A. Briggs; Treasurer, George E. Nichols; Commissioner of Insurance, Fred B. Fancher; Commissioner of Agriculture, A. H. Laughlin; Attorney-General, John F. Cowan; Superintendent of Public Instruction, Emma F. Bates; Railroad Commissioners, J. W. Currie, George H. Keyes, John J. Wamberg; Superintendent of Irrigation, W. W. Barrett; Chief Justice of the Supreme Court, Alfred Wallin; Associate Justices, Guy C. H. Corliss, J. M. Bartholomew—all Republicans.

Finances.—The Treasurer's report for 1895 shows receipts and expenditures as follow: Balance Dec. 31, 1894, \$61,568.16; receipts during the year from taxes for counties, \$334,165.23; receipts from other sources, including balance, \$826,060.22; total receipts, \$1,160,225.45; total disbursements, \$1,103,676.20; balance Dec. 31, 1895, \$56,549.25. Among the receipts were \$80,000 from sale of funding warrants for Legislature and incidental expenses, and \$130,000 from sale of funding warrants to pay outstanding indebtedness. The taxes from railroads amounted to \$97,223.90, and the insurance taxes to \$18,760.95. The warrants for legislative expenses were redeemed, as well as a small part of the debt incurred to pay warrants outstanding at the beginning of the year. Real estate was not assessed this year. The total personal valuation of the State is \$19,809,492. The tax levy was fixed at 4 mills for general taxes, and five tenths of a mill for interest.

Education.—The enumeration of pupils for the last apportionment was 63,567; the fund was \$115,691, or \$1.82 *per capita*. The enumeration had increased 7.2 per cent. over 1894. The average cost of tuition per pupil had been \$2.09, and the average daily attendance 79 per cent. of enrollment. The value of school property is \$1,643,181.77; paid for teachers' salaries, \$547,462.04.

The Valley City Normal School had 228 students at the spring term, of whom about 80 were in the normal proper, and the Mayville Normal 117, about 102 in the normal proper. A class of 11 was graduated at Valley City, and one of 15 at Mayville. As those schools had no appropriation for payment of salaries, it was supposed that they would be closed for the next two years, but subscriptions were taken for amounts sufficient to keep them open for the present year.

The Agricultural College had 82 students, of

whom 57 were in the preparatory department. The college has a creamery, the largest in the State, with capacity for handling 1,500 pounds of milk an hour.

The State University, at Grand Forks, had 150 students, 35 of them in the university classes and 121 in the preparatory school.

State Institutions.—The total number at the Insane Asylum during the biennial period ending Nov. 1, 1894, was 501, of whom 192 were women. The number remaining at the end of the period was 300. The percentage of recovery of those admitted during the two years was 59; of the number treated, 20; the average number present was 294. The expenses from March 1, 1893, to Oct. 31, 1894, were \$117,480.61.

The Soldiers' Home reported 27 inmates. The cost for rations *per capita* was 19½ cents a day, including tobacco. The cost, covering all expenses, except fuel and lights, which were estimated at 34 cents a day, was 35½ cents a day.

The Deaf and Dumb School closed a month earlier than usual, in part because of dimensions in the faculty. It had 30 pupils in March.

The question of the location of the Blind Asylum, which by the Constitution is required to be in Pembina County, was fixed at the corporation of Bathgate.

There were 113 inmates at the Penitentiary at the end of 1895.

Farming.—The wheat harvest of this year was the most abundant in the history of the State. Prices were correspondingly low, but the great trouble was in getting the grain to market. The railroads were unable to move it as rapidly as it was ready to be shipped. Elevators, warehouses, barns, and grain houses full in the fields were stored full, and at one place bins were made on the fair grounds for temporary use. The crop of oats and other small grains was correspondingly large. The yield of potatoes was immense, the average being placed as high as 200 bushels to the acre. Renewed interest is taken in the production of flax, since it has been found that the oil product is of great use for fattening stock.

Irrigation.—The report of the Commissioner of Forestry and Irrigation shows that in 1894 an experimental irrigation plant was established at Bottineau, and the result proved so favorable that 2 districts have been organized in Bottineau County. North Dakota has 672 flowing artesian wells. One of these, the "Minnesota," at Turtle Mountains, flows 283 gallons per minute. The native tree lands are estimated at 460,000 acres, and the cultivated trees at 40,000 acres.

Immigration.—An immigration convention was held in Fargo Dec. 17. A State committee was appointed, and county and town organizations are to be formed. Resolutions were adopted requesting Senators and Representatives in Congress to urge an appropriation to complete the examination of the artesian basin of James river valley, and a survey of the rivers.

The Turtle Mountain Indians.—An outbreak of these Indians was imminent in April and May, in consequence of trouble growing out of the attempted arrest of half-breeds for cutting timber on Government land. Chief Little Shell had given permission to the men to cut

the timber, as he claimed he had the right to do, since the Government had never paid the Indians for the land. This is a problem of long standing. About eleven years ago 2 townships of land were set aside for them, but were never made the subject of treaty. They claim that all the Turtle mountain land, about 10,000,000 acres, belongs to them. They have had assistance from the Government, and it is said that not only the Indians and half-breeds of the reservation have shared it with them, but that the Canadian half-breeds across the boundary line have also profited thereby. When those 2 townships were set aside for the Indians there were only 160 altogether, but the last census gave their numbers at 2,000. On this occasion the half-breeds, to the number of 275, encamped 2 miles from St. John's, and threatened to kill every white man in the vicinity if they were not let alone. Marshal Cronan took a posse of deputies and went to St. John's, surrounded the fort, and demanded the unconditional surrender of the men for whom warrants were held, as well as of all the arms and ammunition. The surrender was made without a shot having been fired. In a subsequent trial Chief Little Shell turned State's evidence.

Legislative Session.—The session of the Legislative Assembly began Jan. 5 and ended March 8. The members were divided politically as follow: Senate—Democrats 2, Republicans 25, Populists 4; House—Democrats 8, Republicans 49, Populists 8. James C. Gill was chosen Speaker of the House. During the session 178 bills were introduced in the Senate, of which 78 passed both houses; 180 were introduced in the House, of which 62 passed both branches.

The commission provided for by the Legislature of 1891 to codify and revise the laws made its report, and a joint committee on compilation was appointed to whom the codes were referred. They were adopted substantially as they came from this committee. Uncertainty arose after the adjournment as to whether the new codes could take effect before they were proclaimed by the Governor, and whether the laws passed by the session would be binding before that time. The question was referred to the Supreme Court by a test case, and the decision was that the revised codes could not take effect until thirty days after the proclamation by the Governor of their printing and acceptance. Meantime the old laws were in force and such laws of the session of 1893 as were accompanied by emergency clauses.

The trouble about the trustees of the Agricultural College and the Penitentiary (see "Annual Cyclopaedia" for 1893, page 223) came up again in the Legislature, and was settled by a report of a committee to the effect that the charges had no foundation.

A committee was appointed to investigate the matter of supplies and expenditures during the preceding term. The report criticized the work of the ex-Treasurer and ex-Auditor, and charged mismanagement, especially in regard to public printing—overmeasurement of type, excessive numbers of copies of reports, and unnecessary matter included. A minority report by 2 members of the committee dissented from the ma-

majority report in every particular. The majority report was adopted.

A proposition to resubmit to the people the question of prohibition was defeated.

The State Superintendent of Forestry and Irrigation was made State Fish Commissioner. No fish can be legally taken from any of the waters of North Dakota, including the Missouri and the Red rivers, except by means of a hook and line. No fish can be legally shipped out of the State. And there are other restrictions.

A new game law was made, but as it was adopted as a part of the political code, it did not take effect during the season of 1895. A new office was created, that of State game warden, appointive by the Governor. For a license or permit to hunt with or without a dog during the open season a nonresident must pay \$25, and a resident of the State 50 cents. Prairie chickens, grouse, woodcock, plover, wild duck, wild geese, or brant may be killed only between Sept. 1 and Dec. 1. Buffalo, elk, deer, antelope, caribou, or mountain sheep may be killed only between Nov. 15 and Dec. 15.

None of the birds or animals named can be legally shipped out of the State.

Two laws were passed relating to cigarettes, one making it a misdemeanor to sell impure cigarettes or to sell any to persons under seventeen years old; the other forbidding the sale of any cigarettes, and imposing a fine of \$10 to \$50. It is claimed that the latter law is unconstitutional.

Bounties were provided for five years on potato starch, flax or hemp spinning fibers, and twine suitable for binding grain made in the State. For the eradication of the Russian thistle and French weed \$30,000 was appropriated.

An act providing for drainage in the Red river valley will result in the reclaiming of 125,000 acres of the best land in the valley.

An act was passed defining intoxicating liquors, covering the leading so-called "temperance drinks."

The Capitol commissioners reported the conclusion of their work in building the south wing of the Capitol, for which \$50,000 had been appropriated. Of this there was an unexpended balance of \$700.

The House repealed the gross-earnings law for taxation of railroads. The Senate also passed the repealing bill, and immediately enacted one adopting another system of gross-earnings taxation supposed to be satisfactory to all the roads. This bill did not become a law. The law of 1890, providing for direct taxation of railroads, was re-enacted.

Among other laws made were the following:

Reducing the amount of personal property exempt from taxation from \$200 to \$25.

Giving each district or township the power to vote on the question of free text-books.

Creating a State historical commission.

Fixing charges for stop-over on cars.

Accepting the provisions of the United States Statutes relating to soldiers' homes involving a grant of \$100 for each inmate.

Allowing State banks in towns of 500 or less with a capital of \$5,000.

Adopting the Minnesota law to prevent fraud in dairy products.

Providing for the employment of inmates of the

Penitentiary in making brick for public improvements, and in improving roads leading to public institutions.

Making it a misdemeanor to abuse, overload, or underfeed domestic animals, and making it the duty of municipalities to provide watering troughs.

Appropriating \$500 annually for expenses of the weather crop service.

Declaring that in all cases in which the probable duration of the natural life of any person from and after a particular age is material, the statistical tables known as the Carlisle Tables of Mortality are competent evidence.

Prohibiting the printing or sale of vulgar or indecent prints or papers, sheets devoted to tales of crime and bloodshed alone, and journals that make a specialty of this class of matter.

Making intoxication a misdemeanor.

Permitting farm laborers to file liens upon crops to secure payment for work done.

Compelling railroad companies to provide a certain number of brakemen to man trains not provided with air brakes.

Providing for teaching civil government and temperance in the schools.

Establishing courts of conciliation.

Providing for a geological and natural-history survey of the State.

Creating the office of chief State veterinarian.

Creating a high-school board and providing a system of higher education.

Establishing a garnishment law.

The Governor reduced the appropriations made by the Legislature to State institutions, on the ground that the amount of revenue available would not be sufficient. Following is a summary of the appropriations after reduction: Insane Asylum, \$128,500; Penitentiary, \$43,440; University, \$15,980; Soldiers' Home, \$11,900; Agricultural College, \$11,250; Mayville Normal School, \$7,700; Valley City Normal School, \$4,600; Deaf and Dumb School, \$16,500; total, \$239,870.

NORTHWEST TERRITORIES OF CANADA. Since 1888 these Territories have had an elective Assembly, and in 1890 the Federal Parliament provided for full self-government.

Legislation.—The fifth session of the second Legislature of the Territories was opened at Regina on Aug. 2, 1894, by Lieut.-Gov. Charles Herbert Mackintosh, and was prorogued on Sept. 7. Among the measures passed the following were the most important:

Respecting elections to the Legislative Assembly.

Respecting the formation of irrigation districts.

To amend the liquor-license ordinance.

To prevent trespass in pursuit of game.

For aiding in the construction of the Wolseley and Fort Qu'Appelle Railway.

Respecting exemptions from seizure and sale under executions.

Respecting the establishment of farmers' institutes.

Respecting the profession of medicine and surgery.

Relating to mortgages and sale of personal property.

The powers given to the Northwest Territories are the same as those held by the provinces of the Dominion, with the single exception of the right to borrow money upon their own credit.

Immediately after the prorogation of the Assembly the elections took place under the new ballot regulations and with increased representation. The Premier, F. W. G. Haultain, was sustained by a good majority.

The first session of the third Assembly was opened on Aug. 29, 1895, with a speech from the

Lieutenant Governor, of which the following extracts are the most important:

The Dominion Parliament having amended the Northwest Territories act, a reorganization of the magistracy will be necessary. With this in view, a carefully prepared digest of magisterial procedure is being prepared.

A careful inquiry justifies an estimate of between 4,000,000 and 5,000,000 bushels of wheat, or nearly double the crop of last year. From no portion of the Territories come reports of failure. Barley, oats, and the smaller products of the farm are equally plentiful. The cattle and sheep ranches are also in a thriving condition.

The announcement of noticeable transport reductions, to the amount of about 30 per cent. on butter, cheese, and eggs, recently made by the Canadian Pacific Railway authorities, will no doubt prove extremely advantageous. Reports of several new inventions have recently been received.

In the recent Territorial Exhibition the entries in the various classes were double the number anticipated, every provisional district manifesting patriotic interest in the enterprise. The stock parade was undoubtedly the finest ever made in any part of the Dominion, and most of the herds were disposed of at good prices to prominent buyers.

The general census of the Territories, taken by order of the Dominion Government, early in the year, shows a gratifying increase of population throughout the various provisional districts since 1881.

The number of schools has noticeably increased. On Aug. 3, 1894, there were 330 public schools, 2 Protestant separate schools, 34 Roman Catholic public schools, and 10 Roman Catholic separate schools. At the present time there are 384 public schools, 3 Protestant separate schools, 44 Roman Catholic public schools, and 11 Roman Catholic separate schools. The number of pupils in August, 1894, was 8,936, and in August, 1895, is estimated at 9,750. Since August, 1894, further school debentures have been issued and registered to the amount of \$34,000. In addition to this, permission has been granted to several districts to issue debentures to the amount of \$21,000. The total school debenture responsibility does not exceed \$170,000, representing virtually the debt of the Territories.

The Dominion Government have decided to name, by order in Council, all the Territories between Alaska and Labrador. The far western district will be called Yukon; Athabasca will be enlarged by the addition of a portion of the eastern territory; the remaining portion will comprise Franklin, Churchill, and, to the far east, Ungava.

A few days since I had the honor of formally opening the Lady Aberdeen Woman's Hospital at Medicine Hat, under the auspices of the Woman's Hospital Aid Society. The Maternity Cottage is a handsome new building, and will be a valuable addition to the general hospital.

Irrigation, authorized by the Dominion act of 1894, has proved extremely useful in portions of Alberta, where a large number of ditches have been cut, splendid results following. One hundred and sixteen are in operation, with irrigating capacity for 28,000 acres.

The Assembly was prorogued Sept. 30, after passing the following ordinances, among others:

- Extinguishing arson.
- To provide for investigation of accidents by fire.
- Extinguishing stock injured by railway trains.
- Extinguishing breakers' line.
- Extinguishing masters and servants.
- Extinguishing management of railways.
- To incorporate the Catholic parishes and missions in the diocese of Prince Albert.

Territorial Exhibition.—This exhibition was opened on July 29, 1895, by the Governor General of Canada, who was accompanied by the Premier, Sir Mackenzie Bowell, and other Do-

minion ministers. The World's Fair at Chicago had given Gov. Mackintosh the idea of advertising Territorial resources in this way, and he had obtained from the Dominion Parliament a grant of \$25,000 for the purpose. The capital, Regina, gave \$10,000, and a site for the buildings was provided. The result was an extremely successful exhibit of cattle and horses, lumber and cereals, poultry and dairy work, and the minor products of mixed prairie farming and ranching. There were over 8,000 entries, compared with the average of 2,000 at the annual exhibitions of Winnipeg.

Agricultural.—The following were the crops and live stock of the main populated portion of the Territories—West and East Assiniboia, Alberta, and Saskatchewan—for 1894, with the exception of one division for 1893: Cultivated land, 437,254 acres; wheat, 2,734,290 bushels; oats, 2,404,442 bushels; barley, 379,299 bushels; potatoes, 471,411 bushels; horses, 28,717; cattle, 283,077; sheep, 243,929; pigs, 29,298.

The production in 1895 was a great increase upon these figures, and the 100,000 people who inhabit these wide Territories are unusually prosperous. During 1894 a large number of fairs were held, and a considerable number of immigrants reported, mainly English and Germans. They settled chiefly at Edmonton, Prince Albert, and Duck Lake.

Education.—No religious instruction is allowed in any public school before three o'clock in the afternoon, at which time such instruction as is permitted by the trustees may be given, parents having the privilege of withdrawing their children at that hour. In 1894 there were 297 schools with 8,341 pupils.

Miscellaneous.—The 4 Territories have 1,772 miles of railway track. Under a Dominion act passed in 1873 a mounted police force was organized, of 190 men, to protect the scattered population. On Nov. 30, 1894, the force numbered 947 men and officers, with 80 stations and 800 horses.

By the census of 1891 there were in the Territories 14,344 Roman Catholics, 15,966 members of the Church of England, 12,367 Presbyterians, 8,110 Methodists, and 4,783 persons who termed themselves "Protestants."

NOVA SCOTIA, an eastern province of the Dominion of Canada.

Legislation.—The first session of the thirty-first Legislature of the province was opened on Jan. 31, 1893, by Lieut.-Gov. M. B. Daly, with the usual speech from the throne, of which the following are extracts:

A good harvest, an average industry, marked progress in mining operations, and considerable activity in other departments have combined to enable the people of Nova Scotia to avoid to some extent the depression of trade which prevailed so widely on this continent. It affords me much satisfaction to see the increased activity in coal-mining operations, the output of the mines having been considerably in excess of that of any previous year. The coal-mining output in Cape Breton and the preparations for still further extension contribute materially to the prosperity of the province.

Very material progress has been made in the construction of the railway connecting the Cape Breton colonies with the port of Louisbourg. We may look with confidence for the completion of that road during the coming summer, and we are justified in an-

icipating that through its operation our coal trade will be further developed.

A contract has been entered into for the construction of a railway from Yarmouth to Lockport. A measure will be submitted to amend, in an important particular, the law respecting the payment of subsidies to railway companies. More important, perhaps, than the question of railway extension is that of the maintenance of our common roads. You will be asked to consider several proposed amendments to the laws respecting roads and to make some further provision for the large bridge service.

In accordance with an act of last session, arrangements were made for the taking, in connection with the general election, of a plebiscite on the question of prohibiting the liquor traffic throughout the Dominion. The returns indicate a very strong public sentiment in favor of prohibition. Since the taking of the plebiscite the disputed point of the relative powers of the Dominion and provincial legislatures, as respects the enactment of prohibitory measures, has been decided by the Supreme Court of Canada in terms which place the subject beyond provincial authority.

F. A. Lawrence was elected Speaker of the Assembly. During the session, which closed on March 20, the principal measures passed were as follow:

To amend the Revised Statutes "Of the Solemnization of Marriage."

To amend and consolidate the acts relating to towns' incorporation.

To amend chapter liii of the Revised Statutes, fifth series, "Of Railways."

To amend and consolidate the factor's acts.

For amending and consolidating the acts relating to arbitration.

To amend and consolidate the acts relating to public instruction.

To amend the law respecting compulsory education of children in the city of Halifax.

To amend the act respecting succession duties.

To amend the trustees' acts.

Respecting the sale of intoxicating liquors.

To regulate the closing of shops and the hours of labor therein for children and young persons.

To amend the Nova Scotia judicature act (1884).

To amend the law respecting exhibitions.

To provide for the formation of the Nova Scotian Farmer's Association.

To amend the acts for the encouragement of agriculture.

Government.—Hon. W. S. Fielding, who has been Premier and Provincial Secretary since 1884, appealed to the people again in March, 1894, and was sustained by a good majority. He is a Liberal, as is his chief lieutenants Hon. J. W. Longley, Attorney-General, but they manage to hold their own despite the province being strongly Conservative in Dominion politics. The other members of the executive are: Hon. C. E. Church, Commissioner of Works and Mines, Hon. T. Johnson, Hon. A. H. Corneau, and Hon. G. H. Murray.

Education.—In 1894 the school sections numbered 1,891; the schools in operation were 2,292, or 40 more than in the preceding year. There were 2,251 teachers, of whom 499 had been trained in normal schools. There were 93,520 pupils in the common schools, and 4,650 in the high schools. The total provincial grants for 1894 were \$230,436, the county funds expended were \$130,307, and the section assessment was \$454,200—making a total of \$795,144, or \$126,000 more than in 1893.

Fisheries.—The number of fishermen in Nova

Scotia during 1894 was 5,907 in vessels and 19,571 in boats. The value of their vessels, boats, nets, wharves, fish houses, etc., was \$3,361,972, and the total yield of the fisheries was \$6,547,387, an increase in the year of \$140,000. The exports of the province in fish were \$5,100,873, and the distribution of the catch was as follows: Salmon, \$100,483; mackerel, \$485,299; herring, \$811,284; cod, \$2,450,341; haddock, \$400,135; lobsters, \$1,294,557; hake, \$152,220; pollock, \$175,106; halibut, \$121,895; smelts, \$21,517; oysters, \$10,048; miscellaneous, \$524,502.

Halifax Exhibition.—During September, 1894, an exhibition was held at the provincial capital under the patronage of Gen. Montgomery Moore and Admiral Sir John Hopkins, and a commission composed of men in the province. The buildings cost \$6,000, the prizes given amounted to \$5,778. The exhibits of horses, cattle, sheep, swine, poultry, fruits, and minerals were good. A series of naval and military manoeuvres was arranged, which lasted during the week. The total expenditure on the exhibition was \$19,130.

Shipping.—The tonnage carrying into and out of the province in 1894 was 2,503,670 tons. The coasting trade in 1894 was 4,403,014 tons, a slight increase over the preceding year.

Finances.—Premier Fielding delivered his budget speech on Feb. 11, 1895. The revenue during the year ending Sept. 30 had been fully up to the estimate. The chief items were: The Dominion subsidy of \$432,813; the receipts from mines of \$242,657; from the Hospital for Insane, \$40,403; and from the Western Counties Railway less refund of \$50,000 loan, \$131,021. The total ordinary revenue was \$888,213.70. The expenditure was \$862,842.89, leaving a surplus of \$25,370.81. The total liabilities were given as \$3,167,493, and the assets as \$1,358,182. The estimated revenue for 1895 was \$833,063, and the expenditure \$832,968.

Minerals.—The production for the year ending Sept. 30, 1894, included 19,980 ounces of gold, 83,512 tons of iron ore, 2,200,235 tons of coal, and an export of gypsum valued at \$106,171. Much Nova Scotian coal used to go to the United States. During the years of free admission—from 1854 to 1866—this export ran up from 139,125 tons to 404,252. Since then it has varied from 102,000 tons in 1883 to 79,837 in 1894. But the production has steadily increased. The number of persons employed during the year in the coal mines was 5,936.

Railways.—The year 1894 will be remembered for the acquisition of the Western Counties Railway by the Windsor and Annapolis Railway Company, which lines were merged under one management and called the Dominion Atlantic Railway. An effort was also made to give railway aid and traffic to the western shore districts of the province. The union of the two roads mentioned will enable the company to compete more effectively with the water traffic between Halifax and Boston, and Annapolis and St. John.

During the nine months from Jan. 1 to Sept. 30, 1894, the Nova Scotia railways carried passengers who paid \$205,475, freight paying \$185,605, and mails and sundries paying \$22,914. There were 825 miles of track in the province on June 30, 1894.

O

OBITUARIES, AMERICAN, FOR 1895.

Adams, Myron, clergyman, born in East Bloomsfield, N. Y., March 12, 1841; died in Rochester, N. Y., Dec. 26, 1905. He entered Hamilton College with the class of 1863, but at the close of his junior year entered as a private in the 126th New York Volunteers. He participated in the defense of Harper's Ferry, where he was among the 11,000 men surrendered. He was successively corporal, hospital steward, lieutenant, and acting assistant inspector general. On March 3, 1863, he was assigned to the signal corps, and the same year he was made acting adjutant of the 3d United States Colored Regiment. In 1864 he was in the battle of Mobile Bay as signal officer on the "Tachawanna." His part in the engagement is described in "Battles and Leaders of the Civil War," Vol. IV, page 437. Lieut. Adams rode to Washington with the news of the surrender of the last Confederate troops east of the Mississippi at the close of the war. He was offered the rank of major, but refused it. He was graduated with his class at Hamilton College and took a course at Auburn Theological Seminary, and, after a pastorate of one year at Union Springs and seven years at Dunkirk, was called to Rochester, N. Y., in 1876, where he remained till his death as pastor of Plymouth Congregational Church. About 1890 his theological views underwent a change, and he announced to his congregation his disbelief in some of the tenets of the Church, especially in that of the eternity of future punishment. This brought upon him the censure of orthodox clergymen of the city, the withdrawal of the fellowship of the Ontario Association of Congregational Churches, and the loss of a part of the membership of his own church. But as the majority either sympathized with his views or were willing to accord full freedom to thought and to the expression of sincere conviction, he remained in the pastorate, and the church became known as a liberal organization, and ultimately set aside the confession of faith of the orthodox churches and adopted as its bond of union a simple declaration of faith in the fatherhood of God and the brotherhood of man, and a pledge to work toward universal redemption of the one and practical realization of the other. Mr. Adams became a Christian evolutionist, and gave expression to his beliefs in his sermons and a systematic exposition of them in his first published book, "The Continuous Creation" (Boston, 1889), and of his theory of continued inspiration and progressive revelation in "The Creation of the Bible" (1905).

Almy, John Jay, naval officer, born in Newport, R. I., April 25, 1814; died in Washington, D. C., May 15, 1894. He entered the United States navy as a midshipman, Feb. 2, 1829; became lieutenant, March 3, 1841; commander, April 24, 1841; captain, March 2, 1850; commodore, Dec. 31, 1859; and rear admiral, Aug. 24, 1875; and was retired April 24, 1877. He was on sea service for twenty-seven years and six months, on shore or other duty fourteen years and eight months, and was unemployed twenty-three years and nine months. He was attached to the line-of-battle ship "Ohio" in the Gulf of Mexico and the Pacific Ocean in 1846-'50; took part in the siege of Vera Cruz and the capture of Tusan, and commanded a fleet at Mazatlan during the naval occupation of that place; was on coast-survey duty in Chesapeake Bay and on the coast of Virginia and North Carolina in 1851-'56; and commanded the "Fulton" on the coast of Central America in 1857, when the Walker-Fitzhugh party surrendered to Admiral Paulding on board that vessel. In 1858-'59 he commanded the same vessel in the expedition to Paraguay. During the civil war he was attached to the North At-

lantic and South Atlantic squadrons, and captured 4 blockade runners with valuable cargoes and chased ashore and destroyed 4 others. While commanding the "Jactata" off the coast of Brazil and South Africa in 1866-'67 he rescued a Brazilian brig and crew from shipwreck, for which he was thanked by the Emperor. He was on ordnance duty at the New York Navy Yard in 1868-'69; chief signal officer of the navy at Washington, D. C., in 1870-'71; and commander of the naval forces in the Pacific Ocean from September, 1873, till July, 1874. He possessed property at Panama during the revolution of 1878.

Ames, Oliver, educator, born in North Easton, Mass., Feb. 4, 1801; died there Oct. 26, 1886. He was the second son of Oakes Ames; was apprenticeship in his father's shawl manufactory, took a special course at Brown University, and became a member of the class of O. Ames & Sons in 1825. For ten years he superintended the mechanical business of the establishment, and at his father's death, in 1828, the numerous financial trusts held by him devolved on the son. By reason of his great undertakings in the Union Pacific Railroad and similar enterprises, Oakes Ames left an estate burdened with obligations aggregating \$1,000,000. Through sagacious management Oliver discharged this indebtedness, paid about \$1,000,000 in legacies under his father's will, and secured a large surplus to divide among the heirs in a few years. In 1861 and 1862 he was elected to the State Senate. In 1862 he received the Republican nomination for Lieutenant Governor on the ticket headed by E. R. Bishop. The latter was defeated by Gen. Butler, but Mr. Ames was elected by a handsome plurality. He was re-elected in 1864, 1866, and 1868, and was elected Governor in 1868, 1870, and 1884.

Anderson, Charles, lawyer, born at "Soldiers' Retreat" (now a part of Louisville), Ky., June 1, 1814; died in Paducah, Ky., Sept. 2, 1895. He was a son of Col. Robert Clough Anderson, and a brother of Robert C. Anderson, a former United States minister to Colombia, and of Gen. Robert Anderson, of Fort Sumter fame. He was graduated at Miami University in 1833; was admitted to the bar in 1835; settled in Dayton, Ohio, to practice; became prosecuting attorney of the county; and was elected to the State Senate in 1844. After an extended European tour he settled in Cincinnati, where he entered into a law partnership with Rufus King. In 1850 he removed to San Antonio, Texas, and engaged in farming, but in the following year was compelled by his Union proclivities to return to the North. In 1861 he was appointed colonel of the 9th Ohio Volunteers, with which he served till severe wounds received in the battle of Stone River (Dec. 31, 1862-Jan. 1, 1863) forced him to resign. In 1864 he was elected Lieutenant Governor of Ohio on the ticket headed by John Brough, and in August, 1865, on the death of Gov. Brough, he became Governor. It was Mr. Anderson who discovered Hiram Powers at work in a quarry in Cincinnati, gave him his first order for a bust, and introduced him to Nicholas Longworth, who became the patron of the famous sculptor.

Abrams, Alexander I., bookbinder, born in St. Petersburg, Russia, in 1846; died in New York city, June 24, 1895. He was educated in medicine at Jena, Germany; removed to New York city in 1867; and began practicing on the east side in 1869. He had inherited a considerable estate, and spent the whole of his professional life in benefiting others. For many years he applied himself to the discovery of a cure for consumption. He passed two years in Europe, familiarizing himself with the effects of Koch's virus, and on his return he opened a Koch Institute, which subsequently became known as the Abramson Hospital

for Consumptives. Here he treated many cases daily, most of them without charge. In dispensing this and other charities he recognized neither creed nor race. A favorite act of his was to discover a landlord pushing a poor tenant to the wall, then to appear on the scene at the last moment, and end the proceeding with a check for the full amount due. He had conspicuously risked his life to aid the suffering poor on many occasions, and by his charitable works had endeared himself to a large community. His death was sudden, and at the funeral it was estimated by the police that fully 15,000 people viewed the remains.

Atwood, Charles B., architect, born in Millbury, Mass., May 18, 1849; died in Chicago, Ill., Dec. 19, 1896. He began studying architecture when seventeen years old, took the full course in the Harvard Scientific School, and worked with his architectural preceptors till 1872, when he opened an office of his own. Within three years he received a prize for a

design for the city hall in San Francisco, two prizes for the State Capitol in Hartford, Conn., one for the courthouse in Springfield, Mass., and the first prize and commission to build the city hall in Holyoke, Mass. In 1875 he removed to New York, and during the next six years designed the residences of David Dows, William H. Vanderbilt, Elliott F. Shepard, and William D. Sloane, and interior decorations for the residence of Mrs. Mark Hop-

kins in San Francisco. In 1894 he gained the first prize, against 125 contestants, for a design for the Boston Public Library, but for some unexplained reason the design was not used. After spending two years in designing the interior decorations for Mrs. Mark Hopkins's residence in Great Barrington, Mass., he gained the first prize of \$5,000 for plans for a new city hall in New York, which were highly recommended by the board of experts. From April 1, 1891, till July 1, 1893, he was associated with Daniel H. Burnham, Director of Works of the World's Columbian Exposition, and distinguished himself by his designs for the Art Building, the Peristyle, the terminal station, the terraces, the bridges, the rostral columns, the Service Building, the forestry, and many minor decorative features. Mr. Burnham says of him: "Atwood was tall and rather slender, of elegant figure and bearing, with a head remarkable for its beauty of outline. His voice was sweet and of that peculiar quality which opens the door of one's heart to its possessor. Altogether, his presence was grateful to one's love of grace and dignity and to one's sense of those intangible elements we comprehend in the name of gentleman. From the beginning of his independent career he was much more interested in monumental works than in the lesser problems of architectural practice. He had been trained in a school of classic design, and although he occasionally used other styles, his successes were made when following most closely the Greek forms and feeling. He was a great user of books, and constantly referred to the measurements made by scholars, and to the drawings and comments of masters of our art. His mind was receptive to suggestion, but still when it came to the final design he was tenacious of his own convictions. I never met his equal as a draughtsman; he worked with his left hand, and his execution was marvellously sure and rapid. After

a sketch had been made by him there was very little improvement to be suggested. He was of an honorable, charitable disposition, but, as most great artists have been, was a mere child in the practical things of life."

Badeau, Adam, author, born in New York city, Dec. 29, 1831; died in Ridgewood, N. J., March 19, 1900. He was educated at private schools, and became a contributor to the newspaper press, under the pen name of "The Vagabond." He entered the national army as an aid on the staff of Gen. Thomas W. Sherman in 1862, and was wounded in an assault at Fort Hudson, May 27, 1863. In March, 1864, he became military secretary to Gen. Grant, with the rank of lieutenant colonel. He occupied the place till May 18, 1869, when he was retired with the rank of captain in the regular army and of brevet brigadier general of volunteers. In May, 1869, he was appointed secretary of legation in London, where he served till December, when he was assigned to duty as bearer of dispatches to Madrid. He returned to London as consul general in May, 1870, and retained that office till September, 1881. During this period he was granted leave of absence, on the request of Gen. Grant, to accompany him on his tour around the world, 1877-'78. In May, 1882, he was appointed consul general at Havana. During his incumbency he made charges of corruption against the State Department, and in April, 1884, on being denied an opportunity for substantiating them, he resigned the office. While consul general at London he received the appointments of minister to Belgium (1875) and to Denmark (1881), but declined both missions. On his retirement from office he sought to re-enter the army, claiming that his military office had not been vacated by public service elsewhere. This led to a controversy that was not settled till Aug. 8, 1890, when the President and the Secretary of War decided that his acceptance of the office of secretary of legation at London, on May 19, 1869, had vacated his military office. In March, 1888, he brought suit against the estate of Gen. Grant for payment of services alleged to have been rendered the general in the preparation of his memoirs, but was defeated. His principal publications are: "The Vagabond" (New York, 1859); "Military History of Ulysses S. Grant" (3 vols., 1867-'81); "Conspiracy: A Cuban Romance" (1885); "Aristocracy in England" (1886); and "Grant in Peace" (1886).

Bailey, Joseph Mead, jurist, born in Middlebury, Vt., June 22, 1833; died in Freeport, Ill., Dec. 15, 1900. He was graduated at the University of Rochester, N. Y., in 1854, and removed to Freeport to practice law two years afterward. In 1866-'70 he was a member of the Illinois Legislature, in 1877-'88 was a judge of the Superior Court of Illinois, and from 1888 till his death was a justice of the Supreme Court. He became a trustee of the University of Chicago in 1875, and for several years was dean of the Chicago College of Law. Judge Bailey was widely known among educators because of his efforts to promote legal education.

Baldwin, Charles Candee, jurist, born in Middletown, Conn., Dec. 2, 1834; died in Cleveland, Ohio, Feb. 2, 1895. He was graduated at Wesleyan University, received his diploma at the Harvard Law School in 1857, and was admitted to the bar in Cleveland the same year. At the time of his death he was the presiding judge of the circuit court of Ohio for the 8th Judicial District. He was one of the founders of the Western Reserve Historical Society, and its president since 1886.

Ballou, Maturin Murray, journalist, born in Boston, Mass., April 14, 1820; died in Cairo, Egypt, March 25, 1895. He was a son of the Rev. Hosea Ballou; was educated in the Boston High School, held Federal clerkships for several years, and entered journalism on the weekly "Olive Branch" in 1835. Subsequently he became editor and proprietor of "Gleason's Pictorial" and "Ballou's Monthly," and undertook large building operations in the business part of Bos-

one, creating the St. James Hotel and other structures. In 1872 he was one of the founders of the "Boston Daily Globe," and for many years he was its chief editor. He was also sole or part proprietor of "Hallow's Pictorial," "The Flag of our Union," and the "Boston Sunday Budget." For many years he had rendered extensively. His publications include "Due West," "Due North," "Due South," "Under the Southern Cross," "The New El Dorado," "Arizona Land," "The Pearl of India," "The Story of Malta," "Squaborial America," "A Treasury of Thought," "Pleats of Thought," "Notable Thoughts about Women," "Genius in Sunshine and Speech," "Edgewise of Speech," "Biography of the Rev. Hosea Ballou," and "Life Story of Hosea Ballou." He bequeathed to 10 institutions, payable on the death of the widow, each \$2,000.

Barney, Hiram, lawyer, born in Henderson, N. Y., May 26, 1811; died in Kingsbridge, N. Y., May 14, 1886. He was graduated at Union College in 1834, began practicing law in New York city in 1840, and became associated with Benjamin F. Butler, formerly Attorney-General of the United States, in 1849. In 1850 he became active in the temperance and anti-slavery movements. In 1840 was an unsuccessful anti-slavery candidate for Congress, in 1848 was nominated for presidential elector on the Free-soil ticket, and in 1862 was similarly placed on the Free Democrat ticket (Hale and Julian). He was a delegate to the convention of the Republican party in 1856, and to the Chicago convention in 1860. President Lincoln appointed him collector of the port of New York, and when he resigned this office three years afterward he was tendered a foreign mission.

Barrett, Isaac, Government official, born in Washington, D. C., in 1819; died there Dec. 18, 1893. His father was one of the doorkeepers of the Senate chamber, and was in the habit of taking his son with him on important occasions. In 1831 the lad attracted the attention of Daniel Webster, who appointed him a page to the Senate, the second one it had had. From that year till his death he was in the continuous service of the Senate, in recent years holding the posts of assistant doorkeeper and assistant to the sergeant at arms. His seat was at the left of the presiding officer, and it was his claim that he had never missed a session till he broke down during the night sessions while the repeal of the Sherman law was being considered in 1893, and that he had never missed being present at the opening of Congress in forty-four years excepting that of the present one, which he was too feeble to attend.

Bates, Clara Doty, author, born in Ann Harbor, Me., Dec. 22, 1828; died in Chicago, Ill., Oct. 14, 1886. She published her first book in 1868; married George Bates, a publisher in Chicago, in 1869, and was the collector of the model library for children at the World's Columbian Exposition. For many years she had written for juvenile periodicals, and besides stories and poems brought out in Christmas books she had published "Blind Jakey" (1868); "Baby's Father," in verse (1873); "Heart's Content," story of child life in Michigan; and "From Heart's Content," a volume of verse.

Battell, Robbins, philanthropist, born in Norfolk, Mass., April 3, 1819; died there Jan. 26, 1893. He was graduated at Yale College in 1839, and since the death of his father, in 1841, had been principally occupied with the management of the Battell estate. He served several terms in the Legislature, was a delegate to the Peace Convention of 1861, and was Comptroller of Connecticut in 1866. He was deeply interested in the promotion of agricultural, temperance, literary, educational, and humanitarian works. It is estimated that the gifts of himself and family to Yale College aggregated \$300,000. Other gifts were to gymnasiums, library, and memorial chapel to the town of Norfolk, \$10,000 to the Long Island Historical Society, and chimneys of bells to Yale and other colleges. He made a large collection of paintings by states of the United States.

Battery, Robert, physician, born in Augusta, Ga., Nov. 28, 1828; died in Rome, Ga., Nov. 8, 1888. He was graduated at the University of Pennsylvania in 1850 and at the Jefferson Medical College in 1857, and spent his professional life in Rome, Ga. During the civil war he served as surgeon in the Confederate army, both on the field and in the hospital. He was Professor of Obstetrics in Atlanta Medical College in 1875-76, edited the "Atlanta Medical and Surgical Journal" in 1875-76, and was President of the Georgia Medical Association in 1875. Dr. Battery was most widely known as the originator of an operation now bearing his name for removal of the prostate.

Baxter, Mary Elizabeth Roberts, philanthropist, born in Manchester, Vt., in June, 1829; died in England, Vt., Nov. 9, 1894. She married Gen. Horace H. Baxter in 1861, and after 1864 passed her winters in New York city and her summers in England, where her husband had large interests. For many years she was active in church and benevolent work. She presented to the city of Rutland a library at a cost of more than \$100,000, made large annual gifts to Bishop Graves, of Colorado, Talbot, of Wyoming and Idaho, Brewer, of Montana, and Johnson, of Texas, and promoted in other ways church work.

Beecher, Edward, clergyman, born in East Hampton, Long Island, Aug. 27, 1809; died in Brooklyn, N. Y., July 28, 1885. He was a son of the Rev. Lyman Beecher and an elder brother of the Rev. Henry Ward Beecher, and was graduated at Yale College in 1831. After graduation he taught in the Hartford, Conn., High School for over a year, then studied theology at Andover and New Haven; was appointed a tutor in Yale in 1835, and was ordained pastor of the Park Street Congregational Church, Boston, in the following year. He remained in this charge till 1850, when he was elected President of Illinois College, where he served for fourteen years. Returning to Boston, he was pastor of the Salem Street Church from 1854 till 1856, and also senior editor of the "Congregationalist" in 1848-53. In 1856 he accepted a pastorate at Galesburg, Ill., which he held till 1871, and where then had resided in Brooklyn, N. Y., without pastoral charge, but active in various religious works, excepting the period 1865-69, when he was pastor of the Parkville Congregational Church. During his residence in Illinois he was for several years Professor Extraordinary of the Christian Organization of Society in the Congregational Theological Seminary, Chicago. His effective work in the anti-slavery cause began while he was President of Illinois College, and was incited by his indignation at the assault on the freedom of the press in the case of Elijah P. Lovejoy at Alton in 1837. He aided in founding the Illinois State Antislavery Society, and prepared the declaration of principles and constitution. He then drew up a vigorous address to the public on the situation of affairs. In November he assisted in erecting a second printing press in the store of Geoffrey A. Gilman, where E. P. Lovejoy was killed in defending it on the 6th. When eighty-six years old he underwent an amputation of a leg, rendered necessary by a railroad accident, and surprised his acquaintance by his speedy recovery. He merited his remarkable vitality to his regular practice of physical culture from early youth. From 1824 to within a short time of his death he was a prolific writer, and besides editorials, reviews, and contributions on a great variety of subjects, he published in book form "Address on the Kingdom of God" (Boston, 1837); "Six Sermons on the Nature, Importance, and Means of Earnest Holiness throughout the Church" (New York, 1840); "Statement of Antislavery Principles and Address to the People of Illinois" (1837); "History of the Alton Riot" (Camden, 1838); "Baptism: Its Import and Modes" (New York, 1840); "The Conflict of Ages" (Boston, 1842); "The Concord of Ages" (New York, 1842); "The Papal Conspiracy" (Boston, 1844); and "History of Opinions on the Scriptural Doctrine of Future Retribution" (New York, 1878). His widow died Nov. 14, aged eighty-nine.

Bentley, Henry H., electrician, born in Dutchess County, N. Y., in 1834; died near Rhinebeck, N. Y., Sept. 7, 1893. He removed to New York city in 1854, became a writer on the "Tribune," subsequently organized the New York City and Suburban Printing Telegraph Company, and on its failure leased the plant and operated it successfully. He laid the first working cable under the East river to Brooklyn, and established a message-delivery service and a mail service between Madison Square and the general post office long before there were any branch post offices in the city. His health failing, he sold out his New York interests and removed to Philadelphia. He became editorially connected with the "Philadelphia Inquirer," and was one of its field correspondents during the civil war. After the war he applied himself to telegraphy; built local private lines; organized and became President of the Philadelphia Local Telegraph Company; and was made President of the Gold and Stock Reporting Telegraph Company and of the Bell Telephone Company, of Philadelphia.

Bingham, George Asa, jurist, born in Concord, Vt., April 28, 1826; died in Littleton, N. H., Jan. 22, 1893. He was educated in his native State; was admitted to the bar in 1848; practiced in Lyndon, Vt., till 1852, and then removed to Littleton; and was a justice of the Supreme Court of New Hampshire in 1874-80 and 1884-91. Judge Bingham was a Democrat in politics; served two terms each in the State Senate and the Lower House; was a delegate to the National Democratic Convention in 1860; and was an unsuccessful candidate for Congress in 1880.

Blake, Amos Shepard, manufacturer, born in Brookfield, Vt., Jan. 18, 1812; died in Waterbury, Conn., Feb. 18, 1895. He learned and practiced dentistry; was a mining superintendent in the Lake Superior region in 1832-35; and at the beginning of the civil war engaged in manufacturing. In the winter of 1860-31 he constructed the first locomotive ever seen in New England, designed to illustrate the practicability of travel by railroad, and large enough to carry two persons at a time around a hall on a circular track. This engine was exhibited throughout the Northern States by Asa Harrington. Dr. Blake procured 19 patents, and in 1865 organized the firm of Blake, Lamb & Co. to manufacture under them. During the civil war he superintended the manufacture of percussion caps for the National Government. He was for three terms a member of the Legislature of Connecticut.

Boies, James Robinson, educator, born in Blandford, Mass., Jan. 27, 1815; died in Chicago, Ill., Feb. 9, 1895. In youth he removed to Hartford, Conn., to learn the tailor's trade; was there converted and licensed to preach by the First Baptist Church; was graduated at Brown University in 1840; and was immediately appointed a tutor of ancient languages there. In 1850 he went abroad to study; in 1862 became Professor of the Greek Language and Literature in the University of Michigan; in 1868 took the same chair in the University of Chicago; and in 1877 was appointed Professor of New Testament Interpretation in the Baptist Union Theological Seminary. On the establishment of the new University of Chicago he was made Professor Emeritus of New Testament Greek. He edited several classical text-books for schools and colleges, and published "Notes" on the epistles to the Galatians, Romans, Ephesians, Colossians, Philémon, and Philippians.

Bowers, Elizabeth Crocker, actress, born in Stamford, Conn., March 12, 1830; died in Washington, D. C., Nov. 4, 1895. She was a daughter of a Protestant Episcopal clergyman, who died in her youth, and a sister of Sarah Crocker, who married Frederick P. Conway, the actor. She made her first appearance on the stage as Amathia at the Park Theater, New York, in 1844; married David P. Bowers, the actor, in the following year; and appeared as Donna Victoria in "A Bold Stroke for a Husband" at the Walnut Street Theater, Philadelphia, a week after her

marriage. At the close of this engagement she made one for the Arch Street Theater, which was continued till her husband's death, in 1857. After a brief retirement she managed the Walnut Street Theater for two years and the Philadelphia Academy of Music for a shorter period; married Dr. Brown, of Baltimore; and in 1861 made a professional trip to England. Her performance as Julia in "The Hunchback" at Sadler's Wells Theater, London, won high praise. She also played an engagement there at the Lyceum Theater, largely increasing her popularity as Geraldine d'Arcy in "Woman." In 1863 she returned to the United States; played an engagement at the Winter Garden, New York; married, on the death of her second husband, J. C. McCollom, her leading man; repeated with him many of her old and favorite characters; and retired for several years. She organized a new dramatic company in 1888.

Boyesen, Hjalmar Hjorth, author, born in Fredericksvaern, Norway, Sept. 23, 1848; died in New York city, Oct. 4, 1895. He was graduated at the University of Christiania in 1868; came to the United States in April, 1869; and, after making a tour of New England, went to Chicago and became associate editor of the "Fremad." While in this place he strongly exposed the hostility of the Norwegian clergy to the system of public-school education in the United States. Chiefly for the purpose of perfecting himself in the English language, he accepted the chair of Latin and Greek in Urbana University, and while engaged began his first novel, "Gunnar." Before completing it he spent a year in philological study at Leipzig; in 1874 was appointed Professor of German at Cornell University, where he remained till 1880, when he was called to the chair of Germanic Languages and Literature in Columbia College. He occupied this chair at the time of his sudden death. In view of his eminent services as an educator, the faculty have made his three sons wards of the college. His publications include: "Gunnar" (New York, 1874); "A Norseman's Pilgrimage" (1877); "Tales from Two Hemispheres" (Boston, 1876); "Falconberg" (1878); "Goethe and Schiller" (1878); "Ilka on the Hilltop" (1881); "Queen Titania" (1882); "A Daughter of the Philistines" (Boston, 1883); "The Story of Norway" (1886); "The Modern Vikings" (1889); "The Light of her Countenance" (1889); "Vagabond Tales" (1890); "The Mammion of Unrighteousness" (1891); "Boyhood in Norway" (1892); "A Commentary on the Writings of Henrik Ibsen" (1894); "Literary and Social Souvenirs" (1894); "The Norseland Series" (1894); and "Essays on Scandinavian Literature" (1895).

Brayman, Mason, lawyer, born in Buffalo, N. Y., May 23, 1813; died in Kansas City, Mo., Feb. 27, 1895. He was brought up on a farm; was apprenticed to the printing business; became editor of the Buffalo "Bulletin" in 1834; and was admitted to the bar two years afterward. Removing to Monroe, Mich., he served a term there as city attorney. In 1841 he became editor of the Louisville "Advertiser"; in 1842 settled in Springfield, Ill.; and in 1843 was appointed a special commissioner to adjust the Mormon difficulties at Nauvoo. He was the special attorney in charge of the prosecution of offenses arising from the difficulties, and conducted the negotiations that led to the withdrawal of the Mormons from Illinois. During 1844-45 he was employed in revising the "Statutes" of Illinois by appointment of the Governor and Legislature. From 1851 till 1861 he was interested in railroad construction and management, part of the time as attorney of the Illinois Central Company. In 1861 he entered the national army as major of the 29th Illinois Volunteers, of which he became colonel in the following year. Subsequently he was detailed as chief of staff and assistant adjutant general to Gen. McClernand; took part in the battles of Belmont, Fort Donelson, and Shiloh; and was promoted brigadier general of volunteers for bravery in action, Sept. 24, 1862. He repelled the attack by Gen. Van Dorn on Bolivar, Tenn.; reorganized at

regiments at Camp Denison, Ohio; was in command at Nashville in 1864-'65; presided over the court of inquiry that investigated the conduct of Gen. Sturgis and over a commission at New Orleans to examine Southern claims; and was brevetted major general of volunteers in 1865. After the war he resumed railroad work, edited the "Illinois State Journal" in 1870-'73, and removed to Wisconsin in the latter year, during 1877-'78 and 1880 he was Governor of Idaho Territory. Since then he had practiced law at Ripon, Wis., till he retired to private life in Kansas City.

Brigham Lincoln F., jurist, born in Cambridgeport, Mass., Oct. 4, 1819; died in Salem, Mass., Feb. 27, 1896. He was graduated at Dartmouth in 1842 and at Harvard Law School in 1844; was admitted to the bar in 1845; and was district attorney for the Southern District of Massachusetts in 1853-'59. On the organization of the Superior Court of Massachusetts, in 1860, he was appointed an associate justice. In 1868 he became Chief Justice, and he held the office till 1891.

Bruder, John Albert, theologian, born in Culpeper County, Va., Jan. 24, 1827; died in Louisville, Ky., March 18, 1895. He was graduated at the University of Virginia in 1850; was Assistant Professor of Latin and Greek there in 1851-'53 and chaplain in 1854-'55; and was pastor of the Baptist Church at Charlottesville in 1851-'55 and 1857-'59. In the latter year he became Professor of New Testament Interpretation and Homiletics in the newly organized Southern Baptist Theological Seminary at Greenville, S. C., subsequently removed to Louisville, Ky., and remained with the institution till his death, being its president for several years. He was a frequent contributor to periodicals; was a member of the International Sunday-school-lesson Committee; and published a review of the American Bible Union's revised version of the New Testament (1866-'68); "Preparation and Delivery of Sermons" (Philadelphia, 1879); "Lectures on the History of Preaching" (New York, 1876); "Three Questions as to the Bible" (1884); "Commentary on Matthew" and "Sermons and Addresses" (1886).

Brooks, Arthur, clergyman, born in Boston, Mass., in June, 1845; died at sea July 10, 1895. He was one of five sons of William G. Brooks, four of whom became Protestant Episcopal clergymen, and one, Phillips, a bishop. He studied at the Boston Latin School; was graduated at Harvard in 1867; studied theology at Andover and Philadelphia; and was ordained in 1870. In 1870-'73 he held a charge in Williamsport, Pa.; in 1873-'75 was rector of St. James's Church, Chicago; and since 1875 had been rector of the Church of the Incarnation, New York city. Dr. Brooks had traveled extensively, published a volume of sermons entitled "The Life of Christ in the World," and was the author of the article on Phillips Brooks in the "Annual Cyclopaedia" for 1893. He was active in many charitable movements, and was a trustee of Columbia and Barnard Colleges.

Brown, Charlotte Emerson, educator, born in Andover, Mass., in April, 1835; died in East Orange, N. J., Feb. 5, 1895. She was a daughter of Prof. Ralph Emerson, of Andover Theological Seminary, and wife of the Rev. William B. Brown, D. D., a Congregational minister. She was graduated at Abbott Female Seminary, Andover; studied modern languages and music in Europe; and on returning settled in Rockford, Ill., where she taught languages in the seminary, and organized a conservatory of music and two clubs, one for the study of French, the other for music. In 1860 she married Dr. Brown, and soon afterward she spent with him three years in foreign travel and study. On their return they made their home in East Orange. Mrs. Brown was elected President of the Woman's Club of Orange, in 1888, and on the organization of the General Federation of Woman's Clubs in 1890, became president of that body. After several re-elections she declined another, and was appointed chairman of the Committee on Foreign Correspondence. She also organized the Fortnightly Club of East

Orange, and was active in the work of the Woman's Missionary Society of the Congregational Church.

Bryon, James M., bacteriologist, born in Lima, Peru, July 24, 1861; died in New York city, May 6, 1900. He received a collegiate education in his native city; was graduated in medicine in Naples, Italy, in 1881; spent three years in studying bacteriology in Paris, and, returning to New York city, became an assistant in the Loomis Laboratory. During the cholera epidemic of 1891-'92, he was physician and bacteriologist on Swinburne Island, New York Bay, and an assistant to Dr. Jenkins, the health officer of the port. He continued to hold his office at the quarantine station after all danger of the spread of cholera had passed, and spent much of his time in laboratory work. He was an accomplished microscopist, and was employed by many physicians to make examinations for them. While examining the specimen of a person believed to have incipient consumption, he noticed some bacteria of tuberculous without being aware of the fact at the time. Heavy tubercular consumption speedily developed, and he died after several severe hemorrhages.

Ball, Ephraim W., viticulturist, born in Boston, Mass., March 4, 1806; died in Concord, Mass., Sept. 24, 1866. He learned the goldsmith's trade, and carried it on successfully till 1827; and then, because of failing health, removed to Concord and engaged in the cultivation of the grape. At that time the Hubbard and Catawba grapes were well established and popular, but they were not sufficiently hardy for the climate of New England; hence Mr. Ball attempted to produce a grape equal to them in flavor and hardiness. He began by sowing the seeds of a wild grape (*V. labrusca*), from which he raised seedlings. He then sowed the seeds from those, and obtained others, among them the famous Concord. About 1830 seedlings were raised before he obtained a grape that surpassed the Concord. In the fourth generation he secured seedlings believed to be superior to the Concord, and nearly equal to the European grape (*V. cinifera*). The wild parent of the Concord was accidentally discovered by him growing along a hedge-row, and he transferred it to his vineyard, where it is still thrifty. The Concord grape was first cultivated by the Massachusetts Horticultural Society in 1836, and professional grape growers made all the money out of the discovery. Mr. Ball was elected by the American party to the State House of Representatives in 1855, and to the State Senate in 1856, and served on the State Board of Agriculture for twelve years. He lived alone on his vineyard till 1864.

Burnett, Peter Harbman, jurist, born in Nashville, Tenn., Nov. 15, 1807; died in San Francisco, Cal., May 14, 1868. For some years, prior to 1840 he was engaged in trading and the practice of law in Tennessee and Missouri. In that year he made the overland journey to the Oregon Territory, meeting Lind. John C. Fremont, then on an exploring expedition, at Fort Vancouver. He took an active part in the organization of the Territorial Government, was a member of the Legislature in 1844 and 1845, and for a short time was a judge of the Supreme Court, resigning to go to California at the outbreak of the gold excitement. For a while he engaged in mining; then became agent for the Foster family and estate at New Helvelia. In 1848 he became conspicuous by his advocacy of a State government, urging such an organization without awaiting congressional authority, and opposing the United States military government of the Territory. Under the new Constitution he was elected Governor, but in the year following the admission he resigned, and engaged in law practice. In 1857-'58 he was a judge of the Supreme Court, and in 1858-'60 was President of the Pacific Bank of San Francisco. He published "The Path which led a Protestant Lawyer to the Catholic Church" (New York, 1860); "The American Theory of Government, considered with Reference to the Present Crisis" (1861); "Reflections of an Old Pioneer" (1874); and "Reasons why we should believe in God, love God, and Obey God" (1894).

Calkins, Norman A., educator, born in Gainesville, N. Y., Sept. 9, 1822; died in New York city, Dec. 22, 1895. He began teaching when eighteen years old, and became principal of the central school in his native town. In 1843 and 1846 he was elected Superintendent of the Gainesville Public Schools, and in the last year removed to New York city and became editor of "The Student and Schoolmate" and engaged in conducting teachers' institutes. He was elected Assistant Superintendent of the Public Schools of New York city in 1862, and held the office by re-elections till his death. From 1864 till 1871, he was instructor in the methods and principles of education in the Saturday Normal School, and from 1871 till 1883 was Professor of the Method and Principles of Teaching in the Normal School of the City of New York. His numerous publications include "Primary Object Lessons" (New York, 1861); "Phonic Charts" (1869); "How to Teach," in conjunction with Henry Kiddle and Thomas F. Harrison (Cincinnati, 1873); "Manual of Object Teaching" (New York, 1881); and "From Blackboard to Books" (1883).

Campbell, James H., lawyer, born in Williamsport, Pa., Feb. 8, 1820; died in Wayne, Pa., April 12, 1895. He was graduated at the Carlisle Law School and admitted to the bar in 1841; was a delegate to the Whig convention in Baltimore in 1844; and was a Republican Representative in Congress in 1855-57, 1859-63, serving on the Committees on Elections and on the Pacific Railroad, being chairman of the last. In May, 1864, President Lincoln appointed him United States minister resident to Sweden, where he served till November, 1866.

Cantor, Rachel, actress, born in England, Sept. 10, 1810; died in Philadelphia, Pa., Nov. 4, 1895. She came to the United States in 1838, and made her first appearance here the same year at the Clintham Street Theater, New York, in support of the elder Wallack. Subsequently, she played for many years in support of Edwin Forrest, Edwin Booth, and other actors of distinction, and made her last appearance at the Howard Athenaeum, Boston, in June, 1882.

Carr, Joseph Bradford, military officer, born in Albany, N. Y., Aug. 16, 1825; died in Troy, N. Y., Feb. 24, 1895. He received a common-school education, became a cigar manufacturer, entered the militia as a private in 1849, and was commissioned colonel of the 24th Regiment, July 10, 1859. At the beginning of the civil war he volunteered, and on May 10, 1861, he was commissioned colonel of the 2d New York Infantry; eight days afterward he left for the front; and on the 24th he established camp at Fort Monroe, his regiment being the first to encamp on Virginia soil. He took part in the battle of Big Bethel; was assigned to duty under Gen. Hooker in Gen. McClellan's peninsula campaign; commanded the Jersey brigade in the engagements at the Orchards, Glendale, and Malvern Hill; and was promoted brigadier general of volunteers, Sept. 7, 1862, for gallantry at Malvern Hill. At Bristow Station, Manassas, Chantilly, Fredericksburg, and Chancellorsville he rendered services that elicited high commendation in official reports, and at Gettysburg a horse was killed under him, and he was injured by its fall, but refused to leave the field. In May, 1863, he acted as a division commander, and in October was given command of the 3d division of the 4th Corps, at the head of which he fought at Brandy Station, Locust Grove, and Mine Run. After the latter action he was transferred to the command of the 4th division of Hancock's (2d) Corps. Subsequently he served under Gen. Butler on the outer line of defense of the peninsula, as division commander in the 1st Corps, and as commander of the defenses of James river. He was brevetted major general of volunteers, June 1, 1865, for meritorious services during the war. After the war he engaged in manufacturing in Troy, N. Y. He was appointed major general of the 3d Division, National Guards State of New York, in January, 1867, and rendered efficient aid to the State during the railroad riots of 1877. He was elected Secretary of State of New

York in 1879, 1881, and 1883, in the latter year being the only Republican on the State ticket who was elected. His last appearance in politics was in 1887, when he was defeated for Lieutenant Governor, with the rest of the Republican ticket.

Cheney, Benjamin Pierce, expressman, born in Hillsboro, N. H., Aug. 12, 1815; died in Wellesley, Mass., June 23, 1895. He received a common-school education; worked for some time in his father's blacksmith shop; became a stage driver on the route between Keene and Nashua; and subsequently was made Boston agent of the stage company. In 1842, in connection with Nathaniel White and William Walker, he established the Cheney & Co. express, to operate between Boston and Montreal. This was about contemporary with Harnden's and Adams's beginnings in the same line. The original Cheney express ran over the Boston and Lowell Railroad as far as it was then built (Concord, N. H.), thence by four-horse team to Montpelier, Vt., then by stage to Burlington, and finally by boat to Montreal. The immediate success of this line soon led to the establishment of a competing one, which ran over the Fitchburg Railroad to Burlington. In 1852 Mr. Cheney bought out his competitor, and afterward, by securing control of other lines, he formed the United States and Canada Express Company, which covered the northern New England States with many branches. Of this consolidated corporation, he was proprietor and president till 1881, when it became a part of the Adams Express Company, of which Mr. Cheney was treasurer and the largest stockholder. He invested much of the fortune made in the express business in railroad enterprises, and left an estate estimated at \$9,000,000. He bequeathed \$10,000 each to the Massachusetts General Hospital and the Massachusetts Institute of Technology; \$5,000 each to the Boston Museum of Fine Arts, the Kindergarten for the Blind, and the Bunker Hill Monument Association; \$2,500 to the Children's Hospital, Boston; \$1,000 to the Society for the Relief of Destitute Clergymen; and \$2,000 each to 18 Boston local charities—in all, \$74,500. In life he had presented the State with the bronze statue of Daniel Webster, at Concord, N. H.

Chittenden, Henry Abel, merchant, born in Guilford, Conn., April 29, 1816; died in Montclair, N. J., May 23, 1895. He began his business career in New Haven, subsequently removed to Hartford, and afterward became associated with his brother, the late Simon B. Chittenden, in the wholesale dry-goods business in New York city. In early life he adopted the religious views of William Miller, and was an active apostle of the second advent. He was expelled from Dr. Bushnell's Congregational church in Hartford in 1840 because of his religious expressions, on which he published "A Reply to the Charge of Heresy." The anti-slavery movement enlisted his hearty co-operation, and he was conspicuous among its leaders. One of his acts in the cause was the individual maintenance in Washington, D. C., for six years of a Congregational church dedicated to the "cause of free speech on the slavery question."

Clendenin, David Ramsey, military officer, born in Lancaster County, Pa., June 24, 1830; died in Onida, Ill., March 5, 1895. He was graduated at Knox College; was commissioned major of the 8th Illinois Cavalry; served through the civil war with this regiment, most of the time as lieutenant colonel commanding; was commissioned major, 8th United States Cavalry, in January, 1867; lieutenant colonel, 3d Cavalry, in November, 1882; and colonel, 2d Cavalry, Oct. 29, 1888; and was retired on account of disabilities April 20, 1891. Col. Clendenin took part in the principal engagements of the Army of the Potomac, and was brevetted brigadier general.

Cogswell, Parsons Brainard, journalist, born in Henniker, N. H., Jan. 22, 1828; died in Concord, N. H., Oct. 28, 1895. He became a resident of Concord in 1847, and learned the printing business in the offices of "The Independent Democrat" and "The New Hampshire Patriot" (1847-52). On May 23, 1864, in

company with an associate, he established the "Daily Monitor," the first permanent daily paper published in Concord, with which he was connected as editor or proprietor until his death. He became a member of the Board of Education in 1846, and continued on the board for thirty-six unbroken years, serving as its president several years and for eighteen years as its financial agent. He was a member of the State Legislature in 1872 and 1873, public printer from 1881 to 1890, and several years auditor of public printer's accounts. He was a member of the Board of Trustees of the State Library, and was Mayor of Concord two years. He was a member of the New Hampshire Historical Society, and four years its president; also a member and officer of the New Hampshire Press Association, a member of the Appalachian Club, and four years President of the Concord Commercial Club. He was United States Immigrant Inspector under President Harrison's administration. Mr. Cowswell spent a year in Europe (1878-79), and wrote for the "Monitor" a series of letters, which were subsequently published in book form under the title of "Glimpses from over the Water." He received the degree of M. A. from Dartmouth College in 1885.

Cowswell, William, lawyer, born in Bradford, Mass., Aug. 26, 1829; died in Washington, D. C., May 22, 1890. He took a partial course at Dartmouth College, made a voyage around the world as a sailor, and was graduated at the Harvard Law School in 1860. In 1861 he joined one of the first companies of volunteers that went to the front from Massachusetts, was appointed its captain, subsequently was commissioned colonel of the 3d Massachusetts Infantry, and in 1864 was brevetted brigadier general and assigned to the command of the 5d brigade, 3d division, 20th Corps, with which he accompanied Gen. Sherman on his march to the sea. After the war he resumed law practice in Salem, where he was elected mayor five times, a member of the State House of Representatives five times, and a State Senator twice. From 1887 to 1890 he was Republican Congressman from the 6th Massachusetts District.

Colt, Henry Augustus, educator, born in Wilmington, Del., Jan. 29, 1830; died in Concord, N. H., Feb. 5, 1890. He was educated at St. Paul's School, College Point, Long Island; took a partial course at the University of Pennsylvania; entered the ministry of the Protestant Episcopal Church, and engaged in missionary work in Clinton County, New York. On the establishment of Saint Paul's School in Concord, N. H., he was chosen its rector, assuming charge in April, 1886, with a class of half a dozen boys. Despite tempting offers of service elsewhere, he remained at this school till his death, making it one of the noted

institutions of the country and bringing its student membership up to 300. In 1867 he was elected President of Trinity College, Hartford, and in 1871 President of Hubert College, Geneva, but he declined both places. He visited England in 1868, and made a study of its public-school system. Dr. Colt received the degree of D. D. from Trinity College in 1886 and that of LL. D. from Yale College.

Cowry, John Joseph, clergyman, born in Cloneslee, County Queens, Ireland, in 1819; died in New York

city, Nov. 20, 1890. He came to the United States when twelve years old; resided his early education in New York city; studied the classics under the tutelage in Montreal; took the divinity and the theological courses at Exeterbury, Md., and Fordham, N. Y.; and was ordained a priest June 4, 1840. In 1848 he was made vice-president of St. John's College, Fordham, and soon afterward president; and from 1844 till 1855 he was pastor of St. Joseph's Church, Albany, N. Y., during a part of which period he was vicar-general and administrator of the diocese. On the elevation of Dr. McCloskey to the see of New York, Dr. Cowry was appointed Bishop of Albany, and was consecrated Oct. 18, 1855. While pastor of St. Joseph's Church he rebuilt the orphans' hospital, St. Vincent's Orphan Asylum, and founded the Sisters of Charity; and during his administration of the diocese he established St. Peter's Hospital, St. Agnes's Rural Cemetery, and an industrial school, and introduced the Little Sisters of the Poor. He attended the first two Plenary Councils of Baltimore—the first as theologian and the second as bishop; visited Rome at the convocation of St. Peter; took part in the sessions of the Council of the Vatican; and in August, 1869, presided over a diocesan synod. In 1873 he was given a coadjutor; in January, 1874, he was compelled by infirmities to relinquish the administration of his office, and on Oct. 15, 1877, he resigned the see and returned to New York city. After his retirement the Pope appointed him Bishop of Corsica, *in partibus*, and he was able to attend the Plenary Council of Baltimore in 1884.

Cooke, Philip St. George, military officer, born near Lonsbury, Va., June 18, 1809; died in Dublin, Mich., March 20, 1890. He was a brother of John Rogers Cooke, and father of the late Gen. John R. Cooke (see obituary in "Annual Cyclopaedia" for 1891); and of Mrs. J. E. B. Stuart. He was graduated at West Point and commissioned a brevet 3d lieutenant of infantry, in 1827; was promoted 2d lieutenant, 6th Infantry, the same day; 1st lieutenant, 1st Dragoons, March 4, 1832; captain, May 31, 1839; major, 3d Dragoons, Feb. 14, 1847; lieutenant colonel, July 13, 1850; colonel, June 14, 1859; and brigadier general, Nov. 14, 1861; and was retired with the rank of brevet major general, Oct. 19, 1878. His early military service was on frontier duty and in the Black Hawk War. In 1840 he commanded the escort of a party of Santa Fe traders to Arkansas river and captured a Texas military expedition. During the Mexican War he commanded a battalion in California in 1846-'47, and a regiment in Mexico city in 1848. Subsequently he served on several Indian expeditions, and in the action at Blue Water, Sept. 3, 1850, he commanded the victory. He was at the head of military affairs in Kansas during the troubles of 1856-'57, and of the cavalry in the Utah expedition of 1857-'58. At the beginning of the civil war he made a public declaration of allegiance to the Union, denouncing it his duty to support the Federal Government in preference to that of his native State. This act caused an estrangement between him and his son and daughter, which lasted till within a short time of the son's death. During the peninsular campaign he commanded all the regular cavalry in the Army of the Potomac, and distinguished himself at the siege of Yorktown and the battle of Williamsburg, Guinea's Mill, and Glendale. He was on combat duty in 1864-'65; was commandant of the Baton Rouge district in 1865-'66; general superintendent of the recruiting service in 1864-'65; and commandant of the Department of the Plains in 1866-'67, of the Cumberland, in 1868-'70, and of the Lake in 1870-'73. He was author of a system of cavalry tactics (1861); revised edition, 1867; "Ranks and Advancements in the Army" (Philadelphia, 1866); and "The Campaign of New Mexico and California" (1870).

Copeland, Charles W., engineer, born in Coventry, Conn., in 1813; died in Brooklyn, N. Y., Feb. 4, 1890. He was a son of David Copeland, a noted builder of steam engines and boilers, under whose direction Charles was given a thorough training in the prob-

ation of designing and draughting of steam vessels and machinery, as well as in all the manufacturing branches of the business as then known. After this training and a course of study in the higher mathematics he became superintendent of his father's establishment in Hartford, and designed and built river steamers. In 1836 he was appointed designing and constructing engineer of the West Point, N. Y., foundry, then the foremost plant of its kind in the country, where he built many marine engines and the first iron hull put together in the United States. Three years afterward he became constructing engineer to the United States navy. During the Mexican War he fitted out for the Government the steamers comprising what was known as the "mosquito fleet." He designed the engines and boilers of the "Missouri," the "Mississippi," and the "Michigan" for Lake Erie, the latter being the first iron steamer ever used for naval service; and also the machinery for the "Saranac" and "Susquehanna," in which he introduced many novel features. He resigned this office and accepted that of superintending engineer of the Allaire Works in New York city, where he designed and built the steamers "Pacific," "Baltic," and "Punama" for the Pacific lines, the "Bay State," "Empire State," and "Traveler" for Long Island Sound, and the famous "Harriet Lane" for the United States Revenue Service. In 1852 he was an expert before the congressional committee having in charge the United States Steamboat bill, and after the passage of the bill he was for nine years the first supervising inspector for the New York district. During the civil war he altered and fitted steamers for service on the shallow waters of the South. After the war he was consulting and superintending engineer to the United States Lighthouse Board and to the Norwich and New York Transportation Company, for which he designed the steamers "City of New York," "City of Boston," and "City of Worcester."

Coppée, Henry, educator, born in Savannah, Ga., Oct. 13, 1821; died in Bethlehem, Pa., March 22, 1893. He was of French West Indian parentage; was a student for one year at Yale College; studied engineering, and was employed on the construction of the Georgia Central Railroad from Savannah to Macon. In 1845 he was graduated at West Point and assigned to the artillery. He served through the Mexican War, receiving the brevet of captain for gallantry at Contreras and Churubusco and a vote of thanks from the Legislature of Georgia. From the close of the war till 1855 he was Assistant Professor of Geography, History, and Ethics at West Point; from 1855 till 1866 was Professor of English Literature and History at the University of Pennsylvania; from 1866 till 1874 was President of Lehigh University, which he had organized; and from 1874 till his death was Professor of English Literature and History and of International and Constitutional Law in that institution. Since the death of Dr. Lamberton he had also been acting president of the university. Dr. Coppée was appointed a regent of the Smithsonian Institution in 1874; was elected by Congress in 1880 and 1886; and was United States Commissioner on Government Assay of Coin in 1874 and 1877. He was editor of the "United States Service Magazine" (1864-'66), of a translation of Marmot's "Spirit of Military Institutions" (1862), and of one of Comte de Paris's "Civil War" (1877); and published "Elements of Logic" (Philadelphia, 1867); "Gallery of Famous Poets" (1858); "Elements of Rhetoric" (1859); "Gallery of Distinguished Poets" (1860); "Select Academy Speaker" (1861); "Manual of Battalion Drill" and "Evolution of the Line" (1862); "Manual of Court-martial" (1863); "Songs of Praise in Christian Centuries" (1864); "Life and Services of Gen. Grant" (1866); "Manual of English Literature" (1872); "Conquest of Spain by the Arab Moors" (1881); and a life of Gen. Thomas (1883).

Coxe, Montgomery Dent, military officer, born in Alexandria, Va., March 14, 1816; died there Feb. 11, 1895. He served through the Mexican War as captain

of a company enlisted in Alexandria; lived in California in 1849-'57; and was engaged in banking in Alexandria till the beginning of the civil war. In May, 1861, he was commissioned colonel of the 17th Virginia Regiment, with which he entered the Confederate service. He was engaged in the actions at Bull Run, where he was wounded, Boonesboro, and Antietam; was promoted brigadier general in November, 1862; commanded a brigade in Gen. Pickens's division in the expedition against Knoxville; and was taken prisoner at Sailor's Creek, Va., April 6, 1865. After the war he resumed banking in Alexandria.

Coxe, Samuel Hanson, clergyman, born in Mendham, N. J., Nov. 15, 1819; died in Utica, N. Y., Jan. 16, 1895. He was the second son of the Rev. Samuel Hanson Cox, D. D., the noted Presbyterian clergyman, and a brother of Bishop Arthur Cleveland Cox (the brothers adopted an older spelling of the name), was brought up in New York city, and entered the ministry of the Protestant Episcopal Church in 1844. After being rector of St. Peter's Church, Auburn, N. Y., for two years, he held various charges till 1857, when he became rector of Trinity Church, Utica, N. Y., where he remained for more than twenty years. He married a sister of Roscoe Conkling.

Crozier, Robert, jurist, born in Ohio in 1827; died in Leavenworth, Kan., Oct. 2, 1895. He went to Kansas to practice law early in life; was a member of the Territorial Council in 1857-'58; served several years as United States Attorney for the District of Kansas, was elected Chief Justice of the Supreme Court of the State in 1864; and in 1873 served part of a term in the United States Senate.

Cullman, John Gottfried, benefactor, born in Bavaria, Germany, in 1825; died in Cullman, Ala., Dec. 3, 1895. He came to the United States in 1865, lived in Cincinnati four years, and then began colonizing German immigrants, settling over 10,000 families in Alabama alone, and making the place of settlement one of the garden spots of the State. A county was created and named after him, and in 1875 the town of Cullman was founded and made the county seat. The colonists are engaged in fruit culture, general agriculture, and manufacturing, and support two weekly newspapers. Mr. Cullman had recently organized the German Immigration Society of Alabama, and had completed arrangements for settling another large body of his countrymen in that State.

Daboll, David Austin, publisher, born in Groton, Conn., in 1813; died there July 8, 1895. He was a grandson of Nathan Daboll, who conceived the idea and published the first number of the "New England Almanac" in 1772, and a son of Nathan Daboll, Jr., who was joint author with his father of "Daboll's Arithmetic" and his successor as publisher of the almanac. The first number of the almanac was prepared under the old oaken roof of the Daboll home, and each succeeding number has been prepared there since. David took up the work on his father's death, and in late years was assisted by his son, David Austin Daboll, Jr. David, Sr., was a member of the Connecticut House of Representatives from 1844 till 1871, and then served a term in the State Senate.

Darr, Francis, military officer, born in Cincinnati, Ohio, in 1833; died in Wayne, Pa., Jan. 26, 1895. He made the overland trip to California when seventeen years old, and spent several years on the Pacific slope. At the beginning of the civil war he was commissioned 1st lieutenant and quartermaster in the 10th Ohio Volunteers; on Aug. 3, 1861, was appointed captain and commissary of subsistence; and Jan. 1, 1863, was promoted lieutenant colonel. During the war he served on the staffs of Gens. Rumsfeld, Buell, and Foster; took part in all the battles of the West Virginia campaign, Shiloh, Murfreesboro, and the occupation of North Carolina, and reached the rank of brigadier general of volunteers. After the war he was a commission merchant in New York city till within three years of his death.

Davis, Edward F. C., engineer, born in Richmond, Va., in 1847; died in New York city, Aug. 6, 1899.

He was graduated at Washington College in 1857, and immediately entered the New Castle (Del.) Iron Works, subsequently going to the Atlantic Dock Works, in Brooklyn, N. Y. In 1878 he was appointed one of the mechanical engineers at the works of the Philadelphia and Reading Iron Company, at Pottsville, Pa., and he had charge of all the collieries operated by the company, and for four years was an engineer in charge of the locomotive works at Richmond, Va. He became a member of the American Society of Mechanical Engineers in 1881, and was elected its president in November, 1904. At the time of his death (which was occasioned by his being thrown from his horse in Central Park) he was manager of an elevator and machinery plant in New York city.

Dawson, Nathaniel Henry Rhodes, lawyer, born in Charleston, S. C., Feb. 14, 1829; died in Selma, Ala., Feb. 1, 1895. He was graduated at St. Joseph's College, Mobile, Ala., was admitted to the bar in 1850, and began practice at Cahawba, Ala. In 1860 he was a delegate to the Charleston and Baltimore conventions, withdrawing from the former under instructions from his State convention. On the outbreak of the civil war he became a captain in the 4th Alabama Volunteers, and during the last two years of the war he was in command of a battalion of cavalry. While in the army he was elected to the Legislature in 1863 and 1864, and in each case left his command long enough to attend the session; after the war he resumed practice in Selma. In 1876 he was appointed a trustee of the State University, an office he retained till his death; in 1876-'86 was a member of the State Executive Committee, and its chairman in the two last years; in 1880-'81 was speaker of the Alabama House of Representatives, and from Aug. 6, 1886, till Sept. 3, 1889, was United States Commissioner of Education.

Day, Edward Hartwick, educator, born in Bath, England, in 1832; died in Algiers, Jan. 4, 1893. He was a younger brother of Justice Sir John Day, of England, and was educated in the Roman Catholic College of Downside and the London School of Mines. For several years he was engaged in geological work in association with Prof. Huxley, Owens, Hawkins, and Etheridge, and he made the first geological survey for the proposed tunnel under the English Channel under the direction of Sir John Hawkshaw. In 1860 he came to the United States as assayer for a mining company in Montana, and on the failure of that enterprise he became master assayer in the School of Mines of Columbia College. In 1873 he became Professor of Natural Sciences in the New York Normal College, and he held the place till his death.

Demorest, William Jennings, publisher, born in New York city, June 10, 1823; died there April 9, 1895. He received a common-school education, and was successively engaged in mechanical pursuits and the publishing business. In 1860 he became editor and publisher of an illustrated periodical subsequently known as "Demorest's Illustrated News," and during the civil war he published "The Phunniest of 'Em," a humorous anti-slavery periodical. He also was the founder and publisher of "Demorest's Family Magazine." In early life he was actively identified with the abolition movement. In later years he was probably best known through his connection with the Prohibition party. In 1855 he organized the National Prohibition Bureau, and subsequently the Constitutional League; and in 1886 he instituted contests for the restriction of prohibition selections, rewarding the successful contestants with gold, silver, and diamond-mounted medals, of which he had bestowed upward of 40,000. By other means he actively promoted the prohibition cause in all parts of the world. He was frequently a candidate for public office, and in 1893, when candidate for Lieutenant Governor of New York, he polled more votes than the rest of the ticket.

Deanton, Aaron L., manufacturer, born in Freepport, Me., March 12, 1812; died in Birmingham, England, Jan. 2, 1895. When ten years old he began working

as a woman's helper, also assisting his father in odd hours at shoemaking. In 1830 he was apprenticed to a watchmaker in Brunswick, and in 1831 went to Boston to perfect himself in the trade under the direction of Tidal Hume, then considered one of the best watchmakers in the United States. While there, in 1835, he discovered the inaccuracies and defects existing in every the finest hand-made watch, and conceived the idea of constructing all parts mechanically so as to produce a more accurate and a cheaper timepiece. In 1839 he began business on his own account. His first invention was the standard gauge bearing his name and still in use. In 1840 his experimenting led him to predict that within twenty years the manufacture of watches would be reduced to system and perfection, and three years afterward he began making machinery from original plans for manufacturing the parts of watches. In 1845, with a partner, he erected a small factory in Waltham, on some Swiss and English watchmakers at work, and completed the model of his first watch, which was made to run for eight days. His first firm was named the American Horological Company, but soon afterward the name was changed to the Warren Manufacturing Company, by whom the first machine-made watch was placed on the market in 1846. In the following year the factory was removed to Waltham, and with 30 workmen it was able to produce 1 watch a day. This was the first watch factory in the world that turned out under one roof a complete watch ready for use, making every part. This plant was bought out by Royal E. Ballou, the present treasurer of the American Waltham Watch Company, and Mr. Deanton remained with it as superintendent till 1861, when he organized the Tremont Watch Company. In 1850 no watches were manufactured in the United States; in 1864, through the genius of Mr. Deanton, the output was 4,300 movements a day.

Dillingham, George Wellington, publisher, born in Bangor, Me., in 1841; died in Summit, N. J., Dec. 27, 1905. After being employed as a clerk in the house of Crosby, Nichols & Co., in Boston, he removed to New York in 1860 and entered the publishing house of George W. Carleton. Eight years afterward he was taken into partnership. In 1868 Mr. Carleton sold his interest in the business to Mr. Dillingham, and the latter conducted it alone till his death.

Dodge, Richard Irving, military officer, born in Haverhill, N. C., May 18, 1827; died in Buckton's Harbor, N. Y., June 16, 1895. He was graduated at West Point and commissioned a 2d Lieutenant, 9th Infantry, in 1848; 1st Lieutenant, March 2, 1850; captain, May 3, 1861; major, 11th Infantry, June 21, 1864; lieutenant colonel, 2d Infantry, Oct. 25, 1870; and colonel, 11th Infantry, June 20, 1882; and was retired May 19, 1891. During the civil war he commanded the camp of instruction at Elmira, N. Y., was recruiting and disbursing officer at several posts, and was assistant inspector general of the 9th Army Corps. After the war he served on a board to perfect a system of regulations for the army, and was in several campaigns against Indians. For his services in recruiting troops during the war he was brevetted lieutenant colonel, and for organizing troops colonel. He published "The Black Hills" (New York, 1870); "The Plains of the Great West" (1877); and "Our Wild Indians" (1891).

Dunbar, Michael T., military officer, born in Lowell, Mass., Nov. 22, 1830; died on Kelleys Island, Boston, Mass., May 30, 1905. He was educated in the public schools of Lowell and at the College of the Holy Cross, Worcester, and worked in Manchester, N. H. At the beginning of the civil war he was commissioned a captain in the 3d New Hampshire Infantry, with which he took part in the expedition to South Carolina, and received honorable mention in general orders for his gallantry. In June, 1862, he assisted in recruiting the 16th New Hampshire Infantry, of which he was commissioned colonel. The regiment joined the 9th Corps in September following, and served with it in the battle of Fredericksburg. Fre-

sequently it was attached to the 18th Corps. In the action of Fort Harrison, Sept. 29, 1864, Col. Donohoe received a severe wound in his hip. For bravery in this action he was again mentioned in general orders. In the last year of the war he served in Gen. Devens's division of the 34th Corps, and was brevetted brigadier general for distinguished services on the field. After the war he was a post-office inspector, clerk of the commissioners of public institutions of Boston, and, at the time of his death, superintendent of the Boston Reformatory.

Dorsey, James Owen, ethnologist, born in Baltimore, Md., Oct. 31, 1848; died in Washington, D. C., Feb. 4, 1895. He took the classical course in what is now the City College of Baltimore in 1862-'63; spent two years in a countingroom, and a year in teaching, studied at the Theological Seminary of Virginia in 1867-'71, and was ordained a deacon in the Protestant Episcopal Church and began missionary work among the Ponka Indians in Dakota in the last year. Just as he became able to converse with the Indians without the aid of an interpreter, ill health compelled him to relinquish work in that field, and he engaged in parish work in Maryland from 1873 till 1878. He was then appointed ethnologist to the United States Geological and Geographical Survey of the Rocky Mountain region under Major J. W. Powell, and went to the Omaha Indian reservation in Nebraska. On the organization of the United States Bureau of Ethnology, in 1879, he was transferred thereto, and was employed in linguistic and sociologic work till his death. Prior to 1884 he confined his investigations to the tribes of the Siouan family. In that year he visited the Siletz reservation, in Oregon, where he obtained vocabularies and grammatical notes of Athabascan, Kusan, Takilman, and Yakouan languages. The results of much of his field and office work were published in the annual reports of the Bureau of Ethnology. Among his most notable works are: "Ponka A B C Wa-ba-ru," a Ponka primer (1873); "On the Comparative Phonology of Four Siouan Languages" (1883); "Omaha Sociology" (1884); "Osage War Customs" (1884); "Siouan Folklore and Mythologic Notes" (1884); "Kansas Mourning and War Customs" (1885); "Siouan Migrations" (1886); "Indian Personal Names" (1886); "The Dhegiha Language, Myth Stories, and Letters"; and "Omaha and Ponka Letters." He had also compiled a "Dhegiha-English and English-Dhegiha Dictionary" of over 20,000 words.

Douglass, Frederick, journalist and orator, born in Tuckahoe, near Easton, Talbot County, Md., in February, 1817; died near Washington, D. C., Feb. 20, 1895. The life of Frederick Douglass is one of the

most wonderful stories ever written, and seldom has pen or tongue told the incidents or drawn the lessons of humanity with more pathos, or greater purity of diction and melody of voice than his. Of his birth he says in his autobiography: "My only recollections of my mother are a few hasty visits made in the night on foot. She was tall and finely proportioned, of dark, glossy complexion, with regular features, and among the slaves was remarkably sedate and dignified. Of my father, I know nothing. Slavery had no recognition of fathers, as none of families. By its law a child followed the condition of its mother." For twenty years, with varying fortunes, Douglass lived on plantations or in the city of Baltimore. Knowledge was what he longed for, and what

by one means and another he obtained until he was famed for his superior intelligence. A desire for freedom began with his earliest memory, and when twenty-one years old he escaped from bondage. Arrived in New York city, he was directed by a colored man to David Ruggles, who sent him to New Bedford, Mass. Here he lived with his wife, who was a free woman, and had come from Baltimore to join him; but the servile condition of his race in the South and the disabilities under which people of color labored even in many parts of the North weighed upon him. Through the "Liberator" newspaper he had come in contact with William Lloyd Garrison, and in 1841, at an antislavery convention held in Nantucket, he was first heard in public, and his eloquent simplicity as he rehearsed his wrongs moved every heart. It was soon proposed to him to become an agent of the Massachusetts Antislavery Society, and to lecture for it. With great enthusiasm he set out, the first duty assigned him being to travel in company with George Foster and solicit subscriptions to the "Antislavery Standard" and the "Liberator." The meetings proved wonderfully successful. Douglass told and retold his story, and Foster and Collins made the applications. But soon this method proved not enough for Douglass. He says: "I was reading and thinking. New views were being presented to my mind. It did not satisfy me to narrate my wrongs; I felt like denouncing them. My friends wished to pin me down to simple narrative. 'Better have a little plantation speech.' 'It is not best that you seem too learned.'" The danger feared by them followed Douglass's efforts to yield to his impulse and put the soul and mind that were growing into the finished rhetoric and strong logic that seemed born in him. People began to doubt whether he had ever been a slave, and for answer he wrote his first book. Mr. Garrison and Wendell Phillips had no faith in the power of Massachusetts to protect Douglass, should the exposure result in any attempt at his recapture, and they advised him to throw the manuscript into the fire. This advice was not followed, and the story, told as only he could tell it, made unnumbered friends for the slave throughout the North. It produced also another result. His English admirers, hearing of the danger of recapture, raised and forwarded the sum necessary for his manumission. In 1843 the New England Antislavery Society engaged Mr. Douglass to accompany Messrs. George Bradburn, John A. Collins, James Monroe, William A. White, Charles L. Redmond, and Sydney Howard Gay on a tour of 100 lectures through New Hampshire, Vermont, New York, Ohio, Indiana, and Pennsylvania. With varying fortunes of sympathy and abuse these lectures were conducted, and everywhere Douglass made personal friends. John A. Collins, who was general agent of the society, was a communist, and organized a corps of speakers to present the dogma of abolishing all private ownership of property. He proposed that he with these men should attend the antislavery meetings and make common cause. Douglass was to speak in Syracuse, where a hearing had been obtained for him with great difficulty. While the meeting was in progress Collins came in and proposed that the cause of antislavery be set aside and communism be presented. To this Douglass objected, on the ground that the already unpopular cause could not bear the new burden; and that Mr. Collins, as well as he, was engaged to plead the antislavery cause during these hundred conventions. Douglass wrote to the board of managers about the matter, and received from Mrs. Maria Weston Chapman, an influential member, a sharp reprimand for insubordination to his superiors. In 1845 Mr. Douglass visited England, and made many life-long friends, among whom were John Bright and Richard Cobden. Friends in England proposed a testimonial of some kind, and Douglass suggested that it be in the form of a printing press, and aid in establishing in the United States a newspaper in the interests of his race. He

hold that the greatest hindrance to the rapid spread of abolition principles was the low estimate placed upon the negro as a man—the assumption that he was a degraded creature—he was naturally inferior. If he could prove by a well-conducted paper what a superior brain and hands would do, he would give an object lesson of immense value. The sum of \$2,500 was raised, and after two years Douglass returned home. To his amazement, his New England anti-slavery friends were opposed to his undertaking such a venture. They said no such paper was needed, and it would interfere with his usefulness as lecturer. The only conviction that this reasoning left upon the mind of Douglass was that New England was not a congenial soil for his paper, and he betook himself to the city where his lectures had been best received—Rochester, N. Y. Here, in 1847, he issued the first copy of "The North Star," afterward called "Frederick Douglass's Paper." He says: "I was then a faithful disciple of William Lloyd Garrison; but after a time a careful consideration of the subject convinced me that to seek the dissolution between the Northern and Southern States was no part of my duty as an abolitionist; that to abstain from voting was to refuse to exercise a legitimate and powerful means for abolishing slavery; and that the Constitution was, in its letter and spirit, an anti-slavery instrument. This radical change in my opinions produced a corresponding change in my actions. The committee of the Western New York Anti-slavery Society, who had helped me in every way when I was a converting abolitionist, withdrew from me when I became a voting abolitionist." Other friends came to his aid in Rochester; but the principal means of paying off the indebtedness following this departure, that almost put an end to his paper, came from England. Thus thrown upon himself, Douglass saw his work prosper as he wrote by day and lectured by night. He became an active manager on the "underground railroad," and at times had as many as 11 fugitives under his roof, his English friends again helping with money. At this time Douglass became acquainted with John Brown, after whose capture (in October, 1859) Gov. Wise issued a warrant for the arrest of Douglass, and he was compelled to flee to Canada. The experiences of this time led Douglass to the opinion that slavery could be destroyed only through bloodshed, and his expression of that apprehension still further alienated his old supporters, the nonresistants. In 1848 he went heart and soul into the Free-soil movement, and six years later into the Republican party. He worked hard for the election of Abraham Lincoln. When the war broke out he saw from the first that it was to be the end of slavery, and in this belief he urged the Government to accept of negroes as soldiers. When this was done, in 1863, he sent his 3 sons into the service and worked to raise regiments until he saw that colored soldiers were not treated like white soldiers. He visited the President and Secretary Stanton to plead their cause, and the result of the interview was that he resumed recruiting. When the news of the murder of President Lincoln reached Rochester the people by common consent flocked to the city hall, and Douglass, being called on, made a speech that so overwhelmed the people with its eloquent sorrow that their sympathetic expression hardly allowed him to end it. In 1870 he removed to Washington to edit, with his sons, "The New National Era." In 1871 he was appointed assistant secretary of the commission to Santo Domingo; and on his return President Grant appointed him one of the Territorial Council of the District of Columbia. In 1872 he was a presidential elector at large for the State of New York. In 1876 he was appointed United States marshal for the District of Columbia, which office he filled until 1881, when he became recorder of deeds in the District. From this office he was removed by President Cleveland in 1888. His published books are: "Narrative of my Experiences in Slavery" (Boston, 1844); "My Bondage and my

Freedom" (Rochester, 1845); and "Life and Times of Frederick Douglass" (Hartford, 1901).

Dubois, Frank L., physician, born in 1807; died in Portsmouth, N. H., Feb. 24, 1868. He was appointed an assistant surgeon in the United States army, from Pennsylvania, May 23, 1840, and was promoted to passed assistant surgeon Oct. 20, 1861; surgeon, Feb. 20, 1870; and medical inspector, Sept. 16, 1880. He was on sea service nineteen years and four months, on shore or other duty ten years and nine months, was unemployed nine years and two months. While at the Washington Navy Yard, under his first assignment, he volunteered for extra duty with the army after the second battle of Bull Run, and narrowly escaped capture at the battle of Chantilly. Subsequently he was attached to the "Tiger," on blockade duty, where the crew contracted yellow fever, from which he nearly died. From his recovery till the close of the war he was attached to the Mississippi squadron. In 1866 he was sent to Panama, in charge of medical stores. Two years afterward, while on the steamer "Fredonia," he was one of five persons saved from the wreck of the vessel by an earthquake and tidal wave at Arica.

Dubois, Claude Marie, clergyman, born in France, about 1817; died in Vermont, Rhine, France, May 21, 1886. He was one of the early Roman Catholic missionaries invited to Texas by Bishop Odlin, and in 1847 was stationed at Castroville, where he built a residence and schoolhouse. In 1860 he was transferred to San Antonio, where for many years he was pastor of San Ferdinand's Church, and where he did much for the cause of education and aided the Ursulines in establishing a convent. On the persuasion of Bishop Odlin to the see of New Orleans, Father Dubois was chosen his successor, and was consecrated Bishop of Galveston Nov. 25, 1862. The progress of the diocese was retarded greatly by the civil war, but through the bishop's exertions it contained in 1873 25 churches and chapels, 60 priests, and about thirty-000 Roman Catholics. In 1884 the bishop returned to France for his health, and there resigned his see.

Eaton, Daniel Cady, botanist, born in Fort Clinton, Mich., Sept. 12, 1804; died in New Haven, Conn., June 29, 1885. He was a son of Rev. Mr. Major Gen. Amos B. Eaton, U. S. A.; was graduated at Yale College in 1827; studied botany at Harvard in 1830; and was Professor of Botany, a chair created for him, at Yale from 1864 till his death. He made numerous investigating tours in the interest of his department of science; was a member of the Government expedition to the Wahatch Mountains in Utah; and contributed frequently to publications on botanical subjects. His most permanent works are the paper on ferns in Chapin's "Flora of the Southern States" (1860) and in "Gray's Manual" (2d ed., 1871), and an exhaustive individual treatise on "The Ferns of North America" (Boston, 1879-80).

Erskine, John, jurist, born in Aberdeen, Scotland, Sept. 12, 1818; died in Atlanta, Ga., Jan. 27, 1890. He came to the United States when eight years old, returned to Ireland to complete his education in 1837, made a tour of the world after leaving college, and settled permanently in the United States in 1838. After teaching for four years in Florida, he was admitted to the bar of that State in 1840, and practiced there till 1855, when he removed to Atlanta. In 1860 he was appointed a judge of the United States courts for the two districts of Georgia, and he presided over the courts in Savannah and Atlanta till 1868, when Congress provided for a judge for each district. Judge Erskine selected the southern one and served in it till 1873, when he resigned.

Fairbanks, Franklin, manufacturer, born in St. Johnsbury, Vt., June 18, 1828; died there April 24, 1900. He was the youngest of the four sons of Keaton Fairbanks, founder of the widely known scale works; received a common-school education; entered the scale works in 1845; and was admitted to the firm in 1855. In 1868 he became president of the company. He served on the staff of Gov. Hall in 1860, and on that

of his father in 1860, and during the last term Franklin equipped the first 5 regiments sent by Vermont to the national armies. Two terms in the Legislature (one term as Speaker) and a twenty-years' membership of the Republican State Committee comprised his political service. He was active in the work of the Congregational Church, was associated with his brothers in acts of public beneficence, and individually presented to the town of St. Johnsbury the Fairbanks Museum of Natural Sciences, with an adequate endowment.

Ferry, Eliza Peyro, lawyer, born in Monroe, Mich., Aug. 9, 1829; died in Seattle, Wash., Oct. 14, 1895. He was educated in his native town; was admitted to the bar in Fort Wayne, Ind., in 1845, and removed to Waukegan, Ill., to practice in the following year. In 1853 he was appointed postmaster of the town; in 1854 was a Fremont presidential elector; in 1859 was elected mayor of the newly chartered city of Waukegan; in 1861 was a member of the State Constitutional Convention; and in 1861-'63 was State Bank Commissioner. During the civil war, as assistant adjutant general on the staff of Gov. Yates, he rendered valuable service in organizing, equipping, and sending Illinois regiments to the front. After the war he was appointed one of the direct-tax commissioners for the State of Tennessee. In 1869 he was appointed Surveyor General of Washington Territory, and in 1873 and 1876 Governor of the Territory. At the expiration of his second term he resumed the practice of law in Seattle. In 1889, on the admission of the Territory into the Union, he was elected Governor of the State.

Field, Eugene, journalist, born in St. Louis, Mo., Sept. 2, 1800; died in Chicago, Nov. 4, 1895. His father, Roswell Martin Field, a native of Vermont, was Dred Scott's first counsel, and for many years was judge of the circuit court of Missouri. As his wife died when his sons, Eugene and Roswell Martin, were small, they were placed under the care of Mary French, a relative, at Amherst, Mass. Owing to the early death of his father, Eugene's education was conducted without any fixed plan, for he attended Williams College, Knox College, at Galesburg, Ill., and the University of Missouri. When Eugene reached his majority he spent several months in Europe, buying rare books and ancient relics without stint. On his return to the United States he was on the editorial staff of several newspapers in Kansas City and St. Louis; but it was not until he wrote witty paragraphs for the *Denver Tribune* that attention was attracted to his work. Ultimately he went to Chicago, where his column, entitled "Sharps and Flats," in the *Chicago News* and "*Record*," soon made him well known. Therein he attacked Western provincialism or described in mock-heroic verse and humorous story the temptations and trials of a bibliomaniac and art collector, as in "Dear Old London" and "Flail, Trask, and Bissland." In that column also appeared his dainty poems for children and his dialect verses caricaturing life in the Western mining towns. The manner in which he mingled the crude and the barbaric with the exact learning of a scholar was very amusing. It is, perhaps, as the child minstrel of the West that he will be longest remembered. "Wynken, Blythen, and Nod," "Little Boy Blue," "Intry-Minty," "Ganderfeather's Gift," and other poems for children are widely popular. The Sunday before his death he spoke to a friend of the dangerous quality of humor, and further remarked that, while he had ridiculed meanness and cruelty and dishonesty, he had spared those whom he believed to be honest, except in those good-natured prods which amused the victims quite as much as the public. He was also a great traveler, and knew every antiquarian bookstore in Europe and the United States. Eugene Field was tall and slender, had a blond complexion, blue eyes, and an attractively homely face, upon which might be discovered many humorous and sensitive lines. He left a widow and five children. The complete list of his works is as follows: "The Denver Tribune

Primer," "Culture's Garland," "A Little Book of Western Verse," "A Little Book of Profitable Tales," "With Trumpet and Drum," "Love Songs of Childhood," "A Second Book of Verse," "The Holy Cross, and Other Tales," "Echoes from the Sabine Farm" (with Roswell M. Field), and the unfinished work "Love Affairs of a Bibliomaniac."

Field, Matthew Dickinson, alienist, born in Nashville, Tenn., July 19, 1853; died in New York city, March 8, 1895. He was graduated at Williams College in 1875, and at the Bellevue Hospital Medical College in 1879; won an appointment on the hospital staff in a competitive examination, and was appointed an examiner in lunacy by the Department of Charities and Corrections in 1882. For over ten years he was surgeon to the Manhattan Elevated Railroad Company, and for several years the city examiner in lunacy to Bellevue Hospital. He was an expert of high repute.

Forbes, Edwin, artist, born in New York city in 1839; died in Brooklyn, N. Y., March 6, 1895. He became a pupil of A. F. Tait in 1859, and at the beginning of the civil war was sent by Frank Leslie to the Army of the Potomac as a special field artist. He witnessed many important battles and movements. After the war a large number of his unpublished sketches were etched on copper, and the collection was awarded a medal at the Centennial Exhibition. First proofs of these plates were bought by the Government and are preserved in the War Department. After 1878 he was principally engaged on landscapes and animal pictures. His most notable war etchings are: "The Reliable Contraband"; "Coming through the Lines"; the "Sanctuary"; "A Night March"; "Returning from Picket Duty"; "The Reveille"; and "Lull in the Fight"; and his principal later works: "Early Morning in an Orange County Pasture" (1879); "On the Skirmish Line"; "Stormy March"; "Roughing"; "On the Meadows" (1880); and "Evening in the Sheep Pasture" (1881).

Forster, Charles Hubbs, playwright, born in Jericho, N. Y., March 3, 1833; died in New York city, Aug. 5, 1895. He removed to New York city in early youth, and made his first appearance on the stage at the Brooklyn Athenaeum in 1855. After a season at the Brooklyn Museum he entered the lowest rank of the profession at Burton's Theater, New York city, with Mrs. McMahon as the star and Lawrence Barrett as leading man, in 1857. Subsequently he played at the Old Bowery, Purdy's National Museum, and Barnum's; was stage manager at the Old Bowery for several years; and in the last three years had traveled with road companies. He was the author of more than 75 melodramas. These included: "Actors by Daylight," "Twins of London," "Neck and Neck," "Bertha, the Sewing-machine Girl," "Old Straw Man," "New York Burglars," "The Swamp Angels," "Twenty Years Dead," "The Gunmaker's Bride," "The Chain Gang," "The Turf Digger's Doom," and "Saved at Seven."

Frothingham, Octavius Brooks, clergyman, born in Boston, Mass., Nov. 26, 1822; died there Nov. 27, 1895. He was the son of the Rev. Nathaniel Langdon Frothingham, a well-known Unitarian writer, and was graduated at Harvard in 1843, and later at Cambridge Divinity School. He was ordained pastor of the North Unitarian Church in Salem in 1847, and from 1855 to 1859 was in charge of a Unitarian church in Jersey City. Removing to New York city in 1860, he became pastor of the Third Unitarian Church there, at that time the most radical in its belief of any church within the denomination. It was dissolved in 1879, and in 1881 Mr. Frothingham devoted himself wholly to literary pursuits in Boston. At one period he was art critic of the "New York Tribune," and in 1867 he was chosen first president of the Free Religions Association. During his ministerial career he was a leader in rationalistic thought, but in later years, without departing essentially from his former standpoint, he became more conservative in expression and certainly broader in his estimate of the standpoint of others. He was an acute, dis-

is, and that to come" (1888). He was one of the compilers of the "Service of Song."

Gordon, Archibald D., playwright, born in Ceylon, India, Oct. 11, 1848; died in Port Richmond, Staten Island, N. Y., Jan. 9, 1898. He was a son of the Rev. Alexander Gordon, an East India missionary; came to New York city and entered a publishing house in 1868; and subsequently was connected with daily newspapers in New York and Chicago, applying himself chiefly to dramatic criticism. He was master of several modern languages. His best plays were: "Trixie," written for Maggie Mitchell; "The Ugly Duckling," produced by Mrs. Leslie Carter; "Is Marriage a Failure?" written for Stuart Robson; and "That Girl from Mexico," produced by Sidney Drew.

Gowaa, John E., engineer, born in Lynn, Mass., March 6, 1825; died in Paris, France, May 7, 1895. After the Crimean War he raised the Russian fleet that had been sunk in the harbor of Sebastopol by the Russians. He was an engineer of world-wide fame, and received the order of Commander of St. Stanislaus from the Emperor of Russia, the Star of the Medjidi from the Sultan of Turkey, the decoration of Chevalier of St. Maurice and St. Lazare from the King of Italy, that of Chevalier of the Legion of Honor from the Emperor of the French, and a diamond-studded gold snuffbox from the Queen of England.

Graves, Samuel, educator, born in Ackworth, N. H., March 15, 1820; died in Grand Rapids, Mich., Jan. 20, 1895. He was graduated at Madison (now Colgate) University in 1846, taking both the collegiate and theological courses; was pastor in Ann Arbor, Mich., in 1848-'51; Professor of Greek in Kalamazoo College, and of Systematic Theology in the Theological Seminary in 1851-'59; and pastor in Norwich, Conn., in 1859-'70. In the last year he was called to a Baptist church in Grand Rapids, where he remained till 1885, and then became president of the Baptist Seminary in Atlanta, Ga., retiring in 1894. His principal publication was "Outlines of Theology" (1893).

Gray, Isaac Pusey, diplomat, born in Downingtown, Chester County, Pa., Oct. 18, 1828; died in Mexico city, Mexico, Feb. 14, 1895. Accompanying his parents to Ohio in childhood, he settled in New Madison in 1834, where he was educated and became proprietor of a dry-goods store. In 1855 he removed to Union City, Ind., where he carried on business for three years, studying law in the meantime, and then engaged in practice. During the civil war he was commissioned captain in the 4th Indiana Cavalry, and colonel of the 14th Indiana Infantry; but failing health prevented field service. In 1866 he was a candidate for Congress, but was defeated by George W. Julian; in 1868 was elected to the State Senate, and became its president. In 1872 he was a delegate to the Liberal Republican Convention. He was elected Lieutenant Governor on the Democratic ticket headed by James D. Williams in 1876; succeeded to the executive chair on the death of Gov. Williams shortly before the end of the term; was defeated for Lieutenant Governor in 1880; and was elected Governor in 1884. As Governor he originated the system of paroling convicts, urged the adoption of election reforms, advocated the increase of the bonds of State and county treasurers as a safeguard against defalcations, and was instrumental in floating bonds of the State at a lower rate of interest than it had ever paid. On March 9, 1891, he was appointed minister to Mexico.

Green, Robert Stockton, jurist, born in Princeton, N. J., March 25, 1831; died in Elizabeth, N. J., May 7, 1900. He was a grandson of the Rev. Ashbel Green, President of the College of New Jersey, was graduated there in 1850, and was admitted to the bar in 1852. He removed to Elizabeth in 1856, and was appointed prosecutor of the borough courts in 1857, and elected city attorney in 1858. He was elected surrogate of Union County in 1862, and appointed presiding judge of the Court of Common Pleas in 1868. In 1871 he was appointed one of the commissioners to suggest amendments to the State Constitution, and

in the convention he was chairman of the committees on bill of rights, rights of suffrage, limitation of power of government, and general and special legislation. He was an unsuccessful Democratic candidate for Congress in 1868, and a successful one in 1884; was elected Governor of New Jersey in 1886; and was appointed Vice-Chancellor in 1890.

Gresham, Walter Quinton, statesman, born near Lanesville, Harrison County, Ind., March 17, 1832; died in Washington, D. C., May 28, 1895. He received a common-school education, spent a year at the State University, studied law in Corydon, Ind., and was admitted to the bar in 1853. His political career began in the presidential canvass of 1856, when he advocated the election of John C. Frémont. In 1860 he was elected to the Legislature as a Republican, and as chairman of its Committee on Military Affairs he introduced and secured the passage of a militia bill, under which the recruiting of troops for the National armies was greatly facilitated. He declined a re-nomination in 1861, enlisted as a private in the 3rd Indiana Volunteers, was elected its lieutenant colonel, and reached the field in time to take part in the battle of Shiloh. In December, 1861, he was commissioned colonel of the 53d Indiana Regiment, and for bravery before Corinth and at Vicksburg he was promoted to brigadier general of volunteers, on the recommendation of Generals Grant and Sherman. Aug. 11, 1863. While commanding a division in Gen. Sherman's army he was shot in the knee at Leggett's Hill, near Atlanta, and disabled. For his services in the Atlanta campaign he was brevetted major general of volunteers, March 13, 1865. After the war Gen. Gresham resumed the practice of law at New Albany, Ind. In 1866 he was an unsuccessful Republican candidate for Congress in a district heavily Democratic, but so reduced the majority of his opponents that soon afterward two Democratic counties were added to the congressional district. During 1867-'78 he was financial agent of Indiana in New York. In 1869 President Grant offered him the appointment of collector of the port of New Orleans, which he declined; but later in the year he accepted the appointment of United States district judge for Indiana. He held this office till April, 1882, and during this period was an unsuccessful candidate for the United States Senate. In 1882, on the death of Postmaster-General Howe, President Arthur appointed him to fill the vacancy, and in 1884, on the death of Secretary Folger, he was transferred to the Treasury Department, but held the office only a few months, resigning it to accept the appointment of United States judge for the 7th Judicial District. His administration of the Post-Office Department was made memorable by his successful proceedings against the Louisiana lottery corporation; and one of his most important acts as United States judge was during the hearing of the celebrated Wabash Railroad case in 1886, when he ordered the removal of a receiver, appointed at the instance of the Gould interest, and put Judge Thomas M. Cooley in his place. In 1884 and 1888 he was a candidate for the Republican nomination for President. After the canvass of the latter year he urged reform in State elections, declaring that the conviction of a thousand obscure voters for bribery would in effect be as nothing compared with that of one prominent man. In July, 1892, an organization that met in Omaha, Neb., under the name of the People's party virtually offered Judge Gresham a nomination for the presidency, but the offer was declined, and in October following he publicly announced his intention of voting the Democratic ticket. After Mr. Cleveland's second inauguration Judge Gresham was appointed Secretary of State, and he held the office till his death. Among the notable diplomatic incidents of his term were the Hawaiian question, the Mosquito Reserve territorial dispute between Nicaragua and Great Britain, the Nicaraguan trouble with Great Britain arising from alleged insults to British subjects, the Mora claim against Spain, the case of ex-United States Consul

Waller against France, the firing on a United States merchant vessel by the Spanish war ship "Alliance," and the Chinese massacres. (For portrait, see "Astral Cyclopedia" for 1888, page 784.)

Haa8, Maurice Frederick Hendrick De, marine painter, born in Rotterdam, Holland, Dec. 12, 1832; died in New York city Nov. 24, 1903. Mr. De Haas began his studies at the Rotterdam Academy of Fine Arts and continued them at The Hague. Spaul, Bealboom and Louis Meyer were the masters who exercised the greatest influence upon his early education, although the taste of the English water-color school drew him to London in 1851, where he studied and painted for a year. In 1857 he was appointed artist to the Dutch navy, but a year later he decided to leave his native land, and since that time he has resided in New York. When he reached this city the Düsseldorf influence was strong, and with this rather than with the romantic French school he naturally sympathized. His work obtained prompt recognition. In 1863 he was elected an associate member of the Academy, and he became a full academician in 1867. The year before, after various tentative efforts, the interest of many of our artists in water-color painting had taken permanent form in the still prosperous American Water-color Society, and Mr. De Haas was one of the original members. His life was that of an industrious and conscientious artist, undiversified by extraordinary events, but on the whole a career of success and of creditable performance. The civil war yielded him a few subjects, like "Farragut's Fleet passing New Orleans," painted in 1867, and his sketching tours to the English coast, Holland, and the island of Jersey furnished several themes, but he usually depicted sunsets, storms, wrecks, and fishing boats on breezy days off the New England and Long Island coasts. These subjects were carefully drawn and painted in a workmanlike and vigorous manner, and, although his pictures may appear objective and cold, his execution too finished, and his coloring too artificial, judged by canons which have found more general acceptance since the passing of Düsseldorf, Mr. De Haas proved himself an admirable representative of his school, and his work was well worthy of serious praise according to the standards by which he intended it to be measured. He was commended by the judges at the Centennial Exposition, and his pictures were constant features of the older private collections in New York, like those of the late August Belmont, Edwin D. Morgan, and John Taylor Johnston. Up to the close of his honorable career he was a regular exhibitor at the National Academy of Design.

Handley, John, philanthropist, born in Ireland in 1803; died in Scranton, Pa., Feb. 15, 1895. On returning to the United States he settled in Virginia, but since 1860 had lived in Scranton. He was elected judge of Luzerne County as a Democrat in 1874, because prevailing judge of Lackawanna County on its incorporation in 1878, and served till 1884, when he was defeated for re-election through factional troubles in his party. After his retirement from the bench he engaged in banking and real-estate operations. His fortune at his death was estimated at over \$3,000,000, and his will contained the following public bequests: To the city of Winchester, Va., for a library, \$500,000; to St. Patrick's Orphan Asylum \$50,000, and the House of the Good Shepherd \$25,000, both in Scranton; and to each of these institutions one third of his residuary estate, the real estate to be held for twenty years before division. He also provided for continuing the education of more than 30 young men and women which he had undertaken.

Hawkins, Jacob, clergyman, born in Newberry County, South Carolina, Sept. 4, 1828; died in St. Luke's, S. C., July 1, 1895. He was the son of a Lutheran clergyman. When he was sixteen years of age his father removed to Tennessee. The son was graduated at the classical and theological seminary in Lexington, S. C., in 1855 was licensed by the South Carolina Synod, and in 1857 was ordained. He was pastor successively of congregations in South

Carolina, Georgia, West Virginia, and Maryland. In 1874 he became one of the editors of the only Lutheran Church paper published in the South, the "Lutheran Visitor." In 1879 he was made vice editor, and in 1880 permanent editor. He held this place until his death. He frequently presided over synodical conventions. He contributed to various periodicals and published a series of catechisms for Sunday schools which have been widely circulated.

Hayman, Samuel Brinkley, military officer, born in Chester County, Pennsylvania, June 2, 1820; died in Louisiana, Mo., May 1, 1886. He was graduated at West Point in 1843, and was promoted 2d lieutenant, 7th Infantry, July 21, 1844; 1st lieutenant, Feb. 24, 1847; captain, March 4, 1850; major, 1856; lieutenant colonel, 1860; and retired July 3, 1872. In the volunteer army he was commissioned colonel of the 87th New York Infantry, Sept. 28, 1861; was promoted out of the service June 25, 1862; and was promoted brigadier general March 14, 1863. He took part in several battles in the Mexican War, including the capture of Mexico city, and served throughout the civil war with the Army of the Potomac, participating in the battles of Williamsburg, Fair Oaks, Malvern Hill, Manassas, Fredericksburg, Chancellorsville, and the Wilderness, in the last of which he was wounded.

Henry, Morris H., physician, born in London, England, July 26, 1835; died in New York city, May 18, 1903. He was the son of a professor of Oriental languages; was educated at the Polytechnic School of Brussels, and in art at Somerset House, London; came to the United States in 1852; and was graduated in medicine at the University of Vermont in 1855. During the civil war he was an assistant surgeon in the navy, serving principally under Admiral Farragut. In 1872 he was appointed surgeon in chief of the New York State Engineer Hospital, and he held the office till 1880. He contracted blood poisoning while on duty, from which he never recovered. Dr. Henry was widely recognized as an authority on skin diseases, as an inventor of surgical appliances, and as the founder and editor of "The American Journal of Dermatology." He was decorated three times by the Sultan of Turkey, and once by the King of Greece. He edited "Fox on Skin Diseases."

Hill, Alfred James, archaeologist and geographer, born in London, England, in 1852; died in St. Paul, Minn., June 15, 1895. He received a secondary education in England, and in 1874 settled at St. Paul, Minn. He immediately began a study of the geography of the Northwest; removed to St. Paul in 1876, and served as a topographical engineer at the army headquarters there. He enlisted at the outbreak of the civil war in 1861, and was almost immediately detailed for special service in Washington at army headquarters. Joining his regiment at Helena, Ark., he served till the close of his term of enlistment and was honorably discharged, returning to St. Paul, where he was continuously connected with different departments of the State government, and by his manifestoes concerning the treaty with England caused the change in the official maps, so as to include the disputed territory north of the Lake of the Woods, not previously recognized as a part of the public domain. In 1890 he took up the study of archaeology, and he was chairman of the Archaeological Committee of the State Historical Society. Mastering the Spanish, French, and Italian languages, he became author of various translated historical articles, adding thereto voluminous notes. In this manner he took up the works of Giacomo Constantino Belandieri, and secured for that Italian traveler the honor of having his name given to a county at the source of the Mississippi. Various translations from the French were completed, principally on topics concerning the early establishment of New France and Louisiana, the writings of Margry and the "Journal Relatons" being his favorite study in that language. He continued his archaeological researches, and supplemented them by studies in astronomy, geography, meteorology, and physiology.

Having acquired a competency by judicious investment of wages, he made all needed preparations for an extensive and important archaeological survey of the Northwest, which had broadened out by necessity from an intended survey of ancient earthworks in Minnesota. He engaged the services of a surveyor in the field for mound explorations during a period of twelve years, and platted with his own hand nearly 12,000 prehistoric mounds north of the Ohio river and west of the Great Lakes. In 1889 he was assistant to the commissioner in charge of a scientific survey of the source of the Mississippi, in behalf of the State Historical Society, and took up a study of the Spanish accounts of discovery, contributing voluminous notes to Vol. VII of the State Historical Collections. Numerous articles were published in scientific journals, usually over the name of his employee who surveyed the mounds and made the necessary explorations in the field. At the time Dr. Elliott Coues undertook the editorial preparation of the Lewis and Clark explorations up the Missouri and down the Columbia to the Pacific seaboard, reproduced in 4 volumes, all the material portion of the work passed under the critical eye of Mr. Hill, and he contributed voluminous notes thereto. He was also associated with the expedition of 1895, which discovered numerous ancient village sites and mounds in the head-water drainage basin of the Mississippi and at Leech Lake. At the time of his death he was preparing a work on the route of De Soto and his followers, from Florida to the country west of the Mississippi; a work upon the archaeology of the Northwest, for which he had accumulated the results of more than twelve years' labor at his individual cost, amounting to about \$19,000; an elaborate paper on the international boundary line between Lake Superior and the Lake of the Woods; an atlas; and various other uncompleted manuscripts. The results of these scientific labors, so far as they have come to light, have passed into the hands of the courts, as an estate for administration and distribution to legal heirs who reside abroad. As the cost of publishing the results of the labors enumerated will probably exceed \$45,000, the final result and disposition of this life work is left in jeopardy, especially since no portion of the work is completed. He had remained single, and was stricken with his last illness only two days prior to the date set for his marriage.

Hoar, Ebeneser Rockwood, jurist, born in Concord, Mass., Feb. 21, 1816; died there Jan. 31, 1895. He was a son of Samuel Hoar and a brother of United States Senator George F. Hoar; was graduated at Harvard in 1835, and was admitted to the bar in 1840. In 1846 he was elected to the State Senate as an Anti-slavery Whig, and in 1848 he became one of a notable company of men whose public careers began in association with the Free-soil movement. In consequence of his father's expulsion from Charleston, S. C., whither he had been sent by the Legislature of Massachusetts to test the constitutionality of enactments by the Legislature of South Carolina authorizing the imprisonment of free colored people who should enter the State, the son wrote the call for a meeting of all who were opposed to Cass and Taylor as presidential candidates, to which Charles Sumner, Charles Allen, Charles Francis Adams, John A. Andrew, and Stephen C. Phillips responded. At this meeting, in Worcester, Mass., June 28, 1848, the name of Samuel Hoar was placed at the head of the electoral ticket of the new Free-soil party, which subsequently met in national convention in Buffalo, N. Y., and nominated Martin Van Buren. In 1849-'53 Mr. Hoar was a judge of the Court of Common Pleas, and in 1859-'69 he was a judge of the Supreme Court of the State. In March, 1869, he became Attorney-General of the United States, but he resigned in June, 1870, for reasons that were never made public, and soon afterward he was nominated for Associate Justice of the United States Supreme Court, but was rejected by the Senate. The President again testified to Judge Hoar's eminent abilities by appointing him a member of the joint

high commission that framed the Treaty of Washington in 1871. Judge Hoar served a term in Congress in 1873-'75, and in the last year was a candidate for the United States Senate, when Henry L. Dawes was chosen.

Holland, George W., clergyman and educator, born in Churchville, Va., July 16, 1838; died at Newberry, S. C., Sept. 30, 1895. He was graduated at Roundo College, Salem, Va., in 1857; was tutor in the college for a year, and was graduated at the theological seminary of Gettysburg, Pa., in 1860, having spent one session in Union Seminary, New York. In 1860 he was licensed and at once became pastor of the Rockingham parish, Virginia. In July, 1861, he enlisted in the Confederate army, and in October of the same year lost his left arm. In 1863 he became principal of the academic department of Roundo College. In 1867 he again became pastor of the Rockingham parish, which he served until 1873, and then accepted a call as pastor of congregations near Pommier, S. C. In the following year he accepted the chair of Ancient Languages in Newberry College, and in 1877 became president of the institution.

Houghton, Henry Oscar, publisher, born in Sutton, Vt., April 30, 1823; died in North Andover, Mass., Aug. 26, 1895. His early education was obtained in the common schools and at Bradford Academy in his native State, and after some time spent in the office of the "Free Press" at Burlington, he entered the University of Vermont. After leaving college he was employed for a time as reporter on the Boston "Traveler," and in 1849 he established a printing office in Cambridge, the successor to which is the present Riverside Press. In 1864 he entered more distinctly upon his career as publisher by establishing in New York the house of Hurd & Houghton, and the publishing department of the business continued

under that imprint until 1878. In the latter year the Boston firm of Houghton, Osgood & Co., publishers, was established, the successor to that of Hurd & Houghton and James R. Osgood & Co., which was itself the successor to the more noted house of Ticknor & Fields. In 1880 the firm name became Houghton, Mifflin & Co., which it has ever since retained. The firm possessed not only the Riverside Press, but the library inheritances of the house of Ticknor & Fields and its predecessors to 1828, the year when the first publishing house of the line was established. Mr. Houghton's success was the direct result of long-continued effort and native talent. He was a man of wide sympathies and far-reaching plans, and did much toward establishing a high standard in book making.

Hovenden, Thomas, artist, born in Dunmaway, County Cork, Ireland, Dec. 28, 1840; died near Norristown, Pa., Aug. 14, 1895. He began studying art in the Cork School of Design; removed to New York city in 1863, became a student at the National Academy of Design, and had a studio in Philadelphia, Pa., from 1868 till 1874. In the last year he studied in Paris under Cabanel, returning to the United States in 1880. A year later he was elected an associate of the National Academy; in 1882 an academician and a member of the Society of American Artists and of the American Water-color Society; in 1883 of the Philadelphia Society of Artists; and in 1885 of the New York Etching Club. He was instantly killed by a locomotive while making a vain attempt to rescue a little girl at a grade crossing. His most notable paintings are: "The Two Lilies" (1874); "A Brittany Woman spinning" and "Pleasant News" (1876); "The Image Seller" (exhibited in the Paris Salon, 1876); "Thinking of Somebody" and "News from

"the Conscript" (1877); "Pride of the Old Folks" and "Loyalist Peasant Soldier of La Vendee" (1878); "A Breton Interior, 1793" (exhibited in Paris, 1879); "In Illo Signo" (1880); reproduced by Goupil; "Dat Pissum" (1880); "Elaine" (1882); "Last Moments of John Brown" (1884); "Taking his Ease" (1885); and "Breaking Old Ties" (exhibited at the World's Columbian Exposition, 1893, and since engraved).

Howe, Mark Antony De Wolfe, an Episcopal clergyman, born in Bristol, R. I., April 25, 1809; died there July 31, 1895. He was graduated at Brown University in 1833, and was ordained deacon in 1833 and priest the next year. He was rector successively of St. James's Church, Huxbury, Mass., Christ Church, Cambridge, and St. Luke's, Philadelphia, having charge of the last named parish from 1846 to 1871. In 1871 he was consecrated bishop of the newly formed diocese of Central Pennsylvania. He possessed marked executive ability, and while holding positive opinions was widely sympathetic in the conduct of his episcopal duties. His publications include "Domestic Slavery: A Reply to Bishop Hopkins" (Philadelphia, 1864); "Memoirs of Bishop Alonzo Potter" (1871).

Rayt Jehiel Keeler, author, born in New York city, in August, 1820; died in Plainfield, N. J., Feb. 9, 1895. He was educated in Wilton, Conn.; engaged in business first in New York and afterward in New Orleans, making a large fortune in the latter city and losing it by the civil war; and from the close of the war till within a few months of his death he was engaged in journalism in New Brunswick and Newark, N. J. He published the first American translation of Jules Verne's "Journey from the Earth to the Moon," and in co-operation with Miss Anna Ward compiled the "Encyclopedia of Practical Quotations." At the time of his death he had completed the compilation of "Quotable Shakespeare," on which he had worked more than twenty years.

Barthol. William Henry, journalist, born in Charleston, S. C., July 2, 1827; died in Cadenabbia, Italy, Sept. 4, 1891. He was graduated at Harvard in 1847, and at its divinity school in 1849; continued his studies in Berlin, Rome, and Paris; entered the Unitarian ministry, and took a course in Harvard Law School. In 1855 he became a contributor to "Putnam's Magazine" and "The Albion." In 1857 he joined the staff of the New York "Times," and he was engaged in editorial writing till after the presidential election of 1890. In 1881 he was arrested by a vigilance committee in Atlanta, Ga., and was released a passport except on conditions to which he would not agree; but in August, 1892, he made his escape through the lines. He then joined the editorial staff of the New York "World," in which he acquired an interest in 1876, and from which he retired in 1885. In 1866 he visited Mexico city on the invitation of Maximilian; in 1867 represented his paper at the Paris Exposition, and at the centenary festival of St. Peter in Rome; in 1871 accompanied the United States expedition to Santo Domingo; and from 1882 till 1891 resided chiefly in London, being for several years the correspondent of the New York "Sun." In 1891 a suit for breach of promise of mar-

riage was brought against him by Miss Gertrude Ellis, otherwise known as Gladys Heston, on the trial of which the jury returned a verdict in his favor. The complainant appealed, and the appeal was denied. Subsequently the public prosecution issued a warrant for his arrest on a charge of perjury in connection with the suit. Denying the charge and claiming that he had been imprisoned in correspondence and interviews with the complainant by a person named Wilfred Murray, he made himself an exile from England, and the subject of a legend that his death has not cleared.

Hutchings, Samuel, missionary, born in New York city, Sept. 15, 1806; died in Orange, N. J., Sept. 1, 1885. He was graduated at Williams College in 1828, and at Princeton Theological Seminary in 1831; first engaged in missionary work in Greenland, 1830, and in 1832 went to Ceylon, where he spent two years in revision of the Tamil Bible and the compilation of a Tamil-English dictionary. Facile health caused his return to the United States. He contributed nearly 1,000 articles to the American edition of "Chambers's Encyclopedia," and a large number of biographical sketches to the "Encyclopedia of Masses."

Jackson, Howell Edmunds, jurist, born in Paris, Tenn., April 8, 1822; died in West Meade, Tenn., Aug. 8, 1895. He was graduated at West Tennessee College in 1840; spent two years at the University of Virginia; was graduated at Lebanon Law School in 1846; and began practice in Jackson, but removed to Memphis in 1850. During the civil war he held a civil appointment under the Confederate Government. Twice he served by appointment as a judge of the Supreme Court of Tennessee. In 1868 he returned to Jackson; in 1880 was elected to the Legislature; in 1881 was elected to the United States Senate; in 1882 was appointed United States circuit judge for the 10th Judicial District, and in February, 1883, an associate justice of the United States Supreme Court.

Jordan, Thomas, military officer, born in Leesville, Va., Sept. 30, 1819; died in New York city, Nov. 27, 1891. He was graduated at West Point in 1840; first served in the Seminole Indian war in Florida as 3d lieutenant, 3d Infantry; was promoted 1st lieutenant, June 18, 1846; served through the Mexican War, distinguishing himself at Palo Alto and Resaca de la Palma; was promoted captain and quartermaster on Gen. Taylor's staff March 8, 1847; and after the war served again in Florida and in the Northwest. In 1850-'51 he was stationed at Fort Miller, Cal., and in 1852-'53 at Fort Dallas, Ore. While on the Pacific coast he introduced steam navigation on Columbia river above the Dalles, and also the first successful system of irrigation of arid plains. In May, 1861, he resigned his commission in the United States army, and soon afterward entered the Confederate service with the rank of lieutenant colonel. He accompanied Gen. Beauregard to Tennessee as chief of staff, took part in the battle of Shiloh, for which he was promoted brigadier general; was on temporary staff duty with Gen. Bragg, and during the siege of Charleston was with Gen. Beauregard. In 1862 he was commissioned chief of the general staff of the Cuban insurgent army; in May he landed at Mayaguez with 500 men and a large quantity of arms and supplies, and entered into the interior; in December was appointed commander in chief of the revolutionists; and in January, 1870, fought a successful battle at Guadalupe. In the following month he resigned because of the exhaustion of his supplies and the impossibility of reorganizing an effective force. He returned to New York city and became editor of "The Financial and Mining Record." He published, with J. E. Frye, "Campaigns of Gen. Gen. Forrest" (New York, 1890).

Jordan, Thomas Jefferson, military officer, born in Walnut Hill, Dauphin County, Pa., Dec. 3, 1821; died in Philadelphia, Pa., April 5, 1891. He was educated at Mount Joy, Pa., and at Dickinson College, and entered the National army as an aid on the staff of Gen. W. H. Kelso, April 13, 1861. On Oct. 20 following he was commissioned major of the 9th Pennsylvania

Cavalry; on Jan. 13, 1863, he was promoted colonel; on Feb. 25, 1863, he was brevetted brigadier general of volunteers for gallant and meritorious service; and on July 15 following he was mustered out. His first active service was in Kentucky, where he took part in the actions at Lexington, Paris, Perryville, and Richmond. Subsequently he served in Tennessee in the engagements at Fair Garden, Dandridge, Franklin, Wauhatchie, Carter's Station, Moccasin Creek, Readyville, and Woodbury. He was present at Chickamauga, and after the fall of Atlanta was assigned to the 1st brigade, 3d Division of cavalry, of the Army of Georgia, and took part in the march to the sea. In April, 1865, he commanded the escort of Gen. Sherman at his conference with Gen. Johnston, and was present at the surrender. Gen. Jordan was a prisoner of war for five months, and part of the time was confined in Castle Thunder, Richmond.

Kautz, August Valentine, military officer, born in Lippingen, Germany, Jan. 5, 1828; died in Seattle, Wash., Sept. 4, 1895. His parents came to the United States in the year of his birth, and in 1832 settled in Brown County, Ohio.

In 1846 he enlisted as a private in the 1st Ohio Infantry for service in Mexico, and on June 14, 1847, he was discharged. He was graduated at West Point in 1852, and commissioned a brevet 2d lieutenant, 4th Infantry. In the regular army he was promoted 2d lieutenant, March 24, 1853; 1st lieutenant, Dec. 4, 1855; captain, 6th Cavalry, May 14, 1861; lieutenant colonel, 34th Infantry, July 28, 1866; colonel, 8th Infantry, June 8,

1874; and brigadier general, April 20, 1891; and was retired Jan. 5, 1892. In the volunteer army he was commissioned colonel of the 2d Ohio Cavalry, Sept. 2, 1862; promoted brigadier general, May 7, 1864; and was mustered out of the service Jan. 15, 1866. During his military service he was brevetted major in the regular army, June 9, 1863, for gallantry at Monticello, Ky.; lieutenant colonel, June 9, and colonel, Oct. 7, both in 1864, for the attack on Petersburg, Va., and the action on the Darbytown road, in Virginia, respectively; brigadier general and major general, March 13, 1865, for meritorious services in the field during the war; and major general in the volunteer army, Oct. 28, 1864, for the Richmond campaign. Prior to the civil war he served in Oregon and Washington Territory, in the Rogue river wars of 1853-'55, and in the Indian war on Puget Sound in 1856, and was wounded in the two last campaigns. From his assignment to the 6th Cavalry as captain to his assumption of command of the 2d Ohio Cavalry, he was on duty in the Peninsula campaign, and from December, 1862, till April, 1863, he had command of Camp Chase, Ohio. In the last month he was assigned to the command of a brigade of cavalry, with which he took part in the capture of Monticello, Ky., and in July was engaged in the pursuit and capture of John Morgan. On May 7, 1864, he was given command of the cavalry division of the Army of the James; on June 9 he entered Petersburg, Va., with a small force; and subsequently he led the advance of the Wilson raid, which cut the roads leading into Richmond from the south. His last act in the civil war was to march a division of colored troops into Richmond, April 8, 1865. After the war he commanded successful expeditions against the Mesquero Apaches in New Mexico, and re-established them on their reservation in 1870-'71; and served in Arizona, California, and Nebraska till his retirement. He was author of "The Company Clerk" (Philadelphia, 1862), "Customs of Service for Non-commissioned Officers and Soldiers" (1864); and "Customs of Service for Officers" (1866).

Kemper, James Lawson, military officer, born in Madison County, Virginia, June 11, 1823; died in Orange County, Virginia, April 7, 1895. He was graduated at Washington College, Lexington, Va., in 1842; studied law and was admitted to the bar; served as a captain in the Mexican War; and entered political life soon after his return. For ten years prior to the civil war he was a member of the Virginia House of Delegates, and for two years its Speaker. On May 2, 1861, he was commissioned colonel of the 7th Virginia Infantry, which he first led at Manassas. Soon afterward he was placed in command of the brigade that had served under Longstreet, Ewell, and A. P. Hill, and was promoted brigadier general. He took part in the first day's fight at Seven Pines, May 31, 1862; in the seven days' fighting around Richmond the same year; the battles of South Mountain, Antietam, and Fredericksburg; in the Confederate operations in North Carolina; and in part of the battles of Gettysburg, where he was severely wounded and captured. In June, 1864, he was promoted major general, and afterward commanded at Richmond till its evacuation. In 1872 he was a presidential elector at large on the Liberal Republican ticket, and in 1874-'75 was Governor of Virginia.

Kendrick, Asahel Clark, educator, born in Poughkeepsie, N. Y., Dec. 7, 1809; died in Rochester, N. Y., Oct. 21, 1895. His father, Clark Kendrick, and his uncle, Ariel Kendrick, were well-known Baptist clergymen in Vermont, the former of whom was active in promoting the education of young men for the ministry. Asahel was graduated at Hamilton College in 1831, and immediately became a tutor in the Literary and Theological Institution at Hamilton, Madison County, N. Y., which his father's cousin, Nathaniel Kendrick, had founded, and which is now Colgate University. Two years later he was made Professor of Latin and Greek, and afterward he taught Greek exclusively. Here he remained until 1850, with the exception of a year and a half, which he spent in a horseback journey through the Southern States, for the benefit of his health. In Hamilton he owned and occupied the house that was afterward the home of Fanny Farnester, the third Mrs. Judson, whose life he wrote. When the University of Rochester was founded in 1850, he was called to the professorship of Greek, which chair he occupied until his retirement and appointment as professor emeritus in 1888. He had been ordained in early life as a Baptist clergyman, but never had a pastoral charge. Professorships in Hamilton, Waterville, Brown, and other institutions were offered to him, and at one time he was asked to become President of Brown University; but he declined them all, preferring to remain with the institution he had assisted in founding. In 1852 he visited Europe, and spent much time in Rome and Athens, studying their antiquities, and also traveled in northern Greece and Germany, returning in 1854. He visited Europe again in 1868, and in 1881. He also traveled much in his own country, and had a very wide acquaintance among men of all classes. In 1865-'66, in addition to his duties in the university, he filled the chair of Hebrew and New Testament Interpretation in the Rochester Theological Seminary. When the American committees were formed to aid in the revision of the English version of the Bible, in October, 1872, he was appointed a member of the New Testament Committee, and he took a very active part in the work, rarely missing a meeting of the committee, until its task was completed, in 1880. Dr. Howard Crosby being asked as to the relative work and in-

favor of the individual members, answered: "I think, on the whole, Dr. Kendrick oftenest suggested the reading that was finally adopted." Dr. Kendrick was not only the foremost Greek scholar in the country, but was deeply read in many literatures and had given much study to Oriental learning. Personally he was the favorite of the students who came under the charge of the faculty of which he formed a part, because of his genial nature, sympathetic method of instruction, and frequent humor, as well as his great scholarship. He did a vast deal of literary work, much of which was of the most exacting and laborious kind, writing elaborate articles for the "Christian Review" and other periodicals and producing many books. These included: "A Child's Book in Greek"; "Introduction to the Greek Language"; "The Greek 'Offender'"; Xenophon's "Anabasis," with notes; revision of Bullen's "Greek Grammar," and other text-books; a revised edition of the English translation of Olshausen's "Commentary on the New Testament," with many new notes and some portions retranslated (6 vols., 1853-'58); "Echols," a volume of historical translations from the French and German poets (1855); "Life and Letters of Emily C. Johnson" (1892); a translation of the Epistle to the Hebrews, with notes, for Lange's "Commentary" (1897); "Our Poetical Favorites" (5 vols., 1870-'80); a revision with notes of Meyer's "Commentary on John" (1885); "The Moral Conflict of Humanity," a volume of articles in New Testament exegesis (1894); and "A Life of Martin B. Anderson," President of the University of Rochester (1895). He left in manuscript a translation of the Epistle to the Romans, with voluminous notes.

Keyes, Erasmus Darwin, military officer, born in Brookfield, Mass., May 23, 1810; died in Nice, France, Oct. 11, 1865. He was graduated at West Point in 1831; entered the army as brevet 2d lieutenant, 3d Artillery; was promoted 1st lieutenant in 1836; captain and assistant adjutant general in 1837; major, Oct. 12, 1838; colonel, May 14, 1861; brevet brigadier general, May 31, 1862; and major general of volunteers, May 5, 1862; and resigned May 6, 1864. His last service was in Charleston harbor during the military expedition of 1862. In 1837-'41 he was an aid to Gen. Scott; in 1841-'44 was on garrison duty; in 1844-'48 was instructor in artillery and cavalry tactics at West Point; and in 1848-'60 was on garrison and frontier duty, taking part in several campaigns against hostile Indians. From Jan. 1, 1860, till April 19, 1861, he was military secretary to Gen. Scott, and he then spent some time in New York city and Boston, hastening the recruiting and forwarding of troops. Afterward he served in the defense of Washington, in the battle of Bull Run, and in the Peninsula campaign, commanding the 4th Corps of the Army of the Potomac. In January, 1862, he organized a raid to White House, Va.; in May commanded an expedition to West Point, Va.; and in June and July was engaged in another toward Richmond. At the time of his resignation he was serving on the board for retiring disabled officers. After leaving the army he was for two years president of the Mexican Gold-mining Company in San Francisco, and for four years vice-president of the California Vine-culture Society. He was author of "Fifty Years' Observation of Men and Events" (New York, 1864).

Kimball, Hannibal I., financier, born in Oxford County, Maine, in 1823; died in Brookline, Mass., April 28, 1896. He was apprenticed to the carriage-maker's trade, followed it in New Haven and Boston till 1840, entered the employ of George M. Pullman in Chicago, was placed in charge of the work of establishing street railways in the Southern States, and became head of the Southern branch of the Pullman Car Company in Atlanta. From 1866 till his death he applied himself to the material development of Georgia. Through his efforts the State capital was transferred to Atlanta, and the new Capitol built by the city and presented to the State; the railway fol-

lows in the rear of the wholesale houses on Alabama Street were improved and arranged as at present; the great commercial convention, the International Cotton Exposition of 1881, and the Cotton States and International Exposition of 1884, were organized; and a large hotel, the Kimball House, was built, and after its destruction by fire, rebuilt. Mr. Kimball was the organizer of the great cotton mills in Atlanta; and was at one time president of a railway association.

Kimball, Moses, philanthropist, born in Newburyport, Mass., Oct. 14, 1810; died in Brookline, Mass., Feb. 21, 1905. He entered mercantile life, but soon of it and purchased "The New Englander" in 1838, published it for several years, and also published engravings of Trumbull's "Signing of the Declaration of Independence," Sumner's "Washington," and many other notable pictures. In 1839 he entered mercantile life again, only to abandon it, as becoming interested in public amusements. He first opened a "lecture room" in Lowell, in which dramatic entertainments were given and vocalization exhibited. About 1840 he bought the Columbian Museum in Boston, and transferred to it all his amusement properties, and in the following year, in partnership with his brother David, he opened what is now the Boston Museum, of which he was proprietor at his death. From early life he was interested in politics, and for many years he was an influential worker in the anti-slavery cause. He was elected a member of the Common Council of Boston in 1848, and held some legislative office almost continuously for more than forty years. He was a member of the State House of Representatives for sixteen years, and director of public institutions of Boston for twelve years; was the first chairman of the State Board of Health, Lunacy, and Charity; was chairman of the House Committee on Finance for many years; and was one of the commissioners to arrange for the celebration of Emancipation in Boston. In 1878 he presided in this city the Emancipation group in Park Square. His public bequests were: To the New England Hospital for Women and Children in Boston, \$16,000; to the same hospital, the Home for Aged Men, the Home for Aged Women, the Boston Dispensary, the Massachusetts Charitable Eye and Ear Infirmary, the Gaynor Home for Children, the New England Historical-Archaeological Society, the Museum of Fine Arts, the Institute of Technology, and the Boston Young Men's Christian Union, each \$5,000; and to other association charitable organizations an aggregate of \$10,000.

Kirkwood, Daniel, educator, born in Brandenburg, Md., Sept. 27, 1814; died in Elwood, Cal., June 11, 1895. He was brought up on a farm; took a two years' course at the academy at York, Pa.; was instructor in mathematics there for five years; and was appointed principal of the High school at Lancaster, Pa., in 1847. In 1851 he was chosen Professor of Mathematics at Delaware College, of which he was elected president in 1854. Two years afterward he was called to the chair of Mathematics at Indiana University, where he remained till 1860, when he was retired. He was author of "The Attitude of Minor Planets between Mars and Jupiter."

Kneeland, Joseph C., inventor, born in Ashbyville (now West Springfield), Mass., about 1812; died in Northampton, Mass., Aug. 31, 1885. He learned the printer's trade in Northampton, and followed it in Greenfield, Worcester, Troy, and New York city, returning finally to Northampton about 1839. Of his many inventions relating to the printing business, the most important are the "lay-off," a device for resolving and piling up paper from a manufacturing or printing machine, an improved writing paper folder, and an improved guide for looking up forms. The first invention yielded him large returns.

Lange, William Chaney, clergyman, born in Burlington, Vt., Aug. 18, 1831; died in Providence, R. I., Oct. 28, 1895. He was graduated at Transylvania University, and after teaching for a short time in Shelby College, Kentucky, was for several years an examiner in the Patent Office. In 1858 he took

priest's orders in the Episcopal Church, and in the same year founded the American Episcopal Church in Rome, and was its rector until 1862. He then became rector of St. John's Church at Havre de Grace, Md. In 1867 he went abroad again, remaining there until 1873, in the interest of the movement for Church union, and was very active in bringing about cordial relations between "Old Catholics" and the American bishops. During this time he founded Emmanuel Church at Geneva, and was its rector for two years. He was subsequently rector of Christ Church, Cambridge, Mass., from 1873 to 1877, and of St. James's Church in Bedford, Pa., from 1883 to 1890. He retired from active clerical duty in that year, but still labored in behalf of the cause of Christian unity. He published "Some Account of the Catholic Reform Movement in the Italian Church" (London, 1869); "The Defects of our Practical Catholicity" (New York, 1871); "Plain Papers for Parish Priests and People (1880-'83)"; "Conflict of Practice and Principle in the American Church Polity" (Cambridge, 1882).

Langstroth, Loran L., apiarist, born in Philadelphia, Pa., Dec. 25, 1810; died in Dayton, Ohio, Oct. 6, 1895. He was graduated at Yale College in 1830; was a tutor there in 1834-'35; entered the ministry of the Congregational Church; and became principal of a young ladies' seminary in Philadelphia in 1848. Since 1858 he had been engaged chiefly in the cultivation of bees at Oxford, Ohio, occasionally acting as a ministerial supply. He invented the movable-comb hive, and was the author of "The Hive and the Honey Bee."

Lauman, Charles, author, born in Monroe, Mich., June 14, 1819; died in Washington, D. C., March 4, 1895. He spent ten years in a business house in New York city, and in 1845 became editor of the "Gazette" in his native town. In 1846 he became associate editor of the Cincinnati "Chronicle," and in 1847 of the New York "Express"; in 1849 was appointed librarian of the War Department; and in 1850 became librarian of copyrights and private secretary of Daniel Webster. He was examiner of depositaries for the Southern States in 1853; librarian of the Interior Department in 1855-'57; librarian of

the House of Representatives in 1866; and secretary to the Japanese legation at Washington in 1871-'82. The last fifteen years of his life were spent in literary work and in painting, as he had studied art with Asher B. Durand and been elected an associate of the National Academy in 1846. He was the first person to penetrate the Saguenay region in Canada, and was one of the first explorers of the mountain region of North Carolina. He contributed frequently to the exhibitions of the National Academy, his best-known paintings being "Brookside and Homestead"; "Home in the Woods" (1851); and "Frontier Home" (1884). His publications included: "Essays for Summer Hours" (Boston, 1842); "Letters from a Landscape Painter" (1845); "A Summer in the Wilderness" (New York, 1847); "A Tour to the River Saguenay" (Philadelphia, 1848); "Letters from the Alleghany Mountains" (New York, 1849); "Private Life of Daniel Webster" (1852); "Dictionary of Congress" (several editions); "Red Book of Michigan" (Detroit, 1871); "Resources of America," compiled for the Japanese Government (Washington, 1872); "The Japanese in America" (1872); "Biographical Annals of the Civil Government of the United States" (several editions); "Curious Characters and Pleasant

Places" (Edinburgh, 1881); "Leading Men of Japan" (Boston, 1883); "Furthest North" (New York, 1885); and "Haphazard Personalities" (1886).

Leach, Stephen W., composer, born in Rumsey, England, in 1821; died in Oakland, Cal., Aug. 21, 1895. Prior to coming to the United States he played double bass in the orchestra that accompanied Paganini in Southampton. He made his first appearance in the United States in Philadelphia, April 25, 1849. At one time he was chorus master of Jenny Lind's company, and he also sang with Anna Bishop and with Patti. In 1861 he went to San Francisco with an opera company, and after a season of song he joined the company of the California Theater. Afterward he established himself in Oakland, where he conducted a conservatory of music. While connected with the California Theater he wrote the incidental music for at least 50 plays, including the parts for John McCullough's "King John," "Coriolanus," and "Rochelien," and that for Adelaide Neilson's "Cymbeline." His last composition was a special Easter service for 1895.

Leclercq, Charles, actor, born in England about 1830; died in New York city, Sept. 19, 1895. He was a son of Charles Leclercq, a well-known English actor and pantomimist, and a brother of the late Carlotta Leclercq and of Rose Leclercq. He came to the United States in 1870, and after supporting Charles Fechter as Caderousse in "The Count of Monte Cristo," he joined the company at Daly's Theater, with which he remained for fourteen years, playing chiefly comedy and dialect parts.

Lee, Samuel J., lawyer, born in Abbeville County, South Carolina; died in Charleston, S. C., April 1, 1865. He was born in slavery, on the plantation of Samuel McGowan, who became a Confederate general; was body servant of his master throughout the civil war, in which he was wounded; and after the war secured an education and was admitted to the bar. About the beginning of the reconstruction period in South Carolina he moved into Edgefield County, and was elected to the General Assembly, of which he became Speaker when Franklin J. Moses was elected Governor. In 1876 he escaped the prosecutions that befell most of the officeholders of that period, and settled in Charleston, where he secured considerable practice and the good will of white lawyers. On the reorganization of the State militia he was commissioned brigadier general of the 1st brigade of colored troops, being the only colored officer of that rank in the United States.

Lewis, John Francis, farmer, born near Port Republic, Va., March 1, 1818; died in Lynwood, Va., Sept. 2, 1895. He was brought up as a farmer, and spent all his life, when not in public office, as such. In 1861 he was a delegate to the State convention called to determine whether Virginia should secede, and was the only member within the present limits of the State who refused to sign the ordinance of secession. With others he appealed successfully to President Grant to recommend to Congress the passage of an act submitting to a separate vote of the people of Virginia the disfranchising clauses of the Underwood Constitution, and in 1869, when the reform Constitution was adopted, he was elected Lieutenant Governor on the True Republican ticket. The same year he was elected United States Senator, and during his term he was chairman of the Committee on the District of Columbia and a member of that on Engraving Bills. In 1875 he was appointed United States marshal for the Southwestern District of Virginia, and in 1881 he was again elected Lieutenant Governor on the Readjuster ticket.

Loomis, Alfred Lebbens, physician, born in Bennington, Vt., June 10, 1831; died in New York city, Jan. 23, 1895. He was graduated at Union College in 1851 and at the College of Physicians and Surgeons in 1853; spent two years as assistant physician to the hospitals on Ward's and Blackwell's islands; and, establishing himself in New York city, made a specialty of pulmonary diseases. In 1860 he was ap-

physician to Bellevue Hospital; in 1860-73 was consulting physician to the Charity Hospital; from 1874 till his death was physician to the Mount Sinai Hospital; and since 1864 had been connected with the University of the City of New York, first as Adjunct Professor of the Theory and Practice of Medicine, and after 1866 as full professor. He was also for several years lecturer on physical diagnosis at the College of Physicians and Surgeons. In the University of the City of New York he was the leader in three notable steps of the faculty of medicine—the liquidation of the debt in 1860; the securing in 1867 of \$100,000 for a new laboratory, the donor of which insisted that the laboratory should bear the name of Dr. Loomis; and the reorganization in 1862 of the course of study. Dr. Loomis had been President of the New York Pathological Society and of the New York State Medical Society. He bequeathed \$25,000 to the Loomis Laboratory and \$10,000 to the New York Academy of Medicine. He published "Loomis in Physical Diagnosis" (New York, 1868); "Diseases of the Respiratory Organs, Heart, and Kidneys" (1876); "Lectures on Fevers" (1882); "Diseases of Old Age" (1882); and "A Year's work of Practical Medicine" (1884).

Loof, Henry Augustus, artist, born in Hillsdale, N. Y., Sept. 9, 1831; died at Lake George, N. Y., Oct. 30, 1906. He was educated at Great Barrington, Mass.; studied painting in New York with Henry Peters (1850), N. A., and in Paris with Thomas Couture; continued his studies in Rome, Venice, and Florence; and opened a studio in New York. In 1859 he was elected an associate of the National Academy of Design, and in 1861 an academician. He confined himself chiefly to portraiture. Among his paintings are: "Andros" (1861); "Aphrodite" (1876); "Echo" (1877); "Hermione and Helena" (1877); "Erone" (1879); "At the Spring" (1879); "Idyl of the Lake" (1881); "Love's Crown" (1882); "Summer Moon" (1884); "The Dreamer" (1885); and many portraits.

McCulloch, Hugh, financier, born in Kennebunk, Me., Dec. 7, 1808; died near Washington, D. C., May 24, 1865. He studied at Bowdoin College and in Boston, and in 1823 removed to Fort Wayne, Ind., and began law practice. But finding this vocation uncongenial, he accepted the management of a branch of the State Bank of Indiana in 1826. In the following year he was elected a director. He remained with this branch till the expiration of its charter, in 1837, when he was chosen president of a newly organized State Bank of Indiana, with which he remained till May, 1865, when he became Comptroller of the Currency under the national banking law. Two years afterward, on the resignation of William P. Fessenden, Secretary of the Treasury, he was appointed by President Lincoln to fill the vacancy.

At this time the Government was in great financial straits, owing to its enormous expenses and the heavy demands upon the Treasury. In less than six months from the time of his appointment the Government had paid the large amount due to 600,000 soldiers and sailors whose services were no longer necessary, had discharged other large obligations, and had begun reducing the national debt. By converting more than \$1,000,000,000 of short-time obligations into a funded debt, Secretary McCulloch succeeded in placing the whole debt of the country in a satisfactory shape in a little more than two years. He constantly advocated a steady reduction of the national debt, the retirement of the legal-tender

notes, and a speedy return to specie payments, and his views concerning the management of the debt were sustained by Congress. He held the office till March 4, 1869, and from 1871 till 1879 was engaged in banking in London. In 1864, on the resignation of Walter Q. Gresham, he was recalled to the secretaryship of the Treasury by President Arthur, and he continued in the office to the close of that administration. He published "Men and Measures of Half a Century" (1886). He was the last survivor of President Lincoln's Cabinet officers.

McPherson, Edward, journalist, born in Gettysburg, Pa., July 11, 1830; died there Dec. 14, 1902. He was graduated at the University of Pennsylvania in 1848, and studied law, but soon abandoned it for journalism. In 1848 and 1849 he was elected to Congress as a Republican; in 1850 was appointed Deputy Commissioner of Internal Revenue, and after six months' service resigned on being elected clerk of the United States House of Representatives. He held the last office continuously till 1872, again in 1892-95, and again in 1899-91. In 1879 he was permanent president of the National Republican Convention; in 1877-79 was chief of the Bureau of Engraving and Printing; in 1877 he was editor of "The Philadelphia Press," and from 1880 was editor and proprietor of a paper in Gettysburg. He received the degree of LL. D. from the University of Pennsylvania in 1877. For several years he was the American editor of the "Allgemeine Zeitung der Goten"; from 1872 editor of a bi-monthly "Handbook of Politics"; and from 1877 editor of the "New York Tribune Almanac." He also published a "Political History of the United States during the Great Rebellion" (Washington, 1865), and "The Political History of the United States during Reconstruction" (1876).

Mahone, William, military officer, born in Southampton county, Va., Dec. 1, 1808; died in Washington, D. C., Oct. 8, 1865. He was graduated at the Virginia Military Institute in 1827, and was engaged in civil engineering till the beginning of the civil war. Early in 1861 he joined the Confederate army. He took part in the capture of the Norfolk Navy Yard, and commanded the 5th Virginia Regiment, and distinguished himself in the battles on the peninsula, on the Rappahannock, and around Petersburg. In March, 1864, he was commissioned a brigadier general, and in the following month was promoted major general. Subsequently he commanded a division in Gen. A. P. Hill's corps. After the war he resumed civil engineering, and became President of the Norfolk and Tennessee Railroad Company. In 1879 he was defeated as Democratic candidate for Governor of Virginia, and, becoming dissatisfied with his party, he organized and became the leader of the "Emancipator" party, which advocated a partial repudiation of the State debt. The following year the new party defeated the regular Democratic organization, and carried both branches of the Legislature, and in 1880 elected Gen. Mahone United States Senator. In the Senate he allied himself with the members of the Republican party. He was a prohibitionist. After his term he spent most of his time in Washington, where he was believed to be a millionaire; but in April, 1895, he executed a deed in front of a large part of his property in Petersburg, to secure the payment of taxes.

Manogue, Patrick, clergyman, born in Donaghadee, County Kildare, Ireland, in 1831; died in Sacramento, Cal., Feb. 27, 1888. He received a religious education, came to the United States in 1850, and studied theology and philosophy at the University of St. Mary of the Lake, Chicago. After graduation he went to California, where he spent three years as a miner, mining superintendant, and part owner, and with his earnings went to Paris and completed his studies for the Roman Catholic priesthood. He was ordained in 1854, and was assigned to mission work in Virginia City, then a typical mining camp, full of saloons and gambling houses. The young priest showed himself at the start to be possessed of great physical courage, and by it as well as his conscientious work soon ac-

himself respected and popular. Through his efforts St. Mary's Church and a house for the Sisters of Charity were erected in the city, and effective mission work was done in the entire Grass valley. When the diocese of Grass Valley was created, he was made its vicar-general, and he acted as such for fifteen years. On July 30, 1880, he was appointed coadjutor to Bishop O'Connell, and in 1884 he became the second Bishop of Grass Valley. In May, 1886, the diocese was enlarged by the addition of adjoining counties. Sacramento was made the see, and Bishop Manogue was transferred to it.

Marshall, William Rainey, military officer, born in Boone county, Mo., Oct. 17, 1825; died in Pasadena, Cal., April 4, 1895. In early life he accompanied his parents to Quincy, Ill., where he received a common-school education. In 1841 he went to work in the lead mines at Galena; in 1847 engaged in the survey of public lands in the part of Wisconsin Territory now within the limits of Minnesota; in 1849 with his brother established the first general merchandise store on the site of Minneapolis; and in 1852 opened the first iron store within the limits of Minnesota at St. Paul. He was a banker in St. Paul in 1855-57; became a dairy farmer and stock breeder in the last year; and established "The Daily Press" (now "The Pioneer Press") in 1861. He was elected to the Legislature of Wisconsin in 1848, and to the First Territorial Legislature of Minnesota in 1849. He was also active in organizing the Republican party in Minnesota, and in 1855 was defeated as its candidate for Congress. In 1862 he was commissioned colonel of the 7th Minnesota Regiment, with which he took part in two campaigns against the Indians; in 1863 was assigned to the 16th Army Corps, with which he was engaged in several battles; in December, 1864, commanded a brigade at the battle of Nashville; and on March 13, 1865, was brevetted brigadier general of volunteers for meritorious services. He was elected Governor of Minnesota in 1865 and 1867, and was afterward a commissioner of railroads.

Martine, Randolph Brant, jurist, born in New York city in 1844; died there March 30, 1895. He was graduated at Columbia College Law School in 1866, and the same year was admitted to the bar and began practice in New York city. For several years he was an active member of Tammany Hall, but in 1882 he resigned, and two years afterward, when chairman of the executive committee of the County Democracy, he was its successful candidate for district attorney. During his tenure a number of celebrated cases were tried, among them the members of the board of aldermen who were indicted for accepting bribes from Jacob Sharp in return for the franchise of the Broadway surface railroad. He personally took charge of the prosecution of Mr. Sharp, and secured a conviction. In 1887 the Legislature provided for the election of an additional judge of the Court of General Sessions, and in the autumn of that year Mr. Martine was elected the first additional judge.

Marvill, Joshua Hopkins, manufacturer, born in Laurel, Del., Sept. 2, 1825; died there April 8, 1895. He was brought up on a farm, went to sea for a year on obtaining his majority, and worked in a shipyard for seven years. In 1853 he established himself as a manufacturer of agricultural implements, and in 1870 began making peach and berry baskets by means of an invention of his own. The following year he introduced steam power into his plant, and afterward he extended his works till they had a capacity of 100,000 fruit baskets per annum. In August, 1894, he was Republican candidate for Governor of Delaware, and was elected.

Massy, Samuel Bell, military officer, born in Tompkinsville, Monroe county, Ky., March 30, 1825; died in Eureka Springs, Ark., Aug. 16, 1895. He was graduated at West Point in 1846; entered the army as brevet lieutenant, 7th Infantry; served with distinction through the Mexican War; was brevetted 1st lieutenant for gallantry at Contreras and Churubusco, and was appointed commandant of a picked company

in the city guard after the occupation of Mexico city. After the war he was on duty at Jefferson barracks till September, 1849, when he resigned, studied law, was admitted to the bar in 1850, and began to practice in Albany, Ky. He removed to Paris, Texas, in 1857, and practiced there till the beginning of the civil war. He raised the 9th Texas Infantry for the Confederate army, and was commissioned its colonel. He was promoted brigadier general in 1862; took part in the assault on Gen. Buell's retreating army in the first siege of Port Hudson and in the defense of Jackson, Miss.; and in 1863-65 commanded the Confederate military district of the Indian Territory, and was promoted major general. After the war he resumed law practice at his home. In 1874 and 1881 he was elected to the United States Senate as a Democrat. In the Senate he was chairman of the Committee on Post Offices and Post Roads and of the select committee to inquire into claims of citizens of the United States against Nicaragua.

Merriam, Augustus Chapman, educator, born in Loud Grove, N. Y., May 30, 1843; died in Athens, Greece, Jan. 19, 1895. He was graduated at Columbia College in 1866, and was tutor in Greek and Latin there in 1868-'80, Adjunct Professor of Greek in 1880-'89, and Professor of Greek Archaeology and Epigraphy from 1889 till his death. He was also at the time of his death the senior active professor in the School of Philosophy and one of the senior instructors in the School of Arts of the college. In 1886-'87 he was President of the American Philological Association; in 1887-'88 was director of the American School of Classical Studies at Athens; and in 1891-'94 was President of the New York Society of the Archaeological Institute of America. He superintended excavations at Siegow and Icaria, and by his investigations in 1888 determined the birthplace of Mespia. He published numerous papers on inscriptions in "The American Journal of Philology" and "The American Journal of Archaeology"; editions of Books VI, VII, and VIII of the "Odyssey," and Books VI and VII of "Herodotus"; and, among other writings, "The Greek and the Latin Inscriptions on the Obelisk Crab in Central Park" (1885) and "The Law Code of Gortyn in Crete—Text, Translation, and Comment" (1886).

Miles, Henry Adolphus, clergyman, born in Grafton, Mass., May 30, 1809; died in Hingham, Mass., May 31, 1895. He was graduated at Brown University in 1829, and at Harvard divinity school in 1834; was ordained to the ministry of the Unitarian Church in Hallowell, Me., in 1832; and continued in pastoral relations till within a few years of his death. In 1836-'53 he held a pastorate at Lowell, Mass.; in 1853-'69 was secretary of the American Unitarian Association at Boston; and in 1876-'84 was pastor at Hingham. He edited the "Quarterly Journal" in Boston, in 1854-'59, and published "Lowell as it was and is" (Lowell, 1845); "Grains of Gold" (Boston, 1854); "The Altar at Home" (1855); "Gospel Narratives" (1858); "Channing's Thoughts" (1859); "Words of a Friend" and "Picture Writing" (1870); and "The Birth of Jesus" (1878).

Millard Harrison, composer, born in Boston, Mass., Nov. 27, 1829; died in New York city, Sept. 10, 1895. He received a public-school education; studied music in Italy; appeared as a tenor singer in grand opera at Florence in 1852; returned to Boston and joined the Handel and Haydn Oratorio Society in 1855; and removed to New York city and composed his song "Vive l'America" in 1859. In 1861 he enlisted as a private in the 71st New York Regiment, and while the regiment was in Washington he created a sensation by singing "Vive l'America" at a social gathering composed chiefly of Southerners. President Lincoln, on being informed of the incident, sent for the composer, and, after congratulating him on his patriotism, commissioned him a 1st lieutenant in the 19th Infantry. He served at various times as aid-de-camp, division commissary, and division inspector on the staffs of Gens. Rousseau, Rosecrans, and Inness

H. Palmer; was wounded at Chickamauga, Sept. 19, 1864, and resigned from the army soon afterward. Returning to New York, he was appointed to a place in the customhouse, where he remained till 1865. During all this time he carried on his work as a composer, writing masses and vespers and many songs, including "Waiting," "When the Tide comes in," "Under the Palms," and "Say not Farewell." His "Waiting" is the best song used in the Conservatory of Music in Paris. He also composed the grand opera "Leah." During the season of 1894 he traveled with his daughter, Marie Millard, prima donna of the Spolys Opera Company.

Miller, John, clergyman, born in Princeton, N. J., April 8, 1819; died there April 14, 1896. He was graduated at Princeton in 1838, and began preparing for a professorship in natural philosophy, but in consequence of a religious revival determined to enter upon the ministry, and was graduated at the theological seminary in 1842. In the following year he was installed pastor of the Presbyterian church in Frederick City, Md.; in 1850 was settled over the Vine Street Church in Philadelphia and in 1855 removed to Lexington, Va. He served during a part of the civil war in the Confederate army, and from 1863 till 1871 was pastor of the Washington Street Presbyterian Church in Petersburg, Va. Returning to Princeton in the last year, he devoted himself to original investigations in theological matters. As results he published a "Commentary on Proverbs" (New York, 1861); "Fetich in Theology" (1874); "Metaphysics, or, The Science of Perception" (1875); and "Questions answered by the Bible." He was tried in May, 1877, by the New Brunswick Presbytery, on a charge of publicly denying and assailing important doctrines in the Confession of Faith and the catechisms of the Presbyterian Church, and was suspended from the ministry. He appealed to the Synod of New Jersey, and finally to the General Assembly, and the latter body modified his sentence so as to permit him to withdraw from the Presbyterian Church instead of being deposed. He then went to Palmyra, near Princeton, which was destitute of church accommodations, built a church at his own expense, and soon gathered a large congregation. In 1880 he built a second church, at Princeton; subsequently erected a third one, at Monmouth Junction; and in May, 1890, purchased a building in New Brunswick which had been occupied by a Baptist congregation and began preaching there in March following. All these churches were conducted according to the doctrines of the Cumberland Presbyterian Church.

Miner, Alonzo Ames, clergyman, born in Lempster, N. H., Aug. 17, 1814; died in Boston, Mass., June 14, 1896. He was educated in public schools and academies in New Hampshire and Vermont, and began teaching when sixteen years old. In June, 1839, he was ordained as a Universalist clergyman at Methuen, Mass.; in 1842 removed to Lowell, where he distinguished himself by combating the rationalistic influence of Theodore Parker; in 1848 succeeded E. H. Chapin as associate of the Rev. Hosea Ballou, whom he succeeded, and held this charge nominally till his death, though retiring from the active pastorate in 1861. In early life he was elected an overseer of Harvard College by the Legislature; was appointed a member of the State Board of Education by three different governors, serving in all for twenty-four years; for nearly twenty-one years was chairman of the Board of Visitors of the State Normal Art School; and for twenty years was President of the Massachusetts Temperance Alliance. He was a founder of Tufts College, of which he was president from July, 1863, till November, 1874. Through life he was active in many philanthropic and patriotic enterprises and in various work of various kinds, and was the founder of the Universalist Publishing House in Boston. He was the Prohibition candidate for Governor in 1878. Besides editing "The Story of Bethlehem" he published books including "Bible Expositions" (1854, 1884) and "Old Ports taken" (1878,

1885). He had executed a bond in favor of Tufts College for \$40,000 for the construction of Miner Theological Hall, and by his will, leaving all his property in trust to his widow, he expressed a desire that, if she did not otherwise dispose of the property, she should give \$40,000 each to the Second Universalist Society, Boston; Union Publishing House, Boston; Massachusetts Convention of Universalists; Standard Biscuitary, Barre, Vt.; Dean Academy, Franklin, Mass.; and Wetherlock Universalist Society; and the residue of the estate, about \$40,000, to Tufts College. The widow died on July 25, 1898, and bequeathed the bulk of the property to her nephew. In October following all the institutions mentioned in Dr. Miner's will joined with the trustees of Tufts College in an attempt to set aside the widow's will.

Minor, John Barben, jurist, born in Louisa County, Virginia, June 1, 1815; died in Charlottesville, Va., July 28, 1896. He was educated at Kenyon College, Ohio, and at the University of Virginia, where he was graduated in 1835. He entered on the practice of law at Buchanan, Va., but in 1840 removed to Charlottesville. In 1842 he was elected Professor of Law at the University of Virginia, and for several years had entire charge of the Law School, subsequently on the division of his work, he took the chair of Common and Statute Law. During the civil war he had sole charge of the school. From 1879 till his death he also conducted a summer law school. He was author of "The Virginia Report of 1789-1800" (Richmond, 1859); "Synopsis of The Law of Crimes and Punishments" (1862); and "Institute of Common and Statute Law" (several editions).

Moore, Gordon E., chemist, born in 1849; died in New York city, April 13, 1895. He was graduated at Yale in 1861; became assayer of the Gold and Curry mines in Nevada; and, going abroad to continue his studies, was graduated at Heidelberg with the highest honors, and spent considerable time in the laboratories of Leipzig, Berlin, Wiesbaden, and Poth. On his return he opened a laboratory in New York. Dr. Moore was the chief Government expert in the colored sugar suit in Baltimore in 1877, and in the soda trial in New York in 1890.

Morris, John Gottlieb, clergyman, born in York, Pa., Nov. 14, 1802; died in Lutherville, Md., Oct. 18, 1896. His father was a surgeon in the Revolutionary War. The son was partially educated at Princeton, where he was awarded a prize in oratory, and was graduated at Dickinson College in 1820. In theology he was graduated at Princeton in 1825, and then continued his studies in the new seminary at Göttingen. In October, 1826, he was licensed, and accepted a call to the First English Lutheran Church of Baltimore, where he remained until June 1, 1830. During his long pastorate the church building was renovated and enlarged, and two other congregations were organized out of the First Church. He was an intimate friend of George Peck, was designated as one of the trustees of the Faculty Institute, and in 1860 became its librarian. He was pastor of the Third English Lutheran Church, Baltimore, in 1848-51, and of the Lutheran Church at Lutherville, Md., in 1875-96. He was the principal founder of the College for Women at Lutherville in 1885, and also of the large hall. He was lecturer on natural history in Pennsylvania College, Gettysburg, Pa., from 1864 until his death, on pulpit eloquence and the sciences of science and revelation in the theological seminary at the same place from 1874, and delivered numerous lectures in the Smithsonian Institution, Washington, and was for a long period Professor of Natural Theology in the University of Maryland. He edited the "Lutheran Observer" in 1843-54; was secretary of the General Synod in 1848; president of the same body in 1849, and again in 1861; and president of the First Lutheran Church, 1861, held in Philadelphia in 1871. He devoted himself to exegesis and exegesis, and contributed numerous articles to scientific journals. He was a frequent contributor to the more important Lutheran periodicals, was an earnest student

of Lutheran history, and did much to cultivate the taste for history in others. He was the founder of the Lutheran Historical Society, whose library at Gettysburg is one of the most valuable in the country, due chiefly to his indefatigable industry in the collection of historical material. He was the founder of the Academy of Lutheran Church History, whose only president he was. He was an enthusiastic Luther student, collecting and collating everything pertaining to Luther on which he could lay his hands; and he collected the best Luther library in this country. Besides many translations and addresses, review and magazine articles, tracts and scientific articles, he published "Catechumen's and Communicant's Companion" (Baltimore, 1831); "Henry and Antonio" of Bretschneider, translated from the German (Philadelphia, 1831; altered ed., entitled "To Rome and Back Again," 1853); "Catechetical Exercises on Luther's Catechism," adapted from the German (Baltimore, 1832); Von Leonard's "Lectures on Geology" (tr., 1839); "Popular Exposition of the Gospels" (2 vols., 1840); "Life of John Arndt" (1853); "Life of Martin Behaim, the German Cosmographer" (1856); "Life of Catherine de Bora" (1856); "The Blind Girl of Wittenberg" (Philadelphia, 1856); "Quaint Sayings and Doings concerning Luther" (1859); "Catalogue of the Lepidoptera of North America" (1860); "Synopsis of the Diurnal Lepidoptera of the United States" (Washington, 1862); "The Lords Baltimore" (Baltimore, 1874); "Bibliotheca Lutherana" (Philadelphia, 1876); "Fifty Years in the Lutheran Ministry" (1878); "A Day in Capernaum," translated from Franz Delitzsch (1879); "The Diet of Augsburg" (1879); "Augsburg Confession and the Thirty-nine Articles" (1879); "Journeys of Luther" (1880); "Luther at Wartburg and Coburg" (1882); "Life of Luther," translated from Koestlin (1883); "Lutheran Doctrine of the Lord's Supper" (1884); "Memoirs of the Stork Family" (1884).

Morris, Leason Burritt, jurist, born in Newton, Conn., April 14, 1827; died in New Haven, Conn., Aug. 22, 1886. He was graduated at Yale in 1854, and was admitted to the bar of New Haven County in 1856. In 1855, 1856, 1870, 1876, 1880, and 1881 he was elected to the State House of Representatives; in 1871 was elected to the State Senate and was president of that body; in 1857-'63 was probate judge of the New Haven district; and in 1885 was appointed chairman of a commission to revise the probate laws of the State. He had early identified himself with the Democratic party, and in 1888 was its candidate for Governor. He received 75,174 votes, a plurality of 1,415, but failed to receive a majority of all votes cast. In 1890 he was again candidate for Governor, and his party friends declared that he had a majority of 26 and a plurality of 3,653 over his Republican opponent. A deadlock followed. The contest for the office was taken from one court to another, and was held in litigation till the expiration of the term. In 1892 Judge Morris was a third time his party's candidate for the office, and was elected. He was administrator of the estate of Daniel Hand, the philanthropist.

Menger, George G., lawyer, born in Morrisville, Madison county, N. Y., in 1829; died in New York city, March 14, 1895. He was graduated at Yale in 1849, took the course at the Harvard Law School, completed his readings in Rochester, and was admitted to the bar there in 1850. Soon afterward he was elected a supervisor of Monroe County, and before he was thirty years old he was elected county judge for a term of four years. On retiring from the bench he was twice elected a State Senator as a Republican. Subsequently he became a Democrat. He formed a partnership with Sanford E. Church, afterward chief justice of the Court of Appeals, and resumed the practice of law in Rochester. About 1860 he removed to New York city and formed a partnership with Martin T. McMahon, and later with James A. Deering. He published a work on "Application of Partial Payments."

Nason, Henry Bradford, chemist, born in Foxboro, Mass., June 22, 1831; died in Troy, N. Y., Jan. 18, 1895. He was graduated at Amherst College in 1853; took a course in chemistry and the natural sciences at the University of Göttingen; and in 1858 was appointed Professor of Natural History at Rensselaer Polytechnic Institute in Troy, and also Professor of Chemistry and Natural Sciences in Beloit College, Wisconsin. In 1866 he was called to the chair of Chemistry and Natural Science in the Polytechnic Institute, which he held till his death. He was a juror at the World's Fair in Paris in 1878 by the United States Government for the department of mineralogy and metallurgy, and since 1880 had occupied the place of chemist to the Standard Oil Company. He received the degree of Ph. D. for original investigations on the formation of ethers from the University of Göttingen in 1857. Since 1880 he had devoted much attention to methods for improving the treatment of crude oil and for abating the nuisances arising from the products of oil refineries. Among his numerous publications are "Table of Reactions for Qualitative Analysis" (Troy, 1865); a translation of Wohler's "Handbook of Mineral Analysis" (Philadelphia, 1868); "Table for Qualitative Analysis in Colors" (Troy, 1870); and an edition of Elderhorst's "Blowpipe Analysis" (1873; revised ed., 1880).

Neumoegen, Berthold, entomologist, born in Germany in 1844; died in New York city, Jan. 21, 1895. He was a broker in New York for many years. In early life he developed a desire to make the largest and most beautiful collection of butterflies in the world, and for more than twenty years all his leisure was devoted to this object. He received choice specimens from Africa through Dr. Livingstone, and others through Henry M. Stanley, Lieut. Schwatka, members of the Greely Relief Expedition, and from personal friends in various parts of the world. He kept 2 men employed in receiving and shipping specimens in exchange with other collectors, and in a single consignment he shipped 20,000 butterflies to Europe. His collection contained 100,000 rare specimens. He is known to have paid \$160 for a single specimen. His collection was exhibited in New York city in April, 1888. There are but two known collections in the world that exceed in number and variety this one; one is owned by the British Museum, and the other is in Paris.

Newton, Henry J., manufacturer, born in Connecticut in 1823; died in New York city, Dec. 23, 1895. For many years he was a member of the firm of Leight, Bradbury & Newton, piano manufacturers, and at the time of his death was President of the Newton-Merritt Bronze Company. He was president of the photographic department of the American Institute for twenty years, the inventor of the dry-plate process of photography, President of the Camera Club of New York, and a member of the Governing Board of the Brooklyn Institute. The top floor of his residence was fitted up as a laboratory, where he studied chemistry, physics, and astronomy, and during the last twenty years of his life he gave much time to investigations in spiritualism. In the summer of 1875 he became chairman of a committee to investigate the phenomena of an alleged materialization by a combustion of aromatic gum and herbs. The committee met at Mr. Newton's house, an organization was completed, and the name of "The Theosophical Society" was adopted. Subsequently the idea was taken up by Henry S. Olcott and Mme. Blavatsky, and expanded into a system of occultism, for which an East Indian origin was claimed. Mr. Newton claimed that the Theosophical Society originated in his house and not in Asia, that all the Indian accessories were an afterthought, and that they constituted a fiction.

Newton, John, soldier, born in Norfolk, Va., Aug. 24, 1823; died in New York city, May 1, 1895. He was graduated at West Point in 1842, standing second in a class of 56, and was commissioned 2d lieutenant of engineers, and assigned to duty as Assistant Pro-

of Engineering in the Academy. Subsequently he served in the construction of fortifications and other works along the Atlantic and Gulf coasts until 1860, except during 1856, when he was chief engineer of the Utah expedition.

On July 1, 1856, he was promoted captain, and at the beginning of the civil war he was chief engineer of the Department of Pennsylvania, holding later a like office in the Department of the Shenandoah. From August, 1861, till March, 1862, he was engaged in constructing the defenses of Washington, D. C., where he also had a brigade, having been made brigadier general

of volunteers on Sept. 23, 1861. During the Peninsula campaign he served with the Army of the Potomac, and was engaged in the actions at West Point, Gaines's Mill, and Glendale. He continued with his command in the Maryland campaign, participating in the forcing of Crampton's Gap and the battle of Antietam. In the storming of Marye Heights at the battle of Fredericksburg he led a division. He was made major general of volunteers on March 30, 1863, and took part in the Chancellorsville campaign. In the Pennsylvania campaign he succeeded to the command of the 1st Corps on July 2, 1863, after the death of Gen. John F. Reynolds, and held it during the last days of the battle of Gettysburg. He was brevetted colonel for services in that action. He was given the 3d division of the 4th Corps of the Army of the Cumberland under Gen. Oliver O. Howard in May, 1864, and participated in the invasion of Georgia, taking part in the engagements that culminated in the capture of Atlanta in September. Later, he had various districts in Florida until January, 1866, when he was mustered out of the volunteer service after receiving the brevet of major general of volunteers, and that of brigadier general and major general in the regular army. He received his regular promotion as lieutenant colonel of engineers on Dec. 28, 1865, and in April, 1866, was made superintending engineer of the construction of the defenses on the Long Island side of the Narrows entrance to New York harbor; also of the improvements of Hudson river and of the fort at Sandy Hook. His most brilliant achievement was the removal of the dangerous rocks at Hell Gate. This compelled the solution of novel engineering problems and the invention of new apparatus. He blew up Hallett's Reef on Sept. 24, 1874, and Flood Bank on Oct. 10, 1885 (see "Annual Cyclopaedia" for 1886, page 470 *et seq.*). Meanwhile the proposed enlargement of Harlem river, the improvements of Hudson river from Troy to New York, and of the channel between New Jersey and Staten Island and of the harbors of Lake Champlain were placed under his direction. On June 30, 1879, he was promoted colonel, and on March 6, 1884, was made chief of engineers with the rank of brigadier general, holding that place until his retirement on Aug. 25, 1888. He was appointed Commissioner of Public Works in New York city Aug. 31, 1887, which office he held until Nov. 24, 1888. During his administration policies were entirely eliminated from the department, and many reforms instituted, notably one that no remunerations should be made except for sufficient cause.

Northeast, Charles, educator, born in Newbury, Mass., April 2, 1814; died in New Britain, Conn., Aug. 7, 1886. He was educated at Amherst College; became an assistant teacher in Dunsmuir Academy; taught in South Danvers; was master of the Eppe School in Salem for twelve years; and was superintendent of public schools in Danvers for three years. In 1855 he removed to New Britain, and for eleven years was

superintendent of the public schools of that town. For several years he traveled over the State, holding teachers' meetings and lecturing, and he also made a tour of New England, New York, and Pennsylvania in the interests of public education. He was a member of the American Institute of Instruction for fifty years, and its president in 1882, and was also president of the Essex County Teachers' Association for a number of years. Prof. Northeast published numerous works, including "The Teacher and the Parent"; "Teachers' Associations"; "Annals of American Institutions of Instruction"; "Memory Games"; "Children's Thoughts"; and "List of Ellen Harris."

Oliver, James Edward, mathematician, born in Portland, Me., July 27, 1829; died in Ithaca, N. Y., March 27, 1905. He was graduated at Harvard in 1850, and was the class poet of his year. While at Cambridge he came under the influence of Benjamin Peirce, who always regarded his student as "the prince of American mathematicians." Through the influence of Peirce an appointment was secured for Oliver in the office of the "American Ephemeris and Nautical Almanac," and there he remained until 1871, when he was called to an Assistant Professorship of Mathematics in Cornell University. On the death of Evan W. Evans, in 1872, he succeeded to the chair, and remained thereafter head of the department of mathematics until his death. As a teacher, he was thorough, painstaking, considerate, and inspiring by his wealth of suggestiveness and depth of insight. He was especially noted for the clearness with which he presented difficult problems to his classes. In 1879 he was elected to the National Academy of Sciences. He was the author of "A Treatise on Trigonometry" (New York, 1884).

O'Gorman, Richard, jurist, born in Dublin, Ireland, in 1821; died in New York city, Feb. 29, 1896. He was the son of a wholesale woolen merchant; was educated in a Jesuit school, and, so far as a Catholic youth could go at that time, at Trinity College, Dublin; and, with his father, became a member of the Repeal Association formed in 1840. Richard, with a number of his associates, withdrew from the association, and organized the Young Ireland party in 1844; and after the uprising in 1848 he, with Thomas Francis Meagher, John Mitchell, and others, was imprisoned for high treason. O'Gorman made his escape in the disguise, traveled on the Continent, and afterward came to the United States, where he joined John Dillon in forming a law partnership in New York city. Mr. O'Gorman continued to practice till his appointment as corporation counsel, which office he held through two terms. In 1881 he was elected judge of the Superior Court, but his seat was contested by an appointee of the Governor. He submitted the issue to a trial, and on the disengagement of the jury withdrew from the contest. In 1889 he was elected a judge of this court, and served till 1896, when he retired after reaching the age limit. Judge O'Gorman was a popular speaker. Soon after the fall of Fort Sumter he delivered a memorable address in New York city full of horror for the Union cause; in 1861 he was the orator at the memorial service for Thomas Francis Meagher; and in 1879 he delivered the oration at the celebration of the hundredth anniversary of the birth of Thomas Moore.

O'Sullivan, John Louis, linguist, born on a British man-of-war, in the Bay of Gibraltar, in November, 1813; died in New York city, March 24, 1906. His grandfather was a major general in the British army, and his father was United States consul to the Barbary States. At the time of his birth his parents were residing in the garrison, but on the outbreak of the plague the British ordered them to his ship. Mr. O'Sullivan was educated at the military school of Saragun, France, the Westminster school, London, where he gained a gold medal for proficiency in Greek, and at Columbia College, New York city. In the early forties he was elected to the New York Legislature, where he distinguished himself by earnest efforts to secure the passage of a bill abolishing slavery.

tal punishment. He became United States minister to Portugal in 1854, and held the office till 1863. He was noted for his mastery of ancient and modern languages, was an intimate friend of Nathaniel Hawthorne, and at the unveiling of Bartholdi's Statue of Liberty, in New York harbor, he delivered an address in French that was highly commended by the French visitors.

Paine, Timothy Otis, Egyptologist, born in Winslow, Me., Oct. 13, 1824; died in Boston, Mass., Dec. 6, 1895. He was graduated at Waterville College, Maine, in 1847; became pastor of the Swedenborgian church at Elmwood, Mass., in 1856, and for many years after 1866 was Professor of Hebrew in the theological school of the New Jerusalem Church in Boston. He was an enthusiastic student of Hebrew and the ancient languages, and he spent his leisure in unraveling the mysteries of hieroglyphics, becoming an acknowledged authority on Egyptology. Among his publications was "Solomon's Temple; or, The First Tabernacle," in the preparation of which he spent thirty-five years, and in which he completely reconstructed the conception of this ancient edifice.

Parker, Ely Samuel, military officer, born in the Indian reservation, Tonawanda, N. Y., in 1828; died in Fairfield, Conn., Aug. 31, 1895. He was a full-blooded Seneca Indian, and chief of the Six Nations. He took a course at the Rensselaer Polytechnic Institute, and studied law; but as Indians had then no claims to citizenship he could not be admitted to the bar. Subsequently he received an appointment in the engineer corps of the United States army. While living in Galena, Ill., he became intimate with Ulysses S. Grant. At the beginning of the civil war he entered the National army; soon afterward was appointed by Gen. Grant one of his staff officers, and during the latter part of the war was military secretary to that commander. He was brevetted brigadier general of volunteers, Apr. 9, 1865, and captain, major, lieutenant colonel, colonel, and brigadier general in the regular army, Mar. 2, 1867. After the war Gen. Parker resumed civil engineering, and in 1869 was appointed Commissioner of Indian Affairs. He resigned this office in 1871, and in 1876 received an appointment in the police department of New York city, where he superintended the repairs to the buildings of the department and purchased its supplies. Gen. Parker owned and always kept the gold pen used by Gen. Grant in signing the terms at Appomattox.

Parsons, Lewis Elliphalet, lawyer, born in Broome County, New York, April 28, 1827; died in Talladega, Ala., June 8, 1895. He was educated in the public schools, studied law, and in 1840 settled in Talladega, Ala. He was elected to the Legislature as a representative of the State-aid and internal-improvement movement in 1869, and was again sent to the Legislature in 1863, when he opposed the militia system of the State because the Confederate Government had full power there. On June 21, 1865, he was appointed Provisional Governor of Alabama, and he applied himself to the work of reconstruction till December, when he was elected United States Senator, but he was refused the seat because of the opposition then in Congress to the reconstruction policy of the President. He afterward served several terms in the Legislature, and was Speaker of the House in 1872.

Perkins, Granville, artist, born in Baltimore, Md., Oct. 16, 1830; died in New York city, April 18, 1895. He showed aptitude for art at an early age, receiving much encouragement from his parents, who were painters. For several years he was engaged in scene painting in Philadelphia, New York, Baltimore, and Richmond; in 1861 began contributing sketches to illustrated papers; in 1865-'66 was a draughtsman for the publications of Frank Leslie; and subsequently was similarly employed for several years by Harper & Brothers. After withdrawing from the establishment of the latter, he furnished a large number of illustrations for "Picturesque America" and other publications, showing a special fondness for marine views. For many years before his death he applied

himself almost wholly to painting, treating particularly tropical and marine views, in which he attained a high reputation.

Perkins, William Rufus, poet, born in Erie, Pa., Sept. 1, 1847; died there Jan. 28, 1895. His early studies were conducted by his mother and by an accomplished teacher for many years resident in the family. He was graduated at Western Reserve College as valedictorian in 1868, and in 1869 he returned to this college as tutor, remaining three years. Subsequently he studied law and was admitted (1878) to the bar of Erie County, Pennsylvania. In 1879 he was called to Cornell University as Assistant Professor of Latin and Greek, being transferred in 1882 to the department of history. In 1885 he studied in Europe the modes of teaching in the universities, and on his return, in 1887, he was called to the chair of History in Iowa State University. In the spring of 1888 he was a delegate to the eighth centenary of the University of Bologna, Italy. He attended that *fête* and spent a few months in traveling in England and France, returning to the university in the autumn. In 1889 he privately published, under a pen name, the poem of "Eleusis," and in 1892 his selected poems, under the misleading title of "Eleusis and Lesser Poems," were published in Chicago. Two of his historical monographs—"History of the Trappist Abbey of New Melleray" and "History of the Amana Society"—were published by the State University of Iowa. His manners were reserved and unassuming. His untimely death, apparently at the beginning of a poetical career, was a great loss.

Perry, Rufus Lewis, clergyman, born in Smith County, Tennessee, about 1833; died in Brooklyn, N. Y., June 18, 1895. He was the son of a slave, who escaped to Canada. The boy was sold in 1852, but subsequently made his escape and undertook to find his father. Rufus was graduated at Kalamazoo University in 1861, and was ordained and installed pastor of the Second Baptist Church in Ann Arbor, Mich., in October of that year. In 1865 he engaged in general missionary work; afterward was superintendent of a freedmen's school; was for ten years corresponding secretary of the Consolidated American Baptist Missionary Convention; and for many years editor of "The National Monitor." He was considered one of the best scholars the negro race has produced; was the author of numerous works requiring much research; and was an accomplished linguist, especially in Hebrew, Sanskrit, French, and German. In 1867 he delivered a scientific lecture on "Light" before the State University at Louisville, Ky. Among his publications is "The Cushite; or, The Children of Ham as seen by Ancient Historians and Poets."

Phillips, Philip, singing evangelist, born in Chautauque County, New York, Aug. 13, 1834; died in Delaware, Ohio, June 25, 1895. In youth he studied music with Lowell Mason, and in 1853 became a conductor of singing schools. In 1860 he united with the Methodist Episcopal Church, the same year publishing his first musical composition, entitled "Early Blossoms." In 1861 he opened a music store in Cincinnati, and published "Musical Leaves." During the civil war he held services of song in the principal cities of the North to aid the Christian Commission. After the war he settled in New York. In 1865 he went to England, and held services in its principal cities, and prepared for the British Sunday-school Union "The American Sacred Songster," of which over 1,000,000 copies were sold. On leaving England he made a singing tour of the world, holding religious services in the Sandwich Islands, Australia, New Zealand, Palestine, Egypt, and India, and in the large cities of Europe. He published many collections of songs, chiefly religious, including "Spring Blossoms" (1865); "Singing Pilgrim" (1866); "Day-school Singer" (1869); "Gospel Singer" (1874); "Singing Sermons" (1877); "Singing Pilgrimage around and throughout the World," with a biographical sketch (1880); and "Six Song Services with Connective Reading" (1892).

Pilling, James Constantine, bibliographer, born in Washington, D. C., Nov. 16, 1844; died at Olney, Md., July 26, 1906. He was educated at Geneva College, and from 1875 to 1880 was a member of the Rocky Mountain surveying expedition under Major Powell. His ethnological researches began then, and until his death his time was mainly given to linguistic and ethnological work. He was considered a high authority on North American Indian bibliography, and his publications on this subject are very numerous. Among them are "Bibliography of the Indian Languages" (Washington, 1887); "Bibliography of the Siouan Languages" (1897); "Bibliography of the Iroquoian Languages" (1898).

Freder, Thomas Gamble, military officer, born in Rockport, Ind., Oct. 23, 1824; died at Fort Bayard, New Mexico, Oct. 21, 1895. He was graduated at West Point and commissioned brevet 3d lieutenant, 8th Infantry, in 1845; was promoted 1st lieutenant, 8th Infantry, Sept. 21, 1846; 1st lieutenant, June 26, 1849; captain, Oct. 18, 1856; major, 16th Infantry, Sept. 19, 1861; and colonel, 44th Infantry, July 28, 1866; was assigned to the 1st Infantry, Dec. 15, 1870; and was retired June 28, 1878. In the volunteer service he was commissioned a brigadier general, Nov. 29, 1862, and was mustered out of the service April 30, 1866. During his military career he was brevetted 1st lieutenant in the regular army, Aug. 20, 1847, for gallantry at Contreras and Charabusco; major, Aug. 9, 1862, for gallantry at Cedar Mountain, Va.; and lieutenant colonel, colonel, and brigadier general, all on March 14, 1865, for meritorious services during the war. In 1862 he served in the defense of Harper's Ferry and in the Virginia campaign, receiving a wound at Cedar Mountain; and from Jan. 10, 1863, to the close of the war, because of his wound, was on duty as commissary and provost marshal. In 1866-'71 he was superintendent of the United States Military Academy; in 1871-'77 was governor of the Soldiers' Home in Washington, D. C.; and in 1880-'87 was superintendent of the New York Soldiers' and Sailors' Home.

Foley, Francis Morrison, journalist, born in Westchester, N. Y., Jan. 31, 1825; died in San Francisco, Cal., Aug. 11, 1886. He was graduated at Hamilton College; studied law in Rochester, N. Y., and was admitted to the bar in Michigan. In the spring of 1849 he set out on muleback for the California mines, arriving in El Dorado County in September following and worked in the mines till 1851, when he went to San Francisco and entered into a law partnership with Judge Frederick N. Morrison, an uncle. Soon afterward he was elected city attorney; in 1858 he was elected to the Assembly as a Republican; in 1861 became Attorney General of the State; and in 1862 was appointed United States district attorney for California, an office he soon resigned. In 1877 he retired from active politics, and with Frederick M. Sowers founded the "Agronaut," a literary weekly.

Fox, Orlando Metcalf, military officer, born in Natick, Ohio, March 7, 1822; died in Detroit, Mich., Oct. 2, 1905. He was graduated at West Point and commissioned brevet 3d lieutenant of topographical engineers in 1836, and was promoted 1st lieutenant, Oct. 7 following; 1st lieutenant, July 1, 1860; captain of engineers, March 3, 1864; major, March 7, 1867; lieutenant colonel, June 30, 1869; and colonel, July 28, 1866. In the volunteer army he was commissioned colonel of the 2d Michigan Infantry, Sept. 16, 1861; was promoted brigadier general, Nov. 29, 1862; and was mustered out of the service, March 4, 1863. During his military career he was brevetted major in the regular army, July 6, 1864, for the siege of Knoxville; lieutenant colonel, Sept. 1 following, for the capture of Atlanta; colonel, Dec. 21, for the capture of Savannah; and brigadier general, March 13, 1865, for meritorious services in the campaign terminating with the surrender of the Confederate army under Gen. Joseph E. Johnston. He was chief topographical engineer of the Department of the Ohio in the early part of 1865; was on the staff of Gen. McClellan at the battle of Rich Mountain; commanded his Michigan re-

giment in the defense of Washington and in the principal fortifications of the Virginia Peninsula campaign; took part in the battle of Fredericksburg; in the early part of 1862 commanded a battalion of the 9th Corps; and later became chief engineer of the 2d Corps of the Army of the Ohio. In Gen. Sherman's Atlanta campaign and subsequent march to the sea, and through the Carolinas, Gen. Fox was chief engineer of his army. After this was he was engineer secretary of the Light-house Board in 1868-'70; engineer in charge of the construction of the Spotsylvania Reef light-house on Lake Huron in 1870-'71; and engineer to Gen. Sherman, and also engineer in charge of the river-and-harbor works between Lake Erie and Lake Superior in 1871-'74; and at the time of his death was chief engineer of the Northwest District. His work in the lake region included improvements on Lakes Erie, Superior, Huron, and Michigan; St. Mary's Falls Canal, and the dam on the rapids of St. Mary's river. He also designed and constructed the famous Stannard Rock Light and the great lock at Sault Ste. Marie. While inspecting the latter work he met with an accident that led to his death.

Foote, Reuben Benda, librarian, born in Rockport, Mass., in 1824; died in New York city, April 3, 1901. He was brought up on a farm, and was graduated at Brown University in 1857. He spent a year teaching in the Rockport high school, and in 1860-'61 he was a teacher in the House of Refuge at Philadelphia. In January, 1864, he was appointed librarian of the Young Men's Christian Association in New York city, and he held this place till his death. Mr. Foote had made a special study of old Bible manuscripts, had written numerous articles on that and other religious topics, and had been President of the State Librarians' Association.

Pope, Franklin Leonard, electrician, born in Great Barrington, Mass., Dec. 9, 1840; died there Oct. 15, 1905. He became a telegraph operator in 1857, assistant engineer of the American Telegraph Company in 1862, and was appointed to a similar office in the Russo-American Telegraph Company in 1864.

While in the last service he made the first exploration of the country between British Columbia and Alaska, surveying a route for an overland telegraph. Subsequently he established himself in New York city as an electrical engineer and expert. He was one of the inventors of the "ticker" used for telegraphing exchange quotations, and was the sole inventor of the self-circuit for automatically controlling electric clock signals now in use on many railroads. Since 1884 he had been editor of the "Electrical Engineer." He was President of the American Institute of Electrical Engineers in 1895. At the time of his death he was superintending the reconstruction of the electric plant at Great Barrington. To facilitate his work, he had placed in the cellar of his house a large and powerful converter. On the night of his death, when the power was turned on, he wanted the meter to adjust the bearings, and by some means his person came in contact with some of the wires, and he was instantly killed by a current of 3,000 volts. Mr. Pope contributed numerous technical and historical articles to the periodical press, and published "Modern Practice of the Electric Telegraph" (1871) and "Life and Work of Joseph Henry" (1879).

Porcher, Francis Payre, physician, born in St. John's, Berkeley, S. C., Dec. 14, 1825; died in Charleston, S. C., Nov. 19, 1895. He was graduated at South Carolina College in 1844, and at the State Medical College in 1847; established himself in Charleston, and remained there till his death. During the civil war he was in charge of Confederate hospitals at Norfolk and Petersburg, Va. He was President of the South Carolina Medical Association in 1872; was one of the editors of the "Charleston Medical Journal and Review," having charge of the volumes published in 1850-'55 and in 1873-'76. For many years he had devoted his leisure to the study of botany, and had written much upon that and medical subjects. He was author of "A Medico-Botanical Catalogue of the Plants and Ferns of St. John's, Berkeley, South Carolina" (Charleston, 1847); "A Sketch of the Medical Botany of South Carolina" (Philadelphia, 1849); "The Medicinal, Poisonous, and Dietetic Properties of the Cryptogamic Plants of the United States" (New York, 1854); "Illustrations of Disease with the Microscope and Clinical Investigations aided by the Microscope and by Chemical Reagents" (Charleston, 1861); and "Resources of the Southern Fields and Forests" (Richmond, 1863; revised edition, Charleston, 1869). For many years prior to his death he was Professor of Materia Medica and Therapeutics in the State Medical College of South Carolina.

Post, Philip Sidney, lawyer, born in Florida, Orange County, N. Y., March 19, 1833; died in Washington, D. C., Jan. 6, 1895. He was graduated at Union College in 1855, studied at the Poughkeepsie Law School, was admitted to the bar of Illinois in 1856, and settled in Galesburg. In 1861 he entered the National army as 2d lieutenant, 59th Illinois Infantry; was promoted for gallant services to the rank of brevet brigadier general; and at the close of the war was in command of the district of western Texas. He was appointed consul at Vienna in 1866, was consul-general for Austria-Hungary in 1874-'79, and was elected to Congress from the 10th Illinois District in 1886-'88 and 1894 as a Republican.

Prescott, Benjamin Franklin, lawyer, born in Epping, N. H., Feb. 26, 1833; died there Feb. 22, 1895. He was graduated at Dartmouth in 1856, taught in Epping, then studied law, and was admitted to the bar in 1859. In 1861 he became editorially connected with the "Independent Democrat." Afterward he served for three years as a special agent of the United States Treasury Department, being removed during President Johnson's administration. In 1872, 1873, 1875, and 1876 he was elected Secretary of State, and in 1877 and 1878 was elected Governor of New Hampshire as a Republican.

Raymond, Charles Atwater, clergyman, born in New Haven, Conn., in 1822; died in West View, Va., March 5, 1895. In 1843 he was called to the pastorate of the Baptist Church at Rondout, N. Y., and in the following year went to the First Baptist Church at Newburg, where he also became principal of the female seminary. He removed to New Orleans on a call to a pastorate in 1847, and subsequently was principal of the Fuller Institute and of Edgefield Collegiate Institute, South Carolina. In the early part of the civil war he became a refugee and returned to Newburg, and during 1863-'71 he was Superintendent of Public Instruction for the Eastern District of Virginia, and he also became Governor of the National Soldiers' Home at Hampton, Va.

Redfield, John H., botanist, born in Middletown, Conn., in 1815; died in Philadelphia, Pa., Feb. 27, 1895. He entered a manufactory of car wheels in Philadelphia, becoming in time a partner. About 1865 he retired from active business, applied himself to scientific pursuits, and from that time till his death spent the greater part of his time in the rooms of the Academy of Natural Sciences. He was elected conservator of the botanical section, and undertook the work of classifying and cataloguing the specimens of the herbarium. He had completed the whole group of North American plants. He also rendered the

academy valuable service as chairman of its Publication Committee. Mr. Redfield had published a work on the flora of Mount Desert, Me.

Remey, William B., naval officer, born in Iowa; died in Somerville, Mass., Jan. 21, 1895. He entered the marine corps of the United States navy as 2d lieutenant, Sept. 5, 1861; was promoted 1st lieutenant, Feb. 17, 1864; captain, June 21, 1872; and colonel, June 12, 1884; and was retired, June 4, 1892, on his own application. In 1862 and a part of 1863 he was attached to the frigate "Sabine"; in 1864 was on duty at the marine barracks at Gosport, Va.; in 1865 was attached to the receiving ship "North Carolina." He served on the "Vanderbilt" of the Pacific squadron in 1865-'67; on the receiving ship "New Hampshire" in 1868; at the marine barracks in Philadelphia in 1868-'69; and was on special duty in Washington, D. C., in 1869-'70. During 1871-'72 he served at the headquarters of the Marine Corps in Washington, D. C.; 1873-'74 was on the frigate "Colorado" of the North Atlantic squadron; and then returned to marine headquarters. As fleet marine officer he served on the South Pacific station in 1875-'76 and on the South Atlantic station in 1876-'77. In 1878-'80 he was acting judge-advocate general of the navy, and from 1880 till his retirement held the office of judge-advocate general.

Renwick, Henry Brevoort, civil engineer, born in New York city, Sept. 4, 1817; died there Jan. 27, 1895. He was a son of James Renwick, physicist, and a brother of James Renwick (see below). He was graduated at Columbia College in 1836; spent some time in commercial business; studied civil and mechanical engineering; entered the service of the United States Government as an assistant engineer, and was first assistant astronomer of the United States Boundary Commission in 1840-'42. In 1848 he entered the Patent Office as an examiner, and in 1850 was appointed the first United States inspector of steam vessels at the port of New York. While on engineering service for the Government, he was engaged in important works, including the breakwaters at Sandy Hook and Egg Harbor, and the survey that settled the boundary line between Maine and New Brunswick. He was probably best known as an expert in patent cases. Among the most notable cases in which he testified were the suits growing out of the invention of sewing machines, the McCormick reaper, and the Bell telephone.

Renwick, James, architect, born in New York city, Nov. 3, 1818; died there June 23, 1895. He was graduated at Columbia College in 1836, inherited a fondness for architecture from his father, and first engaged in civil engineering. He superintended the construction of the distributing reservoir on Fifth avenue and was an assistant engineer on the Croton aqueduct. When the vestry of Grace Church purchased the property on Broadway near Tenth street, his plans for the new building were accepted; he was placed in charge of the work, and completed the building, with the exception of the permanent spire (the first one being of wood), in 1845. He was afterward selected as architect of Calvary Church and of the Church of the Puritans, and before these were finished, on the invitation of the regents of the Smithsonian Institution, Washington, D. C., he prepared plans for their new building, which were adopted. He was also architect of the Corcoran Art Gallery in the same city. In 1853 he was invited by Archbishop Hughes to prepare plans for a cathedral to be built on Fifth avenue, and his plans were accepted. The corner stone of the cathedral was laid Aug. 15, 1862; the building was dedicated May 25, 1879; and the erection of the two towers was begun in 1887. Mr. Renwick also was the architect of the group of buildings of Vassar College, Poughkeepsie; of St. Ann's Church, Brooklyn, N. Y.; of Booth's Theater, at Sixth avenue and Twenty-third Street; the Young Men's Christian Association building; the new front of the New York Stock Exchange; several of the public buildings on Blackwell's and Randall's islands;

and of the restoration of the old Spanish cathedral at St. Augustine, Fla. He had also planned business and residential structures. Mr. Kenwick, who was deeply interested in art in all its forms, had for several years devoted his leisure to making a collection of notable paintings by old masters, and he bequeathed to the Metropolitan Museum of Art a collection of 74 paintings, supposed to be worth \$500,000. In December following his death the trustees of the museum declined the gift, giving no reasons, but a belief gained currency that Mr. Kenwick had been imposed upon in the purchase of the paintings.

Rev. Alexander Hamilton, merchant, born in Newton, Mass., Aug. 30, 1818; died in Melrose, Mass., July 20, 1904. His father carried on an extensive paper manufactory, in which the son passed a regular apprenticeship, subsequently receiving a collegiate education. He then entered a paper house in Boston, of which in time he became the senior member, the name being changed to Rice, Kendall & Co. After serving as a member and president of the Council, he was elected Mayor of Boston in 1865 and 1867 on a reform ticket, and under his administration the Park Bay improvements were begun and the City Hospital founded. He was elected to Congress as a Republican in 1858, and served 4 consecutive terms. From 1869 till 1873 he was President of the Board of Trade of Boston, and in 1876, 1877, and 1878 he was elected Governor of Massachusetts. In 1877 he aroused much unfavorable criticism by vetoing a local-option license bill, but he was re-elected the same year.

Edgway, Henry Bascom, educator, born in Talbot County, Maryland, Sept. 7, 1830; died in Evanston, Ill., March 30, 1905. He was graduated at Dickinson College in 1849; joined the Baltimore Conference of the Methodist Episcopal Church immediately after leaving college, and became a circuit rider. Within a few years he was called to a small church in Baltimore, and subsequently he held pastorates in the Old South Street Church, Baltimore, in Portland, Me., in Chicago, in New York city, and in Cincinnati. In 1863 he was chosen Professor of Historical Theology in Garrett Biblical Institute, Evanston, Ill.; and from 1874 till his death he was President of the institution and Professor of Practical Theology. About two years ago he made a trip round the world and visited many mission stations in India, China, and Japan. He was the author of "The Life of Alfred Cookman" (New York, 1871); "The Lord's Land: A Narrative of Events in Sinai and Palestine" (1876); "The Life of Bishop Edward S. Junes" (1889); "Bishop Bevan's Woe" (1890); and "Bishop Matthew Simpson" (1895).

Riley, Charles Valentine, entomologist, born in London, England, Sept. 18, 1843; died in Washington, D. C., Sept. 14, 1895. His childhood was passed in Wotton-on-Thames. He spent three years in the College of St. Paul, at Dieppe, France, and three more in Bonn, Prussia. He early exhibited a passion for drawing and painting, and for studying insects. He came to New York when seventeen years old, spent three years on a stock farm in Kankakee County, Ill., and then went to Chicago as a laborer in a paper-packing establishment. He was next engaged in newspaper work, and in May, 1864, went to the front with the 134th Illinois Volunteers. In 1868 he was made State Entomologist of Missouri. Of the influence of his Missouri "Reports," Charles Darwin wrote that they brought to his knowledge many valuable facts and generalizations, and the "Entomologist's Monthly Magazine," of London, remarked: "The author, in giving full scope to his keen powers of observation, in minuteness of detail, and in the skill with which he uses his pencil, and in a regard for scientific accuracy, maintains his right to be termed the foremost economic entomologist of the day." The illustrations of these reports were made at his own expense, from drawings by his own hand. During two years (1869-70) Prof. Riley also served as associate editor of the "American

Entomologist." In 1872 an outbreak of the Rocky mountain locust of grasshopper in the Western and Northwestern States led to the creation by Congress of a commission for the investigation of the pest, and Prof. Riley, as chief of this commission, led an exploration of the entire region. In 1879 he was appointed United States Entomologist, and he filled this office till 1894, except in 1879-1880, when, at the head of the Entomological Commission, he conducted the cotton-worm investigation. On his re-appointment as United States Entomologist in 1881 the commission was transferred to the Department of Agriculture, in which the division of entomology was organized, and at its head he remained until June, 1, 1894, when in consequence of failing health he resigned. After bringing to successful issue the treatment of the army worm and other insects injurious to cotton, he turned his attention to the orange interests of Florida, the insects afflicting stock in the lower Mississippi, those afflicting the hops, and those afflicting cranberries. Two of his remedies have passed into almost universal use—the employment of kerosene emulsified with milk or soap against all sucking insects and the invention of the "cyclone" or whirling chamber in nozzles for the spraying of insecticides or fungicides. He never received a cent beyond his legitimate salary, never took a fee for information, never attempted to control any discovery to his own advantage, nor applied for a patent. In 1881 he introduced the Australian ladybird (*Potamonema*) to free the orange groves of California of the white scale, and he has been widely honored for his studies on the grape phylloxera. In 1873 the French Republic presented him with a gold medal for his services to French grape culture, and in 1894 a beautiful bronze statue was presented to him for the grape growers of southern France. In 1889 Prof. Riley represented the Department of Agriculture at the Paris Exposition. On July 14, 1890, he received the Cross of the Legion of Honor from the French Government for services rendered to the agriculture of all countries, and particularly to that of France; and in 1891 he was awarded a gold medal by the French government for a collection of forestry insects which he exhibited in Edinburgh. His studies of the Hessian fly and the hop fly in England bore directly on English agricultural prosperity, and he was elected an honorary member of the Royal Agricultural Society. He was one of the 6 honorary members of the London Entomological Society, was for many years recording secretary, and for two years President of the Academy of Sciences of St. Louis, and was the founder and first president of the Entomological Society of Washington. A bibliography of Prof. Riley's works shows more than 3,000 titles of books, pamphlets, and magazines and newspaper articles on scientific entomology. His more important works are: "Reports on the Hessian Fly, Banded, and other Insects of the State of Missouri" (7 annual volumes, Jefferson City, 1866-77); "Potato Pests" (New York, 1876); "Locust Plagues in the United States" (Chicago, 1877); and "Annual Reports as Entomologist of the Department of Agriculture." He lectured on entomology at Cornell University, Kansas State Agricultural College, Columbian University, and Missouri State University, which institution conferred on him in 1873 the honorary degree of Ph. D. During his life Prof. Riley was an indefatigable collector and promoter of insects, and he presented his numerous private collec-

tion to the National Museum at Washington. It contains more than 20,000 species, represented by 115,000 pinned specimens and much additional material. It is the largest general collection in the United States, and is rich in biological examples. Prof. Riley's death was occasioned by a fall from his bicycle a short distance from his suburban home. He was above the average in height, spare, athletic, with a nervous temperament, a dark complexion, and a striking Italian air. He was an accomplished musician. In 1878 he married Miss Emilie J. Gonzelman, of St. Louis, by whom he had 6 children.

Ritchie, Alexander Hay, engraver, born in Glasgow, Scotland, Jan. 14, 1822; died in New Haven, Conn., Sept. 19, 1903. He was educated in art at the Royal Institution under Sir William Allan, and took 4 premiums for drawing during his first year as a student. This course of instruction was taken while he was serving an apprenticeship to a firm of press builders. In 1844, on completing his apprenticeship, he removed to Canada, where he engaged in portrait painting and learned steel engraving. From Canada he removed to New York city. He was elected an associate of the National Academy of Design in 1863, and an academicien in 1871. He became the foremost engraver in stipple and mezzotint in the United States, and produced notable original compositions. His best-known engravings are: "Lady Washington's Reception Day," after Daniel Huntington; "On the March to the Sea," after Felix O. C. Darley; "Henry Clay"; "Washington and his Generals"; "Death of Lincoln," the last three after his own paintings; "The First Reading of the Emancipation Proclamation," after Carpenter; "Washington entering New York"; "The First Blow for Liberty"; and "Sherman's March to the Sea." His paintings included: "Washington and his Generals"; "Mercy knocking at the Gate" (1860); "Fitting out Moses for the Fair" (1862); "Baby, who's that?" (1871); and portraits of Charles Hodge (1865) and James McCosh (1870).

Root, George Frederick, musical composer, born in Sheffield, Mass., Aug. 30, 1820; died on Bailey's Island, Maine, Aug. 6, 1895. He was brought up on a farm till his eighteenth year, when he went to Boston. There he devoted himself to the study of music, and in 1839-'44 was instructor in the public schools, and also director of music in 2 churches. He then removed to New York city and taught till 1850, when he spent a year in Paris. In 1859 he became a member of the music-publishing firm of Root & Cady, of Chicago, and took up his residence in that city. He was the originator of normal musical institutes, and was one of the faculty when the first one was held in New York city in 1852. Besides many popular songs, he composed much sacred music, and published several collections of vocal and instrumental music, pamphlets on harmony and the principles of teaching, and articles in musical periodicals. Many of his war songs were very popular. The "Battle Cry of Freedom" was inspired by the news of President Lincoln's second call for troops. Words and music started together in his mind, and the ink was scarcely dry when the song was sung at a war meeting, to be used afterward in camp, on the march, and even on the field of battle. There was a large demand for Mr. Root's music in England and Scotland. In 1866 he crossed the ocean for the second time, spending several months in musical circles, where he found his own compositions exceedingly popular, and heard his own songs frequently sung. His friend J. Curwen Spencer, of London, surprised him by showing in the musical catalogue of the British Museum nearly 24 pages devoted to the titles of Dr. Root's works reprinted in England. He was one of the founders of a school of distinctively American music. A partial list of his compositions, coming down only to 1890, shows 74 books, 15 only 5 of which were others associated with him, and 179 pieces of sheet music. In a recent catalogue of 114 national war songs 36 are from the pen of George F. Root. At one time his publishers had

14 printing presses at work on "The Battle-Cry of Freedom." "Trump! Trump! Trump!" was written near the close of the war, and had only a year of its influence, but during that time it gave a profit of \$10,000. Work was his pleasure, and he never took an

absolute vacation from it. His personal appearance was very pleasing. He was tall, erect, and courtly, with a fine strong face, and an atmosphere of friendliness. He received the degree of Mus. Doc. from the Chicago University in 1872. His best-known compositions are "Hazel Dell" (1853); "Rosalie, the Prairie Flower" (1855); "The Battle Cry of Freedom" (1861); "Just before the Battle, Mother" (1862); "Trump! Trump! Trump! the Boys are Marching" (1864); "The Old Folks are Gone"; "A Hundred Years Ago"; "Old Potomac Shore"; the quartet "There's Music in the Air"; and the cantatas "The Flower Queen" (1852) and "The Haymakers" (1857).

Rothermel, Peter Frederick, artist, born in Nescopeck, Pa., July 18, 1817; died in Grassmere, Pa., Aug. 15, 1895. He received a common-school education, studied land surveying, became a sign painter when twenty years old, and soon afterward was led to study drawing by attending an art exhibition in the Philadelphia Academy. He began his art career as a portrait painter, but as there was then only a slight demand for portraits, he turned his attention to historical subjects. In 1856 he spent a short time in London and Paris, and then spent two years in Rome, returning to Philadelphia in July, 1859. He was an honorary member of the National Academy of Design and an active member of the Pennsylvania Academy of Fine Arts. His paintings include: "De Soto discovering the Mississippi" (1844); "Embarkation of Columbus"; "Christian Martyrs in the Coliseum"; a series illustrating Prescott's "History of the Conquest of Mexico"; "The Virtuoso" (1855); "Vandyke and Rubens"; "King Lear," from a study of a pose of Forrest in London (1856); "Patrick Henry before the Virginia House of Burgesses"; "St. Agnes" (1858); "Paul at Ephesus"; "Paul before Agrippa"; "St. Paul Preaching on Mars Hill"; "Trial of Sir Henry Vane"; "Battle of Gettysburg" (finished in 1871, now in Memorial Hall, Philadelphia); "The Landsknecht" (1876); "Bacchantes" (1874); "Columbus before Isabella"; "Macbeth meditating the Murder of Duncan"; "Lady Macbeth"; and "Amy Robsart interceding for Leicester." Many of his paintings have been engraved.

Royall, William Bedford, military officer, born in Virginia, April 13, 1825; died in Washington, D. C., Dec. 15, 1895. He was commissioned 1st lieutenant in the 2d Missouri Mountain Infantry July 31, 1846, and 1st lieutenant and adjutant of the Santa Fe battalion Aug. 14, 1847, and was mustered out of the service Oct. 20, 1848. On March 2, 1855, he was commissioned 1st lieutenant, 1st United States Cavalry; he was promoted captain March 21, 1861; major, 9th Cavalry, Dec. 7, 1862; lieutenant colonel, 3d Cavalry, Dec. 2, 1878; and colonel, 4th Cavalry, Nov. 1, 1882; and was retired Oct. 19, 1887. During the civil war he was brevetted major, May 27, 1862, for Hanover (Virginia); lieutenant colonel, June 15 following, for Old Church, Va.; colonel, March 18, 1864, for recruiting services; and brigadier general, Feb. 27, 1890, for gallantry in the action against the Indians on Painted Creek, Mont., June 17, 1876. His appointment in the regular army was in recognition of his gallantry in the Mexican War, especially at the capture of Puebla de Tlaxc. In 1850 he took part in an expedition in the head waters of Conchos river, and in 1851 distinguished himself by a brilliant defense of his camp against hostile Comanches. In the civil war he took part in the engagement at Falling Waters, the siege of Yorktown, and the actions at Hanover Court-house, Williamsburg, and Old Orchard. In the last he received severe wounds while cutting through the enemy to escape capture, and was disabled for several years, serving the remainder of the war on recruiting duty. After the war he served against Indians in Kansas, 1868, in the Republican river expedition, 1869, and in the Yellowstone expedition, 1870.

Ryder, James Adams, embryologist, born near Louisa, Pa., in 1852; died in Philadelphia, Pa., March 26, 1907. His education was limited in the main to a public-school course, though he studied for some time on a Jessup scholarship at the Academy of Sciences in Philadelphia. He published, when twenty-five years old, an account of his scientific researches that attracted the favorable attention of European bacteriologists, and in consequence he received the appointment of embryologist to the United States Fish Commission. In 1886 he was called to the chair of Comparative Embryology in the University of Pennsylvania, which he held till his death. He invented various instruments, including the microtome, designed to unravel the structure of animal tissues in serial form, and achieved his highest scientific reputation by his investigations into the artistic propagation of oysters. He was a prolific writer on biological science.

Sawyer, Sylvanus, inventor, born in Templeton, Mass., April 15, 1823; died there Oct. 25, 1895. From childhood he showed great mechanical ingenuity, and from his twelfth to his twenty-first year he spent most of his time in endeavors to improve articles of domestic mechanism. In 1829 he went to Augusta, Me., and worked with his brother-in-law, a gunsmith. Prior to attaining his majority he had made inventions, including a reed organ that embodied many of the features of those in use to-day, a steam engine, a water propeller, and a car operated by foot power. About 1848 he went to work in a machine shop in Lowell, and there invented a machine for splitting nutst for use in chair bottoms. Such a device had long been sought, and on receiving his patent, in 1861, he and a brother established themselves in East Templeton as manufacturers of chair cane. This invention revolutionized the chair-cane industry, and transferred it from European and Asiatic countries to the United States. In 1853 he invented improvements in rifled cannon projectiles, which were patented in 1865. He spent considerable time and money experimenting with these devices for the benefit of the United States Ordnance Bureau, and elicited the declaration by the Secretary of War that the practicability of rifled cannon projectiles had been demonstrated. In the early part of the civil war cannon were prepared for service under his patent, and their efficiency was highly commended; but the Govern-

ment did not adopt his system. He claimed that the ordnance officers incorporated his rifled improvements in the manufacture of cannon, thereby infringing on his patent. During 1861-'62 he made further improvements in projectiles, and supplied several department commanders with the first instance of rifled cannon made in the United States. Near the close of the war he built extensive works for the manufacture of his cannon without Government aid, but patent laws obliged him to close them. In 1861 he took out patents on discards and calipers; in 1862 one on a steam generator; in 1872 one on a saw-milling machine; and in 1891 one on a combining watch-maker's lathe. Subsequently he was engaged in the manufacture of watch-maker's tools till his retirement from business.

Schaeffer, Mary Reynolds, missionary, born in Longmeadow, Mass., April 15, 1807; died in New Rochelle, N. Y., Jan. 8, 1895. She removed in childhood, with her parents, to Somers, Conn., and became a teacher in a private school in New Haven. Here she became interested in the work of foreign missions, and accepted an invitation to accompany the Rev. Mr. and Mrs. Brewer to Smyrna, where she opened a school for girls in 1830, the first in the Turkish Empire. In 1834 she married the Rev. William G. Schaeffer, then a missionary of the American Board to the Jews in Constantinople, who died in January, 1861. Fifty years ago Mr. Schaeffer was influential in persuading Sir Stratford Canning, then British minister at Constantinople, to interfere in behalf of Armenians suffering persecution, not from the Turks, but from their own patriarch. Mr. and Mrs. Schaeffer labored in the missionary field more than forty years, and for a great part of the time their home was the stopping place of missionaries going to or returning from stations in European or Asiatic Turkey and Persia. In 1874 they left Constantinople, spent three years in Austria, and then returned to the United States. After her husband's death Mrs. Schaeffer made her home in New Rochelle, N. Y.

Scott, James Wilmet, journalist, born in Wakefield County, Wisconsin, in June, 1840; died in New York city, April 14, 1905. He was the son of D. Wilmet Scott, a journalist and publisher of Galena, Ill.; learned the printer's trade in his father's establishment; took part of a collegiate course, and for a time was employed in the United States Government Printing Office in Washington. In 1872 he established a weekly newspaper in Prince George County, Maryland; in 1874 returned to Galena and with his father established "The Industrial Press"; in 1875 purchased "The Daily National Hotel Register" of Chicago; in May, 1880, founded "The Chicago Daily Herald" (and in April, 1890, with John K. Walsh, who had become interested with him in the ownership of the "Herald," he established "The Chicago Evening Post"; Mr. Scott was one of the organizers, organizers, and directors of the World's Columbian Exposition; was for many years President of the United Press Association, of the American Newspaper Publishers Association, and of the Press and Journalism Club of Chicago.

Schuber, Henry Martya, linguist, born in Fredericksburg, Ceylon, Feb. 3, 1832; died in Weymouth, Mass., June 4, 1900. He was a son of the Rev. John Schuber, M. D., the missionary; came to the United States when ten years old; was graduated at the University of the City of New York in 1850, and at Union Theological Seminary in 1846; and returned to the Madura missionary station in India as a missionary of the American Board in 1848. Subsequently he studied medicine and established a dispensary at Arcot. He showed uncommon industry in the organization of schools and churches, the translation of religious books, and the founding of the Ammi mission. He became a master of the Sanskrit, Tamil, and Telugu languages, and besides doing much direct preaching in those languages he translated numerous religious books and tracts from them. His health failed under the strain of his work, and in 1864 he returned

to the United States. In 1865-71 he was pastor of the Howard Presbyterian Church in San Francisco; in 1872-'83 of the Central Congregational Church in Brooklyn, N. Y.; and in 1883-'87 of Plymouth Congregational Church, Chicago, resigning in the last year to resume missionary work with his son, the Rev. Doremus Scudder, D. D., and his daughter Catherine in Japan. He remained there two years, resided for some time in Pasadena, Cal., and since 1882 had lived in Winchester. He published "Liturgy of the Reformed Protestant Dutch Church" (Madras, India, 1862); "The Bazaar Book, or the Vernacular Teacher's Companion" (1865); "Sweet Savors of Divine Truth," a catechism (1868); and "Spiritual Teaching" (1870).

Seelye, Julius Hawley, educator, born in Bethel, Conn., Sept. 14, 1834; died in Amherst, Mass., May 12, 1895. He was graduated at Amherst College in 1849; studied theology at Auburn, N. Y., in 1849-'52, and at Halle, Germany, in 1852-'53; was ordained by the Classis of Schenectady in 1853; and was pastor of the First Reformed Dutch Church in Schenectady, N. Y., in 1853-'58. In the last year he was elected Professor of Mental and Moral Philosophy in Amherst College, holding the chair till 1875. In 1874 he was elected to Congress as a popular candidate, not having been nominated by any party. While in Congress he acted in general with the Republican party, though he opposed the Electoral Commission and the declaration of the election of Rutherford B. Hayes to the presidency. In 1877 he was elected President of Amherst College, which office he resigned in June, 1890. He received the degree of D. D., from Union College in 1862, and LL. D. from Columbia in 1876. He accepted an invitation to deliver a course of lectures in India in 1872; was a member of a commission to revise the tax laws of Massachusetts; was one of 3 visitors appointed to oversee Andover Theological Seminary; and was a trustee of the Clarke Institute for Deaf Mutes, of Smith College for Women, and of Mount Holyoke Female Seminary. During his administration at Amherst the college received endowments amounting to over \$800,000, and he was instrumental in raising over \$250,000 after the burning of Walker Hall. He made radical changes in the management of the college, abolishing the marking system and the valedictory exercises, and selected the commencement speakers from special departments in which they excelled. He also brought about the abolition of rules for the conduct of the students, and formed what was known as the "college senate," under which the students governed themselves in all matters concerning department. Dr. Seelye was a frequent contributor to periodicals, and published a translation of Schwegler's "History of Philosophy" (New York, 1864); "Lectures to Educated Hindus" (Bombay, 1873; republished as "The Way, the Truth, the Life," Boston, 1873, and translated into Hindustani, Japanese, and German); and "Christian Missions" (New York, 1875); and revised and edited Hiekk's "Moral Science" (Boston, 1880).

Sefton, Marian Mercer, actor, born in Liverpool, England, Oct. 9, 1810; died in Navesink Highlands, N. J., Sept. 19, 1895. She began her career on the stage at Montreal, and made her first appearance in New York city at the Bowery Theater as Babetta in "Dandley," July 4, 1836. At that time she was the wife of Thomas T. Watts, author and scientist, who was connected with Commodore Perry's expedition to Japan. In 1844 she became a member of the company of Mitchell's Olympic Theater, and five years afterward attained much popularity in the character of Grace Peabody, in "Ladies Beware," at the Broadway Theater. She married John Sefton Jan. 15, 1843, with whom she appeared on the stage quite regularly till his death, in 1868. While a member of Wallack's company she created the rôle of Sarah Sykes in Lester Wallack's play "Rosedale." She was the original in the United States of Tillie Drangthorpe in Watts Phillips's play "Lost in London." While rehearsing at the old Wallack Theater,

about 1883, she met with an accident that compelled her to retire from the stage.

Shea, George, jurist, born in Cork, Ireland, June 10, 1826; died in New York city, Jan. 15, 1895. He was the son of John Augustus Shea, author and journalist, and came to the United States with his parents in 1827. He studied law and was admitted to the bar in New York city; was corporation attorney in 1865-'67; and was chief justice of the Marine Court of New York in 1870. Judge Shea was associated with Charles O'Connor in the defense of Jefferson Davis, and was counsel for the Kings County Elevated Railroad in Brooklyn. He published "Hamilton," an historical study (New York, 1877; enlarged edition, Boston, 1890).

Shufeldt, Robert Wilson, naval officer, born in Red Hook, N. Y., Feb. 21, 1822; died in Washington, D. C., Nov. 7, 1895. He was appointed a midshipman in the navy, May 11, 1839; was promoted passed midshipman, July 2, 1845; master, Feb. 21, 1853; lieutenant, Oct. 26, 1853; commander, Nov. 19, 1862; captain, Dec. 31 following; commodore, Sept. 21, 1876; and rear-admiral, May 7, 1883; and was retired, Feb. 21, 1884. He was on sea service for eighteen years and one month; on shore or other duty, eleven years and three months; and was unemployed twenty-six years and four months, being out of the service for seven years and seven months from July 20, 1854, when he was connected with the merchant marine and had charge of a surveying party on the isthmus of Tehuantepec. At the beginning of the civil war he was in command of a steamship plying between New York and Havana, and soon afterward he was appointed United States consul general at the latter city. Early in 1863 he re-entered the navy under a commission of commander, dated Nov. 19, 1862. He was first given command of the steamer "Conemaugh," then on blockading duty at Charleston, and took part in the engagements on Morris Island. In 1864-'66 he commanded the "Proteus" of the Eastern Gulf blockading squadron. After the war he was successively in command of the "Hartford" of the East India squadron, the "Wachusett" of the Asiatic squadron, and the monitor "Miantonomoh." In 1870-'71 he was again on surveying duty, both on the Tehuantepec and Nicaraguan routes. During 1875-'78 he was chief of the Bureau of Equipment and Recruiting, and in 1879-'80 was on a special mission to Africa and the East Indies, in connection with the expansion of American commercial relations. During this cruise he was selected for arbitrator by the United States and British governments to settle the Liberian boundary question, and subsequently he negotiated an agreement with the Kingdom of Korea for protection of American life and property. In 1881, while at Peking, China, as special agent of the United States Government, he secured the treaty that opened Korea to the world and recognized that kingdom as an independent nation. After his return to the United States he was president of the naval advisory board that designed the first steel cruiser and planned the new navy, and was also superintendent of the naval observatory. After his retirement he spent some time in Korea as the guest of the nation.

Sleeper, Solomon S., philanthropist, born in Bristol, N. H., March 18, 1815; died in North Cambridge, Mass., Jan. 6, 1895. He was the son of a Methodist clergyman, and in 1843 engaged in the wholesale

grocery business in Boston. He served several terms in the Legislature and in the Cambridge Board of Aldermen. Mr. Shaper was deeply interested in charitable work, and contributed largely to promote it. He was a liberal benefactor and director of the Green Street Home and the Baldwin Street Home for Little Wanderers of Cambridge, gave \$5,000 to the Shepard Memorial Church there, presented the town of Bristol with a public library, and gave considerable sums to churches.

Smith, Green Clay, military officer, born in Richmond, Ky., July 2, 1802; died in Washington, D. C., June 20, 1865. He was a son of Congressman John S. Smith, and grandson of Gen. Green Clay. In 1847 he enlisted in a cavalry regiment and served a year in the Mexican War. He was graduated at Transylvania University in 1850, and at the Lexington Law School in 1852; began practicing with his father; removed to Covington in 1854; and was elected to the Legislature, where he defended the National Government in 1860. In the following year he was commissioned major in the 3d Kentucky Cavalry; was appointed colonel of the 4th Kentucky Cavalry in February, 1862; was wounded at Lebanon, Tenn.; and was promoted brigadier general of volunteers, June 11. He resigned his commission, Dec. 1, 1864, having been elected to Congress, where he served till 1867, then resigned to accept the office of Governor of Montana, where he remained three years. He was promoted major general of volunteers, March 13, 1865, for gallantry in the field. In 1869 he was ordained to the ministry of the Baptist Church, and settled in Frankfort, Ky. He devoted most of his time to service as an evangelist, but in 1876 was the candidate of the National Prohibition party for the presidency, and received a popular vote of 9,522. In 1890 he was elected to the pastorate of the Metropolitan Baptist Church, Washington, D. C.

Smith, Samuel Francis, clergyman, born in Boston, Mass., Oct. 21, 1808; died there Nov. 16, 1895. He was graduated at Harvard College in 1829, and at Andover Theological Seminary in 1832. During 1839-'42 he held a pastorate at Waterville, Me., and was also Professor of Modern Languages in the college there; and 1843-'54 was stationed at Newton, Mass. He was editor of the "Christian Review" in Boston in 1843-'48, and of publications of the Baptist Missionary Union in 1854-'69, and visited the chief missionary stations in Europe and Asia in 1875-'76 and 1880-'82. He received the degree of D. D. from Waterville College in 1854. Dr. Smith was best known as the author of the national hymn "My Country 'Tis of Thee," which he composed while a student of theology, and which was first sung at a children's celebration in Boston, July 4, 1832. About the same time he also wrote the well-known missionary hymn "The Morning Light is breaking." On the afternoon and evening of April 3, 1895, he was given a reception in Music Hall, Boston, in recognition of his service as author of the national hymn. Among his literary works are several collections of original hymns and poetry and poetical translations, including "Lyric Gems" (Boston, 1843), "The Psalmist," a Baptist hymn book (1843), and "Rock of Ages" (1868, 1877). He translated from the German the greater part of the "Juvenile Lyre" (Boston, 1852), and from the "Conversations-Lexicon" nearly enough articles to fill a volume of the "Encyclopedia Americana" (1828-'32). He published the "Life of Rev. Joseph Grafton" (1848); "Missionary Sketches" (1879, 1887); "History of Newton, Mass." (1880); and "Ramblings in Mission Fields" (1884).

Smith, Sebastian B., clergyman, born in Germany, in 1840; died in Havana, Cuba, March 2, 1895. He was brought to the United States when a child, and was educated at Seton Hall College, South Orange, N. J., and at the American College in Rome, Italy. He made a special study of canon law, and was professor of it at Seton Hall for several years. He was at the time of his death legal adviser to the bishop of the diocese of Newark, and had been employed as coun-

sel in many important ecclesiastical trials. He spoke English, German, Spanish, French, Latin, and Greek. From 1880 he was rector of St. Joseph's Church, Paterson, N. J. He bequeathed three quarters of an estate, estimated at \$10,000, to Catholic institutions.

Snow, Andrew, pilot, born in Thompson, Me., in January, 1810; died in Brooklyn, N. Y., June 29, 1888. He served before the mast for five years, and when twenty-five years old was a shipowner. He followed the sea till 1836, when he settled in New York city and formed the shipping firm of Snow & Burgess. For twenty-five years he had been a member of the board of pilot commissioners, of which he was president at the time of his death, and for fifteen years he was President of the Board of Trade and Transportation. At the centennial of the inauguration of President Washington in New York city on April 29, 1888, he was coxswain of a crew of 18 veteran sea captains, all members of the Marine Exchange, that rowed President Harrison in a small boat from the United States steamer "Dispatch" in the East river to the landing stage at Wall Street.

Spier, Samuel Fleet, physician, born in Brooklyn, N. Y., April 9, 1808; died there Dec. 18, 1882. He was graduated at the medical department of the University of New York in 1830, having won the Eustach gold medal and the Van Rensselaer prize for scholarship. He also was awarded the Wood prize at Bellevue Hospital, which he subsequently retained. He continued his studies in Europe for nearly three years. Plaster of Paris as a substitute for splints was there first introduced in surgical operations. He made a special study of the innovation, returned to the United States in the latter part of 1832, and was sent by the United States Sanitary Commission to the Army of the Potomac, where he distinguished himself in applying these surgical aids. In 1842 he returned to Brooklyn, where he remained till his death, holding the offices of demonstrator of anatomy in the Long Island College Hospital, physician, curator, microscopist, and surgeon of the Brooklyn Hospital, surgeon to the tumor and cancer department of the Brooklyn Dispensary, and consulting surgeon of the hospital. Dr. Spier originated the Female Home for Children and founded the Uniting Hand Dispensary. He published the "Pathology of Juncos" (1856), for which he received a gold medal; "The Microscope in the Differential Diagnosis of Malignant Growth" (1871); and "The New Method of arresting Hemorrhage by the Use of the Artery Compressor," which won a prize from the New York Medical Society. He was widely known as an expert on cancer, which was the cause of his death.

Spoth, Edward A., musical composer, born in Germany in 1829; died in London, N. Y., April 20, 1900. He developed musical abilities at an early age, and became especially known as a composer of religious, classical, and concert music. Among his best-known compositions are the "Austrian Eagle March" and the "Apollo Overture," a funeral march.

Sprague, Eben Charles, lawyer, born in Bath, N. H., Nov. 28, 1822; died in Buffalo, N. Y., Feb. 14, 1900. He removed with his parents to Buffalo in 1835. He studied at Phillips Exeter Academy, and was graduated at Harvard in 1845. He was admitted to the bar in October, 1846, and from that time practiced in Buffalo. He was a member of the State Senate in 1876-'77, was for several years Chancellor of the University of Buffalo, and was President of the Harvard Club of western New York, and President of the Liberal Club of Buffalo. Harvard gave him the degree of LL. D. in 1900.

Stearns, John Newton, publisher, born in New Ipswich, N. H., May 24, 1820; died in Brooklyn, N. Y., April 21, 1900. He engaged in journalism in New York in 1850, and became editor and proprietor of "Merry's Museum" in 1868. He joined a juvenile temperance society when seven years old; became a member of the Sons of Temperance at the birthplace in 1849; was elected grand worthy patriarch of the grand division of western New York in 1870 and 1884

and most worthy grand patriarch of the national division of North America in 1866. In the latter year he also joined the Independent Order of Good Templars, and subsequently he was twice elected grand worthy templar of the Grand Temple of New York. On the organization of the National Temperance Society and Publishing House, in 1865, he was appointed its corresponding secretary and publishing agent, which offices he held till his death. In 1875-76 he was President of the New York State Temperance Society, and in 1893 had general charge of the World's Temperance Congress in Chicago during the World's Exposition. Mr. Stearns was editor, from 1863, of the "National Temperance Advocate"; was also editor of the "Youth's Temperance Banner," "The Water Lily," "The National Temperance Almanac," issued annually since 1869; and published "The Temperance Chorus" (New York, 1867); "The Temperance Speaker" (1869); "The Centenary Temperance Volume" (1876); "The Prohibition Songster" (1885); and "One Hundred Years of Temperance" (1885).

Stearns, Joseph Barker, electrician, born in Weld, Me., Feb. 28, 1831; died in Camden, Me., July 2, 1895. He learned telegraphy in Newburyport, Mass.; became superintendent of the Boston Fire-alarm Telegraph Company in 1855, and held the office till 1867, when he was elected President of the Franklin Telegraph Company, operating lines between Boston and Washington. While in charge of the fire-alarm telegraph in Boston he made numerous inventions, by which the system reached its present high state of development. In 1868 he invented a duplex system of telegraphy, for which he received a United States patent and royalties from the British, French, Italian, Russian, and Spanish governments, from several in Central and South America, and also from submarine telegraph companies. He was employed as an electrical engineer in making, laying, and putting into operation telegraph cables between Galveston, Texas, and Vera Cruz, Mexico, and between the Isthmus of Tehuantepec in Mexico and Callao, Peru. On the completion of his last work he made his home in Camden, Me., where he gathered a collection of carved ivories, said to be the largest ever made.

Stevens, John Leavitt, journalist, born in Mount Vernon, Me., Aug. 1, 1820; died in Augusta, Me., Feb. 8, 1895. He was educated at the Maine Wesleyan Seminary and the Waterville Liberal Institute; studied theology, and was ordained a minister of the Universalist Church in 1844. After ten years failing health compelled him to abandon the ministry, and James G. Blaine, then one of the owners of "The Kennebec Journal," called him to the associate editorship of that paper. Three years afterward Mr. Blaine removed to Portland, and Mr. Stevens succeeded him as editor in chief, holding the place till 1870. He was then appointed United States minister to Uruguay and Paraguay, which countries were in a disturbed condition. He was influential in protecting American interests and in aiding to re-establish peace between the two countries. In 1873 he resigned this post, and four years afterward went to Sweden as United States minister, remaining there till 1883. While residing in Stockholm he gathered materials for a history of Gustavus Adolphus and the Thirty Years' War. In 1889 he was appointed minister to the Hawaiian Islands. A revolution against the royal Government broke out in Honolulu on Jan. 30, 1893; the Queen's authority was overthrown, and a provisional government was proclaimed (see article HAWAIIAN ISLANDS in the "Annual Cyclopædia" for 1893). Minister Stevens established a protectorate over the islands on Feb. 1—an act which was promptly disavowed by the American Secretary of State. On Feb. 15 President Harrison sent to the Senate a message accompanied by the draft of a treaty providing for annexation. Not five days after President Cleveland assumed office he withdrew the treaty from the Senate and appointed James H. Blount, of Georgia, a special commissioner to visit Hawaii and ascertain all the facts

connected with the overthrow of its Government, vesting him with paramount authority. On April 1 Commissioner Blount withdrew the protectorate, and in May Minister Stevens was recalled and Mr. Blount was appointed minister in his place. Mr. Stevens returned to the United States and took no further part in public affairs.

Stiles, Isaac Newton, lawyer, born in Suffield, Conn., July 16, 1833; died in Chicago, Ill., Jan. 18, 1900. He received a common-school education, studied law, and was admitted to the bar in Lafayette, Ind., in 1855. Soon afterward he became prosecuting attorney; was elected to the Legislature; and was an active speaker in the Fremont presidential campaign. At the beginning of the civil war he enlisted as a private, but went to the field as adjutant of the 5th Indiana Infantry. He was taken prisoner at Malvern Hill, and was confined for six weeks in Libby prison. On being exchanged, he returned to the army; was promoted major, lieutenant colonel, and colonel of the 63d Indiana Volunteers, and was brevetted brigadier general for meritorious services in the field, Jan. 31, 1865. After the war he settled in Chicago to practice. For several years he was totally blind.

Stockbridge, Henry, lawyer, born in North Hadley, Mass., Aug. 31, 1822; died in Baltimore, Md., March 11, 1895. He was graduated at Amherst College in 1845, and was admitted to the bar in Baltimore, May 1, 1848. During the civil war he was active in the Union cause, and was appointed a special district attorney in the War Department. In 1864, while a member of the Legislature, he drew up the act providing for a Constitutional convention to abolish slavery in that State. He was elected to this convention, and subsequently defended the Constitution framed by it before the court of last resort. Subsequently he instituted and prosecuted with success in the United States courts proceedings for annulling the indentures of apprenticeship, through which attempts had been made to evade the emancipation clause. By these efforts he secured the enfranchisement of more than 10,000 colored children in Maryland. In 1865 he was judge of the circuit court of Baltimore County. He was Vice-President of the Maryland Historical Society, for more than twenty years editor of the fund publications, and contributed Part XXII to "The Archives of Maryland" (Baltimore, 1866).

Stone, David Marvin, journalist, born in Oxford, Conn., Dec. 23, 1817; died in Brooklyn, N. Y., April 2, 1895. He received a common-school education, and was engaged in teaching and in mechanical pursuits till 1842, when he became a merchant in Philadelphia, and in 1849 removed to New York city and became editor of the "The Dry-goods Reporter." In December following he became commercial editor of "The Journal of Commerce." In 1861, in conjunction with William C. Prime, he purchased the paper, and five years afterward succeeded Mr. Prime as editor in chief. He held this place till June 10, 1866, when the paper was consolidated with "The Commercial Bulletin." A notable incident in his long editorial career was the suppression of his paper by the United States Government in May, 1864, for publishing a spurious draft proclamation purporting to have been issued by President Lincoln. Copies of the alleged proclamation were sent to the principal newspapers in the city, but the "Journal of Commerce" and the "World" were the only ones that published it in full. The only person imprisoned was Joseph Howard, Jr., author of the ennard. Mr. Stone was a lover of flowers, and spent all his leisure in his garden and conservatory, giving freely of his floral treasures to the poor and sick. He bequeathed to the Brooklyn Society for the Relief of Reputable Aged Indigent Women \$5,000.

Story, William Wetmore, sculptor, essayist, and poet, born in Salem, Mass., Feb. 12, 1819; died in Vallombrosa, Italy, Oct. 7, 1895. He was a son of Joseph Story, the famous jurist, and after graduation at Harvard University studied law with his father and was

admitted to the bar. Five years of active work in his profession, during which time he produced several law books and contributed both verse and prose to the magazines, were followed in 1845 by a severe illness, from which he had hardly recovered when his

father died. It was decided by the bar to erect a statue to Judge Story, and the commission was given to his son, who had hitherto accomplished only amateur work in sculpture. In order to qualify himself for serious effort in this direction he went to Rome to study, and for the rest of his career made Italy his home. He made, however, several visits to the United States, delivering a series of art lectures here in

the winter of 1877-78. In 1843 Mr. Story married Miss Eldridge in Boston. Mr. Story's studio was one of the most popular places of resort for visitors in Rome, and about the sculptor himself centered much of the best literary and artistic life of the city. He went to Italy at a period when very little had been accomplished in sculpture in his native country, and if he never rose to greatness as a sculptor, he still accomplished much that was both creditable and pleasing. His "Cleopatra" statue is mentioned by Hawthorne in "The Marble Faun," and among his best works of this character are the statues of Josiah Quincy, at Faneuil Theater, Cambridge, and George Peabody, in London. Much less admirable are such well-known works of his as the "Edward Everett," in the Boston public garden, and the "Prescott," at Harker Hill. In poetry Story takes a higher rank than in sculpture; the level reached in his first volume of poems in 1847 is maintained in all his subsequent work down to the latest collection of his verse in 1885. His poetry exhibits a delicacy of suggestion, a strength of phrase, a felicity of diction, and a glow of color that win our admiration, but it falls short of a very high degree of excellence. The "Roman Lawyer in Jerusalem," one of his most characteristic poems, was better known a generation ago than it is at present; but perhaps his lines on the historian Motley show him, in certain aspects, at least, at his best. His most popular prose work was "Roma di Roma," a series of "Walks and Talks about Rome," which remains as delightful reading to-day as when it was written. "Fiammetta" is a novel deeply penetrated with Italian passion, and displays one side of his varied nature, as his "Conversations in a Studio," a critical volume, reveals another. Yet it must be admitted that in prose as in verse, and in sculpture also, Story achieved nothing distinctive, although his work in all three departments of effort gives much pleasure. But it is the work of a highly accomplished dilettante, not that of genius. His talents were exercised in too many fields to admit of supreme excellence being achieved in any one. He was strongest as a poet. Mr. Story's first published work was a "Treatise on the Law of Sales" (Boston, 1844), followed by a "Treatise on the Law of Contracts" (Boston, 1847). His other books include "Poems" (Boston, 1847); "Life and Letters of Joseph Story" (1853); "Poems" (Boston, 1864); "Roma di Roma" (London, 1862); "The American Question" (London, 1862); "Proportions of the Human Figure" (1866); "Grafitti d'Italia" (Edinburgh, 1867); "The Roman Lawyer in Jerusalem" (Boston, 1870); "Nero: An Historical Play" (Edinburgh and London, 1875); "Castle St. Angelo" (Philadelphia, 1877); "Vallembrosa" (Edinburgh, 1881); "He and She, or, A Poet's Portfolio" (Boston, 1884); "Fiammetta: A Summer Idyl" (Boston, 1885); "Poems" (Edinburgh, 1885); "Conversations in a Studio"

(Boston, 1889); "Excursions in Art and Letters" (Boston, 1891); "A Poet's Portfolio: Later Readings" (Boston, 1901).

Strong, William, jurist, born in Somers, Conn., May 6, 1808; died at Lake Minniewaka, N. Y., Aug. 15, 1895. He was graduated at Yale in 1831; took a "vicarinate" course in the law school, and was admitted to the bar in Reading, Pa., in 1835. In less than a year he acquired a practical familiarity with German, which was then generally spoken in that section of the State, established himself in practice, and became active in politics. In 1842 and 1843 he was elected to Congress as a Democrat. He continued to practice till 1847, when he was elected a justice of the Supreme Court of Pennsylvania, resigning in 1850 and removing to Philadelphia. His opinions fill 30 volumes of the State reports. In Philadelphia he almost immediately obtained a large practice, but relinquished it in 1870, on being appointed an associate justice of the United States Supreme Court. Judge Strong was a member of the Electoral Commission of 1877 to decide the Hayes-Tilden presidential contest. He resigned his seat on the bench in December, 1891. Justice Strong was for many years President of the American Trust Society and of the American Sunday-school Union, and was one of the incorporators of the American Board of Commissioners for Foreign Missions. For several years after his retirement he lectured in the law department of Columbian University, Washington, D. C., and

also gave a course of similar lectures to the professors and students of Union Theological Seminary, New York. In 1875 he delivered an address before the law department of the University of Pennsylvania on the "Growth and Modifications of Private Civil Law."

Sutherland, Charles, physician, born in Philadelphia, Pa., May 28, 1829; died in Washington, D. C., May 11, 1888. He was appointed an assistant surgeon in the United States army, Aug. 5, 1852; was promoted captain and assistant surgeon, Aug. 5, 1857; major, April 16, 1862; lieutenant colonel and assistant medical purveyor, July 20, 1862; colonel and surgeon, June 24, 1876; and brigadier general and assistant general, Dec. 28, 1890; and was retired May 20, 1892. He was brevetted lieutenant colonel for meritorious services, and colonel for efficient discharge of duties during the war, both on March 10, 1865. On the secession of Texas he was engaged, being taken prisoner, and left the State with artillery and infantry troops for New York, reporting for duty in March. In the following month he accompanied the same expedition to Fort Pickens, Fla., where he was stationed till March, 1862, and after a brief service at Fort Warren, Mass., was appointed medical purveyor to the armies at Fribourg Landing, Tenn. He commanded large medical depots at Columbia, Ky., and Memphis, Tenn.; shed out a general hospital at the latter city, and was appointed medical inspector of troops and purveyor of the Army of the Tennessee in and about Vicksburg, Miss. Afterward he was medical director to the Department of Virginia and North Carolina; from November, 1862, till January, 1864, was on retiring board duty at Winchester, Va.; then became medical director of hospitals at Annapolis; and afterward was succeeding medical purveyor at Washington, D. C., till the close of the war. After the war he was on duty principally in New York and San Francisco, till his permanent retirement general, and then till his retirement at Washington, D. C.

Swain James Barrett, journalist, born in New York city, July 20, 1837; died in Sing Sing, N. Y., May 27, 1895. He received a public-school education, and in

1834 entered a printing office as an apprentice, where he had Horace Greely for an associate. A friendship sprang up between them, and on leaving the printing office the two set up in business for themselves under the name of Horace Greely & Co., and edited and published the "Log Cabin." In 1843 Mr. Swain purchased the "Hudson River Chronicle" in Sing Sing, N. Y., and edited and published it till 1849, when he returned to New York and became city editor of the "Tribune." He went to the "Times" in a similar capacity in 1851, and became editor of the "American Agriculturist" in 1852, and political contributor to the "Times" in 1853, and its Washington correspondent in 1860. He also edited the "Free State Advocate," a national Republican campaign paper in 1856, and the Albany "Daily Statesman" in 1857-'61. In 1861 he raised a body of cavalry known as "Scott's Nine Hundred," and went to the front as its colonel. He served till the close of the war, and on his return was appointed engineer in chief of the National Guard of New York. In 1867-'70 he was a United States weigher. In 1876-'85 edited the "Hudson River Chronicle," and in 1881-'85 was an inspector of post offices. He published "Life and Speeches of Henry Clay," to whom he was for a time private secretary (3 vols., New York, 1842); "Historical Notes to a Collection of the Speeches of Henry Clay" (2 vols., 1843); and "Military History of the State of New York" (3 vols., 1861-'65).

Swinburn, Ralph, engineer, born in Newcastle, England, in January, 1805; died in Charleston, W. Va., June 14, 1895. He was the son of a miner, and when fifteen years old was apprenticed to Stephenson, who was then perfecting his railway locomotive. In 1850 he settled in New Orleans, afterward removing to Richmond Va., where he secured employment in the building of the old Virginia Central Railroad. He remained in the railway service as operating and constructing engineer till about 1870, when he settled on a farm in West Virginia, and also entered the ministry of the Baptist Church, and was engaged in work as an evangelist till within two years of his death. Mr. Swinburn aided Stephenson in making the trial trip of the first railway locomotive, and sat in the cab with his hand on the throttle as engineer.

Taylor, William Mackergo, clergyman, born in Kilmarnock, Scotland, Oct. 23, 1829; died in New York city Feb. 8, 1895. He was graduated at the University of Glasgow in 1849; studied theology at the Divinity Hall of the United Presbyterian Church at Edinburgh; was licensed to preach by the presbytery of Kilmarnock, Dec. 14, 1852; and was ordained pastor of the United Presbyterian Church at Kilmarnock, June 28, 1853. In 1855 he was called to the United Presbyterian Church on the Derby Road, Liverpool, where he labored for sixteen years, building up a congregation of from 16 to nearly 1,000 members, and leaving it the second largest of its denomination in England. He first came to the United States in 1871 as a delegate to the General Assembly of the Presbyterian Church, and the same spring occupied for several weeks Dr. Storm's pulpit in Brooklyn. In November, following, Dr. Taylor was called to the pastorate of the Broadway Tabernacle Church, where he was installed on April 9, 1872. He held this charge actively till November, 1892, when, on resigning, he was chosen pastor emeritus. He received the degree of D. D. from Yale and Amherst Colleges in 1872, and that of LL. D. from Princeton in 1888. From 1876 till 1890 he was editor of the "Christian at Work," for which he wrote the International Sunday-school Lessons for several years; in 1876 and 1886 delivered the Lyman Beecher course of lectures in Yale College; in 1888, the L. P. Stone lectures in Princeton Seminary; and in 1883 undertook to raise a fund for the erection of parsonages on the Western frontier, to be administered by the American Congregational Union, his personal efforts resulting in the contribution of over \$21,000, which has since been increased to \$40,000. He was identified with numerous missionary and philanthropic societies; was a frequent

contributor to the religious press; and published "Life Truths," a volume of sermons (Liverpool, 1862); "The Miracles: Helps to Faith, not Hindrances" (Edinburgh, 1865); "The Lost found and Wanderer welcomed" (1870); "Memoir of the Rev. Matthew Dickie" (Bristol, 1872); "Prayer and Business" (New York, 1873); "David, King of Israel" (1875); "Elijah, the Prophet" (1876); "The Ministry of the Word" (1876); "Songs in the Night" (1877); "Peter, the Apostle" (1877); "Daniel, the Beloved" (1878); "Moses, the Lawgiver" (1879); "The Gospel Miracles in their Relation to Christ and Christianity" (1880); "The Limitations of Life, and Other Sermons" (1880); "Jesus at the Well" (1884); "John Knox: A Biography" (1884); "Joseph, the Prime Minister" (1886); "The Parables of Our Saviour expounded and illustrated" (1886); "The Scottish Pulpit" (1887); "Ruth, the Gleaner" and "Esther, the Queen" (1891); "Good Character: What it is, and how to form it" (1892); and "The Boy Jesus, and Other Sermons" (1893).

Thatcher, Solon O., jurist, born in Hornellsville, N. Y., Aug. 31, 1830; died in Lawrence, Kan., Aug. 11, 1895. He studied at Union College, and was graduated at Albany Law School in 1856. He was a delegate to the first State convention in New York for the organization of the Republican party, and after the Fremont campaign removed to Lawrence, Kan., where he at once became one of the counselors of the Free-state movement. In 1859 he was temporary presiding chairman of the Wyandotte Convention, and was chosen chairman of the legislative committee of that body. He was elected the first district judge of the 4th Judicial District of Kansas in 1860, and served till 1864, when he resigned, and was the unsuccessful Republican candidate for Governor. He was appointed in July, 1884, one of 3 commissioners to negotiate treaties with the South and Central American governments; and at the subsequent assembling of the Pan-American Congress at Washington he made a detailed report of his work.

Thomas, Elisha Smith, clergyman, born in Wickford, R. I., March 2, 1834; died in Salina, Kan., March 9, 1895. He was graduated at Yale in 1858 and at Berkeley Divinity School, Middletown, Conn., in 1861. In June of the latter year he took deacon's orders, and after taking priest's orders was for three years rector of St. Paul's Church at New Haven. In 1864 he became rector of Seabury Hall, Fairbault, Minn., and Professor of Old and New Testament Exegesis in the divinity school there. In 1811 he accepted a call to the rectorship of St. Mark's Church, Minneapolis, which he held till his consecration as Assistant Bishop of Kansas in 1887. On the death of Bishop Vail in 1889, Bishop Thomas became the head of the diocese, and he labored with energy and ability in behalf of Church extension.

Thomes, William Henry, author, born in Portland, Me., May 5, 1824; died in Boston, Mass., March 7, 1895. He received a public-school education and learned the printer's trade. In 1843 he went to California, and again in 1849, extending his last trip to Honolulu, the East Indies, Australia, and China. During his travels he visited almost every point of interest on the South American and African coasts. He was engaged for three years in the mines in Australia; spent some time on an opium smuggler between China and California; and at the beginning of the Mexican War was forced into the service of the Mexican Government, from which he escaped with difficulty. On his return to Boston he became editor of "Ballou's Monthly," to which he contributed a large number of stories. Among his publications are "The Gold Hunters of Australia" (Boston, 1860); "Life in the East Indies" (1870); "A Whaler's Adventures" (1871); "The Gold Hunters in Europe" (1872); "A Slaver's Adventures" (1873); "Running the Blockade" (1874); "The Belle of Australia" (1885); "On Land and Sea" (1886); and "Lewey and I" (1887). He was the first President of the New England Society of California Pioneers.

Thompson, Alexander Ramsey, clergyman, born in New York city, Oct. 16, 1822; died in Summit, N. J., Feb. 7, 1895. He was graduated at the University of the City of New York in 1842, and at Princeton Theological seminary in 1845; was pastor of the Presbyterian Church, Staten Island, in 1861-'69; of the Reformed Dutch Church in Twenty-first Street, New York city, in 1862-'73; and of the North Reformed Dutch Church, in Brooklyn, N. Y., in 1873-'94. While holding a pastorate in Bridgeport, Conn., at the beginning of the civil war he was instrumental in organizing the 17th Connecticut Regiment, and for a year he was its chaplain. He was also an organizer of the Christian Commission, and for two years was in charge of the New England Soldiers' Relief Bureau. In 1862-'65 he was chaplain of the New England Hospital, and from 1873 till his death, of the Episcopal Hospital, New York city. He received the degree of D. D. from the University of the City of New York in 1865, and had been a member of its council since 1872. Among his publications are "Casting down Imaginations" (1874) and "Christian Patriotism: The Points of Similarity between the Struggle for Independence in America and that of our Holland Ancestors" (1876). Dr. Thompson was the author of many hymns, and his translations of Latin and Greek hymns rank high. He assisted in compiling "Hymns of the Church" (New York, 1880) and "Hymns of Prayer and Praise" (1874).

Thompson, Alfred, artist, born in London, England, in 1831; died in Barnesat Park, N. J., Aug. 31, 1886. He was educated at Rugby and Cambridge; entered the Eastchillien Dragoons, with which he served for several years, attaining the rank of captain; sold his commission, and studied art in Munich and Paris; and did considerable work on the illustrated papers in the last city. Three of his paintings were exhibited at the Royal Academy. After returning to London he was for a time editor of "Pan and the Mask," was one of the founders of the Empire Music Hall, and composed and superintended the production of pantomimes at Drury Lane Theater and Covent Garden. He settled in New York city in 1884, where for a time he published a comic paper called "Snap." He adapted "The King's Pleasure" for Lawrence Barrett, wrote the librettos for "The Arabian Nights" and "The Crystal Slipper"; designed the floats for the Columbian Celebration parade, and the scenery and costumes for Robson and Crane's production of "The Comedy of Errors," and for several years devoted himself almost exclusively to designing theatrical scenery and costumes.

Thompson, Mary Harris, surgeon, born in Washington County, New York, in 1839; died in Chicago, Ill., May 21, 1906. She was educated at Fort Edward Institute and West Poughkeepsie Academy, and studied at the New England Female Medical Academy and the New York Infirmary for Women and Children. In 1862 she removed to Chicago, where she gained the reputation of being one of the most eminent female surgeons in the world. She was one of the promoters of the Women's Medical College, and founder of the Chicago Hospital for Women and Children.

Thurman, Allen Granbery, jurist, born in Lynchburg, Va., Nov. 14, 1815; died in Columbus, Ohio, Dec. 12, 1895. He accompanied his parents to Chillicothe in 1833, where he received his education, and afterward settled in Columbus. His first employment was as an assistant to a party of land surveyors in Ohio. Afterward he studied law and became private secretary to Gov. Lucas. He was admitted to the bar in 1843. Returning to Chillicothe, he entered into partnership with his uncle, William Allen, and when the latter had sold his law practice for his political affairs, Mr. Thurman took charge of all of the former. He resumed the Democratic nomination for Congress in 1844 and was elected. He declined a renomination, and resumed the practice of law till 1851, when he was elected a judge of the Supreme Court of the State, serving the last year of his term as chief justice. He declined a renomination for this office also, and again

returned to practice. In 1867 he was the Democratic candidate for Governor, and, though defeated by Richardson B. Hayes, he greatly increased the majority

of the successful party. The new Legislature was Democratic and elected him United States Senator for the term beginning March 4, 1869. He was appointed a member of the Committee on the Judiciary, of which subsequently he was chairman for several years. In 1874 he was re-elected to the Senate, and in this term was chosen its president *pro tem*. While in Congress he drafted the bill to compel the bonded-aided Pacific railroads to fulfill their obligations to the Government, since known as the "Tyman act"; presented arguments against the constitutionality of the Civil Rights bill which have since been sustained by the United States Supreme Court; labored to secure for the States that would the most favorable reconstruction legislation; opposed the Reconstruction act; advocated a concurrent resolution declaring that the public debt of the United States was payable in silver coin of standard weight and fineness; supported the Brand-Albion act; took part in framing the bill providing for the Electoral Commission; and was a member of that body and a warm defender of its constitutional authority and of its decisions. James G. Blaine, in his "Twenty Years of Congress," pays a glowing tribute to his integrity and work. He was succeeded as Senator by James A. Garfield, and the latter on his accession to the presidency appointed his political rival and personal friend a member of the International Monetary Conference at Paris. In 1876 Judge Thurman received several votes in the National Democratic Convention for the presidential nomination; in 1880 he received a larger vote; in 1884 he was promised for the nomination a third time; and in 1891 he was nominated for Vice-President by nomination.

Tillman, Davis, military officer, born in Rockland, Me., April 14, 1830; died in Portland, Me., April 20, 1900. He spent two years at West Point, and then resigned because of an accident that required the amputation of his leg. In 1857 he was elected to the State Legislature, in the following year was appointed adjutant general of the State, and early in 1861 was appointed collector of customs of the Washington (Maine) district. In 1861 he was commissioned captain of the 2d Maine Battery. He remained in Maine, owing to the apprehension of difficulty with England on account of the "Trent" affair, till April, 1862, when he reported for duty in Washington, D. C. In the following month he was promoted major and appointed chief of artillery in Gen. Ord's division, and in August, after the battle of Cedar Mountain, became chief of artillery on Gen. Matthews's staff, taking part in the battle at Rappahannock station and in the second Bull Run. He was commissioned brigadier general, to date from Nov. 21, 1861, and while serving as inspector of artillery till April, 1862, he was ordered to Cincinnati as chief of artillery for fortifications in the Department of the Ohio, where he had charge of the defenses of Cincinnati and of the works on the Louisville and Nashville Railroad. He also, while there, raised two regiments of heavy artillery. In December following he was ordered to the supervision of defensive works at Knoxville, Tenn., and was assigned to the command of a Brigade in the 2d Corps, with which he served in several campaigns during the winter of 1862-'63. From Knoxville, where he constructed what were considered

as the best works in the military division of the Mississippi, he was transferred to the command of the District of East Tennessee, serving there till early in 1863, when he was assigned to the 4th division of the Department of the Cumberland, which he commanded till the close of the war. He was retained in the service till Dec. 1, 1866, having charge of branches of the Freedmen's Bureau in Tennessee and Georgia. He was engaged as a cotton planter in Georgia for a year, and then returned to his birthplace and became interested in the lime and granite business.

Tyler, Josiah, clergyman, died in Asheville, N. C., Dec. 20, 1893. He was the son of the Rev. Bennett Tyler, D. D., a former president of Dartmouth College, and was founder and first president of the theological seminary in East Windsor, Conn. For forty years he was a missionary among the Zulus in South Africa under the American Board. During the last ten years he was engaged in literary labor at his home in St. Johnsbury, Vt. He published "Forty Years among the Zulus."

Upham, Francis William, author, born in Rochester, N. H., Sept. 10, 1817; died in New York city, Oct. 17, 1895. He was graduated at Bowdoin College in 1837, studied law with his brother, Nathaniel G. Upham, and was admitted to the bar of Massachusetts in 1844. After a few years' practice he became interested in the defense of the Bible against what has since been called the "higher criticism," and passed the remainder of his life in studying in the original tongue and publishing works defending the Scriptures. He received the degree of LL. D. from Union College in 1868. His publications include: "The Debate between the Church and Science," anonymous (Andover, 1800); "Wise Men: Who they were and how they came to Jerusalem" (New York, 1869); "The Star of Our Lord" (1873); "Thoughts on the Holy Gospels: How they came to be in Manner and Form as they are" (1881); "St. Matthew's Witness"; and "The First Words from God." His "Debate between Church and Science" was published in support of Prof. Tayler Lewis's "Six Days of Creation."

Van der Weyde, Peter H., scientist, born in Nymegen, Holland, in 1813; died in New York city March 18, 1895. He was graduated at the Royal Academy in Delft, became Professor of Mathematics and Natural Philosophy at the Government School of Design, founded a journal devoted to mathematics and physics in 1842, and in 1845 received a gold medal from the Society for the Promotion of Scientific Knowledge for a text-book on natural philosophy. He was also editor of a daily paper, in which he took strong ground against what he considered abuses in the Government. In 1849 he removed to New York city, in 1856 was graduated at New York University Medical College, and after practicing for three years was appointed Professor of Physics, Chemistry, and Higher Mathematics at Cooper Institute. He was also chosen to the chair of Chemistry in the New York Medical College. In 1864 the chair of Industrial Science was created for him by Girard College, Philadelphia, and after holding it a few years he returned to New York and became editor of "The Manufacturer and Builder." Prof. Van der Weyde had secured over 200 patents on inventions, mostly electrical, and was also a musician, a composer, and a painter.

Van Dyck, Cornelius van Allen, clergyman, born in Kinderhook, N. Y., Aug. 13, 1818; died in Beyrout, Syria, Nov. 16, 1895. He was graduated at Jefferson Medical College in 1837, and went to Syria as a missionary under the authority of the American Board. He soon became proficient in Arabic, was appointed principal of the seminary on Mount Tabor, and undertook the preparation of mathematical and scientific works in Arabic. In 1846 he was ordained to the ministry of the Congregational Church, and on the death of Dr. Eli Smith was sent by the American Board to Beyrout to complete the work on the Arabic version of the Scriptures begun by Dr. Smith. He rewrote the entire work, excepting the Pentateuch, in the style of the Koran, and supervised the publica-

tion by the American Bible Society in New York in 1864-'67. From 1857 till 1880 he was manager of the mission press in Beyrout, and afterward he was physician to St. John's and St. George's Hospitals and Professor of Pathology in the Syrian Protestant College. In Syria he was esteemed as the "Great Hakim," or "Great Healer." On April 2, 1890, on the completion of his fifty years of service among them, the Syrians held a jubilee in his honor. He received the degree of D. D. from Rutgers College in 1865. His publications in Arabic include a series of mathematical, chemical, astronomical, and hygienic works, and translations of the "Shorter Catechism" and the "Schönberg Cotta Family."

Van Wyck, Charles Henry, lawyer, born in Poughkeepsie, N. Y., May 10, 1824; died in Washington, D. C., Oct. 24, 1895. He was graduated at Rutgers College in 1843, studied law, was district attorney of Sullivan County, New York, in 1850-'56, and was a Representative in Congress in 1859-'63. While in his second term he was commissioned colonel of the 56th New York Volunteers, with which he served to the close of the war, being promoted brigadier general in 1865. In 1866 and 1868 he was re-elected to Congress. He removed to Nebraska in 1874, was a delegate to the Constitutional Convention in 1876 and a State Senator in 1876-'80, and was elected United States Senator, as a Republican, and took his seat March 4, 1881. In the Senate he distinguished himself by persistency in the attempt to secure the removal of secrecy from its executive sessions. In 1892 he was defeated as the Populist candidate for Governor of the State. Senator Van Wyck was conspicuous in organizing the Farmers' Alliance movement in Nebraska. He was a man of much eccentricity, at one time spending an entire summer with his family in a vacant church which he owned in the fashionable residence part of the national capital.

Vaux, Calvert, architect and landscape gardener, born in London, England, Dec. 20, 1824; died in Bensonhurst, Long Island, Nov. 19, 1895. He was educated at the Merchant Tailors' and the F. A. Reynell's schools in London. At the age of nineteen he became an articled pupil of Lewis N. Cottingham, a prominent architect, and at the close of his three years' indenture took an educational trip on the Continent. In 1850, being then a member of the London Architectural Association, he met the eminent American landscape designer, Andrew J. Downing, who induced him to come to this country as his assistant, and at the close of 1851 made him architectural partner, their office being at Newburg, on the Hudson. After the death of Mr. Downing, in 1852, Mr. Vaux remained for five years in Newburg, his professional engagements rapidly growing in number and importance, and taking him over a wide extent of the seaboard States. An idea of his work at that time may be got from his book "Villas and Cottages" (New York, 1857; 2d edition, 1864). At the suggestion of John A. C. Gray, whose house in Fifth Avenue he had designed, and who remained his staunch friend through life, Mr. Vaux removed to New York to take charge, as architect, of the Bank of New York, and from that time he was identified with the best art life of the metropolis. Landscape painting, then at its best, centered in New York, but the leading city of America was at a low stage both in architectural adornment and in civic dignity. Most of the territory now known as Central Park had been secured, but it was a strip of unkempt suburb, with the ruins of a grand scenery. While the ground was being cleared and roughly inclosed Mr. Vaux, among others, urged that the designs for its landscape treatment be selected in a public competition, and this idea being adopted he sought out Mr. F. L. Olmsted, then engaged as superintendent of labor in closing in the park, and invited his co-operation in preparing a landscape design. The two met after the day's work was over, at Mr. Vaux's house in East Eighteenth Street, and as the result of their labor the design signed "Greensward" was accepted (April

20, 1856). The two men became associated under the firm name of Olmsted & Vaux, and under their hands chiefly, but through various vicissitudes of political administration, the Central Park grew up. On June 13, 1856, Mr. Vaux was employed to make a plan for Prospect Park, in Brooklyn, and urged the change to the boundaries by which a great addition was made to the grounds already acquired and a more picturesque and happy arrangement was rendered possible. Olmsted & Vaux were appointed landscape architects and superintendents (May 29, 1856), and in their reports of 1856 and 1871 presented in a suggestive way and with a light touch what came to be the leading features of a general treatment of city grounds applied by them then and afterwards, but with endless variations, to many great parks. Through them chiefly the landscape architect has brought our American elms and maples into harmonious relations with the foliage of all lands, and out of elements as heterogeneous as our population has, in the heart of our cities, framed a picture of general quiet and satisfying beauty. Of Mr. Vaux's individual work in New York city may be noted as typical the Marble Arch, Bowbridge, and Belvidere, and the bridges over drives and sunken roads, with the new landscape treatment of transverse roads; the beautiful site of the Grant monument and all details of Riverside Park west of the drive; all details of Monmouth Park, whose full development is yet to come. In the Niagara reservation Luna Island bridge may be noted. In association with Mr. Olmsted Mr. Vaux's plans and supervision—sometimes one, but generally both—extended over parks in Bridgeport, Conn. (1866); in Newark, N. J. (1867); the South Park, in Chicago (1869), including the grounds afterward used for the World's Fair buildings; Fairmount Park, in Philadelphia (1871); parks in Providence, R. I., and Fall River, Mass. (1872); in Buffalo, N. Y. (1874), and others. In connection with General Parsons, Jr., the present superintendent of the New York City Park Department, Mr. Vaux laid out the grounds of Bryn Mawr College, Pennsylvania (1882); Trinity Cemetery, New York (1884); East River Park, New York (1893); and that at Cortlandt Hook (1894). Of public buildings, he designed, besides many others, the Museum of Natural History (1873) and the Metropolitan Museum of Art (1874), both only partly completed. His last finished work was a design for Mulberry Bend Park. "When he signed it," says his daughter, "being then ill in bed, he laid down the pen with a happy sigh and said, 'Is that I feel I have put the best work I have to give, and it is my best.'" He was much engaged in his last years in defending in the interests of the city children the sylvan meads and other rural features of the city grounds against encroachments for speedways and for military purposes or for merely temporary utilities. In this most important work he found powerful auxiliaries in Paul Dana and Andrew H. Green. Mr. Vaux at the time of his death was landscape architect of the Department of Parks of New York city, commissioner of the Consolidated Commission of the Greater New York, and landscape architect to the Commission of the State reservation at Niagara. He was an early member of the Union League Club and of the Century Association; also of the National Sculpture Society. He married in 1856 Mary Swan McEntee, of Rondout, N. Y., a sister of the eminent artist, and left two sons and two daughters.

Vaux, Richard, penologist, born in Philadelphia, Pa., Dec. 32, 1816; died there March 22, 1895. He was a son of Judge Roberts Vaux, was educated by private tutors, and was admitted to the bar in Philadelphia in 1842. Soon afterward he was appointed bearer of dispatches to the United States minister in London, with whom he remained for a year as Secretary of Legation. During this period he had the honor of dancing with Queen Victoria at a court ball in London. After aiding in reorganizing the United States embassy at Brussels he returned to London,

and became private secretary to United States Minister Andrew Stevenson. In 1852 he returned to Philadelphia. In 1852-'53 he was treasurer of county of Philadelphia. On Jan. 7, 1852, he was appointed an inspector of the Eastern Penitentiary, and was elected secretary of the board at the first meeting. For more than fifty years he wrote every annual report, prepared nearly 60 voluminous treatises of penology, and delivered numerous addresses on the subject of prison management. About the time of his appointment as penitentiary inspector he was elected controller of public schools to succeed his father. After being several times the unsuccessful Democratic candidate for mayor, he was elected to that office in 1855, and completely reorganized the government of the city. In 1856 he was chosen a director of Girard College, and in the following year became president of the board. Mr. Vaux was largely instrumental in framing and passing the act of 1861, which now constitutes the charter of the city of Philadelphia. His last public service was as a member of Congress, elected May 12, 1866.

Veach, James Clifford, military officer, born near Elizabethtown, Ind., Dec. 19, 1831; died in Blackport, Ind., Dec. 23, 1905. He was admitted to the bar, practiced for many years, and was elected to the Indiana Legislature in 1861. On Aug. 8, 1862, he was commissioned colonel of the 10th Indiana Volunteers; on April 20, 1862, was promoted brigadier general; and in August, 1862, was promoted major general for distinguished services during the war. He took part in the actions at Fort Donelson and Shiloh, the siege of Corinth, Vicksburg, and Mobile, and the Atlanta campaign. He was appointed adjutant general of Indiana in 1863, and was collector of internal revenue in 1870-'80.

Volk, Leonard Wells, sculptor, born in Wells, Hamilton County, N. Y., Nov. 7, 1838; died in Ossau, Wis., Aug. 19, 1895. His father was a marble cutter in Pittsfield, Mass., with whom he learned the trade and worked for several years. In 1859 he went to St. Louis, Mo., where he began modeling in clay without instruction. In 1859 he went to Italy to study sculpture, aided by Stephen A. Douglas, whose cousin he had married. Two years afterward he established himself in Chicago, and had for his first sitter for a portrait bust his distinguished patron, of whom a year afterward he made a life-size statue in marble, which was destroyed in the great fire of 1871. In 1860 he made a portrait bust of Abraham Lincoln in marble, which was destroyed in the same fire. He spent 1860-'69 and 1871-'72 in study in Italy. He was elected an academical member of the Chicago Academy of Design in 1867, and was its president for eight years. Among his many works are the Douglas monument in Chicago, the life-size statue of Douglas and Lincoln in the Illinois State Capitol, portrait busts of Henry Clay, Zachariah Chandler, Eliza K. Washburne, and Gen. James Shields, and the statue of the Henry Keep monument at Watertown, N. Y.

Wadwell, John Newton, astronomer, born in Wilmington, S. C., April 2, 1812; died in Birmingham, Ala., Jan. 9, 1895. He was a son of Gen. Rev. Moses Wadwell, D. D., President of the University of Georgia, and was graduated at that institution in 1835. In 1841 he entered the ministry of the Presbyterian Church; in 1845-'57 was Professor of Latin and Greek in the University of Mississippi; and in 1857-'58 held a similar chair in La Grange College, Tennessee. He was then elected president of the last institution, which in 1862 was closed, and he became general superintendent of Presbyterian missions in the Western Confederate army. During 1862-'75 he was Chancellor of the University of Mississippi, and in 1875-'80 he held the same post in the Southern Presbyterian University, Charleston, Tenn. Dr. Wadwell was largely instrumental in founding the asylum for orphans of Confederate soldiers in Yorkville, Ala.; was secretary of the Board of National Education of the Southern Presbyterian Church from

1874; and received the degree of D. D. from the University of Nashville in 1881 and of LL. D. from the University of Georgia in 1878.

Wainwright, William Pratt, military officer, born in New York city in 1818; died there Oct. 17, 1895. He was graduated at the University of the City of New York; and spent much time in the study of military matters, chiefly in Germany. At the beginning of the civil war he was commissioned major of the 29th New York Regiment, which was composed principally of Germans, with officers educated in German institutions. He distinguished himself at the second Bull Run in August, 1862; prevented the Confederates from turning the right flank of the National army at Turner's Gap, Sept. 14, 1862; and after the battle of Chancellorsville was commissioned colonel of the 76th New York Regiment, with which he served till failing health, from wounds received at Turner's Gap, forced him to resign. On his retirement he was brevetted brigadier general.

Walker, Charles L., historian, born in Otsego County, New York, in 1844; died in Flint, Mich., Feb. 11, 1895. He became a teacher in 1850, removed to Grand Rapids, Mich., in 1856, was secretary of the Territorial Convention, and was elected to the State Legislature in 1849. In 1841 he removed to Springfield, Mass., where he was admitted to the bar; in 1844 settled in Brattleboro, Vt.; and in 1851 made his home in Detroit. He became a professor in the law department of the University of Michigan in 1857, and a judge of the Wayne Circuit in 1867. He published a "Life of Cadillac"; "Michigan from 1796-1805"; "The Civil Administration of General Hull"; and "The Northwest Territory during the Revolution."

Walsh, Robert E., author, born in Kinsale, County Cork, Ireland, in 1855; died in New York city Dec. 28, 1895. He made a specialty of ichthyology, and, besides several books and essays on that subject, published articles relating to the cultivation of fish. By both the British and United States Fish Commissions he was considered an expert in all matters relating to fish culture, and a member of the British commission declared that Mr. Walsh had given many valuable suggestions concerning the development of the mackerel and herring fisheries on the west coast of Ireland. Mr. Walsh had also written a life of Charles Stewart Parnell, was the author of the song "Plain Molly, O," and left an unpublished novel. He received the degree of D. Sci. from Trinity College, Dublin.

Watts, James W., steel engraver, born in Boston, Mass., March 19, 1830; died in Medford, Mass., March 12, 1895. He was one of the last survivors of the old school of line engravers, and for many years was in the employ of the American Bank Note Company. Besides portraits of Longfellow, Whittier, Holmes, Blaine, and Cleveland, he engraved on steel a number of notable paintings, including "The Stag at Bay," "The Sanctuary," and Landseer's "Challenge."

Wayman, Alexander Washington, clergyman, born in Caroline county, Maryland, Sept. 21, 1821; died in Baltimore, Md., Nov. 30, 1895. He was one of 12 colored children, 4 of whom were slaves, and 8 born free, and educated himself by means of borrowed books. In 1840 he was licensed to preach, and three years afterward he joined the Philadelphia Conference of the African Methodist Episcopal Church. He was pastor of several churches, secretary of several general conventions, and was elected bishop in 1884. In 1885 he organized the Florida, Georgia, and North Carolina conferences, and as bishop he had supervision over the conferences of Ohio, Pittsburgh, Kentucky, Tennessee, and West Tennessee. He received the degree of D. D. from Howard University in 1877, and at the time of his death was the senior bishop of his Church. He published "My Recollections," "Cyclopedia of African Methodism," a work on "Discipline," and other books.

Webb, Frances Isabel Currie, author, born in Springfield, N. J., in 1827; died in New York city Dec. 20, 1895. She was the daughter of Judge John L. Cur-

rie, and wife of William Vassar Webb. She began her literary career in early childhood, and became a contributor to juvenile papers and magazines when fifteen years old. In 1873, having become familiar with the Spanish language, she was engaged on the editorial staff of "El Ateneo," a Spanish art journal published in New York city, and soon afterward she became known as a writer of short stories and poems and of essays on reform topics. Her best-known publications are "A Tiff with the Tiflins," "Gala-Day Books," and "A Breath of Suspicion."

Weld, Theodore Dwight, reformer, born in Hampton, Conn., Nov. 23, 1803; died in Hyde Park, Mass., Feb. 8, 1895. He was educated at Phillips Andover Academy, became general agent of the Society for the Promotion of Manual Labor in Literary Institutions in 1830; studied in Lane Theological Seminary, Cincinnati, Ohio, but withdrew on the suppression of the antislavery society of that institution by the trustees in 1833, and then engaged in delivering antislavery lectures till 1836, when he lost his voice. Soon afterward he was appointed editor of its publications by the American Antislavery Society. In 1841-'43 he was engaged in the antislavery cause in Washington, D. C., in 1854 established a school in Eagleswood, N. J., where he received pupils irrespective of sex and color; and from 1864 resided in Hyde Park, near Boston, where he taught as long as his strength would permit. He published numerous pamphlets, including "The Power of Congress over the District of Columbia" (1837); "The Bible against Slavery" (1837); "American Slavery as it is; or, The Testimony of a Thousand Witnesses," which is said to have led Mrs. Stowe to write "Uncle Tom's Cabin" (1839); and "Slavery and the Internal Slave Trade in the United States" (London, 1841).

Wellington, Arthur Mollen, civil engineer, born in Waltham, Mass., Dec. 20, 1847; died in New York city May 16, 1895. He was educated at the Boston Latin School, and at the age of sixteen began, in the office of John B. Henck, the study of civil and mechanical engineering. He passed an examination for assistant engineer in the navy, but the close of the war and some difficulty with his eyes prevented his following that branch of his profession. His first engagement was in the engineering corps of the Brooklyn Park Department, under Frederick Law Olmsted. In 1868 he began railway work on the Blue Ridge Railroad in South Carolina, serving later as an assistant engineer on the Dutchess and Columbia Railroad in New York. In 1870 he was placed in charge of a division on the Buffalo, New York and Philadelphia Railroad, and was soon made principal assistant. Two years and a half later he became locating engineer of the Michigan Midland Railroad, and later engineer in charge of the Toledo, Canada Southern and Detroit Railroad. From 1874 to 1878, the active practice of his profession being interrupted by the long financial depression, he devoted himself assiduously to study and to literary work connected with his professional interests. In 1874 he published "The Computation of Earthwork from Diagrams," which met with such success that in the following year he began his principal work, "The Economic Theory of the Location of Railways." This was afterward expanded into a series of articles on "The Justifiable Expenditure for improving the Alignment of Railways," and published in the "Railroad Gazette." Still later these were published in book form, and at once attracted the attention of engineers and railway men. In 1878 he became principal assistant to Charles Latimer, chief engineer of the New York, Pennsylvania and Ohio Railway, and through the courtesy of Mr. Paine, of the Lake Shore and Michigan Southern Railway, he was enabled to make experiments on the resistance of rolling stock, which suggested a paper read before the American Society of Civil Engineers, Jan. 15, 1879. These experiments were influential in establishing formulas for train-resistance at low velocities; and in 1884, in another paper before the same society, he gave the results of

a series of tests on journal friction at low velocities. In 1861, after spending three years on the "Nypano," he became engineer in charge of location and surveys on the Mexican National Railway, and he described his work there in a paper read before the society in July 1866. The latter part of the three years spent in Mexico he was assistant general manager and chief engineer in charge of location of the Mexican Central Railway. On his return to the United States he turned his attention to technical journalism, and became one of the editors of the "Railroad Gazette." While upon their staff he edited the revised edition of the "Car-builders' Dictionary," in addition to his regular work, and prepared another edition of his "Railway Location" (1867). This second edition was almost a new book, embodying a vast amount of labor. In January, 1867, he became one of the editors to divide and part owner of "The Engineering News," and within two years its subscription list was more than doubled. His originality and the swiftness with which his brain worked were most wonderfully supplemented by infinite care as to statistics and particulars in investigating and proving his theories and assumptions. In addition to his editorial work, he often served as a consulting engineer, being called upon for his advice in such important matters as the construction of grade crossings at Buffalo, the improvement of railway terminals at Toronto, and the foundations of the Board of Trade Building in that city. He was a member of the Board of Engineers that examined and approved the estimates of the Nicaragua Canal in 1869. In 1893 he was called before the Massachusetts Legislature, and at his suggestion the Tremont Street subway, now being built in Boston, was accepted as the best plan for a desired improvement. His last work as consulting engineer was in regard to railway lines in the island of Jamaica. His plans for increasing the facilities of the Brooklyn bridge were unanimously approved by the experts as not only the best offered, but in every way admirable. The trustees feared, however, a greater expense than they wished to incur, though the results indicated by Mr. Wellington from other plans have since followed. He was greatly interested in the study of thermodynamics, and invented an entirely new type of thermodynamic engine, designed to convert heat into mechanical power with a much smaller percentage of loss than the best existing steam engines. His intense devotion to this problem undermined his health, but he finished his experiments and left the matter for practical and commercial development, although he did not live to see it brought to the notice of the world. The daring brilliancy of his imagination was fully equalled by a respect for exact science that made him heedful of every ground for objection, and his great service to the world came from a rare combination of literary ability with scientific knowledge.

Westbrook, Benjamin Frank, physician, born in St. Louis, Mo., Feb. 4, 1831; died in Brooklyn, N. Y., April 12, 1896. He was graduated at Long Island College Hospital in 1874, the youngest and first in a class of 51, and became Professor of Surgical Pathology at that hospital and Adjunct Professor of Anatomy and visiting physician to the Methodist Episcopal and St. Mary's Hospitals. Dr. Westbrook was known for his success in the operation of drawing blood from the right lung in cases of pneumonia when it was believed that this was the last chance to save life. He contributed largely to medical literature, his last work being the elaboration of a system of therapeutics.

Wheeler, James A., engineer, born in Manchester, N. H., Aug. 27, 1827; died there May 8, 1895. When nineteen years old he was appointed assistant engineer on the Concord Railroad, and in 1849 he was promoted to chief engineer. For a series of years he held the office of roadmaster and master of transportation of the Concord and the Manchester and Lawrence roads. As chief engineer of the Concord and Portsmouth Railroad he superintended the construction of the greater part of that line, and subsequently

built the Seaboard Valley road and was engineer and builder of Concord's system of waterworks. In 1862 he was elected Mayor of Manchester as a Democrat. In 1871 he was a candidate for Governor of the State against the Rev. James Fiske. The election resulted in no choice by the people, but Mr. Weston had the poll and a Democratic Legislature elected him. In 1875 and 1878 he was an unsuccessful candidate for reelection, and in 1874, when the choice of his party the fourth time, he received more votes than his Republican opponent, Luther M. Cushing; but the censoring vote prevented a choice, and the Legislature again chose him for Governor.

Wheatleigh, Charles, writer, born in London, England, about 1821; died in New York city Feb. 14, 1896. He was the son of an actor and appeared in a juvenile part with his father. In 1848 he came to the United States and played his first important engagement in support of Charlotte Cushman. Subsequently he played leading parts with Booth, Laura Keane, Joseph Jefferson, John McCullough, Charles Foster, and others. He was a member of Laura Keane's company in the late 50s. Mr. Wheatleigh made several professional trips to California and Australia and also visited India and New Zealand, and at one time was lessee of the Lyceum Theatre in New York city. For about eight years prior to his death he was connected with Augustin Daly's company, and the day of his death he attended a rehearsal of "The Two Gentlemen of Verona" at Daly's Theatre. He was the original Davy Man in "The Collins Family."

Wickliffe, Robert Charles, lawyer, born in Bardonia, Ky., Jan. 6, 1826; died in Shelbyville, Ky., April 18, 1896. He was the son of Gov. Charles A. Wickliffe. He was educated in St. Joseph's Academy, and Center College in Kentucky, studied law, and resided in West Feliciana Parish, Louisiana, in 1846. He was elected State Senator for three terms, became President of that body on the death of Leont-Gene Farmer, and was elected Governor of Louisiana in 1860, serving for four years. At the close of his term he resumed law practice to a limited extent and sought compensation from ill health in active planting. In 1866 he was elected to Congress as a Democrat, but was refused his seat because he would not take the oath required under the reconstruction laws.

Wilcox, James M., inventor, born in Ivy Mills, Pa., Nov. 30, 1824; died in Havertown, Pa., Oct. 10, 1896. In early life he was apprenticed in the paper-making trade, which he followed till 1860, when he engaged in the manufacture of Portland cement. For twenty years he manufactured the paper used by the United States Treasury Department for its bank notes. He gave special attention to making this paper by machinery and to rendering it difficult to counterfeit, securing and producing the localized fiber paper. The chemical paper used by the Treasury Department for its stamps and checks, known as "chambré" paper because of its smallness when finished, was invented by him, and resulted in preventing the counterfeiting and reuse of internal revenue stamps. Under an agreement between him and the United States and German governments a mill was established near Berlin for the manufacture of the German currency paper under his patents in 1875.

Willetts, William Madras, author, born in New York city Jan. 2, 1807; died in Jersey City, N. J., Dec. 8, 1886. He was a son of Col. Madras Willetts, was educated a minister of the Methodist Episcopal Church in 1823, was instructor in Hebrew at Wesleyan University in 1826-'41, became a professor in the last year, and founded the Biblical Institute at Newark, Vt., in 1844, of which he was president till 1848. He edited the "Newbury Biblical Magazine" in 1845-'46, and the "New Bible Magazine" in 1851; and among other works published "Sermons in the Wilderness: Labors and Sufferings of the Mexican Missionaries among the North American Indians" (1842); "A New Life of Samuel Johnson" (1857); "The Life and Times of Harold the Great" (1860); "Harold Antiquary with Passages from the Life of Jesus" (New York,

1866); "The Messiah" (1874); and "The Restitution of All Things" (1880).

Williams, Charles Frederic, editor, born in Charlestown, Mass., Oct. 31, 1842; died in Boston, Mass., Dec. 20, 1905. He studied at Harvard Law School, and was editor of the last 8 volumes of the "American and English Encyclopedia of Law." He published, among other works: "The Tariff Laws of the United States, with Explanatory Notes and Citations from the Decisions of the Courts and the Treasury Department" (1883); "Index of Cases overruled, distinguished, etc." (1887); and "Digest of Decisions of the Massachusetts Supreme Court" (Vol. CXLII-CLI of the Massachusetts "Reports," 1881). He also was engaged in the preparation of the "Federal Digest" (1886); was a collaborator of the "Annual Digest" and of Jacobs's "Complete Digest."

Williams, Henry Willard, physician, born in Boston, Mass., Dec. 11, 1821; died there June 13, 1895. He was educated at the Boston Latin School and at Harvard Medical School, being graduated at the last in 1849. He then spent three years in European hospitals. He was ophthalmic surgeon to the Boston City Hospital from 1864 till 1891; was lecturer in Harvard Medical School in 1869-71; and was Professor of Ophthalmology there in 1871-'91, when, on retiring, he endowed the chair. He was the founder and first President of the American Ophthalmological Society. He gained the Boylston prize for his essay on "Recent Advances in Ophthalmic Science," and published a "Practical Guide to the Study of Diseases of the Eye" (1862); "Recent Advances in Ophthalmic Science" (1866); "Optical Defects in School Children" (1868); "Our Eyes, and how to take care of them" (1871); and "A Diagnosis and Treatment of Diseases of the Eye" (1886).

Wilson, James P., lawyer, born in Newark, Ohio, Oct. 19, 1828; died in Fairfield, Iowa, April 22, 1895. He was apprenticed to a harness maker, and worked at his trade till 1851, but studied law, and was admitted to the bar in 1852. In 1853 he removed to Fairfield, Iowa. In 1856 he was elected to the State Constitutional Convention; in 1857 to the Legislature, in which he was made chairman of the Committee on Ways and Means; and in 1859 to the State Senate, where he served on the Judiciary Committee, and was chosen presiding officer in 1861. In the last year he was elected to Congress to fill a vacancy, and he was three times re-elected. During the civil war and reconstruction periods he was chairman of the Judiciary Committee; in 1868 was one of the managers of the impeachment trial of President Johnson; and in 1869 was appointed a commissioner for the Pacific Railroad. He was elected to the United States Senate as a Republican, taking his seat Dec. 4, 1883; was re-elected in 1888; and retired on March 3, 1895. In 1861 he introduced a resolution in Congress instructing the Committee on Military Affairs to report an additional article of war prohibiting the use of United States forces to return fugitive slaves and providing for the dismissal from the army or navy of any officer who used troops for such a purpose. The committee acted according to this resolution, and the article was adopted. He also reported the first bill ever reported in Congress for the enfranchisement of the slaves of the District of Columbia; presented the first notice ever given in Congress of an amendment to the Constitution abolishing slavery; reported and carried through the House a bill giving freedom to the wives and children of colored soldiers, and reported the Civil Rights bill. Throughout his official life he was known as the "Friend of the Slave."

Winter, Herman, shipbuilder, born in Prussia in 1822; died in Brooklyn, N. Y., Sept. 4, 1895. He was brought to the United States when two years old, and on leaving school entered the Morgan Iron Works, of which he became manager. In this place he had charge of the work of adapting the improvements and new ideas in marine architecture, and under his management propellers were substituted for side wheels in ocean steamships. He spent several years

abroad, setting up heavy engines that had been built in New York and superintending the fleet of steamboats belonging to the Danube Navigation Company, returning to the United States shortly before the civil war. He resumed his studies of marine architecture and made the designs for one of the first ironclad vessels built by the Italian Government. During the war the greater part of the Morgan fleet of steamships was taken by the United States Government for use as transports and cruisers, and Mr. Winter superintended the equipment of several large plants required for the construction of war vessels. The first twin-screw steamship launched in the United States was designed by him. From the close of the war till his retirement he was chief engineer of the Morgan line of steamships, and he held the same place with the Metropolitan line. Mr. Winter invented a rotary cut-off for beam engines, a patent wharf drop, and other devices which were never patented, but are in use in the steamships that he designed.

Wright, Edward, military officer, born in Salem, Ohio, June 27, 1824; died in Des Moines, Iowa, Dec. 6, 1895. He removed to Iowa in 1852, and was elected to the Legislature in 1855, 1857, and 1859. Early in 1862 he was commissioned major of the 24th Iowa Infantry, and at the close of the war, during which he was twice wounded, was brevetted brigadier general of volunteers. He was returned to the Legislature, and was elected Speaker in 1865 and Secretary of State in the following year, serving for three terms. On retiring, in January, 1870, he was appointed secretary of the Capitol Commission.

Wright, Henry, father of professional baseball, born in Sheffield, England, Jan. 10, 1835; died in Atlantic City, N. J., Oct. 3, 1895. He came to the United States when an infant and learned the jeweler's trade in New York city. In 1859 he became a professional player in the St. George Cricket Club; and on the organization of the Knickerbocker Baseball Club, a pioneer in that sport, he joined it, and for six years played in the principal games of both clubs. He joined the Union Cricket Club of Cincinnati in 1864, and in the following year became captain of the famous Red Stocking Baseball Club of that city, for which he played center field till 1870. From 1871 till 1882 he was manager, captain, and secretary of the Boston Baseball Club, and during this engagement he took the Boston and Athletic Clubs' nines to England for a series of games. In 1882 he was engaged by the Providence (R. I.) club, and in 1884 by the Philadelphia club, remaining with the last till 1893, when failing eyesight obliged him to resign. His sight partially returned in 1895, and he was appointed chief of umpires of the National League.

Wylie, Theophilus Adam, educator, born in Philadelphia, Pa., Oct. 8, 1810; died in Bloomington, Ill., June 11, 1895. He was a son of Samuel Brown Wylie, D. D.; was graduated at the University of Pennsylvania in 1830, and was appointed an instructor there. In 1837-'52 he was Professor of Natural Philosophy and Chemistry in the University of Indiana; in 1853-'55 was Professor of Mathematics in Miami University, and in 1855-'64 held his former chair in the University of Indiana, also acting as president in 1859. From 1864 till his retirement, in 1886, he served the university as Professor of Ancient Languages, and on retiring was made professor emeritus. He was pastor of the Reformed Presbyterian Church in Bloomington, Ill., in 1838-'52 and 1855-'69. He published a "History of the University of Indiana."

Yost, George W. N., inventor, born in New York in 1831; died in New York city Sept. 26, 1895. He was brought up on a farm, developed a fondness for mechanics, and was apprenticed in an agricultural-implement manufactory. After serving his time he was employed for many years in the manufacture of Acme mowers and reapers, for which he suggested many valuable improvements. Subsequently he became interested in writing machines, and invented the typewriter bearing his name. For a description of it, see "Annual Cyclopaedia" for 1890, page 817.

About two years before his death he organized the Union Typewriter Company for the manufacture and sale of writing machines. He was deeply interested in typewriting for several years before his death, and seemed to be able to make spirits of the dead communicate with the living by means of a typewriter.

OBITUARIES, FOREIGN, FOR 1895.

Aberdare, Henry Austin Bruce, Baron, an English politician, born in Duffryn, Wales, April 16, 1815; died in London, Feb. 25, 1895. His father's name was originally Knight, but he changed it to Bruce, and afterwards to Bruce-Pryor. The family resided in France till the son was twelve years old. He studied at Lincoln's Inn—in the chambers of his uncle, who became Lord Justice Knight Bruce—and was called to the bar in 1841; practised a few years; became a police magistrate in Wales in 1847; and in 1853 was elected to Parliament for Merthyr Tydvil in the Liberal interest, retaining the seat until he was displaced, in 1866, by an earnest advocate of disestablishment. He was Chief Secretary of State for the Home Department in 1866, and Vice-President of the Council in 1864. Having made himself familiar with the working of the education acts, he aided Mr. Forster in elaborating a new system of elementary education. He was a hearty unionist and one of the commissioners of Church estates. After Mr. Gladstone's return to office in 1868, Mr. Bruce, although he had lost his seat, was appointed Home Secretary, and was elected member for Kenfrewshire. He introduced in 1871 a licensing bill for the control of the drink traffic that proposed the sale at auction of all licenses that were to be renewed. This raised such an outcry that the measure was withdrawn, and the measure failed to pass. In 1873 he was more successful with the temperance regulation act. When the Cabinet was reconstituted in 1873 Mr. Bruce gave up his place as Home Secretary to Robert Lowe, and on being raised in the peerage as Lord Aberdare succeeded Lord Ripon as President of the Council. His Radical licensing bill was the principal cause of the defeat of the Liberals at the polls in the following year and of his own permanent retirement from office. He occupied himself thenceforth with social reforms and educational questions and became interested in geographical exploration. He presided over the Social Science Congress in 1876, and in 1883 he was elected President of the Royal Geographical Society. He published a life of his father-in-law, Sir William Napier (London, 1884).

Albrecht Friedrich Rudolf, Austrian archduke and general, born in Vienna, August 13, 1817; died there Feb. 16, 1895. He was the son of the Archduke Karl, a great uncle of the Emperor Franz Josef. Entering the army when twenty years old, he served two years with a cavalry regiment in Hungary, and in 1840 was placed in command of a brigade. He studied faithfully the art of war with the Italian army of Marshal Radetzky, and when he was made lieutenant field marshal in 1843 and placed in command of the forces in Moravia and Silesia he put into practice the manoeuvres originated by that officer. Subsequently, under his supervision, this method of training was extended to the whole Austro-Hungarian army. In March, 1848, when he was commander-in-chief at the capital, he ordered the troops to fire upon the mob and thus provoked the revolution. Resigning his command, he shortly afterward joined Marshal Radetzky's army in Italy and fought against the King of Sardinia, distinguishing himself as a volunteer in the battle of Santa Lucia. When Carlo Alberto renewed the war, in 1849, he returned to Italy, and, as commander of a division in the advanced guard, he took a prominent part in the battles of Mortara and Novara. From 1851 to 1860 the Archduke Albrecht was commander in chief of the 2d Army Corps and civil and military Governor of Hungary. He assumed command of the 8th Army Corps at Vienna in October, 1860. In April, 1863, he was promoted to be a field marshal, and, having been made commander-in-chief of the broken and disheartened Aus-

trian army, he achieved, on June 24, 1866, a brilliant victory at Custozza over greatly superior forces. Returning to Austria with his victorious troops, he raised a new army of 200,000 men to repel the Prussian invasion of Bohemia. To him is due a great part of the credit for the Hungarian home guard from Prussia in the years of 1866. From 1866 the archduke was inspector general of the army, in which he introduced many reforms. He published works on military subjects.

Alexander Frederick Beauchamp Paget Brydner, Lord, an English naval officer, born April 13, 1811; died in London, March 5, 1895. He entered the navy as midshipman in 1824, and was commissioned a lieutenant in 1842 and commander in 1847. As a volunteer in the Burmese war in 1824 he led the storming party that captured the pagoda at Pegu. In the Crimean War he commanded a ship that went to the White Sea. He commanded the Mediterranean squadron in 1866, when he compelled the Turks to evacuate Dulagiro, on July 13, 1867, he bombarded Alexandria. He was commander on land as well as on sea of the subsequent operations in Egypt until the arrival of Gen. Wolseley. For his services in this campaign he was made Baron Alexander and was voted a grant of £25,000. From 1869 to 1870 he served at the Admiralty as second naval lord, and in 1886 he was retired.

Alexander, Mrs. Cecil Frances Humphrey, an Irish poet, born in County Wexford in 1822; died in Londonderry, Oct. 17, 1895. In 1847 she married the Rev. William Alexander, who became Bishop of Derry and Raphoe in 1867. She was very active in religious and charitable works. Of some of her hymns General Grant declared they seemed to set themselves to music. Among the most noted are "The Rose-tree Hues of Early Dawn," "All things Bright and Beautiful," and "There is a Green Hill far away." Her most famous poem is "The Burial of Moses." Mrs. Alexander's published volumes include: "Verses for Holy Festivals" (London, 1846); "Narrative Hymns" (London, 1847); "Legend of the Golden Prayer" (1859); "Verses from Holy Scripture"; "Hymns, Descriptive and Devotional"; "Hymns for Little Children"; "Poems on Old Testament Subjects" (1857); "Moral Songs"; "The Baron's Little Daughter and other Tales in Prose and Verse"; "The Lord of the Forest and his Vassals"; and "Sunday Book of Poetry" (revised).

Arndt, Wilhelm, a German historian, born in Koenigsberg, West Prussia, in 1809; died in Leipzig, Jan. 15, 1888. He studied history at Göttingen under Prof. Wack, and devoted himself to original research. In 1833 he became a collaborator on the "Monumenta Germanica Historica," for which he edited the writings of Timogor of Tarsus, Rannold of Salerno, and Lambert of Hainault. In 1874 he published "Kleine Denkmäler aus der Merwinger Zeit" and the first part of "Schrifttafel aus Geschichte der Vorzeit," of which the second series was published in 1875. In 1875 he became privat docent at Leipzig University, and in the following year he was appointed Professor Extraordinary of History. He became later joint director of the historical seminary, and in that capacity he published paleographical works. In 1884 he was made Ordinary Professor of History and Allied Sciences. Prof. Arndt edited Gottlieb's letters to the Grafen von Hatzfeld, and also his poem of "Ieri und Heute" in its original form.

Bell, John, an English musician, born at Epsom, Surrey, in 1833; died in March, 1895. He studied in the Royal Academy schools, and published works at Somerset House as early as 1852. By 1877, when he still popular host of "Psyche" was published in the British Institution, his position as a writer was generally recognized. The list of his productions is long and formidable, but his activities were rather those that appeal to popular sentimentality than to a severe taste. "Jane Shore" and "The Eagle-Singer" are two of his most popular works. Many of his statues have been seen in houses and along public

buildings and squares in London. He was the author of "Ivan: A Tragedy," "Primary Sensations of the Mind," and manuals of drawing and design.

Benavides y Navarrete, Francisco de Paula, a Spanish prelate, born in Baeza, Jaen, May 14, 1810; died in Saragossa, March 30, 1895. He was a learned and eloquent priest and an ardent defender of the Catholic faith, and in 1857 was created Bishop of Sigüenza. After the accession of Alfonso XII he was selected to the office of Patriarch of the Indies, and at the same time was created a cardinal, March 12, 1877. In 1881 he was appointed Archbishop of Saragossa.

Bennett, William Cox, an English poet, born in Greenwich, Oct. 14, 1820; died in Blackheath, March 4, 1895. He was active in educational and other reforms, and as a song writer enjoyed considerable popularity. After the death of Longfellow he suggested that the bust of the American poet should be placed in Westminster Abbey, and he formed a committee of 500 to effect it, headed by the Prince of Wales. He published the following works: "Poems" (London, 1850); "The Trial for Salamis" (Greenwich, 1850); "Endowed Parish Schools and High Church Vicars" (Greenwich, 1853); "Queen Eleanor's Vengeance, and Other Poems" (1856); "War Songs" (1857); "Songs by a Song Writer" (1858); "Baby May, and Other Poems" (1859); "The Worn Wedding Ring, and Other Poems" (1860); "Our Glory Kell, and Other National Poems" (London, 1867); "Contributions to a Ballad History of England, etc." (London, 1869); "School Book of Poetry" (London, 1870); "Songs for Sailors" (London, 1872); "Narrative Poems and Ballads" (London, 1879); "Songs of a Song Writer" (London, 1876); "Sea Songs" (London, 1878). His work shows facility of execution and considerable range of feeling.

Blackie, John Stuart, a Scottish author, born in Glasgow in July, 1809; died in Edinburgh, March 2, 1895. He studied at Marischal College, Aberdeen, and afterward at the University of Edinburgh, but he would not give enough attention to mathematics to win his degree, and in 1829 was sent to complete his studies in Göttingen, Berlin, and Rome. When he returned he wrote articles on German literature and education, and in 1834 published a translation of "Faust." He was admitted to the bar in that year, but gave his attention rather to literature. In 1841 he was appointed professor in Marischal College, and became known as an enthusiastic and inspiring teacher. In 1852 he was called to the chair of Greek in Edinburgh University. He had begun an agitation for the elevation and broadening of university education in Scotland, which, with the help of others, he carried on henceforth with great vigor until he succeeded in having the universities act passed in 1858. He retired from his professorship in 1882, but continued to write and lecture till the end of his life. As a teacher of Greek, he aimed to inspire his students with a love for Greek life and thought rather than the aims of exact scholarship, in which he was no adept, and he was one of those who regard Greek as a living language and the modern Greeks as heirs and exemplars of the intellectual qualities of the ancients. Besides his philological writings, Prof. Blackie published popular books on ethical, religious, aesthetic, and literary subjects, and read popular lectures on many subjects, especially on the social and national life of his native land, on which he took advanced grounds, not as a politician, but as an ardent patriot. He was interested in the preservation of the Gaelic language, and by his individual efforts raised the money to endow a Celtic chair at Edinburgh University. His principal published works are a translation of *Æschylus* (1850); "On Beauty" (1858); *Homer translated into ballad verse* (1860); "Lays of the Highlands and Islands" (1872); "Horn Hellenism" (1874); "Self-culture" (1874); "Language and Literature of the Scottish Highlands" (1875); "Natural History of Athens" (1877); "Lay Sermons" (1881); "Altavona" (1882); "Wisdom of Goethe" (1883); "Life of Burns" (1888); "Scottish Song" (1888); "Songs of

Heroes" (1889); and "Essays on Subjects of Moral and Social Interest" (1890).

Bogran, Luis, ex-President of Honduras, born in Santa Barbara, June 3, 1849; died in Guatemala city, July 10, 1895. He was educated in his native town and at a college in Comayagua, and studied law. In 1873 he joined the Guatemalans in the war against Salvador and served as chief of staff in his native province, of which he was made governor at the termination of the war. He retired in 1876, but in 1877 was again appointed governor, served as commissioner for Honduras to the Paris Exposition in 1878, and in 1879 was elected President of Honduras by an almost unanimous vote. He was again elected in 1883. He organized and directed a movement for the union of the Central American States into a single republic, in which Nicaragua should not have too great a preponderance.

Bonaparte, Lucien Napoléon, an Italian prelate, born in Rome, Nov. 15, 1828; died there Nov. 19, 1895. He was a son of Lucien Bonaparte, Prince of Canino. Entering the Church at an early age, he filled with zeal and intelligence various posts in the Roman Curia, and was created a cardinal on March 13, 1888.

Bonghi, Ruggiero, an Italian scholar and politician, born in Naples, March 20, 1828; died in Torre del Greco in October, 1895. He began the study of philosophy, and at eighteen published a partial translation of "Plotinus on the Beautiful." A year later he put forth a translation of Plato's "Philebus," with critical notes. During the revolutionary excitement of 1848 Signor Bonghi founded the journal "Il Nazionale," and subsequently he was banished from the Kingdom of Naples. In 1859 he became Professor of Philosophy at the new Academy of Milan, and in 1864 of Greek Literature at Turin. He was subsequently called to the University of Rome as Professor of Ancient History, and at various times held other similar posts. He was also connected with the management of newspapers at Naples and elsewhere. He was a strong advocate of secular education, and from 1874 to 1876 was Minister of Public Education. He supported the second ministry of Signor Crispi, although he had formerly been opposed to him, and almost his last public utterances were in behalf of the present Italian Government. The more important of his many works are: "Storia della Finanza Italiana"; "La Vila e i Tempi di Valentino Bassini" (1860); "Frati, Papi e Re, discussioni tre" (Naples, 1871); "Pie IX ed il Papa Futuro" (Milan, 1877); "Cavour, Bismarck, Thiers"; "Bibliografia Storica di Roma Antica" (Rome, 1879); "Roma Pagana" (1886).

Brook, Edgar Philip Loftus, an English architect, died in London, Nov. 2, 1896. He studied at the Royal Academy schools and entered the offices of the Messrs. Habershon, architects, in 1851. Some years later he became a member of the firm of E. Habershon & Brook, and on the retirement of Mr. Habershon, in 1879, Mr. Brook conducted the entire practice of the firm. He designed a great number of rural and other churches as well as secular buildings, while his restorations of ancient edifices were accomplished in a spirit of intelligent conservatism. He developed a mode of timber construction in thirteenth-century Gothic for mission churches that was notably effective. In those buildings the exterior walls were of brick or masonry, and the pillars, arcade, and clearstory were of timber.

Brot, Charles Alphonse, a French novelist, born in 1809; died in Paris, Jan. 4, 1895. He began to publish verses when he was twenty-one years old, but soon he turned to the historical romance. From 1834 till 1872, he had the direction of the printing and publishing department of the Ministry of the Interior. He was one of the founders of the *Société des Gens de Lettres*, and of the *Société des Auteurs Dramatiques*. He was the author of 4 plays and many novels. Some of the earlier ones are: "Ainsi soit il," "Histoire du Cœur," "Le Tour de Londres," and "Jane Grey." "Les Espions" was published in 1874 and "Déesse Raison" in 1881.

Brown, Robert William, an English clergyman, born in Kilmington, Surrey, Nov. 12, 1807; died in Wells, Somerset, Dec. 12, 1885. He was educated at St. John's College, Oxford, and became Prebendary of St. Paul's, London, in 1845. In 1860 he was made Archdeacon of Bath and rector of Weston-super-Mare, resigning the rectory in 1876, on becoming honorary fellow of King's College, London. He was the author of a "History of Greek and Roman Classical Literature" (1851-53); the "History of Greece" and "History of Rome" in "Gloucester School Series"; and "History of Rome to the Death of Domitian," and translated the "Ethics" of Aristotle.

Bushman, Sir George, an English sanitarian, born in London in 1801; died there May 5, 1885. He was educated at University College, where he won honors and prizes, was graduated in medicine at the London University in 1826, assisted his father, a metropolitan surgeon, in his practice, and made himself noticeable by his interest in sanitary affairs, having been nominated medical officer to St. Giles in 1836, when public health officers began to be appointed. He originated new methods of sanitary investigation, studied the effects of overcrowding and other insanitary conditions on the spread of disease, worked at the prevention of smallpox and cholera epidemics, and invented a system for collection of statistical information regarding the health of his district, in which the results of his labors soon became apparent in the improved condition of the public health. His inquiries into the working of the vaccination acts, begun at the request of the Privy Council, led to the amendment of these acts in 1867. He began in 1862 an inquiry into the prevalence of typhus fever in the north of England during the cotton famine, and devised methods of prevention. In 1865 he reported upon the improved health in the manufacturing towns resulting from the adoption of better methods of drainage, the removal of filth, and water supply. His report established the conclusion that even the mortality from consumption depends largely on drainage. He was appointed a medical inspector under the Privy Council in 1869, and in 1871 he was transferred to the Local Government Board as assistant medical officer, becoming head of the department ten years later. He reorganized the system of defense against the invasion of cholera, and perfected various other sanitary measures that have reduced mortality in the United Kingdom. He retired in 1892, and was knighted. As a member of the council of University College and of the senate of the university, he took a great interest in educational matters, especially university education for women.

Buckall, Benjamin, an English architect; died in Algiers at an advanced age, Nov. 16, 1895. He went to Algeria about 1873, and practiced his profession there with much success. He very skillfully adapted Moorish art to modern requirements, and built or reconstructed many fine villas near Algiers for French and English residents as well as for native owners. He was the friend of Viollet-le-Duc, and was the guest of that famous architect when the latter was building the chateau of Pierrefonds for Napoleon III. He translated into English "Painted Tapestry," by J. Goudon (1879), and the following works by his friend Viollet-le-Duc: "How to build a house" (1874); "Annals of a Fortress" (1875); "Habitations of Man in All Ages" (1876); "Lectures on Architecture" (1877); "Mont Blanc" (1877).

Bunge, Nicholas Christianovich, a Russian statesman, born in Kioff in 1830; died in St. Petersburg, June 18, 1895. He gained distinction as a Professor of Political Science, Economy, and Statistics, and published valuable treatises on the bases of political economy, on the system of public accounts in England, on the theory of credit, on the restoration of a metallic currency, etc. In 1881 he was appointed Minister of Finance. His financial policy was severely criticized by Katkoff and others, as being too theoretical and unsuited for the needs of the country, and in 1884 he was replaced by Vishnegradsky.

Canrobert, François, a French soldier, born in Brittany in 1806; died in Paris, Jan. 20, 1895. He entered the military school of St. Cyr in 1822, was graduated with distinction, and served as a private soldier till he won a commission in the infantry as sub-lieutenant. Becoming a lieutenant in 1831, he was ordered in 1832 to Africa, where he took part in the expedition to Mascara, gained a captaincy by meritorious service in Oran, was wounded in the shelling of Constantine, and was made a lieutenant colonel in 1846 and colonel in 1847. He had an expedition against Ahmed Agacha in 1848, and, being transferred to the command of a square regiment, won a victory over the Kabyles. In 1849 he commanded the squares and led one of the columns in the attack upon Zenteh, winning the grand cross of the Legion of Honor and promotion to the rank of brigadier general. In 1850 he surrounded the Arabs in Narah and destroyed their stronghold. He returned to France in that year and identified himself with the cause of the Prince Prévost, who made him one of his *aide-de-camp*. He held a command at Paris, and by his energetic suppression of the popular uprising insured the success of the coup d'état. In January, 1852, he was commissioned to visit the prisons and select among the political prisoners subjects for imperial clemency. When the Revolution broke out, in the spring of 1854, he was placed in command of the 1st Division of the Army of the East, and took a prominent part in the battle of the Alma, where he was wounded by the bursting of a shell. When, after a few days, Sir Arnold Napier, then Canrobert assumed the chief command, they marched upon Sebastopol and, after finding it impossible to reduce the place by bombardment in front, carried out the operations for a complete investment in the face of great obstacles. He was wounded at the battle of Inkermann while leading a charge of the masses. His and Lord Raglan fell out on the question of the best method of attack, and in May, 1855, he resigned the chief command to Marshal Pelissier on the plea of failing health and returned to France. Napoleon III sent him to Bismarck on a diplomatic mission. The Italian war of 1859 gave him another opportunity to display his talents as a commander in the field. At the head of the 3d Corps of the Army of the Alps he showed his usual fearlessness of personal danger in the battle of Magenta, and at Solferino he came to the aid of Marshal Niel and saved the day by an able movement. At the end of the war he was made a marshal of France. He commanded the camp at Châlons in 1870, and subsequently the army of Paris. When the war with Prussia broke out in 1870 Marshal Canrobert took command of the camp at Châlons and attempted to organize the reserves, but was so hampered by the detachments from Paris that he was unable to establish order and discipline, consequently he gave up this task and was placed in command of the 9th Corps at Lyons. After the defeat at Fortach he served under Bazaine in and around Metz, exhibiting in all the engagements the utmost intrepidity under fire. At Vionville and at Gravelotte his displayed ability as well as gallantry. On the capitulation of Metz he was taken as a prisoner to Germany, whence he returned after the signature of the preliminary of peace. There received him courteously, but would not give him a command. He was appointed a member of the Supreme Council of War in 1873, and thereafter resigned in disgust, but was induced by Marshal Mac-Mahon to withdraw his resignation. When his name was proposed in 1875 for the command of the Army of Versailles the Council of Ministers rejected the proposition. In 1878 he was elected as a deputy to the Chamber, and he sat till 1879, speaking only twice. He failed to be re-elected from the 1st Department, but was returned later from the Department of the Charente, and was re-elected in 1882. Canrobert was the last surviving marshal of France. The German Kaiser telegraphed condolences to the family of the "heroic defender of

St. Privat," but the extreme Republicans in the French Chamber refused to vote to give the honor of a national funeral to "the accomplice of the *coup d'état*" of Dec. 2, 1851.

Cantri, Cesare, an Italian historian, born in Brivio, near Milan, Dec. 2, 1805; died March 11, 1895. At seventeen he became Professor of Literature in the College of Sondrio. He afterward went to Milan, became an ardent Liberal, and on account of the sentiments expressed in his "Reflections on the History of Lombardy in the Seventeenth Century" was imprisoned for three years by the Austrian Government. During his captivity he published a popular historical romance, "Margherita Pusterla" (1835). His "Storia Universale" (1837) has been translated into English, French, Danish, and German. Among his other works are: "Storia degli Italiani" (1854); "History of Italian Literature" (1851); "History of the Last Hundred Years" (1852); "Milano, Storia del Popolo e del Popolo" (1871); "Cronistoria della Indipendenza Italiana" (1873); "Commento Storico ai Promessi Sposi, o la Lombardia nel Secolo XVII" (1874); "Donato ed Ercole Silva Conti di Biandrate," with C. Rorida (1876); "Caratteri Storici" (1881); "Beccaria et le droit pénal" (1885).

Carrière, Moritz, a German philosopher, born in Griedel, Hesse, March 5, 1817; died in Munich, Jan. 19, 1895. He studied in Giessen, Göttingen, and Berlin, and spent some years in Italy, where he devoted himself to aesthetics amid the master works of art. Returning to Germany, he became a privat docent at the University of Giessen, and in 1849 was made professor. In 1853 he went to Munich, and lectured on aesthetics in the university, and later also in the Academy of Arts on the history of art. He acquired fame as a philosopher, starting as a Hegelian, of original views, and diverging more and more from his master. His first essays in this field were "Vom Geistlichen" and "Die Religion in Ihrem Begriff," both published in 1841. In 1843 appeared "Der Kölner Dom als freie deutsche Kirche." His translation of the letters of Abélard and Héloïse passed through several editions. Carrière's system of philosophy sought to reconcile pantheistic conceptions of the world with deism. His chief works are "Die philosophische Weltanschauungen der Reformationszeit"; "Religiöse Reden und Betrachtungen für das deutsche Volk"; "Das Wesen und die Formen der Poesie"; "Aesthetik"; "Die Kunst im Zusammenhang der Kulturentwicklung und die Ideale der Menschheit"; "Erbauungsbuch für Denkende"; and "Die ästhetische Weltordnung." He also wrote an historical poem, "Die letzte Nacht der Girondisten," an essay on Cromwell, and "Deutsche Geisteshelden im Elsass."

Cates, William Leist Boodwin, an English writer, born in 1821; died in Hayes, Middlesex, Dec. 9, 1895. Mr. Cates was a well-known scholar whose "Dictionary of General Biography" (1867) passed through four editions, the latest revised and enlarged, appearing in 1891. He was also the author of "The Pocket Date Book" (1843); "A History of England from the Death of Edward the Confessor to the Death of King John" (1874); and, with B. B. Woodward, of an "Encyclopedia of Chronology" (1872). His translation of D'Aubigné's "History of the Reformation" was issued in 1863.

Cayley, Arthur, an English mathematician, born in Richmond, Surrey, Aug. 16, 1821; died in Cambridge, Jan. 26, 1895. He was graduated at Trinity College, Cambridge, as senior wrangler, was soon called to the bar, and for fourteen years was a conveyancer at Lincoln's Inn. When the Sadlerian professorship of Mathematics was established at Cambridge, in 1863, Cayley was appointed to the new chair, which he held until his death. As a mathematician he was one of the foremost men in his profession, and his abilities were everywhere recognized and testified to by degrees conferred and medals received from many learned societies in various countries. His talents ranged over a wide field, and he was learned in many

sciences besides his own. A collected edition of his works is in process of publication at the University Press. Among separate publications are "An Elementary Treatise on Elliptic Functions" (1876); "Addition to Memoirs on the Transformation of Elliptic Functions" (1879); "Tenth Memoir on Quantics" (1879); and "Single and Double Theta Functions" (1881).

Cheesney, Sir George Tomkyns, an English general, born in 1830; died in London, March 31, 1895. He was educated at Woolwich, and joined the Bengal Engineers in 1848. He was made lieutenant general in 1885, and from 1870 to 1880 was President of the Royal Indian Engineering College. He was the author of "Indian Polity: A View of the System of Administration in India" (1868); "The Battle of Dorking: Reminiscences of a Volunteer" (1871); and the novels "A True Reformer" (1873); "The New Order" (1871); "The Private Secretary" (1881); and "The Lesters." "The Battle of Dorking" was published anonymously first in "Blackwood's Magazine," which it sent into a fifth edition, and afterward in a pamphlet which is said to have sold to the number of 100,000 copies.

Christian, Ewan, an English architect, born Sept. 20, 1814; died in Hampstead, London, Feb. 21, 1895. He was educated at Christ's Hospital, and in 1830 was articled to the architect, Habershon, for whose work on "Half-timbered Houses" he made sketches. In 1837 he traveled on the Continent, and on his return he established himself in business. His first building was the parish church of Hildenborough, near Tunbridge, and his first important church restoration, a department in which he became eminent, was St. Mary's at Scarborough. He restored the cathedrals of Carlisle and Southwell as well as several of the London City churches. His most important work, the National Portrait Gallery, adjoining the National Gallery in London, he did not live to see completed. From 1850 he held the post of consulting architect to the Ecclesiastical Commissioners and several similar appointments. He was President of the Institute of British Architects from 1884 to 1886, and received the Institute gold medal in 1887.

Churchill, Randolph Henry Spencer, an English statesman, born in Blenheim Palace, Feb. 13, 1849; died in London, Jan. 24, 1895. He was the third son of the seventh Duke of Marlborough and of a daughter of the Marquis of Londonderry, who was a grand-niece of Lord Castlereagh. Lord Randolph Churchill was educated at Eton School and at Merton College, Oxford. At Eton, where he was a contemporary of Arthur Balfour and Lord Rosebery, he manifested his energy and ingenuity in frolicsome pranks, and at the university he set out on a gay and reckless career, but applied himself to study in order to get his degree in 1871, and even took honors in modern history and jurisprudence. He traveled through Europe, spending much time in Austria. He wavered between a military or a diplomatic career, and seeing no opportunity in either for the exercise of his restless energies, embraced the chance that was presented by the dissolution of Parliament early in 1874 to go into politics. He was elected to represent the petty constituency of Woodstock. As it was a family borough, he was not called upon to unfold his political principles, nor did he profess any except antagonism to Gladstone. Though his father held a high

effort in the Conservative Government, Lord Randolph was not trained nor minded to earn the rewards of public life by docile submission to party discipline. He was too much of an English aristocrat, however, to rebel against forms and precedents, and in this Parliament he kept quiet, studying attentively the ways and the procedure and treasuring for future use his observations of political arts and ruses and the words and wares of parliamentary debate. He made only one effort to gain the attention of the House, when, as became the member for Woodstock, he made a spirited plea for the preservation of small boroughs. His constituency elected him with a diminished majority in 1874. Though his father was Lord Lieutenant of Ireland, Lord Randolph Churchill, losing the prestige of the Conservative party waning, was not content to sit behind ministers whose lack of originality and force made him impatient. Going over to the front bench below the gangway, he made a slashing onslaught on the President of the Local Government Board, Selator-Booth, denouncing his minority government bill as a most radical, democratic measure. He had not yet evolved the principles of Tory Democracy, but he was never devoted to political principles and consistency any more than his prototype, Disraeli. When the Liberals came in with an enormous majority in 1880, when the tried leaders of the Conservative party, the "old gang," who antagonized the democratic masses and were unable to adapt themselves to the methods and measures that were necessary to captivate the new electorate, were stunned by their unexpected defeat and spellbound by Gladstone's overpowering ascendancy, the Fourth party arose to show that there was vitality left in the Conservative party. The small group that soon came to acknowledge Lord Randolph Churchill as its leader was composed of young men who all had the brilliant career of Lord Beaconsfield before their minds, and who had caught the spirit of the assimulative genius and philosophic imagination that enabled him to infuse the new life of the age into the stagnant party, to lift it above selfish class interests and arrogant prejudice, and draw it almost unwittingly and unwillingly into the historic movement. The chief members of the group that was nicknamed "the Fourth party" were Lord Randolph Churchill, Arthur J. Balfour, Sir Henry Drummond Wolff, and Mr. Gurney. When Sir Stafford Northcote, the leader of the Opposition, refrained from challenging Mr. Gladstone on the side issue of the seating of Mr. Bradlaugh, Mr. Gurney, Sir Henry Wolff, and Lord Randolph Churchill saw an opportunity to place both leaders in an awkward predicament by a theatrical stroke that would give a sensational prominence to themselves. Lord Randolph Churchill took the lead of the group. After appealing to Mr. Gladstone to exclude this atheist and disloyal person, he carried a motion that Mr. Bradlaugh should not be allowed to take his seat, and in 1881 a similar motion. Casting about for subjects for a serious programme, he allied himself at first with the Protectionists and proposed a scheme for taxing the products of foreign skilled labor and applying the £20,000,000 thus raised to the relief of the distressed agriculturists. Two years later he denounced the impending extension of the franchise as an attempt of impostors to cover up their failure to fulfill their promises. In the House of Commons he derided Sir Stafford Northcote and attacked Mr. Gladstone, often in such reckless style as to damage only his own reputation, but, on the whole, with telling effect upon the country. On the stump, too, before audiences of workmen, he showed up the temporizing weakness of the shifting policy of the Liberals and the hollowness of the Gladstonian pretensions to exalted wisdom and virtue. The closure, the Parnellite alliance, the occupation of Egypt, the abandonment of the Sudan, and the sacrifice of Gen. Gordon, the timorous policy toward Russia, the alienation of the colonies, the agricultural distress, the agitation against the House of Lords, the shortcomings of the budget—every act

and omission of the Government was made the basis of a new indictment against "an administration of make-believe, whose every act is a fraud or a sham." In regard to Egypt, Lord Randolph Churchill proposed to scale down the debt and place Arabi Pasha and the National party in power, under the control of united Europe. After rejecting the extension of the franchise and of local self-government, he veered round to the position of the Tory Democracy and was willing, like Disraeli, to outbid the Liberals and after denouncing an impossible coalition of the Liberals and the Parnellites he secretly negotiated with the Irish leaders, but could not induce the chiefs of his party to surrender their principles. When combating Birmingham against John Bright he assailed the reputation of that old reformer with the same savage vehemence that he was wont to expend on Gladstone, and in attacking the hypocrisy of Liberalism he further enlisted the shout of the Tory Democracy. The followers of Sir Stafford Northcote fought hard to cast him from the chairmanship of the Central Union Conservative Associations. To show his power, his resignation, and his tactics themselves led to howls of protest. When the Gladstonian ministry was spent in June, 1885, the credit of the victory was given to the Fourth party, but its leader was not to have a very prominent place in the annals of the men he had belittled, at least not before he had proved his fitness for office. He was taken into the Cabinet of Lord Salisbury as Secretary of State for India, and soon showed his capability, restoring the business of the office and ably advocating in the House the views of the permanent officials. The content of Upper Burma dignified his short tenure of the office. In the following year, to become Chancellor of the Exchequer and leader of the House of Commons in the present Conservative Cabinet that conducted the general election of July, 1886, Lord Randolph Churchill and Sir John Gurney endeavored to consummate an alliance between their party and the Parnellites. They had allowed the crimes act to lapse, and they presented an investigation of Lord Spencer's administration. Lord Randolph was beaten by Mr. Bright in the general division of Birmingham, but he was returned for South Finsbury as well as for Woodstock. Changing his attitude toward the Irish, he denounced home rule as a mixture of imbecility and political hysteria, and changed the Gladstonians with trying to shatter the Constitution simply to gratify the ambitions of "an old man in a hurry." The Unionist policy, so he explained it, was so advanced that the Liberals accused him of stealing their programme. His ideas were not accepted, however, by the older chiefs of his party. As Chancellor of the Exchequer he approved a policy by imperial expansion and military adventure, and thus came into direct conflict with the majority of the Cabinet. In December he resigned, evidently by resigning his office, on the ground that he could not assent to the demands of the War Department and the Admiralty upon the treasury. His budget, that never saw the light, is believed to have been a work of genius. Few thought that the Cabinet could sustain his loss, but the Liberal Unionists lost Mr. Gurney to the Conservatives to fill the gap, and after a moment of consternation the party recovered its spirits and it grew to be as strong as before, when Arthur Balfour developed into a second leader of the House. Randolph Churchill's attitude toward his old friends, while it was independent and original, especially in regard to Mr. Gurney's magnificent naval programme, was not of all factions or combinations. He sometimes spoke contemptuously of the Liberal Unionists, and he had a bitter quarrel with Joseph Chamberlain over the general division of Birmingham, which he regarded as his by right after the death of John Bright. He finally agreed to vote the matter to arbitration, who awarded the seat to the Liberal Unionists. He endeavored as an independent member to play a part in social legislation, introducing a licensing bill for the restriction of the drink traf-

he, which provided compensation for retailers and was hostile to the brewers. On the labor question he took advanced views, promising to support an eight-hour bill, and thus became more than ever the idol of the working classes. General paresis crept upon him and sapped his mental vigor. Toward the last his speeches in Parliament were rambling and incoherent. In 1891 he went to South Africa for his health and to earn money with letters to the London "Graphic." His physicians sent him on a tour round the world. In Egypt, where he was sinking fast, he begged his wife to take him home to die. Lady Randolph Churchill, a daughter of Leonard Jerome, of New York, was her husband's efficient helper in all his electoral contests. Lord Randolph Churchill was the originator of the Primrose League.

Clarke, Hyde, an English philologist, born in London in 1815; died there March 1, 1895. In his early manhood he was employed in the British diplomatic service. He became an expert engineer and a railroad promoter, was the founder of the London and County bank, organized the Council of Foreign Bondholders in 1865, and long took an active part in Oriental finance and politics. Though actively engaged in affairs, he acquired a knowledge of a great number and variety of languages, and wrote speculative books on philology and ethnology. Among his published works are: "Pre-Hellenic Inhabitants of Asia Minor," "The Connection of the Languages of India and Africa," "Prehistoric Comparative Philology," "The Khita and Khita-Peruvian Epoch," "Serpent and Siva Worship and Mythology," "The Earliest English," and "Early History of the Mediterranean Populations."

Collett, Mrs. Jacobine Camilla Wergeland, a Norwegian novelist, born in Christiansand, Jan. 23, 1813; died in Christiania, March 7, 1895. She was the sister of the poet Henrik Wergeland. She was educated at the Hørnshut Institute in Christiansfeld, and from 1834 to 1837 traveled in France and Germany, studying literature. In 1841 she married Prof. J. P. Collett, and at his death, in 1851, she left Norway, and lived in several European cities successively, returning to Norway ten years before her death. In 1855 appeared her most remarkable book, "Ant Mandens Døttre" (The Sheriff's Daughters), which was very popular in Norway and has often been translated. "Ide Large Naetter" (In the Long Nights) was published in 1863, and "Sidste Blade" (Last Leaves) in 1868. She was an advocate of the rights of women, and wrote much on that topic.

Orsk. Georgiana, see MAY.

Cundall, Joseph, an English author, born in Norwich in 1815; died in London, Jan. 10, 1895. He learned the printer's trade in Ipswich, went to London, and originated illustrated children's books of a better class than had before been printed, himself writing "Tales of the Kings of England," for which John Gilbert drew the pictures, established a publishing business of his own, and with Henry Cole (Felix Sumner) brought out the "Home Treasury." Illustrated by artists like Redgrave, Cope, and Webster. This was followed by "Gammer Gurton's Story Books," and many other picture books. He was the author of "Annals of the Life of Shakespeare," "Life of Holbein," "History of Bookbinding," and "A Brief History of Wood Engraving."

Decout, Camille, a French dramatist, born in 1812; died in Paris, April 1, 1895. For more than fifty years he produced plays, some of which, such as "Fruit Infortuné" and "Les Ennemies de la Maison," have an enduring place in the repertory of the French theater. He also devoted himself to dramatic criticism. He was a grand officer of the Legion of Honor. For some years he was the administrator of the imperial theaters. For the last twenty years of his life he was secretary of the French Academy.

Drif, Sir Robert William, a Scottish politician, born in Fetteresso in 1827; died in Sydney, New South Wales, March 15, 1896. At the age of thirteen he entered the navy, in which he served seventeen years,

attaining the rank of commander. After succeeding to the estate of his uncle at Fetteresso, he was elected in 1861 to Parliament to represent Banffshire, which returned him six successive times without a contest. He became a recognized authority on naval affairs, was a Liberal whip, and was a junior lord of the Admiralty from 1882 to 1885, and was made a civil lord in 1886. In February, 1893, he was appointed Governor of New South Wales. He was knighted in 1894.

Dumas, Alexandre, a French novelist, born in Paris, July 28, 1824; died there Nov. 27, 1895. He was the son of Alexandre Dumas, the elder, and grandson of the famous mulatto general of the army of Napoleon. He was educated at the school of Goubaux and the Collège Bourbon, where he was known as an intelligent, but not brilliant student. Shortly after leaving college at the age of seventeen he published "Les Péchés de la Jeunesse," a collection of indifferent poems. He had no great success with his first novel, "Adventures of Four Women and a Parrot," published in 1846, after he returned from a tour in Spain and Africa with his father. "La Dame aux Camélias," published in 1858, created a tremendous sensation, which never has died out, owing to the pathetic character of his style and to the representation of the principal character on the stage by great actresses and the reproduction of the theme in Verdi's opera of "Traviata." It was based on the life history of a woman of his acquaintance, one Marie Duplessis. Dumas, the younger, while not so prolific an author as his father, wrote many novels and plays, most of which made an impression, while some had a permanent success. He sometimes took some moral problem of the day and treated it in a novel or a play strong in dramatic action and realistic character drawing, but having a didactic philosophical motive. He was elected a member of the French Academy in January, 1874, and was made a grand officer of the Legion of Honor in 1894. His greatest successes in the drama were "Le Fils Naturel" (1858); "L'Ami des Femmes" (1864); "Les Idées de Mme. Aubray" (1867); "La Princesse Georges" (1871); "La Femme de Claude," a dramatization of his novel "L'Affaire Clémenceau" (1873); "Monsieur Alphonse" (1878); "L'Etrangère" (1877); "La Princesse de Bagdad" (1881); "Dénise" (1885); and "Francillon" (1887).

Durnford, Richard, an English prelate, born in Sandford, Berkshire, Nov. 3, 1802; died in Basle, Switzerland, Oct. 14, 1895. He was the eldest son of the rector of Goodworth Chatford, Hampshire, and was educated at Eton and at Magdalen College, Oxford. He was rector of Middleton, Lancashire, from 1835 to 1875, having taken priest's orders in 1831. While rector of Middleton he was honorary Canon of Manchester in 1854-'56, and was preferred to the archdeaconry of Manchester in 1867, becoming Canon of Manchester the year following. In 1870 he was made Bishop of Chichester. Although then in his sixty-eighth year, he entered upon his duties with great vigor, and for the quarter century that he administered the affairs of the diocese was noted as one of the most active prelates in the Establishment. Even after he had passed his ninetieth birthday he performed all his episcopal engagements as regularly as ever, and not many weeks before his death he was known to walk several miles after holding a service and preaching. He devoted himself with great earnestness to the furtherance of temperance, middle-

class education, and other movements of the day. Bishop Darnford was a High-churchman of an unaggressive type, and, though he held very decided opinions, never antagonized those of other people. During his episcopate nearly every church within the diocese was enlarged, repaired, or restored.

Mayev, Dr., a Russian explorer, died in St. Petersburg, June 4, 1895. He was a physician, and as a medical officer in the army he visited all parts of the Russian Empire. He also made many explorations in Asia, of which he published accounts. In 1890 he made an attempt to penetrate the country of the Manchus, and barely escaped. In making another attempt in 1894 he was prostrated by a sunstroke; but he recovered and was able to join Leontieff's expedition to Abyssinia.

Engels, Friedrich, a German Socialist leader, born in 1820; died in London, Aug. 5, 1895. When he was twenty-two years of age he went to Manchester as agent for his father, who was a cotton manufacturer in Germany. On his journey homeward, two years later, he fell in with Karl Marx in Paris, and thenceforward he was the most ardent and efficient of that agitator's lieutenants and his intimate friend and literary associate. Together they issued the Communist manifesto in 1847. He returned to business in Manchester in 1847, and became a partner in the firm in 1864, retiring in 1883 to join Marx in London. Together they wrote the "Deutsch-Französische Jahrbücher," and afterward worked on the "Neue Rheinische Zeitung." In 1870 Engels became corresponding secretary to the International Society for Belgium, Italy, and Spain. He studied with Marx the English bluebooks on labor, and produced independently a learned work on "The Condition of the Working Classes in England," and a philosophical book on "The Origin of the Family." The rise and propagation of Socialist doctrine in England was largely due to his influence and teachings. He left unfinished a large work, parts of which have been published under the title "Outlines, Scientific and Utopian."

Everett-Green, Mrs. Mary Anne (Wood) an English historical writer, born in Sheffield in 1818, died in London, Nov. 1, 1895. She removed with her parents to London in 1841, and in 1845 became the wife of Mr. G. F. Everett-Green, an artist, whom she survived. Mrs. Green was for almost forty years employed in the Record Office as one of the editors of the *Rolls Series of State Paper Calendars*, and accomplished a vast amount of work in this department. She edited 41 volumes of Calendars, of 600 to 800 pages each, the latest from her hand comprising 465 pages. The list of works edited by her includes "Letters of Royal and Illustrious Ladies of Great Britain" (1844); "Diary of John Rous" (1863); "Letters of Henrietta Maria" (1857); "Life of William Whittingham" (1870). Mrs. Green's only original work was one in 6 volumes entitled "Lives of the Princesses of England, from the Norman Conquest" (1820-34).

Faithfull, Emily, an English author, born in Huddersley, in 1833; died in Manchester, May 31, 1895. Her father was rector of the parish in which she grew up, and she began early to take a keen interest in the condition of women. She determined to aid practically in enlarging the field of employment for women. In 1860 she founded a printing establishment in London in which female compositors were employed. It was called the Victoria Press, and it turned out such fine specimens of book work, such as the "Victoria Regia," that the Queen appointed Mrs. Faithfull her printer and publisher in 1870. In 1863 Emily Faithfull began to publish the "Victoria Magazine," in which for eighteen years she advocated the claims of women to remunerative employment in branches of business monopolized by men. She published in 1868 a novel, "Change upon Change," which had the same thesis for its moral, and lectured on the subject. In 1872-73 she gave her lectures in the United States and repeated the

tour twice in the next two years. In 1881 she published "Three Visits to America," in which she described the conditions of feminine life and labor in the United States.

Fitzpatrick, William John, an Irish author, born in Ireland, Aug. 21, 1807; died in Dublin, Dec. 14, 1895. He was educated at the Roman Catholic college of Clongowood Wood and held several offices of trust. He was a member of the Irish Royal Academy and Professor of History of the Royal Historical Society. He published "The Life, Times, and Contemporaries of Lord Clancourty" (1855); "Who wrote the Waverley Novels?" (1856); "The Friends, Foes, and Adventures of Lady Morgan" (1860); "Lady Morgan: Her Career, Literary and Personal" (1860); "Life and Times and Correspondence of Bishop Doyle" (1861); "Anecdotal Memoirs of Archbishop Richard Whately" (1864); "The Whom System and the Influence of 1789" (1865); "Curious Family Histories" (1867); "Irish Wits and Worthies" (1873); "Life of Charles Lever" (1879); "Correspondence and Life and Times of Daniel O'Connell" (1880); "Secret Service under Pitt" (1882); "Memoirs of Father Healy" (1885). The last-named work appeared anonymously the week of his death.

Foebler, Edward Harrington, de, an English author, born in 1821; died in Bournemouth, June 14, 1895. He was educated at Bonn, Germany, and held several posts of importance in the army, being at one time quartermaster general. He was an extensive traveler and a close observer of men and things. His published works include: "Money or Morals: The Army Purchase System reconsidered" (1857); "The Administration of the British Army" (1858); "Napoleon and Prussia" (1862); "Political and Military Episodes in the Latter Half of the Eighteenth Century" (1874); "A New System of Elementary Teaching" (1877); "Cluck-Cluck! A Christmas Story" (1877); "Lives of the Lords Brougham" (1887); "Lives of the Dukes of Northumberland"; "Ancestry of the House of Percy" (1890).

Freytag, Gustav, a German novelist, born in Kasselberg, Silesia, in 1816; died in Wiesbaden, April 29, 1895. He studied at Breslau and Berlin, became a privat docent at Breslau University in 1850, and remained there eight years in that capacity, meanwhile publishing a volume of poems. His father, a wealthy physician, provided him with ample means to follow his bent. A Berlin theater having offered a prize for the best play on a German historical subject, he wrote "Die Brautfahrt" in 1844 and won the prize, though the piece was not a success on the stage. He was not more fortunate with a tragedy, but in 1846 he produced a successful play, "Die Valentin," soon afterward he acquired an interest in "Die Germania," a weekly paper, and thenceforth he divided his attention between journalism and dramatic composition. He had wished to deliver at the university a course of lectures on the history of civilization, but the professors would not permit it because they feared that his democratic ideas would offend the authorities. His polished and trenchant articles soon made him review the course of literary sentiment throughout Germany. "Graf Waldemar," a dramatic drama, was not accepted by the theatrical managers. He wrote a series of historical sketches called "Bilder aus der deutschen Vergangenheit," which proved popular and was afterward revised and enlarged. "Die Journalisten," a satirical play, appeared in 1851 and was immediately successful. It is still one of the staple acting plays. Next he wrote "Nacht und Hagen," a realistic novel of bourgeois life, of which nearly 40 editions have been printed since its appearance in 1851. The English translation is entitled "Doubt and Conflict." Freytag's next venture, a tragedy in verse called "Die Fabeln," was a failure. He wrote more of his picturesque studies of old German life and events and a little book on the technique of the drama. "Die Verborgene Hand," was an ambitious novel that fell far short of his masterpiece. "Die Ahnen" was a series of 4 historical novels in

which he attempted to trace the history of a German family from the time of Tacitus to the present day. Freytag was elected to the North German Diet as a National Liberal in 1867, but he soon withdrew from political life. When the French war broke out he left the "Grenzboten" because he disagreed with the editorial management. He went to the war and was attached to the headquarters of the Crown Prince as historiographer. He saw the battles of Weissenburg, Wörth, and Sedan; but he was dismissed at last because in his letters to the journals at home he described too truthfully some of the barbarities that he witnessed.

Gallenga, Antonio Carlo Napoleone, an Italian publicist, born in Parma, Italy, Nov. 4, 1810; died in Llandovery, Wales, Dec. 17, 1895. He was educated at the University of Parma, and, becoming involved in revolutionary political events, left Italy in 1831 and spent several years in various countries, residing in Boston, Mass., from 1836 to 1838. In 1839 he went to England, and in 1846 became a naturalized British subject. He was connected with the London "Times" from 1839 to 1853 as special correspondent, and again as its leading editorial writer on foreign affairs. He was a voluminous writer in English and Italian, the following English works of his appearing under the pseudonym L. Mariotti: "Italy Past and Present" (1841); "The Black Gown Papers" (1846); "Italy: Its Present State and Prospects" (1848); "Scenes from Italian Life" (1850); "Italy in 1848" (1851); "Practical Grammar of the Italian Language" (1851); "First Italian Reading Book" (1852); "Historical Memoir of Fra Dolcino and his Times" (London, 1853). "Castellamente: An Autobiographical Sketch" (1855) appeared anonymously. His later works, published under his own name, include: "History of Piedmont" (1855); "Country Life in Piedmont" (1858); "The Invasion of Denmark in 1864" (1864); "The Pearl of the Antilles" (London, 1873); "Italy revisited" (1875); "Two Years of the Eastern Question" (1877); "The Pope and the King" (1879); "South America" (1880); "A Summer Tour in Russia" (1882); "Democracy across the Channel" (1883); "Iberian Reminiscences" (1883); "Episodes of my Second Life" (London, 1884); "Jenny Jennett: A Tale without a Murder" (1886); "Italy Present and Future" (1887). Among his Italian works are "Oltremen to el Oltremare," "La Nistra Prima Caravona," "Manuale dell' Ellettore," and "A che ne siamo. He was a forcible, picturesque writer, and his work shows keen observation and wide knowledge. The early portion of his career after first leaving Italy was a period of privation and discouragement. He earned a precarious living as a teacher in the United States and in other foreign countries, but after he went to England his situation was bettered. In 1846 his sympathy with the Italian insurgents led him to cast in his lot with them, and for a time he vibrated between Italy and his adopted country, being elected in 1854 a deputy to the Italian Parliament. In 1859 the war between France and Austria brought him into notice again as the "Times" foreign correspondent. To his influence is directly traceable the larger part of the friendly feeling at present entertained for Italy by Englishmen.

Gama, Baldanha da, a Brazilian naval officer, died in Rio Grande do Sul, June 25, 1895. He was the head of the naval school when Admiral Custodio de Mello began the bombardment of Rio de Janeiro in September, 1893. At first Admiral da Gama, who had a higher reputation for ability and honesty than any other officer in the navy, remained neutral, but eventually he cast his lot with the insurgents, and when Mello sailed for the south he took command of the rebel fleet and kept up the attack with vigor until his resources were exhausted and Mello's efforts to raise reinforcements had failed. He surrendered unconditionally in March, 1894, and was taken on board a Portuguese ship of war, to be conveyed to Lisbon. But at Nazaré Ayres he was permitted to escape with some of his officers and men. He then joined the

rebels in Rio Grande do Sul, and endeavored to keep up the struggle against the Government, though with little success. When his force of 700 men was cut to pieces at Charelim, he took his own life.

Geffroy, Mathieu Auguste, a French historian, born in Paris, April 21, 1820; died there Aug. 15, 1895. He was educated at the Normal School, and was instructor in history at the Lycée Louis le Grand when he was called to the chair of History at Bordeaux in 1854. He made researches in Scandinavian history, and in 1854 he was sent on a mission to Sweden. In 1872 he became Professor of Ancient History at Paris, and three years later he was appointed director of the French school at Rome, where he remained until a short time before his death. He was formerly a frequent writer for the "Revue des Deux Mondes." His principal published works were "Histoire des Scandinaves" (1851); "Lettres de Charles XII" (1852); "Gustave III et la Cour de France" (1867); "Marie Antoinette: Correspondance Secrète" (1874); "Rome et les Barbares" (1875); and "Mme. de Maintenon" (1887).

Giers, Nikolai Karlovich de, a Russian statesman, born May 9, 1820; died in St. Petersburg, June 24, 1895. He was sprung from a family of Swedish origin, long settled in Finland, and received his education in the imperial lyceum of Tsarskoe Selo. In 1838 he entered the Asiatic department of the Ministry of Foreign Affairs. In 1842 he was appointed secretary to the consulate at Jussy, and after that he was often intrusted with minor diplomatic missions. In 1848 and 1849 he was attached as diplomatic agent to the Russian army that invaded Transylvania to suppress the Hungarian rebellion. In 1850 he was appointed first secretary of legation at Constantinople. During the Crimean War he was chief of the chancery of the imperial commissioner in the Danubian principalities, and when these were evacuated by the Russian forces he was recalled and appointed in 1858 consul general to Egypt. In 1860 he was sent back to Moldavia-Wallachia as consul general at Bucharest. From this post he was promoted in 1863 to be minister to Persia. He remained in Teheran till 1867, when he was appointed minister at Bern, whence he was transferred, in 1872, to Stockholm. In 1874 Prince Gortchakoff, whose niece, the Princess Cantacuzene, was his wife, recalled him to St. Petersburg to fill the post of assistant to the Minister of Foreign Affairs. He was intrusted with the reorganization of the Russian consular service, and also took charge of the Asiatic department. The aged minister chose him in preference to more brilliant and ambitious diplomatists, as one of these might supplant him. M. de Giers exerted what influence he had to avert the Turkish war, and after it was over his prudent counsels had more weight with the Czar than those of the rash Pan Slavists, who would have defied Europe and defended the San Stefano treaty against a military combination that Russia could not successfully oppose. Prince Gortchakoff was so frequently ill that his assistant was acting minister for long periods. In the negotiations with England about Afghanistan in 1878, and about Merv in 1881, M. de Giers was not dismayed by threats and bluster, but with imperturbable tenacity preserved all the advantages of the situation. He arranged the treaty with China that provided for the evacuation of Kuldja. After the Congress of Berlin he was practically the Minister of Foreign Affairs. He saw that the treaty of Berlin was faithfully carried out. On April 9, 1882, he was appointed Minister of Foreign Affairs, Prince Gortchakoff having at last resigned. He endeavored to establish more friendly relations with Germany and Austria, but at no time did he possess the authority and initiative of his predecessor, for Alexander III endeavored to direct the foreign policy and sought advice in various quarters. In the settlement of the new quarrel with England over Afghanistan in 1885, and the negotiations for the delimitation of boundaries in the Pamirs, he gained all the points for which he contended. While he was ever fearful of a con-

that in Europe, knowing all the dangers of the Eastern question better than any man, his diplomacy was an advantage after another in Asia, and extended the influence and prestige of Russia in China, Afghanistan and Persia. The Franco-Russian *entente* is believed to have been brought about without his active co-operation and in spite of his misgivings. When the late Czar died, M. de Giers, who was then in invalid, desired to retire, but Nicholas II would not dispense with his services, Prince Lobosof, his natural successor, being needed at Berlin.

Glogau, Gustav, a German philosopher, born in Lauingen in 1844; died in Grosse, March 17, 1895. Graduated in Berlin, at first medicine, then history, philosophy, and philosophy, and after serving as a soldier through the Franco-German War became a teacher. He went to Zurich in 1878, and four years later he was appointed professor at the Polytechnicum. In 1884 he went to Halle as extraordinary professor, and in 1894 became Professor of Philosophy at the Kiel University. His chief work was "Abriss einer philosophischen Grundwissenschaft" (1880-86).

Groat, Gustav, a German painter, born in Königsberg, Dec. 14, 1821; died in Berlin, Jan. 6, 1895. He studied in Düsseldorf, and in 1846 exhibited a picture of a scene in the "Nibelungenlied." Afterward he continued his studies in Antwerp, Paris, Munich, and Rome, and in 1859 he settled in Berlin, where he carried out a design of Kaulbach's in the painting of Charlemagne and Wittekind in the new museum. In the old museum he painted pictures in the portico depicting the adventures of Theseus and Hercules. Several paintings of scenes in German wars hang in the National Gallery. Since 1863 he had devoted himself chiefly to portrait painting. He painted large figures of Demosthenes, Phidias, and Solon for the Königsberg University, and exhibited two studies from the nude entitled "Felicia" (1879) and "Märchen" (1891).

Groat, Sir Patrick, an English soldier, born in Auchtermuchty, Scotland, in 1804; died in Chelsea, March 25, 1884. He served with distinguished gallantry through the Mahratta war under Lord Gough, whose daughter he married, and returned to England as adjutant to the Queen in 1851, after taking part in the expedition to Kohat. He served in India through the Sepoy mutiny, winning the grand cross of the Order of the Bath. He was commander in chief of the Madras army, and for two months held the same office in Bengal. From 1867 till 1872 he was Governor of Malta, where his administration was popular and successful. Not long after his return he was appointed governor of the Royal Military Hospital at Chelsea, and the rest of his life he passed in this post. He was a field marshal from 1883.

Grove, Thomas Gordon, an English poet and physician, born in Leeds in 1809; died in London, Jan. 11, 1895. He was educated at Christ's Hospital, and took his medical degree at the University of Glasgow in 1831. His earliest published work was entitled "Poetic Lamitations" (1825). Later works of his include: "A Treatise on Varicose Capillaries, etc." (1842); "Vates: A Prose Epic" (1849), afterward expanded into another work called "Valdarno"; "Madeline, and other Poems and Parables" (1871); "Parables and Tales" (1872); "New Symbols," verse (1874); "The Promises"; "Legends of the Morrow," verse (1878); "Madden Ecstasy," verse (1880); "The Serpents Play: A Divine Pastoral" (1884); "The New Days"; and "Memoirs of Eighty Years" (1892). For several years he practiced his profession in East Anglia, and later, becoming the physician and friend of Dante Rossetti, was introduced to the literary circle of which Rossetti was a prominent member. Some of his work contains the elements of popularity, and throughout his life he remained as an author practically unknown to all save the few English poets and critics among whom he moved. His poetry is thoroughly original and wholly intellectual. It is both queer and vague in manner, subtly philosophical as to theme, but always justifying its right to be classed

as poetry as opposed to some, and valuable as indicating new possibilities for his art. His last lines were, "Love of whom are known to Eternity."

Halle, Sir Charles, a German mathematician, born near Ellersfeld, Germany, April 11, 1819; died in Manchester, England, Oct. 26, 1900. When quite young he went to Paris and became well known as a pianist. At the time of the French Revolution of 1848 he went to England and presently became director of the Musical Institution, in Manchester. His name as a conductor dates from 1857, when he began the annual series of 30 orchestral and choral concerts that have been given continuously since then. He ranked first among musical pianists in England, and was the author of several compositions of high grade. He was knighted in 1890, and in the same year married his second wife, the second daughter Madame Norman-Néruda. His son, C. E. Halle, is an artist, and his daughter a sculptor.

Hind, John Russell, an English astronomer, born in Nottingham, May 12, 1829; died in Twickenham, Dec. 22, 1895. In 1845 he became a fellow of the Astronomical Society, and in 1847 discovered his first asteroid, Iria, for which he received a gold medal from the King of Denmark. Later he discovered 2 more. For his discovery of 4 in a single year he received for the third time the Lalande medal from the Academy of Sciences at Paris and a prize of 500 francs. He contributed to English and foreign scientific journals, and was for a long time superintendent of the Nautical Almanac Office. The most important of his published works are: "The Solar System" (1860); "Astronomical Vocabulary" (1862); "Comets" (1862); "Illustrated London Astronomy" (1864).

Ismail, Ismail, ex-Khedive of Egypt, born in Cairo, Dec. 31, 1830; died in Constantinople, March 2, 1895. He was the second son of Ibrahim Pasha and a grandson of Mahmud Ali. Both were dead before he grew up, and his cousin Abbas came to the throne, after whom, in the order of succession, under the title *Arreef* of 1841, whereby the valdine passed to the eldest descendant of the founder of the dynasty, were his uncle Said and his brother Ismail. Ismail was one of the leaders of the Prince's party that opposed Abbas. Ismail was educated in Paris, and while his uncle became Veli he was sent abroad on missions to the Emperor of the French, the Pope, and other European rulers. He escaped a suspicious national accident by which his elder brother lost his life, and he returned safe from a military expedition to the Sudan and succeeded Said on Jan. 18, 1863. Ismail found himself in possession of financial resources that appeared to be boundless, for the American civil war had raised the price of cotton from 12 cents to 50 cents a pound, adding \$100,000,000 a year to the national income. His ambition was to become the independent ruler of a powerful and prosperous nation. He set out boldly and unhesitatingly to accomplish his objects with the help of politicians, diplomats, and financiers, European and Oriental, and he was directed and deflected on every hand. He bought, by increasing the national income from 20,000 to 700,000 liras, an accession of dignity and power from the Sultan of Persia, having the title of Veli changed to Khedive, and the order of direct descent from father to son established in place of the Mohammedan law of succession; but his wife managed to have princepsuaries decreed, whereby he was obliged to choose his boy and then son his eldest son, whom he disliked. He instructed Nubar Pasha with negotiations for the curtailment of the constitutional constitution for the curtailment of the constitutional constitution, under which foreigners were excluded from the laws of the land and from all taxation. The result was the system of international tribunals that institutionally introduced European control and eventually deprived him of his sovereign rights and sent him his throne, for the new tribunals had jurisdiction over the Khedive's Government and his actions. By taking over the beleaguered and impoverished farms of the *fellaks* the Khedive gradually became owner of a great part of the land of Egypt, and the con-
